

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at <http://books.google.com/>

AMERICAN MASONIC RECORD, AND ALBANY SATURDAY MAGAZINE.

Vol. I.]

ALBANY, SATURDAY, FEBRUARY, 3, 1827.

[No. 1]

MASONIC RECORD.

*Semita certe,
Tranquilla per virtutem patet unica vitæ.*—[*Juv. Sat.*]

[From a correspondent.]

In the year 1781, a young American merchant, settled in France, employed several Nuns in a Convent at Nantes, to execute a variety of masonic ornaments, including aprons, with the American and French flags intertwined, emblematical of the happy union then subsisting between the two countries. They were elegantly executed, and were sent as a present to General WASHINGTON, accompanied by a masonic address. The year following (being the last year of the revolutionary war), the same merchant, while travelling in England, received a letter of which the following is a copy, which had made the tour of England in pursuit of him. Had the various post offices through whose hands the letter passed, known they were transmitting the signature of the immortal Washington, at that crisis of the Revolution, what would have been their sensations?

State of New York, August 10, 1782.

"Gentlemen—The masonic ornaments which accompanied your brotherly address of the 23d January last, though elegant in themselves, were rendered more valuable by the flattering sentiments, and affectionate manner in which they were presented.

"If my endeavours to avert the evil with which this country was threatened by a deliberate plan of tyranny, should be crowned with the success that is wished, the praise is due to the *Grand Architect* of the Universe, who did not see fit to suffer his superstructures and justice to be subjected to the ambition of the Princes of this world, or to the rod of oppression in the hands of any power on earth.

"For your affectionate vows permit me to be grateful, and to offer mine for true brothers in all parts of the world, of whatever nation, and to assure you of the sincerity with which I am yours.

GEO. WASHINGTON.

Messrs Watson & Cossard, East of Nantes, France.

EXTRACTS FROM AN ADDRESS,

Delivered by M. W. G. M. De Witt Clinton, to the M. W. the Grand Lodge of New-York, 5806.

The principle of association, which is implanted in our nature by the author and dispenser of all good, is calculated to produce the same beneficial end in the moral, that the power of attraction does in the natural, world. This propensity to associate may be observed in every stage of society, from the rude hunter of the forest, to the polished inhabitant of the city; from the first elements of simple societies, to the more complicated and expanded associations. Whether it is an instinct or a habit; whether it is the dictate of powerful unerring nature, operating for the benefit of the subject, or the result of prudence and reason, consulting individual as well as general good, it is not necessary to investigate. We feel and we know that it predominates over our species; that it operates with the power of both those causes; and that, whether it exhibits itself in families, in literary and benevolent institutions, or in nations, its spirit is good and its object beneficent. The absence of this principle in men, or in other animals, is generally attended with ferocious and sanguinary propensities: and wherever it prevails, we find our nature improved, our felicities increased, and the general condition of society ameliorated. The gloomy anchorite, the unfeeling fanatic, and the repulsive misanthropist, always inshroud them-

selves in solitude, and seek in vain for that happiness which they failed of obtaining on the busy theatre of the world. Independent of those associations which may be denominated natural, we observe voluntary societies springing up in a thousand shapes, for the improvement of our physical, mental, or moral faculties. Of all the institutions however, which have been established for the purpose of improving our condition, none are more numerous and more beneficial than charitable ones, which are as diversified as the various wants and miseries of man. Amongst associations of this description, freemasonry stands as pre-eminent in usefulness as it is in age. Its origin is lost in the abyss of unexplored antiquity. No historical records, no traditionary accounts, can point out the time, the place, or the manner of its commencement. While some have endeavored to discover its footsteps amongst the master builders and artists engaged in the construction of the first Jewish temple, others have attempted to trace it to the Eleusinian mysteries, which are said to have taught the immortality of the soul, and the other sublime truths of natural religion. Some again have ascribed its rise to the sainted heroes of the crusades, while others have endeavored to penetrate the mysteries of the Druids, and to discover its origin amongst the wise men of that institution. Amidst this uncertainty which must ever result from the absence of written history, our safest course is to avoid a particular conclusion, and to rest satisfied with the general conviction, that our society is the most ancient benevolent institution in the world. It is remarked by an elegant and profound delineator of nature, that no other species but that of man is generally diffused over the globe. The assimilation of his nature to every clime and country indicates his excellence and demonstrates his superiority. This remark may be applied, with some modification, to our institution. While other societies are either ephemeral in point of duration, or limited in respect to place, freemasonry is coextensive with the enlightened part of the human race, and has raised its insignia in every quarter of the globe. Wherever man in his cultivated state fixes his habitation, freemasonry may be seen enlightening and consoling him. No diversity of religion or form of government opposes barriers to her progress. Amid the dark clouds of fanaticism and despotism she may be seen shining with unsullied brightness, diffusing light and imparting joy. In countries where one man's happiness is the cause of all men's misery, we observe with astonishment the ardour with which our institution is cultivated, and the eagerness with which it is embraced by all descriptions of men; but our astonishment must cease when we reflect that it inculcates the natural equality of mankind: it declares that all brethren are upon a level: it admits of no rank except the priority of merit, and its only aristocracy is the nobility of virtue. The avidity therefore, with which men resort, in despotic countries, to the standard of freemasonry, is the effort of nature to recover her original rights, and to surmount the corruptions of society. Amidst the pleasing intercourse of brethren, the artificial distinctions of rank and office, and the adventitious advantages of wealth, are lost. Seeing the strong hold which masonry has upon the human heart; that it intertwines itself with the best sympathies of our nature, and is approved by the most enlightened faculties of the mind; that all the terrors of punishment—that even the horrid inquisition has not been able to destroy the institution; that like the true religion, it has flourished on the bloodstained soil of persecution: the despotic ruler, perceiving these striking characters of freemasonry, and despairing of extirpating it, has endeavored to make it an engine of state, or to regulate it in a way most conformable to his interest. Hence he has frequently descended from his throne, approached with reverential awe our sacred altars and mingled freely among the brotherhood. The beneficent and enlightened ruler, although clothed with unlimited

power, yet anxious for the good of his subjects, cannot fail of countenancing an institution calculated to produce so much benefit to mankind. Hence, from different motives, and with various views, our society has been encouraged and fostered in the most ungenial climes. Its progress in free nations, where law, liberty, and good order prevail, has been singularly great; but, in these United States, it has attained an elevation and a perfection unequalled in other countries. It travels with our population from the Atlantic to the Michigan; from the St. Lawrence to the Missouri: it flourishes in the sequestered hamlet as well as in the wealthy city—it is embraced by all descriptions of men as a softener of the cares and an improver of the felicities of life. In this country, where there is so little poverty, masonry in the restricted sense of pecuniary beneficence is not so essential as in other countries, where man is reduced to the most abject state; but in its more comprehensive signification of benevolence in general, and as a school where all the friendly affections of the heart, and all the delightful charities of life are taught and cherished, it is deservedly ranked amongst the most important establishments.

The state of society, of government, and of knowledge with us, is admirably calculated to countenance and encourage freemasonry: like seed thrown into a congenial soil, it has flourished accordingly. Some of its most important doctrines are here practically illustrated in the condition of our species. Man here recovers his dignity: he no longer exists a slave. All institutions which ennoble his nature, which elevate his mind and purify his heart, must be cherished by him in proportion as he feels, in his own experience, the importance of those objects; and he is certainly better qualified to receive and to foster the doctrines of masonry, than if he were the slave of ignorance and despotism. There can be no doubt but that much of our flourishing condition is to be attributed to this source. Masonry, considered as a moral benevolent institution, will unquestionably prefer those stations where she observes man in his most dignified and happy form: and as an intellectual establishment, where can she be more gratified in beholding the diffusion of knowledge and the supremacy of mind, than in this country?

The purity of freemasonry, here, has no doubt, had an auspicious tendency in promoting its prosperity. It is vain to conceal that our institution has in various countries been adulterated and degraded by the arts of designing and interested men. The distinction between ancient and modern masonry, which occurred in England a long time ago, is well known; but Germany has been the prolific parent of a thousand devices, intended to sport with public credulity, and calculated to degrade the simplicity and beauty of our society. The great landmarks have been broken down: the genuine degrees of freemasonry have been considered as initiative steps into more elevated orders, and more sublime mysteries; with a view of gain or gratifying that taste for frivolous parade which is the natural companion of frivolous minds, a great number of orders have been invented as connected with and more exalted than freemasonry. They are decorated with stars and ribbands and garters, and other insignia—all calculated to mislead the weak, the frivolous and the vain. They are attended with all the pomp and mystery and solemnity which the imagination can invent. They are imposed upon their credulous votaries as the offspring of heroic achievements—as the establishment of sages who administered before the oracles of God—or as the invention of heaven-endowed philosophers, possessed of all the secrets of nature—of the immortal elixir—the philosopher's stone, and the powers of invisibility and ubiquity. Such gross impostures being invented and practised in most instances by unworthy brethren and being ingrafted upon our institution, have tended to degrade and debase genuine freemasonry. In this country, ancient masonry, as used and taught for ages, ex-

ists in its pure unsophisticated shape: its venerable simplicity has not been invaded by the rude hands of modern barbarians; its sublime doctrines have not been sullied by the ridiculous fables of wretched adventurers—nor have its beautiful ceremonies been ridiculed by the empirical parade and disgusting mummery of recreants and cowards.

The exertions of some individuals have had a signal effect in exalting the institution. At the close of the revolutionary war, some distinguished brethren applied themselves with zeal and industry in rebuilding the masonic temple, which had been nearly destroyed. This generous spirit was communicated to others; and to this original and continued impulse, we are indebted for much of the ground we now occupy. Some of the brethren of whom I now speak, have gone to that undiscovered country from whose bourne no traveller returns. Many of us have witnessed—all of us have heard of their laudable exertions. No pains were spared—no talents were unemployed by them in their honorable career: that enthusiasm which they felt they communicated; and before they descended to the silent tomb, they had the satisfaction of seeing their efforts crowned with success, and their most sanguine anticipations surpassed. Had I time or the talents, I would pronounce their eulogium—but I cheerfully submit the task to the grateful feelings which animate the bosoms of all who hear me: that they will enjoy the rewards of benevolence in another and a better world, cannot be doubted.

But turning from a subject, calculated to operate so much upon our sensibility, and to excite the mingled emotions of sorrow and joy, let us render the justice due to the paternal and superintending care of the grand lodge and its officers. A good government, a flourishing community, cannot exist without good rulers as well as good laws. It is impossible that our institution could have attained such an elevation in feeble and unworthy hands. The success of your past efforts, will doubtless serve as a stimulus to future exertions.

ELECTIONS.

Amber Chapter, No. 69, Skaneateles, Onondaga co.
James M. Allen, High Priest; John Richards, King; Killian H. Van Rensselaer, Scribe; Benjamin Trumbull, Secretary; John Van Benthuysen, Treasurer.

Village Lodge, No. 456, Skaneateles, Onondaga co.
James M. Allen, W. M.; William Gibbs, S. W.; Augustus Hickox, J. W.; Stephen Horton, Secretary; Charles Pardee, Treasurer.

Western Light Lodge, No. 105, Lisle, Broome co.
Elected December 13, 5826:—Nathaniel Bosworth, W. M.; Cyrus Salisbury, S. W.; Samuel M. Hunt, J. W.; Carding Jackson, Treasurer; George Wheeler, Secretary; Lyman Richards, S. D.; Henry Sherwood, J. D.; David Clark, 2d, Tyler; Abijah Sherwood, James Campbell, Stewards; Daniel Sherwood, Pelatiah B. Brooks, Ira Seymour, Censors; Joshua Baker, Marshal.

During the past year about twenty brethren have been initiated in the above Lodge.

Regular communications, Wednesday preceding full moon.

Grand Lodge of Massachusetts.

Installed December 27, 5826:—John Soley, Esq. of Charlestown, G. M.; Rev. John Bartlett, of Marblehead, D. G. M.; Hon. John Keyes, of Concord, S. G. W.; Hon. John Mills, of Southwick, J. G. W.; John J. Loring, Esq. of Boston, G. T.; Thomas Power, Esq. of Boston, G. R. S.; W. J. Whipple, Esq. of Cambridge, G. C. S.; Ferdinand E. White, Esq. of Boston, G. Marshal.

Grand Chaplains. Rev. Paul Dean, Boston; Samuel Clark, Princetown; Wilkes Allen, Chelmsford; Benj. Hutton, Canton; James Sabine, Samuel Barrett, Boston.

James A. Dickson, S. G. Deacon; B. B. Appleton, J. G. Deacon, Boston.

Grand Stewards. Michael Roulstone, Daniel Baxter, jun. Elias Haskell, David Parker, Boston. Thomas J. Goodwin, Charlestown, G. S. B.

Grand Pursuivants. G. G. Smith, J. P. Bigelow, Esq. Boston. Josiah Baldwin, Boston, Grand Tyler.

Committee on Charity. Ferdinand E. White, B. B. Appleton, Elias Haskell, David Parker, Gilbert Nurse.

Grand Lodge of Ohio.

Elected January 9, 5827, at the annual session held in Columbus:—M. W. John M. Goodenow, Grand Master; R. W. Thomas Colwin, Deputy Grand Master; R. W. William R. Foster, Senior Grand Warden; R. W. Roswell Stone, Junior Grand Warden; L. Lincoln Goodale, Grand Treasurer; W. Bela Satham, Grand Secretary; W. Walter M. Blake, Grand Marshal; Rev. and W. George C. Sedgwick, Grand Chaplain; W. Robert T. Lytle, Grand Orator; W. David Spangler, Grand Senior Deacon; W. William Coolman, Grand Junior Deacon; W. William Fielding, Grand Lecturer; W. William John, Grand Tyler.

SCIENCE AND THE ARTS.

VISION AND COLOURS.

In the second part of the tenth volume of the *Transactions of the Royal Society of Edinburgh*, is a paper on this curious and interesting subject, by Mr. Harvey. The person possessing the remarkable peculiarities of vision described in the paper, is, it appears, sixty years of age; who, having served in early life an apprenticeship to a farmer, but disliking agricultural pursuits, became a tailor, and entering afterwards the navy, served in several general actions. After quitting sea-service, he resumed his trade, in the employment of which he now continues. From his childhood, it appears, he was unable to point out colours by their proper names, or, except in a few cases, to distinguish one color from another. From the nature of his avocation, this unfortunate circumstance must, of course, have often been to him the source of much inconvenience; and during his whole life, it appears, he has found the utmost embarrassment from it. He has remarked to Mr. Harvey, that his inability to distinguish colours has cut him off from the enjoyment of many innocent and harmless pleasures. If a painting were placed before him, abounding with the most beautiful varieties of color, it would only present a dull and cloudy appearance; and hence he has never made a practice of stopping at print-shops, or of visiting any scenic representations. In early life, Mr. Harvey informs us, he once visited a panoramic exhibition, and remarked that his mortification was extreme when he found every one around him delighted with the splendour of the scenes, whereas, to him, to adopt his own words, the whole presented "a smoky appearance." The face of nature, which to the perfectly organized eye presents so many exquisite varieties of color, and so many beautiful varieties of light and shade, has always appeared to him under a dark and murky aspect. While others have contemplated with high gratification the splendour of the setting sun, or the glory of the rainbow, he has seen but little to admire;

and, when led by the chances of a seaman's life into the Mediterranean, where a bright sun and a pure and cloudless sky lend to the glowing tints and the vivid colouring of nature charms unknown to the climates of the North, the contrast produced no peculiar effect on him; nor has this arisen from a morbid constitution of mind—for, on the contrary, he is remarkably happy and cheerful; and, from all the information Mr. Harvey has been able to obtain respecting him, has always been distinguished for his steadiness, cheerfulness, and good conduct. After these general observations, Mr. Harvey proceeds to illustrate some of the remarkable peculiarities of the case, by striking and appropriate examples. Being desired to repair an article of dress that required black silk, he employed crimson; and a similar mistake occurred on two other occasions. On another occasion he compounded sky-blue with green, when repairing an article of dress; and once, when a young gentleman's dark blue coat was brought to him for immediate repair, the mother of the lad was surprised to find the elbow of the coat repaired with crimson; indigo and Prussian-blue he regarded as black; China and azure-blue, he considered to be blue, but thought them good matches for carmine-red, when placed by its side; ultramarine-blue he thought to be the same as lake-red.

VOLCANOES.

Professor Daubeny remarks that there are ten volcanoes in the Japan Islands, but so little is known of them or of any thing relating to those islands, that some account of the devastation occasioned by volcanic agency in Nippon and Kiou Siou, the most central of that group, may excite some interest. The particulars are given by M. Fittingh, and may have undergone some alteration from having been translated from the original Dutch, through the French, into English. A minute account of a series of earthquakes, eruptions, and showers of sand, and red hot stones, inundations, and other volcanic phenomena, prevailed during ten years, in which twenty-seven villages were swallowed up or overwhelmed. The details are somewhat prolix, and we omit them, except the following account of the destruction of Kiou Siou, the most westerly of the volcanic islands of Japan. [N. Y. Times.]

From the *Annals of Philosophy*, Dec. 1826.

In 1793, a first shock was felt, with a motion which lasted upwards of an hour and a half, and became more and more violent, threatening all around with instant destruction. It was not long before several houses were engulfed with their inhabitants, which seemed to be the signal for most dreadful disasters. The cries of men and animals aggravated the horrors of the catastrophe. Prodigious rocks, rolling from the mountain, overthrew and crushed every thing that happened to be in their way.

A tremendous noise, resembling loud and repeated discharges of artillery, was heard under ground and in the air: at length, when the danger was supposed to be over, a horrible eruption of Mount Miyayama took place; the greatest part of it was exploded into the air, fell into the sea, and by its fall raised the water to such a height as to inundate both the town and country. At the same time, an enormous quantity of water issuing from the cliffs of the mountain, met the sea-water in the streets, and produced whirlpools, which, in some places, washed away the foundations of houses, so as not to leave a vestige of habitations. Men and beasts were drowned in the flood. Some were found suspended from the tree, others standing upright, others kneeling, and others again on their heads in the mud, and the streets were strewn with dead bodies. Out of all who fled, a very few only escaped. The cries of those who were still alive beneath the ruins, pierced the heart, and no assistance could be rendered them.

The tubs which are used in Japan, instead of coffins, for burying the dead, were uncovered in the cemeteries, or broken, the large stones laid over them having been carried away by the torrent. Thus the whole country was at once transformed to a desert; but the province of Figo, opposite to Sitabara is reduced to a still more deplorable state. Its form is entirely changed: not the least trace of what it was can now be discovered. A great number of vessels in the neighborhood went to the bot-

tom; and an incredible number of carcasses of men and beasts, and other wrecks, were brought down by the current, so that the ships could scarcely force a passage through them. The wretchedness that every where prevails is inexpressible, and fills the spectator with horror. The number known to have perished exceeds 53,000; and it is impossible to describe the consternation produced by this catastrophe.

BLUE, FROM WOOD.

A new method of preparing wood, for dying in blue, has been read by Messrs. Robiquet and Colin, before the Royal Academy of Sciences at Paris, the title of which is "Researches on the colouring principle in wood." By means of a new process those chemists have succeeded in obtaining very expeditiously and economically that precious article, which now sells from fourteen to fifteen francs an ounce. They designate under the name of alizarine the tinctorial matter in wood, which they believe to have obtained in its greatest purity by the following process. Their researches had induced them to propose the alcoholic fermentation, which disengages all heterogeneous substances, which might impair its beauty, at the same time that it does no injury to its fine coloring substance. But they now propose the following method, as being much more expeditious. Grind well the wood, and add two or three parts of clear water, subject the whole to a very strong pressure, repeat the same operation for three successive times, bruise well the residue and suffer it to be thus exposed to a liquid bath with five or six parts of water added to it, in which a sufficient quantity of allum has been previously dissolved; afterwards strain well that liquid and precipitate it by an addition of subcarbonate of soda. The precipitate thus produced must be very carefully washed in clear water. The maceration in alum water is then continued till it becomes of a properly thick consistence. By the above process you obtain in three hours a result which by the old method required as many months.

WET ROT.

Centuries, as the chemists know, would be inefficient to destroy charcoal by moisture; it would rather turn to stoue. The quickest decay of out-door posts, gate-posts, and all other wooden uprights in or upon the ground, exposed to changes of weather, though ever so well painted or pitched, or covered with coal-tar, is always at the foot. To prevent which, that end of the post which is inserted in the ground, or the under part of wooden thresholds, or quartering used as the ribs of ground-floors, should be charred, coated, or encrusted with charcoal, something more than coopers do the inside of barrels; (whether so intended or not, barrels best charred remain the sweetest, and are most easily cleansed after exposure to air.) The most ready way to apply intense heat, without so much flame as materially to reduce the dimensions of the wood, is to make red a heavy bar or plate of iron, and pass it over the surface of the wood, until nothing but blackness is to be seen. Shakes or cracks should be treated in the same manner, with a red-hot hatchet, or bay-knife blade, so that the charcoal case may let in no portion of moisture.

NEW STEAM CARRIAGE.

The Reading-room of the Mechanics' Institute, in Hull, England, was crowded, in November last, to witness the exhibition of a model of a steam carriage to run on common roads. This machine weighs 82 oz. is eleven inches in length, has three wheels, and is guided by a lever in front. The boiler and engine are placed in the hinder part of the carriage: the steam cylinder is half an inch bore; and the stroke of the piston is seven-eighths of an inch. The eighth part of a pint of water being put into the boiler (which is heated by a tallow lamp,) causes it to go for the space of half an hour. It will turn in a circle, the diameter of which is only twice the length of the carriage, and the inner wheel will form the centre of its motion. It is capable of being backed in a moment with the greatest ease, and when allowed to run in a straight direction, at its greatest speed, will proceed at the rate of upwards of five miles per hour. The youth-

ful inventor is a clerk, and the machine is the production of his leisure hours.

THE ANTIQUARY.

AMPHITHEATRE OF VERONA.

This celebrated structure was supposed to have been built about the time of the Emperor Adrian, its diameter according to Lalande, is four hundred and sixty-four feet, by three hundred and sixty-seven: and that of the arena two hundred and twenty-five, by one hundred and thirty-three: its circumference one thousand and three hundred and thirty-one feet. It had four stories, and the total height was 120 feet.

There were forty-five rows of seats, which could contain 22,000 persons: the whole building was erected without cement, and joined and secured by iron cramps, overlaid with lead. The ferocious disposition of the Romans, was immoderately fond of every species of amusement, which was of a bloody or horrible nature. In the amphitheatres they witnessed gladiators contending together, or entering the lists with wild beasts, which were hunted, or encountered, or left to devour each other, according to the humour of the times, or the taste of him who gave the entertainments.

It appears also that criminals were sometimes forced to fight with those ferocious creatures, for the gratification of the Roman people; and in the days of Christianity, many of the Christians suffered death in this brutal manner. It is also reported, that artificial mountains were sometimes constructed with caves below, whence these devouring animals rushed forth to attack their prey. Lucius Metellus brought the elephants which were part of the Carthaginian spoil, into the circus, in the year of the city five hundred and two; and this proved the cause of the introduction of wild beasts into the spectacles of Rome. The number of wild beasts that could stand together in the arena has been calculated to be 10,779. Titus exhibited 5000 in one day, and Probus 4000 ostriches, bears, deer, ibexes, wild sheep, and other graminivorous animals, amidst a forest which had been transplanted into the amphitheatre. Pompey exhibited in the last five days of his spectacles, 400 tigers, 500 lions, several elephants, and rhinoceroses, and other strange beasts from Ethiopia.

THE HUMOURIST.

[A volume has lately issued from the London press, under the title of *Whims and Oddities, in Prose and Verse*, by Thomas Hood, author of *Addresses to Great People*, &c. This volume is illustrated with forty original designs. Mr. Hood's puns are as palpable in his plates as in his pages. In order that the reader may properly understand "My aunt Shakerly," we will give him an idea of one of these punning pictures. Under the head of "a Spoiled Child," is an enormous fat woman who has just sat down upon a chair upon which an infant was sleeping; she is, unconscious of the mischief done, reading the accidents and offences of the *Morning Herald*; the head of one paragraph is very plainly, "Child Killed." "My aunt Shakerly" is the illustration.]

MY AUNT SHAKERLY.

My aunt Shakerly was of an enormous bulk. I have not done justice to her hugeness in my sketch, for my timid pencil declined to hazard a sweep at her real dimensions. There is a vastness in the outline of even moderate proportions, till the mass is rounded off by shadows, that makes the hand hesitate, and apt to stint the figure of its proper breadth; how, then, should I have ventured to trace, like mapping in a continent, the surpassing boundaries of my aunt Shakerly! What a visage was hers!—the cheeks a pair of hemispheres;—her neck literally swallowed up by supplementary chin;—her arm cased in a tight sleeve, was as the bolster;—her body like the featherbed, of Ware. Her waist, which, in other trunks, is an isthmus, was in hers only the middle zone of a continuous tract of flesh;—her an-

kles overlapped her shoes. With such a figure, it may be supposed that her habits were sedentary. When she did walk, the Tower Quay, for the sake of the fresh river breeze, was her favourite resort. But never, in all her water-side promenades, was she hailed by the uplifted finger of the waterman. With looks purposely averted, he declined, tacitly, such a Fairlopian Fair. The hackney coach driver whilst she halted over against him, mustering up all her scanty puffings for an exclamation, drove off to the nether pavement, and pleaded a prior call. The chairman, in answer to her signals, had just broken his poles. Thus, her goings were cramped within a narrow circle: many thoroughfares, besides, being strange to her and inaccessible, such as Thames Street, through the narrow pavements;—others, like the Hill of Holborn, from their impracticable steepness. How she was finally to master a more serious ascension, (the sensible incumbance of the flesh clinging to her even in her spiritual aspirations) was a matter of her serious despondency—a picture of Jacob's Ladder, by Sir F. Bourgeois, confirming her. That, the celestial staircase was without a landing. For a person of her elephantine proportions, my aunt was of a kindly nature—for I confess a prejudice against such giantesses. She was cheerful, and eminently charitable to the poor,—although she did not condescend to a personal visitation of their very limited abodes. If she had a fault, it was in her conduct towards children—not spoiling them by often repeated indulgencies, and untimely severities, the common practice of bad mothers;—it was by a shorter course that the latent and hereditary virtues of the infant Shakerly, were blasted in the bud. Oh, my tender cousin** (for thou wert yet unbaptised) Oh, would thou hadst been,—my little babe cousin—of a savager mother born! For then, having thee comfortably swaddled, upon a backboard, with a hole in it, she would have hung thee up, out of harm's way, above the mantle shelf, or behind the kitchen door—whereas, thy parent was no savage, and so having her hands full of other matters, she laid thee down, helpless, upon the parlour chair! In the meantime, the "Herald" came. Next to an easy seat, my aunt dearly loved a police newspaper;—when she had once plunged into its columns, the most vital question obtained from her only a random answer,—the world and the roasting-jack stood equally still; so without a second thought she dropped herself on the nursing chair. One little smothered cry—my cousin's last breath—found its way into the upper air—but the still small voice of the reporter engrossed the maternal ear. My aunt never skimmed a newspaper, according to some people's practice. She was as solid a reader as a sitter, and did not get up, therefore, till she had gone thro' the "Herald" from end to end. When she did rise,—which was suddenly;—the earth quaked—the windows rattled—the ewers splashed over—the crockery fell from the shelf—and the cat and rat ran out together; as they are said to do from a falling house. "Heyday!" said my uncle, above stairs as he staggered from the concussion—and, with the usual curiosity, he referred to his pocket book for the royal birth day. But the almanac not accounting for the explosion, he ran down the stairs, at the heels of the housemaid—and there lay my aunt, stretched on the parlour floor, in a fit. At the very first glimpse, he explained the matter to his own satisfaction, in three words,—"Ah—the apoplexy!" Now the housemaid had done her part to secure him against this error by holding up the dead child; but as she turned the body edgeways, he did not perceive it.—When he did see it—but I must draw a curtain over the parental agony—

About an hour after the catastrophe, an inquisitive she neighbor called in, and asked if we should not have the coroner to sit on the body; but my uncle replied; "There was no need." "But in cases, Mr Shakerly, where the death is not natural," "My dear madam," interrupted my uncle, "it was a natural death enough."

Apology for Absence. A conceited young man asked a friend what apology he should make for not being one of the party the day before, to which he had a card of invitation. "Oh, my dear sir," replied the wit, "say nothing about it, you were never missed."

ORIGINAL TALES.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

UGOLINO, THE BANDIT;

OR, THE REVENGE.

O, sweet revenge!
I have turn'd o'er the catalogue of human woes,
Which sting the heart of man, and find none equal.
It is the Hydra of calamities;
The seven-fold death; the jealous are the damn'd.
Oh, jealousy, each other passion's calm
To thee, thou conflagration of the soul!
Thou king of torments, thou grand counterpoise
For all the transports beauty can inspire! (Dr. Young.)

At the foot of a celebrated mountain in Italy, is still to be seen, the cave of Ugolino, the Bandit. Never did the biographer record a more ferocious character, though he possessed those brilliant traits of intellect which might have rendered him illustrious, had his inclinations led him to the paths of virtue. Impetuous in his temper, he was easily led away by passion; and unrelenting in his disposition, his revenge, when once determined, could never be relinquished, though opposing barriers might present themselves, which, to others, of less determined character, would appear insurmountable. Fear never swayed the soul of Ugolino; and he looked with contempt on him whose mind would ever swerve from its firm resolves. Nor less fortified against fear was the soul of Ugolino than his athletic and gigantic frame. Though he had once moved in the highest circles of society, where luxury and voluptuous indulgence too often beget effeminacy and imbecility, both of body and mind, yet his active spirit had preserved him from the contagion, and had ever urged him to daring deeds, and the overthrow of every obstacle which sprung up in his path. From small causes great effects have proceeded, and revolutions have been the consequence of trifling disputes. Such had been the case in the soul of Ugolino. He who had been the admiration and the admirer, had now become the foe of man. His soul in its dark visions brooded over the injury he had received, and was constantly planning schemes of revenge. Night and day, he sat in his dark dwelling and meditated on vengeance.

In the very wildest spot in nature, amid the almost impenetrable gloom of a wilderness, was situated the cave of Ugolino, the Bandit. Seldom was the silence of that dark woodland broken, save by the nightly band who attended the councils of Ugolino. The gloom of that spot was congenial to his soul; and there he gathered his band around the midnight lamp, to lay plans for the accumulation of wealth and the destruction of those who had incurred his displeasure. Ugolino was the terror of the country; but none knew or could discover his abode, for it could only be approached by climbing almost perpendicular rocks, and then sliding down a tremendous precipice, which would have made any shudder but the daring followers of the Bandit. Ugolino became sullen to his comrades; and three nights they came to the dismal cave, but still he had but little to say, appearing to be deeply absorbed in thought.

"Why are you so lost to your comrades, Ugolino?" said Petrini, as he took up a bag of gold from a corner of the cave. "Cheer up, our brave leader, melancholy but ill becomes the daring soul of a bandit."

"Hear, then, comrades," said Ugolino, "the cause of my musing melancholy. You all remember, that some seven years since, my character shone conspicuous in Naples, and that my family stood in the first rank of society. Since then, you know, I have fallen to be the enemy of man, and now I shall relate to you the story of my wrongs. Ere I arrived at manhood, I wedded the beautiful, the accomplished Cornelia, with whom I lived as happily as man can be on earth. Time sped on, and the beautiful Cornelia gave to my arms a lovely daughter, whom I called Cornelia, in honor of her mother. I watched over the little cherub's infancy with all the solicitude of a father, and as years passed away, I beheld my daughter grow up the very image of her beautiful mother. Ugolino was then the happiest of men; but ah, a serpent dashed the cup of bliss from my lips, and Ugolino is now the most wretched man alive. Count Obizzo, the

man who but three days ago was wedded to another, was the man who wooed my fair Cornelia, on whom I doted, and having won her love, then ruined her, and left her to despair. Oh, had a dagger been planted in my heart, it had not pained me half so much as when my blooming flowret withered and perished in neglect. Disgrace was the lot of all, but more of her's, and she could not bear the cold neglect of an unfeeling world. My much loved Cornelia died; and Count Obizzo felt not even the world's reproach. It was a dagger to the heart of poor Cornelia's mother, and she soon followed her poor daughter to the grave, over whose memory she had shed so many tears. It was almost fatal to Ugolino; but he lived to weep over the ruins of all he loved on earth. Gods! do I live, or do I dream! Oh, had I then but found the villain, I had torn him to pieces in my rage. But he escaped. I have not seen him since, until of late, and three days since he wedded. Three days and nights I have meditated on revenge; and now, hear me, comrades, while I swear—never will Ugolino rest, until the wretchedness, or blood, of Count Obizzo, shall atone for my wrongs. I will follow him to the ends of the earth! but I will not kill him, for that poor pain of dying, would not satiate my vengeance."

"Comrade, you are brave, and able to revenge injured innocence," exclaimed one of the banditti, "but tell us, Ugolino, the particulars of this affair. Was not your daughter's crime equal to that of her seducer?"

"Oh, no," cried Ugolino, as he wiped a tear from his eye, "heaven is witness, that she was innocent. The falling fortunes of Ugolino gave Count Obizzo the opportunity to triumph over innocence. I stood in need of a friend to support me in my difficulty, occasioned by a loss at sea, and he came forward like a generous friend, to snatch me from the gulph of poverty, into which I fell, at last, by the ruin of a wealthy house in Naples. Still Count Obizzo was the friend of Ugolino. My daughter, the lovely fair Cornelia, who now sleeps in peace, saw his disinterested friendship, and loved him, ay, loved him even in proportion as she loved her father. He knew she loved him, and while she praised his kindness to Ugolino, he planned the destruction of the fairest flower that ever flourished in the garden of Italy. Oh, cursed be that hour, for it was then that all my hopes were withered. He partly saved my fortune, and took, as his reward, the happiness and the life of an only daughter. I could have borne any thing but that."

"And how did the demon kill your daughter?" interrupted Petrini, "and what was the punishment he received?"

"Cold, cold neglect," returned Ugolino, "for which there is no punishment. When she was blighted, and found his promises untrue, she dare not meet my face, though ruined as she was, I would have pressed her to my bosom. It is a hard task for a parent to disclaim a child, an only child. But ah! she wandered into distant lands, where no feeling bosom pitied her afflictions, and there, despised, she died. This letter, which I received from a stranger, informed me of her death. Seven years have rolled away since I last saw my daughter, and since that time, Ugolino has become a bandit. When my fortune was wrecked, I was thrown into prison; and it was in that cold, comfortless abode, that the news of my daughter's death came, like a thunderbolt to my heart; and ere the long period of my imprisonment had expired, the bosom friend of Ugolino was no more. Friendless, and childless, I awoke from my dream of former greatness, and found myself undone. The hopes of Ugolino once were bright, but he has fallen from the splendid pinnacle on which he was seated, and revenge now fills the soul of Ugolino the Bandit, the terror of all Italy. Comrades! prepare to revenge the cause of Ugolino. The castle which stands in Gothic grandeur, three leagues distant from our cave, encloses in its walls the object of my vengeance, who has recently returned from travel, with a blooming bride. This arm could easily plant a dagger in his heart, but that revenge would but feebly gratify the soul of Ugolino."

"What more daring deed than death, comrade," said Petrini, "can satiate the vengeful soul of Ugolino?"

"That would be but momentary," returned Ugolino with a smile, "I will find more poignant means to sting him to the soul. It is well known to you, that the dark foreboding heart of an Italian shrinks from the idea of jealousy, and three days and nights my brain has laboured for a stratagem, by which I may blast his happiness, and bid him feel the anguish which he preyed upon the heart of Ugolino. By well executed plans, I will blast the fair fame of his beloved Countess, whom I have never seen, and urge him on to desperation; and when he feels the hell of jealousy burning on the altar of his heart, then joy shall triumph in the soul of Ugolino. To night we part, but when you hear this horn sounded from yonder cliff, then hasten to my cave, and you shall be made better acquainted with this affair."

The banditti now separated from each other with mutual pledges, and left the terrific Ugolino to ruminate alone. It was a fearful stormy night, and the roar of the distant ocean came mingled with the echoes of a hundred caves to the ear of Ugolino: but it frightened him not, for it only resembled the tumult in his own soul. Ugolino feared not the stormy soul of man, and why should he shrink from the rage of elemental war, or the spirit of storms and darkness? Alone, he sat in his cave by the flickering lamp, and while revenge lowered upon his dark eyebrows, he traced with his pen the outlines of a letter, which was to be dropped in the path of Count Obizzo, and which, when read, was to fire his heart with suspicion of that fair object which he had but lately taken to his bosom. Absorbed in thought, we leave the bandit Ugolino, in his cave, planning the destruction of his fellow man, for whom he had conceived a deadly hate.

Three leagues hence, as observed before, stood the ancient and venerable castle of the family of Obizzo, which had descended through a long line of illustrious ancestors to the present possessor. Situated in one of the most beautiful valleys of Italy, and surrounded by scenery, as beautiful as the romantic imagination of a poet might create, it seemed more like the abode of celestial, than terrestrial beings; for nature had lavished on that spot all her imagery of the sublime and beautiful. In the distance were seen, the lofty mountains, bathing their summits in fleecy clouds; at the bases of which, were all the varieties of rural scenery in perspective; and surrounding the mansion more immediately, were pleasure grounds, and gardens, and groves, and cool grottos, through which crystal cascades murmured, and invited the weary to repose. At the bottom of the flower garden was seen, a beautiful artificial lake, whose lucid waters dazzled the eye, like polished silver beneath the clear sunshine of an Italian sky. Here, in a little gondola, the bride of Obizzo paddled at the moonlight eve, while she sung to her delighted husband the song of the gondolier, and heard it reverberated in a hundred echoes from the surrounding rocks. In the garden and grotto, beneath the fragrant vines which overshadowed it, Count Obizzo and his lady spent much of their time, where many fashionable guests from the neighboring city delighted to spend the hours of their visits. The Count, in venturing into matrimony, had filled up the measure of his happiness, for he now possessed wealth, reputation, and a bosom friend, and he could ask no more to render him as contented as it is possible for man to be below the skies. But there was a dark storm lowering upon his head, which he knew not of, and which was to plunge him, perhaps, in the lowest depth of misery. Revenge is one of the most powerful passions of the human heart.

Ugolino frequently held a council in his cave, after reconnoitering in disguise to discover the situation of his enemy, and learn on which side to plunge the dagger of the mind with the more fatal effect. Of all daggers, as well as of all tyranny, those of the mind are the most excruciating and horrific. Such were the weapons of the vengeful Ugolino, and he scorned that revenge which terminated by death, as he delighted to see his victim writhe under the anguish of his soul, having no friend like death to put an end to his agony.

"Tell me, Petrini," said Ugolino, "if you have seen any thing which can forward the plan which I have concerted?"

"I have," returned Petrini, with a smile, "and I

shall now unfold it to you. According to your request, I have often sauntered about in disguise, around and through the pleasure grounds of Count Obizzo, and frequently, of late, I have seen his bride seated in the grotto, in friendly chat with young Cordova. I wished to feast my eyes upon her beauty, but she was covered with a flowing veil, that screened her from scrutinizing gaze. I marked them well, and I have reason to believe, that there is something more in young Cordova's breast than friendship, for, from behind a tree, I heard her speak quite tenderly, and saw him nod his head, while a languid smile played upon his cheek."

"Thanks, to thee, comrade," said Ugolino in a hurried voice, "the die is cast, and now, Ugolino, it is thy time to triumph. My instrument of vengeance is prepared, and, to-morrow night, it shall be placed in Count Obizzo's reach, and if this letter sting not his soul, then Ugolino is deceived. Small things to jealous hearts wound deeply, and when once suspicion finds access, not all the reason of philosophy can overcome it. O, revenge, how sweet art thou to him who groans beneath an injury, for thou canst soothe and heal the wound inflicted."

The next night arrived, and Ugolino, at the midnight hour, stole to the grotto at the bottom of Count Obizzo's garden, and there deposited the letter. Silence reigned around, and the moon just rising above the eastern hills, illuminated the beautiful winding avenue, adorned with flowers and overshadowed by clustering vines, which led up to the mansion, and her pale rays were dancing on the silver surface of the lucid lake, like smiles on the face of infancy. The bandit, Ugolino, seemed like the fiend who stole into the garden of Eden to destroy the happiness of the first pair, as he moved with cautious steps to the grotto, to place a dagger there, more fatal to the happiness, than the Upas of Java to the life of man. Aurora, goddess of the morning, had but just thrown open her golden gates, and ere the sun had appeared above the eastern mountains in his flaming chariot, when Count Obizzo wandered to that delightful spot, to breathe the fresh air and gaze on the beauties of nature beneath an Italian sky. Suddenly his eye rested on the letter, which had been carelessly dropped, and, grasping it, his rolling eyes quickly devoured the superscription, which he found addressed to Count Obizzo's bride. With a face as pale as death, and with trembling hands, he opened it, and read as follows:—

"FAIR ANGEL—

"My happiness depends upon thy determination, and the consummation of the wish which I expressed to thee when last we met. Heaven is in thy smile, and death the minister that waits upon thy frown. I need not tell thee that thy beauty hath bound my heart in chains, but O, permit me to snatch thee from the tyrant who loves thee not, and place thee in a bosom where thy image sits enthroned the sole mistress of my fate. I shall wait your determination with impatience, and in the mean time, for heaven's sake, keep this from the eye of Count Obizzo.

Your Slave, &c. C*****"

"Death and vengeance," cried Obizzo, as he tore the letter, and saw the fragments wafted on the winds, "what fiend is it that thus dares to break in upon my newborn happiness, and point a dagger at my heart? Can it be possible that she, whom I love so dearly, can be false? No, no, I will not believe it; and yet, I have observed that her company is very agreeable to young Cordova, the initial of whose name was signed to the letter. Oh! what horrors rend my heart, to think, that he should endeavor to subvert my happiness, when I have been a father to him! Great God! can it be possible, that he should be so ungrateful as to poison my cup of joy, when I took him to my bosom a friendless orphan, and brought him up to manhood as my child. If he is a villain, as the letter seemed to indicate, then have I nurtured a viper on my breast to sting me. Ungrateful wretch! Yonder comes the woman in whose affections I placed my happiness, and she looks as innocent as though no guile were in her heart."

"Why, my dear Obizzo," said the Countess, approaching, with a smile, "do you leave me so early, to wander by yourself. Good Cordova and myself sought after you in the woodland; but not finding you, we thought you were in the grotto."

"Woman," returned the Count, "never mention

your good Cordova to me again: he is a villain, and you know it."

"And is it thus you treat the woman of your love," said the Countess, as she burst into tears. "I have never wronged you."

"Tell me no more," cried the Count, "your sex are all deceitful; and I little thought that the bosom on which I reposed my head concealed a serpent. Oh, talk to me no more of love, for I am sick of such Utopian nonsense."

The imagination of Count Obizzo had become so highly excited by having read the letter forged by Ugolino, and from having heard the innocent expression of good Cordova fall from the lips of her whom he loved, that he broke from her as she kneeled, weeping, before him, and fled to the mansion. He walked the splendid hall alone; and the more he thought on what he had seen and heard, the more was his mind harassed by the visions of jealousy. Now he resolved to discard his hapless wife forever; and now he determined to revenge the wrong, and send the young Cordova to a dungeon. The latter resolve was put into execution; and his distracted wife pleading for his innocence, only served to convince the Count that he was guilty, and to make him more inexorable. The Countess endeavoured to console, to persuade, but all to no purpose; for the more she spoke in favor of Cordova, the more was he inclined to think him guilty; and now, the habitation which before had been filled with merriment and mirth, had become the theatre of woe; and that bosom on which he had sighed his cares to rest, he now shunned as the bed of venomous reptiles, which had already stung his jealous soul to madness.

Ugolino, in the mean time, had heard of the success of his forged letter, and he gloried in his triumph. Like those unhappy beings whose hearts are filled with envy, his happiness consisted of the misery of his enemy, and his joy was in proportion to Count Obizzo's agony. But the vengeful soul of Ugolino was not yet satiated, and he resolved on one more attempt to mar his peace and lengthen out his miseries, until life should become a burthen to him, and his own dagger should put an end to his woe. For this purpose he repaired, at the midnight hour, to the garden and grotto where he had before placed the fatal scroll. He had scarcely arrived when, by the light of a clear moon, he beheld a female figure gliding along down the long winding avenue, and lest he should be discovered, he retired behind a large tree and shrubbery which stood on the margin of the lake, where he could perceive all that passed in the grotto without being perceived. The Countess came near to the spot where Ugolino was concealed, and he discovered that she was weeping bitterly for the loss of her husband's confidence and affection. She passed on to the bank which overhung the lake, where she stood some moments with her hands and eyes lifted to heaven, and again indulged in a flood of tears. Her breast seemed bursting, and after gazing around to discover if any being was near, she, in broken accents, uttered the following:—

"Be witness, heaven, that the ill-fated Cornelia is innocent of that for which a once affectionate husband has renounced her, and for which she soon shall cease to weep. Death is but a momentary pang; but to live the supposed victim of crime, neglected and despised, is too horrible to think of, and far more painful than a thousand deaths. I was once loved by the best of husbands, but alas, some fiend fabricated a horrid deed, and charged me, with it to his face, for which he cursed me. Oh, cruel, cruel, husband, thy heart will bleed when poor Cornelia lies cold in death, and thou shalt have discovered that she is innocent. Oh, my father, the once loved and still remembered Canari, if thou art now in heaven, look down and pity thy poor distracted daughter, whose life must soon be extinguished beneath these waves. Farewell, my still beloved husband, and all I once held dear."

As she uttered the last words, she plunged into the lake; and, for a moment, Ugolino stood in astonishment and horror. He had heard her breathe the name of Cornelia, and call upon her father, Canari, which was his name before he became a bandit and assumed that of Ugolino. He could delay no longer, but plunged in after her, to rescue his long lost and beloved daughter from immediate

death. His revenge was forgotten, when on the shore, reclining in his arms, he gazed on her whom he supposed long since dead. At this moment Count Obizzo came down to the grotto, where a mutual discovery took place, to the great satisfaction of all, which led to a discovery of the fatal errors under which both Ugolino and Count Obizzo had laboured. Cordova was released from prison, and Ugolino resumed his proper name of Canari, and ceased from the hazardous employment of a bandit, to be happy in the family of his daughter. This story is intended to shew the ill effects of jealousy and premature suspicion, and also, the impropriety of determining on revenge before we are convinced that we have suffered an injury, inasmuch, as the arrow of vengeance generally flies back and inflicts a wound on him who discharges it.

MILFORD BARD.

ALBANY:

SATURDAY, FEBRUARY 8, 1827.

The patrons of "The Escritoire" will observe that we have not noted the volume in the title-page of that journal. This omission was intentional. The paper is complete in one volume. We have thought proper, also, to omit the register of the whole number, which it was our intention to insert under the head of this paper; for the reason, simply, that we have assumed a title entirely irrelative to the one we formerly used. These petty alterations, we trust, will receive the indulgence of our patrons; as the inconvenience (if any) which they occasion, must necessarily result to ourselves.

Printers who exchange with us will please to direct their papers to the *Masonic Record*, instead of *The Escritoire*.

Necessity has compelled us to delay our publication one week. For the future, however, our paper shall be issued in good season. It may be expected that we should, on this occasion, enter into an exposition of our views and objects, and give a foretaste of our sentiments respecting the subjects which are to occupy our attention. The custom is an old one, and perhaps good policy requires that we should follow in its train. We will not, however, imitate those who serve up the "cameleon dish" of promises at the commencement of their labours, without the intention of rendering their repast more substantial and agreeable by action.

It is of course known that the primary intentions of this journal are, to develope information respecting freemasonry, and to pursue such a course as shall be deemed best calculated to do away the erroneous impressions which exist against the masonic institution. We are not unadvised of the magnitude of the undertaking, nor are we unaware that the misrepresentations of interested calumniators promise us but meagre success; but if the venom of hypocrites and demagogues could deter us when in pursuit of justice, we never would have taken up the gauntlet. Freemasonry has no warlike feature: in contention it acts solely on the defensive; and when we think ourselves called upon to advocate its cause, we shall be governed by moderation; being confident that, though the ferocious zealot may sway the vulgar, the better informed portion of the community will respect opinions that are advanced with justice and temperance. Unexampled turpitude may at times call for a harsher rebuke, and then we shall mete it out to the deserving.

As to religion, we possess the most unbounded respect for the pure and holy precepts of Christianity; but as to sects and their peculiar notions, we shall attempt no distinction between them.

Which is correct it is not for us to say: it will not be questioned that there are sincere and pious members in each; and it remains for the Grand Architect of Heaven to determine who are the most worthy among his people.

As to politics, we shall have nothing to do with them, farther than to record events without the least partiality to either contending party. We shall leave the arena to those who make political contention "their vocation."

As its title indicates, a part of our paper will be devoted to miscellaneous reading. The scientific matter with which we intend to enrich our pages, will be taken, for the most part, from standard American and European journals, which are exclusively devoted to science and the arts. The theorist, as well as the practical man, will find much interesting matter in this department; and we trust that our efforts in the cause of useful knowledge will not be unprofitable to our readers.

In our miscellaneous department we shall study variety. Good writers have promised us much original miscellaneous matter; and we have no reason to question the probability of receiving it. We shall every week furnish our readers with the whole or a part of an original or a selected tale. We are promised, by a correspondent, a series of original essays on the mind; and we have fair hopes of receiving, from various sources, much amusing and interesting matter. Our selections shall be made from new publications, and such journals as the great mass of readers are unacquainted with.

A summary of news, and a collection of matters of chit-chat, or table talk, will be found in our columns every week.

In our own remarks we shall "be just, and fear not;" and no end we aim at shall be opposite to "our country's, our God's, or truth's." Our press shall be free from the shackles of interest, and no influence shall awe us into the support of bad and corrupt measures or men. We shall pursue "the even tenor of our way," calmly expressing our views of such subjects as we may consider it our duty to notice, and court only the approbation of "good men and true." It will probably fall to our lot to castigate more hypocrites than we have any wish to deal with; but as it is not a love of dispute which urges us on to the contest, it will not be a fear of our opponents' strength which shall induce us to relinquish it.

THE NATIONAL OBSERVER. We did hope that our attention would not again be called to that silly, crazy fanatic, the editor of the National Observer. But his last night's paper is distinguished for such unexampled turpitude, that we cannot reconcile silence with our duty. One would naturally suppose that a man of Mr. Southwick's age and experience should be possessed of better sense than to enter into such vile and trafficking practices as must ultimately ruin him in the estimation of all good men—practices which can be of no benefit to the community, and of little advantage to himself; and which must leave him with a little ill-gotten wealth, that will always render him a reproach to his own moral sense. There must be a day of retribution; and whether that day comes sooner or later, its boon to him will be an agonizing retrospect. A dexterous play upon the bad passions of the community may throw the horn of plenty into his present path; but it must as certainly strew poisonous weeds upon the brink of the grave.

In his last night's paper, Mr. Southwick has renewed his foulest attacks upon the the masonic

fraternity, and enforced them with all the vigour of his imagination. He seems to have gathered boldness from practice, and to be rendered desperate by the fact that his cause is hopeless. After two or three paragraphs of unmeaning and disgusting cant, he commences a general fanfaronade upon those editors who have had the independence to condemn the pestiferous proceedings of enthusiasm. He says they "have either secretly approved of the daring wicked outrage, on the one hand; or have not, on the other hand, possessed the moral courage to denounce the deed, and its guilty authors." Now there is not an honest hearted editor in the country who has not heartily condemned the whole proceedings of the Batavia rioters. But let us inquire who are Mr. Southwick's guardians of the public welfare? Is David C. Miller,—a political renegade,—a man loathed and detested by the honest men of every party—one who acknowledges that it is his misfortune to be an ATHEIST—we say, is he to regulate the scale of virtue? or is the quixotic gambler of the National Observer to be considered the moral genius of the western hemisphere? But let these things go: when they come to pass, we guess the "sky will fall, and we shall have larks in plenty."

Next, after a very learned comparison of the western editors with the ancient Britons, he says, "The Masons have said to the Western editors, if you publish the facts relating to Morgan's case, we will deprive you of patronage, of bread!" Now we pronounce this to be a wilful misrepresentation. The masons never said that they would deprive any man of patronage or of bread for publishing "the facts relating to the Morgan case." The masons have said, that they wholly disapproved of the proceedings against Morgan, but that they could not consistently extend their support to presses which were determined to rob them of their good name, by declaring them guilty of acts of which they were innocent, and which could never be performed by men who were under the influence of principles which they cherished as the soul of their institution. Masons have never said more than to this import, and this honest expression of opinion the editor of the Observer has misrepresented in the manner above stated! And then, with all the sang froid of a gladiator, he snatches from oblivion an old worn out lie, manufactured by his excellent friend Mr. Miller, in the first stage of this business, and ekes out his paragraph with a eulogy upon that consistent man's zeal in favour of Morgan's book! Here is the "cat let out of the bag" at once: if Mr. Southwick had not an interest in this book, he would be mute; we should not hear so much about *lap* and *justice*. If he says that he is governed by good motives, we say, we do not believe him. A man who was engaged with him in the lottery business, in this city, left the place as his agent, with a parcel of these books in his possession. When we heard from him last, he was in Montgomery county—his progress thus far, in consequence of his superstition, had been more laughable than serious.

He next proceeds to talk about himself, and says he has lost the patronage of masons in consequence of taking so conspicuous a part in the war against masonry. Now this is as it should be. What right has a public slanderer to expect support from those he is vilifying? Would any christian sect support a press that continually traduced its character? If Mr. Southwick had only aimed his philippics at the guilty, masons would have been the last men in the world to deprive him of a penny of his

income. But he did all that he could to connect the fraternity with the outrages at Batavia—he traduced its good name,—he said that it aimed at the foundation of liberty—in a word, that it was useless and dangerous. After being thus insulted, masons would have been wanting in respect to themselves if they had given him their support. He says that one gentleman, through his agent, gave as a reason for stopping his subscription, Mr. Southwick's "publications in relation to the Morgan affair." Now, we know the agent did not tell Mr. Southwick any such reason. He told Mr. Southwick explicitly that it was *not* for his publications against the kidnappers of Morgan, but that it was for his foul abuse of masonry, that the paper was stopped. Here then he is guilty of another misrepresentation, of the basest kind, and we think that this case, together with what has before been said, portrays the character of his word in its true light.

As to his foolish talk about the inadequacy of punishment, we believe Judge Throop did his duty; he is not a mason, and cannot be accused of partiality to the order. The editor of the Observer should recollect that Mr. Foote, who introduced into the Assembly the bill to prevent *man stealing*, is an officer of the Grand Lodge of this state; so, if the law is to be made a party thing, the masons deserve the credit of it.

Morgan. The editor of the *Escritoir*, a paper devoted to Freemasonry, published at Albany, and the editor of the *National Observer*, Solomon Southwick, Esq. have got by the ears, on the merits of the "Morgan matters." Not wishing to identify ourselves in this controversy, we now only advert to an error of the latter editor; merely a geographical error, but which destroys all the beauty of Mr. Southwick's remarks. Mr. Southwick says he is convinced "that the wretched man, (Morgan,) after being confined a few hours in the abandoned and solitary fortress of Niagara, was forcibly sent adrift in the river at midnight, and carried by the current over the falls! This, we believe, was his awful fate."

This would be an "awful fate," truly. Fort Niagara is situated where the Niagara river disembogues itself into the Lake Ontario, and some 14 miles below the *Falls of Niagara*! If "Morgan in his boat," took the direction of the falls, he must have rowed up stream to Lewiston, which from the gentle current of the Niagara, he might have accomplished; but then, to talk of passing up the rapids, breasting the tumbling and foamy river for seven miles, through the tremendous gulf, must be the work of a super-human agent. And then, to take a "Salmon leap" of 150 feet, up the feathery sheet, to gain a footing on the centre of the horse shoe! would require more than mortal exertion.

[Black-Rock Gazette.

[Here now, is our neighbour nailed flat upon the counter. We do not know how he can back out of this scrape, unless he meant to pull Morgan up the feathery sheet, by the cable-tow. If he tells many more such thumpers we shall be obliged to strike his name off our list of friends; and besides if he goes on at this rate his readers wont believe a word that he says, by and bye. Who ever heard of a man's climbing up Niagara falls (against his will!) at midnight for the sake of jumping off the horse shoe! Friend Solomon has undoubtedly brought on a hypochondriacal affection, by dreaming. We recommend him to receive medical aid immediately; to live abstemiously; and not dream with his eyes open about lucky numbers, for the next twelve hours.]

We have a review of the "Morgan case" in type; but have omitted it this week, in fear of nauseating our readers with the subject.

LITERARY. We have received the first number of a new monthly publication, entitled *The Boston Lyceum*. The editorial department is under the direction of Mr. F. S. HILL, editor of *The Memorial*, &c. &c. The productions in the Lyceum are written with vigour and good taste; and we notice among its correspondents names highly esteemed by the lovers of fine writing. The contents of this present number are—*Reviews*—A selection of Eulogies, pronounced in the several States, in honour of those illustrious Patriots and Statesmen, John Adams and Thomas Jefferson. Yorktown, a Historical Romance. The Grave of Byron, with other poems: by George Lunt. The Cities of the Plain by S. L. Fairfield. *Miscellany*—Editor's Address. Notes on France. Blue Devils. Posthumous Reputation. Christmas. *Original Poetry*—To—Anna. The Last Survivor of the Signers of our Declaration of Independence. The Music of the Winds. *Critical Notices*—Annals of the Town of Keene. Poems by Felicia Hemans. Diary of an Ennuyee. The Literary Gem. Goode's Book of Nature. *Table Talk*—Scene at Sea. Washington Irving. Campbell. Jeu de Mot. New Novel. Dramatic Jeu d'Esprit. Madame Geoffrin. New Theatre. Storm at Sea. Somerset House. Bonaparte and Talma. Ignorance of Europeans respecting America. *Drama*—Federal Street Theatre. *Political Summary*—United States. State Legislature. Foreign Summary.

The Lyceum is a neat specimen of printing, and is published on the 15th of every month for four dollars a year. The present number contains 56 octavo pages.

✂ J. B. Moore, Esq. of Rensselaerville; J. C. Burnham, Esq. of Schenectady; and R. Parkinson, Esq. of Natchez, Miss.; will act as agents for the American Masonic Record and Albany Saturday Magazine, at their respective places of residence, and in the vicinity of the same.

✂ The Right Rev. Bishop HOBART, will hold confirmation in St. Peter's Church, in this city, on the afternoon of to-morrow.

GOODE'S BOOK OF NATURE. Dr. Goode is one of those bright instances of the triumph of persevering industry over the prejudices of the world with regard to the dogmas of scholastic discipline. The strength of his own mind has gained him an enviable literary reputation, and the superiority of his self-education has been amply demonstrated by his numerous productions. His poems, particularly his translation of Lucretius—and his medical works are already known to the world; and we find him now, at an advanced age, offering to the public a production which will be as much admired from its being founded upon the principles of common sense, as for its unostentatious display of research and erudition. The lectures in the Book of Nature contain no visionary flights, but the reader is led on pleasantly and delightfully in the path of knowledge, with the mind always sufficiently excited to prevent any weariness. We cheerfully recommend these volumes, for they cannot be perused without benefit.

[*Boston Lyceum.*]

POEMS BY FELICIA HEMANS. This lady has been before the public, as an authoress, for several years, and has been constantly gaining favour with the public, and adding new laurels to her wreath, at every progressive step in the walks of Fame. There is a degree of finish in all her emanations; and a tempering of common sense mingled with her inspiration, evincing as much regard for the opinion of the world, as of carefulness for her own justly acquired renown. While the muse of Scott has passed into almost utter oblivion, and that of Campbell has been fluttering with weak and weary pinions about the Heliconian spring;—while Coleridge has mused in silent listlessness, "forgetful of his own bright name," and Leigh Hunt toiled to stir up an

effervescence in his little quiet pool; while L. E. L. has simpered about love, and fainting hearts, and "plighted vows that have been broken" till she has exhausted the patience of her readers, as well as her own vocabulary of babyish sentimentality,—Mrs. Hemans has gone on in her career, with her eye fixed steadily on the utmost height of Parnassus, and has gained an ascendancy of which she may well be proud. These volumes of poetry, will, undoubtedly, retain a conspicuous place in the literary annals of the present age. [ib.]

NATURAL HISTORY. Ornithology is generally considered as one of the most important branches of natural history, and yet we have no good popular account of the habits and external characteristics of Birds. Mr. Jennings, the author of a work on the Somersetshire dialect, is about to supply this deficiency in our scientific literature. The work is modestly enough entitled "An introduction to the Natural History of Birds." [Eng. paper.]

NEWS AND TABLE TALK.

The Edward Bonaffe, the last vessel which has arrived from France, bringing us dates only to the 16th December, could, of course, give no light upon the manner in which the recent incursion from Spain into Portugal, and the efficient stand which has been taken by Great Britain in her favour, will be viewed by France. The little sympathy, however, which the folly and bigotry of Spain have of late permitted on her behalf among the continental powers, renders it probable, that if the English keep within the line laid down by the British minister, which is merely to fulfil the obligations of a previous treaty, and assist Portugal to repel invasion, the affair will end nearly as soon as it began, and that the other powers will content themselves in remaining spectators. Nor do we see any thing in the state of continental Europe, which at the present moment can dispose it for war. France is eminently happy in the prosperity of her agriculture, her commerce, and her manufactures, and comparatively free and satisfied with her government. The liberals and Jesuits sufficiently balance each other to restrain the turbulence of the former, while the latter retain an influence, which may be hazarded by allowing greater activity to many restless spirits, through the medium of a war. If we may credit Mr. Canning, the crusade which France made into Spain, headed by the Duke D'Angoulême, for the purpose of aiding Ferdinand against his own subjects, has even become more unpopular in France than in Spain, and she would now be willing to withdraw her 30,000 men from the latter kingdom, and relinquish her posts, could she obtain any thing like indemnity for her expenses; and retire, could she do so short of a sacrifice of her national pride.

It is not probable that any events can grow out of the English campaign, to excite the jealousy of Russia; and as for Austria, although she breathes herself against the dissemination of free principles, she is, if we may credit recent accounts, as sick of supporting her army in Naples, as France is hers in Spain, and is about to withdraw it. Prussia, Denmark, and Sweden, desire only to be let alone, and it would seem as if Portugal might be left to settle down under her new constitutional system, and Spain to struggle with her bigoted court and her malcontents. We see not but that every continental government has more to hope from retaining their present attitude than disturbing the existing order of things for the purposes either of interest or ambition. Still, however, we consider the different powers of Europe in some degree like the component parts of a grand electrical battery, and therefore it requires more than human sagacity to predict the result of any important movement of any one leading power. That the Peninsula will, for a long time to come, be the seat of much intestine commotion, and that the struggle between the ecclesiastical power and the reformists will continue bitter and bloody, we have little doubt. We have as little that Portugal will become as free as she is susceptible of; and that, after a rancorous contest between the parties in Spain, she too, at a late day, will arrive at something like constitutional freedom.

There are two flannel factories at Amesbury, Massachusetts, which finish weekly 500 pieces of flannel. The first factory commenced in 1821, and the second in 1825. Their water-power comes from the *Powow*. It is said that the *Powow* flannel is equal to any in the world.—A rum factory is going to be established at Tallahassee, Florida. A joker said they must be rum fellows that would never think of such a thing in the wilds of Florida.—Great mistakes are made in partridges—we do not mean Capt. Partridge—but the birds known by that name. What is called a partridge in Massachusetts is called grouse in New-York and a pheasant south and west of the Delaware. What is called a quail in New-England and New-York is called a partridge in the southern states. So there is much in understanding the application of names. A real partridge is a wandering bird, something as racy as an Arab or a Yankee.—We find that a printer in Boston has published a new paper called the *Youth's Gazette*, intended for young men. In a short time we may have "The Girl's Courier," "The Schoolboy's Advertiser," "The Little Miss's Court Calendar," "The Baby's Budget," &c. &c.—The Philadelphians must be fond of chess and mathematical ways of thinking. It is said the company visiting the automaton is still increasing. The ladies are particularly fond of calling upon the Turk.—A bill has been introduced into the Pennsylvania legislature to build a church by giving a lottery.—The theatres begin to fall off considerably. It is only very celebrated performers that bring full houses. A comic actor the other day swore by Jupiter, that if matters did not mend, he would set up a grog shop, for that was the best business a-going since the lotteries were about being diabled.—

We talk much about our freedom and independence, yet such men and aristocrats are permitted to control public sentiment and industry by means of monied coalitions. Banks will be the most dangerous combinations our country will experience.—Mr. Reynolds has been lecturing in Annapolis, where the Maryland legislature is now in session. An editor says that he has been half seduced from his belief in Newton.—Vigorous measures are adopting in Baltimore for the prosecution of the Susquehanna canal. This improvement when completed, will be of great utility to that city.—It is said that the exports of Cuba equal in value two-thirds of the whole exports of the United States.—A million and a half of oranges are gathered in the vicinity of St. Augustine, Florida.—By a single act of the South Carolina legislature over twenty incorporations are created, such as jockey clubs, sister of charity societies, fire engine companies, religious associations, &c.—Matrimonial difficulties are increasing in the world. During the last year many husbands and many wives have been advertising each other. In Ohio a husband advertised his wife that she had not performed her duty. The wife retorted, and said he had not performed the duty of a man.—A new literary Gazette is proposed to be published in Philadelphia. It is to be edited by Dr. M^r Henry.—The weather has not been so cold in Baltimore for seven years past.—It is said that the retaliatory measures to be proposed in Congress for the refusal of the English to negotiate on the colonial trade will not take effect till September next, for the purpose of giving England time to repent.—The demand for domestic goods at Providence is rising beyond the supply.—The weather has been so cold in Washington that the editor of a paper could not go to either House to report.—There were 1354 deaths in Boston during the last year, of which 231 were of consumption and 88 of intemperance.—The Georgia resolutions respecting the amendment of the U. S. Constitution as regards the Presidency, have been presented to the legislatures of Massachusetts and New-York.—The Right Rev. Dr. England lately read before the Charleston Philosophical Society, a communication on the religious rites, belief, &c. of the Aborigines of North America, and successfully attempted to prove their belief in Polytheism, in opposition to the opinion of Hume. In the course of his argument, several letters, illustrative of the Indian character, written by Roman Catholic Missionaries, were happily introduced.—The river Delaware, opposite Chester, and as far as the eye can see, is completely frozen over. A number of persons have crossed it from the Jersey side.—A bill to divorce Henrietta S. Love a vinculo matrimonii, passed the Maryland House of Delegates the other day by a large majority. The name was an echo the thing done, one would think. The bill passed in company with resolutions on a Polar Expedition.—The Philadelphians are skating by hundreds on the Delaware ice. The ladies too mix in the amusement in the sliding way.—It is said that no state in the Union has so much money expended in it as the Missouri.—This arises from the Army, the Indians and the Lead Mines.—A Mr. Cambridge was to make his first appearance at Boston on Friday evening last in the character of Rollo.—General La Fayette's grant of 20,000 acres is in the neighborhood of Tallahassee, the capital of Florida. This is said to be a charming country, producing the wild grape plumb, and may be fit for the silk worm.—Portable lanterns lighted with gas are now used in England. The carriages are lighted with gas.—A number of the citizens of Norristown, lately roasted a fat deer on the ice of the Stony Creek, and eat up the fellow on the spot. If an English traveller hear of this he will write to his friends in England thus, "a flock of the savages at a place called Stony Creek caught a deer recently and actually eat him up raw on the spot."—The disturbances recently made by the Indians in Florida have been quelled by the troops who apprehended the murderers, &c. The Georgian troops were within 40 miles of Tallahassee.—The project of calling a convention in Maryland to amend the constitution has received the go-bye for the present.—There are 63 incorporated academies in Massachusetts and 25 in Maine. 39 grants of land, each six miles square, have been given to an equal number of the academies. One of them has received a lottery.—A committee of the Massachusetts legislature have made a report on the subject of a rail road from Boston to the Hudson, in which they speak decidedly in favor of the measure. The expense is estimated at \$15,000 per mile; the aggregate cost (160 miles) at \$2,400,000; and the annual income at \$300,000.

MR. KEAN. Few men have been more conspicuous, or rather notorious, than Edmund Kean. He is, undoubtedly, a man of talents, and, as an actor, stands in the very first rank. But he appears to be as distinguished for want of moral principle, and for a total disregard of the good opinion of society, as for ability and merit in his profession. After having made a positive and unconditional engagement with Mr. Caldwell, to be in New-Orleans in March next, after having repeated his positive assurances that no proposals, however flattering, should induce him to break his engagement, he has sailed for Europe, without even offering an apology or suggesting a reason for his fatherly violation of a deliberate contract. Mr. Caldwell has, very properly, published his letters and given him the character such conduct deserves. In March last he wrote, that he should be "very happy (agreeing upon terms) to pass a portion of the ensuing winter in the western states." Mr. Caldwell, in reply, told him to make his own terms, adding, "I will agree to them at once." In May last he stated, by his agent, that he would be at New-Orleans as early in March as he possibly could, and in June he said he "should leave New-York for New-Orleans late in January or early in February;" adding, "in March I trust to make my bow to a public, who already have claims upon my feelings by the flattering terms of their invitation." In September he says, "I again assure you I shall be at New-Orleans by the first of March, winds and weather permitting;" and adds, "in consequence of my engagement with you, I have resisted the proposals of 100l. per night from the Theatre Royal, Drury Lane, Covent Garden, and Dublin." Yet, after all these assurances and re-assurances, he has broken his engagement and gone to Europe, at the very time he should have been making his arrangements to proceed to New-Orleans. This seems to be in keeping with the general character and ordinary conduct of Mr. Kean, and he deserves to lose all the patronage which his talents as an actor have commonly secured to him.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

CONTENTMENT.

If in a mortal mind
Contentment hath a rest,
Where shall a son of sorrow find
A soul so richly blessed?
The worldly hopes of each degree
All bid the inquirer, "follow me."
Who says that *Wealth* and *Power*
Are fitted for her seat?
Lo! thorns are strewn in every bower
To wound the nabob's feet:
While he whose boundless way inspires
Cannot even rule his own desires.

And *Wisdom* is a foe
The cherub scarce suspects,—
The wise are doomed to feel and know
Their follies and defects.
And self-rebuke makes any breast
Too narrow for Contentment's rest.

Truth has a voice which shakes
Her altar to its base;
And ill betide the heart which makes
Its only resting place
So near her dwelling as to know
Earth's daily narrative of woe.

And *Love*—the tenderest tie
Which trembles in the breast—
Though blessed, and loved again will sigh
A stranger to her rest.
The truest joys the heart can gain
Are linked by many a cord to pain.

If *Wealth*, and *Power*, and *Truth*,
And *Love* requited, fail,
Heaven direct the inquiring youth
To her frequented vale.
But *Earth*!—too plainly do I see
Thy wretchedness, to follow thee.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

CHARMS OF WOMAN.

Like the star-rays that beam
On the blush of the rose,
Like the fanatical dream
In the noon-tide repose,
Like the moon's mellow ray
On the red cherry's hue,
Like the dawn of the day
To the mariner's view,
Are the rich ruddy smiles on the lips of the fair,
The balm of the blest, and the solace of care.

Like the gold-glowing sky
At the evening's close,
Like the ruby-red dye
Of the opening rose,
Like the tulip beside
The white lilies that bleach,
Like the rosy rich pride
Of the ripening peach,
Is beauty's bright blush on the face of young love,
The type of the virtue of angels above.

Like a star 'neath the waves
In a perilous night,
Like the violet that laves
In the dawn's dewy light,
Like the blue-bell when hung
With the drops of the shower,
Like the chilly frost flung
On the sensitive flower,
Is the bright eye of woman, dissolving in tears.
O then she most lovely and charming appears.

Milford, Del.

MILFORD BARD.

[Our friend B. is not exactly under the Muses' thumb. His Pegasus bolts, occasionally; and, besides, he drives a little in the whimsico-dolorous style.—EDIT.]

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO ———.

I saw thee in thy brightest hour,
When Beauty's garb was round thee;

When hope and glee seem'd striving, which
First with joy should crown thee.
I saw thee when thy wreathed smile,
Was first in beauty woken;
Whose dazzling sweetness conquer'd all,
E'en though thou ne'er hadst spoken.

I saw thee when thy soft blue eye,
In loveliness was beaming,
Which seem'd a radiant orb of heaven,
In its own clear azure gleaming.
I saw, when round thy radiant brow,
Thy sunny curls were playing;
And deem'd thee, even some fairy thing,
From its bright world straying.

But oh! there came a high-born youth,
Whose words of silver sweetness,
Flash'd in thy heart a vivid flame,
E'en with a lightning's fleetness.

I saw a change—thy bosom's throb,
Betray'd a tender sadness—
The fleeting blush, and burning eye,
Presaged thy heart's deep gladness.
Oh! what wild rapture swell'd thy breast,
When the stranger youth was smiling;
Thou didst not deem, in thy dream of love,
That he was base beguiling!

Oh! false as hell was the whisper'd vow,
He swore to the lovely maiden!
And he scornfully laugh'd at her proffer'd faith,
And he has left her alone and forsaken!
Oh! it fell on her heart, like a hideous knell,
That told her 'twas lost and broken.
And her silent, and dreary, and fearful smile,
Was a sad and dreadful token!

I saw thee again, 'mid a gloomy storm,
When thunder the Earth was quailing;—
See! the lightning has dash'd thy boy from thy breast!
Now hark! 'tis a maniac wailing! B.

From the Boston Lyceum.

TO ———.

My cup has been a bitter one—yet time cannot erase
From the lorn tablet of my heart the image of thy face;
Last night upon my sleep it came, as soft itself as sleep,
And rose upon my vision like a star upon the deep.

That voice—methought I heard that voice—although the lips
were mute—

Its music like the dying wind upon a silver lute;
I caught the gleam of sunny hair and listen'd to the fall
Of footsteps like the antelope's—so light and musical.

Thou art a pleasant memory preserved 'mid worldly wrong,
And thou shalt be the feeling and the voice of every song;
Yea, even as the Pilgrim greets the fount in balmy shade,
My thirsting heart still stoops to thee and worships, though
betray'd.

Thy days like summer rivers run, and summer friends are thine,
And hearts that never bow'd before are bending at thy shrine;
Thou glidest through the festal hall unmindful of his fate
Whose soul like that deserted hall is dark and desolate.

The cloudy Past his golden hopes has turn'd to sick despair,
And the dim Future will but stamp his brow with deeper care:
Those very tears and smiles of thine are but the masquer's art,
And that worst famine, want of hope—thy tribute to his heart
To sad and broken whiteness soon thy kindling cheek shall
wane.

Those eyes shall have no brightness but the tears of grief and
pain—
For why does India's glittering bird 'mid careless eyes depart?
That bright bird wants the gift of song and thou, the gift of
heart. A. A. L.

From the New-York Crystal Hunter.

THE SNOWFLAKE IS FALLING.

"Curtis. Who is that calls so coldly?
"Grumio. A piece of ice: If thou doubt it, thou may'st
slide from my shoulder to my heel, with no greater a run than
my head and my neck."

The snow-flake is falling
Upon the bare tree;
The wild duck is calling
Above the white sea.

The sun seems to sicken
When soaring at noon;
But diamond lights quicken
Around the cold moon.

The wren, from the bramble,
Is perch'd on the thatch;
The dappled deer ramble
The lichen to snatch.

The rough wind increases
Around the mill sail;
The sheep turn their fleeces
Away from the gale.

O'er meadow and dwelling
The misty clouds skim;
The quiet cow's smelling
The icy pool's brim.

The field flow'r is holding
The icicle's train;
And autumn is folding
Her leaves on the plain.

Ho!—press the doortighter;
Come—curtain the room;—
Those logs should be brighter
To frighten the gloom.

Now—set the pile blazing;—
Here—draw the red wine;
Our cups we'll be raising,
To thine and to mine.

Yes—here's, with its flushing,
To her that's away;
Whose heart may be gushing,
While mine must be gay.

May old friends caress her;
May dearer friends smile;
May both her boys bless her—
Her sorrows beguile.

May earth, with its pleasures,
Surround her for years;
And God, with his treasures,
Subdue all her fears. C. E. E.

LOVE AND HYMEN.

When Love and Hymen both were boys
They fix'd a day of smiling weather,
To show each other all their toys,
And pass an afternoon together.

To Hymen's bower young Cupid came,
And each with each was quite delighted—
Love shot his darts of surest aim,
And Hymen's brightest torch was lighted.

But Hymen soon, capricious elf,
(Now Hymen's but a peevish fellow,)
Told Love he wish'd the bow himself,
And then began to pout and bellow.

Love gave his friend the weapon straight,
(Young Love is such a cheerful giver!)
And thus, for Hymen's torch of state,
Changed his best bow and fullest quiver.

While each his proper arms possess'd,
Men neither could nor would resist them;
For Hymen's fires inflamed their breast,
And Cupid's arrows seldom miss'd them.

But, changing thus their arms about,
The boys became perplexed and stupid;
Love put the torch of Hymen out,
While Hymen blunts the shafts of Cupid.

'Twas this dissolved their union sweet,
And broke affection's firmest tether.
So, now, if Love and Hymen meet,
They seldom sojourn long together.

ELEPHANT DESTROYER. Elephants, though from their size and strength formidable to all the other inhabitants of the forest, themselves live in continual apprehension of a smaller reptile, against which neither their sagacity nor their prowess can defend them. This diminutive creature gets into the trunk of the elephant, and pursues its course till it firmly fixes in the head, and by keeping him in continual agony, at length torments the stupendous animal to death. So dreadfully afraid are elephants of this dangerous enemy that they use a variety of precautions to prevent his attacks; and never lay their trunks to the ground, except to gather or separate their food.

To expunge faults where there are no excellencies, is a task equally useless with that of the chemist, who employs the arts of separation and refinement upon ore in which no precious metal is contained to reward his operations.

MASONIC RECORD.

—Semita corte,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

HON. W. B. ROCHESTER'S ADDRESS.

The following ADDRESS, was delivered at Bath, in the county of Steuben, on the festival of St. John the Baptist, before Enos Master's Lodge, No. 323, and Zion Mark Master's Lodge, No. 81, on the 24th of June, 1820, by brother WILLIAM B. ROCHESTER.

Worshipful Master, Wardens, and Brethren:

The meekness and the benevolence of the eminent and inspired patron of masonry, the anniversary of whose nativity we are this day celebrating, will, if practically appreciated, prove a salutary lesson both to the speaker and to the hearer, on the present, as well as on all other occasions.

Supported by this belief, and long sensible of the harmonized feelings which impart a charm to our secret labours, may I not reasonably hope that every effort, whether of thought or expression, however crude or illtimed, will be received with that fraternal indulgence which characterizes the craft?

When I look around me, and behold so many, my seniors in years, in discretion, and in science, I must be permitted to declare, that nothing short of a profound sense of that willing obedience which is due to the wishes of the fraternity, could have prompted me to attempt so prominent a part of our interesting exercises.

Assembled as we are, to exhibit a public manifestation of reverence to the virtues of a sainted brother, let it be deeply impressed upon our memories, that external ceremony does not unerringly indicate the homage of the heart, and that the world will look to our conduct for the test of our sincerity and merit, whether as men, as masons, or as christians.

Masonry is a system co-eval with the first rudiments of civilization and refinement; nay, some who have ministered to the altar, have, without compromising their orthodoxy, ventured to trace its origin to that momentous period, when man, by the Almighty fiat, was spoken into existence, when "the spirit moved upon the face of the waters, and God said let there be Light." Its antiquity, however, cannot, will not be disputed; history confirms the fact that it has existed in all ages, and flourished in all countries; nor can its Tuscan pillars and Corinthian columns, which are based on the deep foundations of immutable truth, be destroyed, until they are swept into the abyss of universal desolation.

It was not until king Solomon built the temple at Jerusalem, on Moriah's mount, where first the destroying angel was appeased, that masonry assumed its stability of form, and beauty of proportion; it was not until that memorable epoch, that a regularity of working, and symmetry of structure, were established.

Such was the wisdom and forecast of the royal Architect, that notwithstanding his visible fabric has long since mingled with the dust, still the towering speculative edifice, whose Mosaic pavement stands upon HOLY GROUND, whose *tessel* encompasses the living springs of refined and plastic enterprise, and the head of "whose corner is made of the stone which the builders rejected," remains unimpaired by the ravages of time.

It has survived the reign of barbarism, the rude shocks of Gothic violence, and the convulsions of exterminating war. Societies, systems, cities, nations, and empires, have successively disappeared. Nought but broken columns and dilapidated temples designate the site where once stood Rome's illustrious rival; and Rome herself, proud Rome, is almost a pile of ruins; the lofty spires of her four hundred temples, are nodding to the earth; the brazen statues have fallen into decay; the villas of the Fabii and the Cæsars have become the lurking retreats of brigands and desperate assassins; the mistress of Asia is blotted from the face of empire; yet masonry exists in all its pristine vigour and beauty,

scattering blessings to the four corners of the habitable globe.

Wherever the liberal arts and sciences have flourished, they have been made tributary to the mystic behest, and perhaps at no period since the distinguished era, to which allusions have been made, could the annals of masonry more justly than at present boast of its imperishable grandeur. Indications of decay, have, it is true, in the lapse of ages, apparently threatened the demolition of the noble structure, but it was only the mould of neglect, forming for a season, over the rough ashlers of the building, which were exposed in the shades of ignorance, the damps of superstition, and the mildews of vandalism. The corrosive incrustation has long since yielded to the gavel of science, and the chissel of refinement. The polished fabric on whose *key-stone* is "written the new name, which no man knoweth saving him that receiveth it," at this day presents to the admiring view of the accepted, its original Ephesian aspect, bearing upon its pilasters the stamp of duration, and containing within its spacious apartments, the incense of devout gratitude, and the hidden manna of life. The nations of the east are gradually emerging from heathenish darkness. The day star seems to proclaim that light is beginning to dawn again in that once favoured land which gave birth to masonry, and which received the impress of a Saviour's feet.

Our sublime institution has, for its fundamental principles, universal benevolence, and brotherly love; it stimulates its professors to deeds of charity, and offers to them dignity and respect; it illustrates those awful truths which

— "point out an hereafter,
And intimates eternity to man."

To a corrected mind, and a faithful heart, it furnishes a balm for every affliction. There is no selfish inclination which it is not calculated to banish; no generous sentiment which it is not intended to inculcate; it discourages defamation; it tempers the passions, and fortifies the heart; it enjoins us to be faithful to our trusts; to let the words of our mouths express the thoughts of our hearts; to renounce error; to avoid rash engagements, but what we do promise, religiously to perform.

It would, however, be useless to declaim upon the excellence of the virtues, which are constantly arrayed before us in the most captivating manner. Every maxim of the craft breathes with them; every example of our distinguished sages illustrates them; every admonition contained in our mystical pages, eloquently enforces them; every tenet learned from the oral lectures of our enlightened compeers, teaches the bright lesson of love, charity, and universal benevolence.

When the direful blasts of war assail an unhappy country, and embattled legions of kindred men are engaged in the strife of blood; when thousands perish by the victor's sword, and humanity shudders at the sight, the mason's well known sign preserves the captive from chains. Instead of receiving the fatal weapon in his bosom, he finds himself encircled within the arms of an affectionate brother, and his heart is gladdened by the generous sympathies of a kind friend.

We have innumerable legends, which are treasured in memory, and constitute a species of intellectual heritage. Tradition has preserved and transmitted them from brother to brother, in a manner which makes them indelibly more impressive, than the modes of communication adopted by other institutions. They are not the day-dreams of a romantic imagination, but a pleasing reality; the banquet of chastened thought, combined with the fruits of tender monition, which are equally delightful, interesting, and permanent.

Our entire system is conceived in a strain of beautiful allegory, and furnishes hieroglyphics to remind us constantly of our duty to ourselves, to our neighbour, and to our God. The ark of innocence will waft its inmates in triumph over the tempestu-

ous billows of adversity; and the anchor of well grounded hope, which has been cast in the furnace of affliction and repentance, will safely moor them in the peaceful haven of felicity "where the wicked cease from troubling, and the weary are at rest."

Can you, my brethren, without sensations which can be better felt than expressed, seriously meditate upon the uncertain tenure of life? Behold our appropriate emblem: how almost imperceptibly the minute particles pass away, and yet in one "little hour" they are all exhausted! Thus wastes man: "to day he puts forth the tender leaves of hope; to-morrow blossoms, and bears his blushing honours thick upon him; next day comes a frost, a killing frost, which nips the bud, and when he thinks his greatness is a ripening," the brittle thread of life is lengthened out to the last strike of the reel, is suddenly snapt in twain, and his accountable soul launched into the boundless ocean of eternity.

Masonry has ranked among her votaries, men most prodigal of good gifts to the human family, and celebrated for their sterling virtues: philosophers and statesmen, heroes, kings, and princes, both in ancient and modern days, have been proud to divest themselves of the ermined robes of power, in order to put on the more honorable badges of our order; and have thought it no disgrace to bring themselves to the level, which knows no rank but that attained by superior wisdom and purity; and acknowledges no distinction but that which untiring zeal, and masonic devotion secure to their possessor.

Solomon, who preferred wisdom to all other earthly blessings; Hiram, who erected the temple of the living God; and St. John the Baptist, and precursor of him "who spake as never man spake," have consecrated our annals. But without resorting to antiquity, or adverting to the many living ornaments who at this day adorn the ecclesiastical and civil departments of the world, our own favored country furnishes a splendid list of departed worthies, who yield not their attachment except with their last breath. Warren, the martyred hero, who fought, and bled, and died, under the first ensign of liberty which America bravely unfurled, was a mason; so was Franklin, the philosopher who could wrest the lightning from heaven, and make it familiar with the instruments of his laboratory. And so also was Washington, "that blazoned star amidst the bright constellation of the universe, which eclipses the splendour of every surrounding luminary."

Well indeed may the institution which can boast of such champions, dispense with the meed of a studied eulogium; "recorded honours shall gather round their monuments, and thicken over them; they are solid fabrics, and will support the laurels that adorn them."

Masonry knows of no geographical boundaries; its residence is the universe: the sons of India and America alike shine upon its diffused existence: mysteriously bound by the unbroken compact, it is spread over the surface of both hemispheres, it ranges restless, through every region and through every clime. The thunders of the Vatican, the receipts of imperial despotism, the terrors of the Auto de fe, and the tortures of the inquisition, have in vain essayed to check its illimitable progress, "no tint of words can spot its snowy mantle, nor chemic power turn its sceptre into iron."

Religious and political disputes enter not our portals: every sect (acknowledging a Supreme Being) is equally respected by our order: all are left free to pursue whatever they deem important to Zion, or to the world; never forgetting, however, that we are to keep within the square with all men, and to regard the sacred volume as the only sure guide to eternal happiness.

The principles and privileges of the order are open to all, whose capacities qualify them for exercising the one, or inhibiting the other: but let it not be vainly supposed, that therefore every individual

who enters our mystic sanctuary is necessarily a free and an accepted Mason; far from it; and, brother Masons, however humiliating the reflection, too true it is, we must acknowledge to the world the lamentable fact, many, after long trial, and strict examination, have come out of the furnace, seared and scarred: disqualified and unworthy: many, too, many have been "weighed in the balance and found wanting:" they only who hold out to the end, who in all situations, and in defiance of every temptation, prove themselves true and trusty: they alone catch the unquenchable element which animates the craft, and incites them to deeds of honour, and noble daring.

He who can faithfully represent that certain point, within the circle, embroidered by the parallels of Christianity, on whose vertex rests the volumes of inspiration, and wherein are contained the commandments on which hang the law and the prophets, may well exclaim with the philosopher of Saneos, *Ureka*, I have found it; and it will require the sacrifice of a hecatomb to secure to him the benefits of the discovery.

[Conclusion in our next.]

MASONIC HONOR.

Never perhaps did any body of Freemasons pay more deserved honors to humble but inflexible integrity, than yesterday, when 190 members of a single lodge followed the corpse of Mr. Pendrell to that most durable of all masonic or architectural works, the grave! Mr. Pendrell was by trade a shoemaker, and resided when alive, in Newgate street. At the time when a reward of £1000 stg. was offered for the apprehension of young Watson, he secreted him in his house dressed as a female, watched over him to prevent the approach of every intruder, accompanied him to the United States of America, and never left him till he saw him in a place of safety—yet was Mr. P. very poor. His refusal to betray the trust he had accepted, and obtain the reward, was a great sacrifice of interest to honor; and his further exertions on behalf of the young man who had confided in him, were made at a great cost of time and trouble. He was rewarded in life by the testimony of his conscience, and in death by the avowed approbation of those who were best acquainted with his merits.

SCIENCE AND THE ARTS.

GROUND SWELL.

The ice in the Polar regions accommodates itself to the surface by bending, but when several yards in thickness, it refuses to yield beyond a certain extent, and is broken in pieces with dreadful explosions. The best account that we know of the appearances presented on such occasions, is given by a party of Moravian missionaries, who were engaged in a coasting expedition on the ice along the northern shore of Labrador, with sledges drawn by dogs. They narrowly escaped destruction from one of those occurrences, and were near enough to witness all its grandeur. We extract it from the recent interesting compilation of the Rev. Dr. Brown, on the history of the Propagation of Christianity. The missionaries met a sledge with Esquimaux turning in from the sea who threw out some hints that it might be as well for them to return; after some time, their own Esquimaux hinted that there was a ground swell under the ice; it was then scarcely perceptible, except on lying down and applying the ear close to the ice, when a hollow disagreeable grating noise was heard ascending from the abyss. As the motion of the sea under the ice had grown more perceptible, they became alarmed, and began to think it prudent to keep close to the shore; the ice also had fissures in many places, some of which formed chasms of one or two feet, but as these are not uncommon even in its best state, and the dogs easily leap over them, they are frightful only to strangers: as the wind rose to a storm, the swell had now increased so much that its effects on the ice were extraordinary and really alarming. The sledges, instead of gliding smoothly along on an even surface, sometimes ran with violence after the dogs, and sometimes seemed with difficulty to ascend a rising hill; noises too, were now distinctly heard in many directions like the report of cannon, from the bursting of the ice at a distance: alarmed at these frightful phenomena, our travellers drove with all haste towards the shore, and as they approached it the prospect before them was tremendous; the ice, having burst loose from the rocks, was tossed to and fro, and broken in a thousand pieces against the precipices, with a dreadful noise, which added to the raging of the sea, the roaring of the wind, and the driving of the snow, so completely overpowered them as almost to deprive them of the one or both their eyes and ears. To make the land now was the only source that remained; but it was with the utmost difficulty that the frightened dogs could be driven forward, and as the whole body of the ice frequently sunk below the summits of the rocks and then rose above them, the only time for landing was at the moment it gained the level of the coast, a circumstance which rendered the attempt extremely nice and hazardous; both sledges, however, succeeded in gaining the shore, and were drawn up on the beach, though not without great difficulty; scarcely had they reached it when the part of the ice from which they had just escaped burst asunder, and the water rushing from beneath instantly precipitated it into the ocean; in a moment, as if by a signal, the whole mass of ice for several miles along the coast, and extending as far as the eye could reach, began to break and to be overwhelmed with waves, the spectacle was awfully grand, the immense fields of ice rising out of the ocean, clashing against one another, and then plunging into the deep with a violence which no language can describe and a noise like the discharge of ten thousand cannons, was a sight which must have struck the most unreflecting mind with solemn awe. The brethren were overwhelmed with amazement at their miraculous escape, and even the pagan Esquimaux expressed gratitude to God for their deliverance.

[London Mechanic's Magazine.]

BALLOONS.

A writer in a recent number of a Continental publication recalls the public attention to the subject of balloons, and expresses a persuasion that that invention, will, in some future day, be considered as of much greater importance than it has hitherto been. He subjoins a description of the use which was made of balloons in the earlier periods of the Revolution, contributed by an old officer of

the name of Coutelle, who at that time was appointed captain-commandant of the balloon corps! and a transcript of a manuscript memoir on the same subject by M. Meunier, an officer of engineers, and a member of the Academy of Sciences. Some of the most remarkable details are as follows:—

A proposal having been made to the Committee of Public Safety to employ balloons with the armies, for the purpose of observation, it was accepted, on condition that sulphuric acid should not be employed in their inflation, sulphur being scarce and necessary for the fabrication of powder. The means resorted to were to obtain the gas by the decomposition of water on hot iron. A large apparatus for that purpose, and a balloon 27 feet in diameter, were constructed by M. Coutelle, whose experiments on the subject completely succeeded. He was sent to the French army under General Jourdan, at Manbeuge, and ascended repeatedly to the height of 270 fathoms (the length of the cords by which he was retained) which gave him an opportunity of observing all the movements of the enemy. On several of these occasions he experienced great danger from the violence of the wind; and in one instance was fired at three times during his ascent, the balls passing so near the balloon, as to induce him to fear that they had perforated it. The victory of Fleurus was in a great degree attributable to the advantage which the French derived from the communications made to them by M. Coutelle, from his aerial station, to the manoeuvres of the hostile army. From what reasons ~~does~~ not appear, but the use of balloons in military operations were soon after discontinued.

M. Meunier's memoir is curious. Proposing to himself nothing else but the power of making very long voyages, he had of course to consider the means of sustaining the shocks of strong and adverse currents of air, of stopping and anchoring, of raising himself and remaining at a convenient elevation, of moving in a calm, and of modifying the direction and speed of his progress. Again, as none of the materials of which air-balloons are composed are absolutely impermeable by the hydrogen, it was indispensable to discover how to retain the gas, or to repair its loss. It remained to determine the size, and shape of a balloon, that should be capable of transporting the apparatus, the observers and their instruments, and a quantity of provisions necessary for the longest voyage they might be required to undertake. This skilful mechanic conquered a number of the above difficulties by putting a second cover on his balloon. This outer cover was of linen, not permeable by the atmospheric air. Between the two covers there was a considerable space. A pipe, of the same fabric of the outer cover communicated between that space and a forcing pump fixed in the car. By means of this pump the air between the two covers could be condensed, the volume of the hydrogen diminished, and thereby the mean specific gravity of the fluid contained in the balloon increased. As the cover was scarcely extendible, and as the cords on its outside would not allow it to change its shape, the volume of the balloon varied very little, while its weight increased or diminished according to the mean specific gravity of the two gases which it contained. Thus, when the aeronauts were at a great elevation, all that it was necessary to do in order to descend, was to work the forcing pump, by which the weight of the atmospheric air between the covers was increased, so that the balloon would not remain suspended except in denser, that is to say, in lower air. Ballast was thereby rendered unnecessary. When it was required to ascend, the opening of the valve allowed the compressed atmospheric air to escape. By this ingenious contrivance, the aeronauts were enabled to regulate their distance from the earth; and, as the currents of air at different degrees of elevation frequently run in opposite directions, to get into that current most favorable to the object they had in view. In calms, they made use of oars, by which, however, they could not advance themselves above a league in an hour. The writer seems to think that it would be possible with such a machine, to reconnoitre the interior of Africa, without being exposed to any of the evils which have hitherto proved so fatal to travellers in that country!

[London Times.]

IODINE.

Much has been said of the good effects of Iodine in swellings of the thyroid gland, and against scrofulous tumours in general; but no where has the atal action which it exercises on the breast been properly noticed. M. Hufeland reports, among other cases, that of a girl of twenty years of age, endowed with a good constitution, who made use, during six months, of the tincture of Iodine, for the resolution of a goitre. It produced the desired effect; but she perceived in time that her breasts were sunk, and diminished in volume. Notwithstanding the disuse of the Iodine, this diminution continued, so that at the end of two years there remained no vestige of the mamillary gland. Two other analogous cases might have been cited, but the preceding M. Hufeland thinks sufficient to arrest the attention of practitioners upon a subject of so much importance, for if these facts are confirmed, in a majority of cases, a remedy which deprives a female of one of her most important organs, ought to be rejected. The author asks in conclusion, if it is not possible that this peculiar action of Iodine may extend itself to the other organs indispensable in the conformation of both sexes. Besides he observes the extraordinary effect of this remedy upon those organs in the normal state might be efficacious in a pathological condition. We shall add that the employment of Iodine externally produces the same alterations. M. Eusebe de Salle has successfully employed Iodine in a chronic enlargement of a particular organ, and Magendic in his formulae under the article Iodine, has made known the results of this medicament.

[Silliman's Journal.]

PLATINUM.

M. Pongauit, a celebrated French chemist, has recently discovered a mine of platinum at Antioquia, in the department of Cundinamarca, in Colombia. Hitherto this precious metal, so valuable in the arts, had only been found in the Uralian mountains, in Russia, and in the provinces of Choco and Barbacoas, on the coasts of the South Sea, but always in alluvial lands, where it could only be met with accidentally; but in this case there can be no doubt that the metal exists in real veins in the valley *De Osus* (being very near the province of Choco, from which it is separated only by a branch of the Cordillera of the Andes, which circumstance accounts for the same metal in the alluvial soils of the valley of *De Osus*); and it is sufficient to pound the materials which these veins contain, in order to obtain from them, by washing, the gold and platinum which they embody. Mines of platinum have recently been found in the Uralian mountains in the government of Perma, so extremely rich, that the price of platinum fell nearly one-third at St. Petersburg; and hence we may reasonably expect that this valuable metal will cease to bear that high price at which it has hitherto been sold.

ELECTRICITY.

M. Pouillet, in a memoir on the subject of electricity of gases and atmospheric electricity, deduces that no electricity is developed, by fusion or vaporization, or by the inverse changes in the state of bodies. That during combustion, combustible bodies assume the negative state, and the supporters of combustion the positive state, and that the electricities pass from the combining molecules to those which are ready to combine. That as soon as the vegetation of a plant is well developed, it produces electricity in the earth. That alkaline solutions of soda, potash, baryta, and strontia, however little they be concentrated, give electricity; and the alkali which remains after the evaporation of the water is positively electrified. The other solutions of salts or acids equally yield electricity, and the bodies combined with the water then acquire negative electricity.

CHARACTER.**MIRABEAU.**

Honore Gabriel Riquete de Mirabeau was born at Bignon, near the town of Nemours, on the 9th of March, 1749. He lived 42 years, in which period he underwent every species of persecution, was accused of every sort of crime, thrown into prison seventeen times, by virtue of as many lettres-de-ca-

chet, procured chiefly by his own father; tried, condemned, exiled, executed in effigy. He tasted the sweetness and the bitterness of every individual stream which flows from the fountain of human passion; he gave the immediate impulsion to a mighty revolution; he created and directed the dominant opinions of twenty-five millions of men, for two years together, by the single magic of intellectual superiority; he was hated, and feared, and courted, by antagonist factions; he triumphed over every obstacle, and avenged himself of every enemy; he died an exhausted debauchee, a professed Atheist, amidst the tears and groans of thousands, in the bosom of an immense popularity, a representative. France bore him the first to his tomb within that splendid monument, which she had raised in gratitude to the lovers of their country!

His power at the moment of his victory over the Jacobins was immense; his popularity approached to an idolatry for his person. He was tall, thick and ugly; yet he reigned more indisputably in the hearts of the fair sex than he did even in the tribune. The girls embraced him as he walked in the streets; threw ribbons around his neck, and scattered flowers before his feet. He gave himself up to the most destructive excesses, and sunk himself to apathy in the mad voluptuousness which the finest women of Paris were proud to participate with him. At the same time he never ceased from his intellectual toils; his ambition was never lulled, his reason was never intoxicated, never asleep. He saw with accuracy the exact position in which he was placed, and understood the relative strength and intentions of the various parties with precision. He restrained the Aristocrats within bounds, and repressed the furies of the democratical faction; he might have strengthened the bands of the king—he might have quelled the clubs; he might have saved France! but death came and snatched him from the earth, when his life was invaluable and his loss irreparable. His debauches racked him with pain; his mind became lethargic, his energies languid.

Mirabeau felt that his end was approaching and submitted to it with fortitude. He ordered the windows to be opened wide on the day of his death:—"My friends," said he to Cabinis, "I shall die this day; when a man has arrived at this point there remains but one thing to do—to languish in perfumes, to enwreath his head in flowers, to surround the senses with music, that so he may enter sweetly into that sleep from which he shall never more arise."

He became speechless, but still remained perfectly sensible. His sufferings were excruciating, and taking up a pen he wrote legibly the word *Dormier*. He twice or thrice wrote to express his request that they would give him opium; he fell back again apparently dead; when some artillery being discharged in the neighbourhood, the dying Mirabeau raised himself upon one arm, opened his eyes, smiled, and said with a clear and almost exulting voice, "Sont-ce deja les fumerailles d'Achille?—J'ai pour un siecle de codrage, et je n'ai plus pour un instead de force." He sunk with the effort, and expired.

No monarch was ever carried to his long home with more imposing magnificence; it was rather an apotheosis than a human entombment. The representatives of the people, all the public functionaries, twelve thousand of the national guard, and more than four thousand citizens in mourning, formed the procession. A slow and melancholly music told of departed greatness, the thousand torches, the intermittent cannons, the windows and balconies breathing with all the beauty of Paris, presented a striking and memorable contrast of motion and stillness of life and of death.

DR. FRANKLIN.

Towards the end of the year 1777, the Abbe Raynal, calling one evening on Dr. Franklin, at his lodgings in Paris, found in company with the Doctor their common friend, Silas Deane. Ah, Monsieur l'Abbe," said Deane, "we were just talking of you and your works. Do you know that you have been very ill served by some of those people who have undertaken to give you information on American affairs?" The Abbe resisted this attack with some warmth: and Deane supported it by citing a variety of passages from Raynal's works,

which he alleged to be incorrect. At last they came to the anecdote of Polly Baker, on which the Abbe had displayed a great deal of pathos and sentiment. "Now here," says Deane, "is a tale in which there is not a word of truth." Raynal fired at this, and asserted that he had taken it from an authentic memoir received from America. Franklin, who had amused himself hitherto with listening to the dispute of his friends, at length interposed. "My dear Abbe," said he, "shall I tell you the truth? When I was a young man, or rather more thoughtless than is becoming at our present time of life, I was employed in writing for a newspaper; and as it sometimes happened that I wanted genuine materials to fill up my page, I occasionally drew on the stores of my imagination for a tale which might pass current as a reality: now the anecdote of Polly Baker was one of my invention." "And upon my word," cried Raynal, quitting at once the tone of dispute for that of flattery, "I would much rather insert your fictions in my works than the truths of many other people."

LITERARY NOTICES.

THE MEMORIAL. The editor and publishers of this "annual," encouraged by the flattering reception which their first number has met with in the reading community, take this occasion to inform the contributors to the pages of *Christmas and New-Year's Offering*, and the public at large, that they are commencing a similar volume for the year 1828. Their arrangements have been made with reference to the issuing of a larger and more beautiful Souvenir, than that which they have already presented; and from the resources now at their control, and the devotion of time and attention to its preparation, they trust that the intrinsic merits of their publication will recommend it to notice. They are now ready to receive original communications, designs for engravings, &c. and productions of merit will, when desired, meet with a liberal compensation. All contributions must be forwarded "to the Editor of the Memorial, care of Messrs. True & Green, Boston, Mass. on or before the first of May next."

ATLANTIC SOUVENIR. Messrs. Carey & Lea, proprietors of that popular and beautiful work, the *Atlantic Souvenir*, wish it to be generally known, that all literary contributions should be sent to them for the editor, by the beginning of April, in order to enable them to publish each number in due form and season. The work is open to literary composition in any quarter; and a liberal compensation in money will be paid for all the articles that shall be inserted.

THE FREDONIAD. Subscriptions are obtaining in Boston, for a Poem under the above title, from the pen of Richard Emmons, M. D. of Kentucky. The poem is historical and heroic, being in part a history of the events of the late war. It is proposed to publish it in four volumes. Dr. Emmons is a native of Boston, and is deserving of liberal patronage.

Timothy Pitkin, Esq. of Connecticut, (formerly for many years a prominent member of Congress, and author of a well known work on the Statistics of the Union,) has issued proposals for a work, entitled "Sketches of the Political and Civil History of the United States," from the settlement of the colonies to the close of the Administration of President Washington; to be comprised in two volumes, of 500 pages each, at \$2 50 per volume.

The London Courier of the 12th ult. announces a new work, entitled "The Campaign of the British Army at Washington and New Orleans, by the author of 'The Subaltern.'"

Mr. Jared Sparks, editor of the North American Review, has made arrangements with Judge Washington for publishing an entire edition of "General Washington's Works," to consist of his letters to the Governor of Virginia during the French war, his State Papers, Official Correspondence, both military and civil, and such of his private letters as may be deemed suited for publication; the whole to be comprised in a series of volumes, with notes and illustrations by the esteemed editor.

POPULAR TALES.

THE CONDEMNED CELL.

From the London New Monthly Magazine.

There are tragedies in real life which, but for their every day occurrence, would penetrate men's souls deeper than all the fabled woes that poets ever yet imagined. I do not allude to the consuming or broken hearts which one meets at every turn, and which are either masked by their owners' pride, or pass unheeded by the selfish shortsightedness of the million; but of those public and notorious spectacles on which, as on a stage, the miseries of mankind are exhibited; even paraded without exciting from the beholders more than a passing remark; sometimes without being thought of at all.

The condition of criminals sentenced to die, is of all others the most heart-sickening. Every feeling of humanity revolts at the degradation to which these human beings are exposed; and putting aside the enormity of their crimes, and the justice of their punishment, upon which latter topic much might be said, it is impossible to contemplate men in this condition without sensations of the deepest pain and humiliation. Few persons visit these abodes of wretchedness; and it is perhaps well that they do not. Little good can result from the spectacle; it is indecent to gaze upon sorrows which cannot be alleviated; and as for the benefit of example, always strongly overrated, what can be the force of example from persons whom imprisonment, and suffering, and conscious helplessness, have reduced to a condition little above that of the inhabitants, of Bedlam, in point of intellectual power?

Years have passed since I saw the condemned cells at Newgate; but many more must elapse before the impression which that sight made upon me can be removed, or even weakened. It was on a gloomy November day; the streets were filled with that damp murky vapour which is the reproach of our climate; and everything looked as sad and dull as the task I had undertaken. The approach to Newgate; the appearance of the building, and the entrance to the prison; form a succession of horrors, the gradual increase of which prepare the mind for those which are to ensue, and are a fit prologue to the tragedy behind. The massy fastenings to the doors, the chains, of forms and size as various as the crimes which fill the heart of man, and hanging upon the walls as if in mockery of the ornaments which are to be found in ordinary dwellings; the thick stone walls, through which the passages seem rather to be cut than built, cast a chill upon the blood, and the respiration is checked by the weight which falls upon the animal spirits. This oppression is heightened by the scarcely human appearance of the goalers, who swarm about the entrance of the prison. Originally possessing the same feelings as other men, their features expressed those feelings; but long commerce with the most abandoned of their kind, the necessity for exercising an incessant vigilance, and, more than all, the knowledge of crime with which their minds have become familiarized, have had a blighting effect on their whole being. Like those plants which blossom and flourish under the light of the sun and the dew from heaven, but which in the noisome damps of a dungeon lose their freshness, change their odour for rankness, and their beauty for deformity, these men seem to have been lowered from their first nature, and to have undergone a similar degradation. But frightful and painful as was the approach to this scene of horrors, every further step became infinitely more so.

At the period of my visit to this place, for some reason; perhaps on account of the number of criminals then under sentence of immediate execution, they were not confined in the cells commonly allotted for such purposes, but were all placed together in a long chamber, on what might be called the first floor of the building. A staircase of stone led to it; and as the edifice stood within a court yard, the entrance to which was secured by several gates and passages, it had not been thought necessary to fasten the door of the room. It was a long whitewashed chamber, lighted by small windows, which were secured with thick iron bars. At one end lay the mattresses and bedding of the inmates, rolled up in as small a compass as possible, to be out of the way; a small wooden desk, furnished with materials for writing, stood near them. At the other end of the

chamber there was a chimney, in which a fire, as dull as the weather, was consuming. A long deal table, with benches on each side, stood in the middle of the room; and on the right hand was a large leaden sink, furnished with water for the use of the prisoners. Everything was kept scrupulously clean; but, at the same time, so bare and desolate an appearance prevailed throughout the room, that if all the other circumstances of horror had been absent, there was enough in the mere look of the place to make one's blood run cold. But the people; the human beings of whom this was for a time the abiding place; they formed a sight the most revolting, and which words can hardly describe.

On a seat near the fire sat a miserable looking old man, dressed in a loose brown great-coat, and wearing a white night-cap. He was reading, or rather spelling, a hymn, from a book which had been given him by one of the dissenting clergymen, who are always about the prisons. The utter want of expression in this poor wretch's countenance, and the almost idiotic manner in which he continued to mutter, half aloud, words which he did not understand, excited feelings of greater pain, because there was something of disgust mixed up with them, than a display of violent grief. This man had been a small farmer, and was possessed of some substance. He had long been suspected in this neighborhood of dishonest practices, and at length been convicted of sheep-stealing: the general circumstances of his life prevented his being treated as many others who had been found guilty of the same offences. The apathy which he displayed formed a sickening contrast to the scene around him: the helpless wretch, with less intelligence than a beast destined to be slaughtered, was awaiting his fate with as little apprehension.

On the opposite side of the room three men, each of whom was heavily ironed, were walking up and down in a row. At every step their fetters rung on each other, and the regularity of their paces produced a dull and horrible sound, monotonous and sad as the groans which may be imagined to proceed from the prison caverns of the damned. The first of these persons was a pale, slender youth; who, with the second, an elder and more robust man on the other side, had been condemned for a burglary. The third man, who occupied the middle place, was a Jew, of sturdy limbs and short stature. He had been found guilty of a secret robbery, and as he had maltreated his victim after plundering him, he was doomed to a fate, which but for the cruelty he had practised, he would probably have escaped. After his condemnation he had suffered his beard to grow, a practice which it seems is common with the Jews; and the grizzled black hair, of several days' growth, which now overspread all the lower part of his face, added to the natural base and ferocious cast of his features. These three persons walked and talked together in a dogged, reckless manner for some time. At length the younger, as if tired with the tediousness of his exercise, quitted his companions, and sat down at the table to read a prayer book which was lying upon it; the others continued their walk for some time longer. Their conversation, however, seemed to flag, they said less to each other, and each was evidently thinking of some other subject than that on which they spoke. The burglar at length went towards the sink, and drew some water in a cup which he drank, while the expression of his eyes told that he was almost unconscious of what he was doing: he sat down, and, as if at that moment some bitter thought thrust itself upon his memory, the tears started involuntary to his eyes, he buried his face in his hands, and threw himself upon the table, while a low groan burst from him, and the quivering of his whole frame told the agonies which remorse was inflicting upon his inmost soul. The Jew left alone, continued to walk for a short time, looking more sulky and dogged than ever: after a few moments his features relaxed a little; a tremulous motion was apparent upon his upper lip, and a tear rolled down from either eye, which he wiped off with his hard, muscular hand; and, as if more surprised than softened by so strange an emotion, he went into a distant corner of the room and sat down upon the beds.

I believe these three men were wholly unconscious of the presence of any other person in the room. In their actions might be traced, as plainly as if they had been described by words, the feelings

which worked upon them. A deep and bitter remorse; not repentance of their crimes; but regret that they were reduced to this condition; a sense of their own helplessness, and a desperate conviction that there was no hope left for them. These feelings, as by turns they sprang up and exercised their power upon the uncultivated minds of the miserable men, swayed them as the winds move the waves of the ocean. It was curious speculation, and I have often thought since; for at that time I was too much pained at the spectacle to reflect upon it; that a strange lesson might be learned of the heart of man in such a school as this.

Another man was there of a superior character to the criminals I have mentioned. His mind had been to a certain degree refined by education and by travel. He had served in the army abroad, had fought bravely, and had signalized himself on several occasions, the only reward for which was some severe wounds, which were not even then wholly cured. The idleness which the peace brought with it to soldiers, and a desire to improve his fortune in pursuits for which he was better calculated than for the military profession, induced him to quit the army. He was married; and this was a more cogent reason than all the others for his entering again in civil life. He did so, and was unfortunate; perhaps imprudent; but he lost his all, and, in time, found himself beggared; without the cost of a day's subsistence in hand; and with a wife whom he loved, he only wanted children, dying slowly of a broken heart, which people called a "fever." In this situation a friend recommended him to "try the forged notes." At first, of course, the proposal was rejected. But, next day, furniture, clothes, every thing but the bed his dying wife lay on, and that lay on the floor, was gone; the demon was not to be cheated out of his prey, he went to work, and to destruction.

The unskillfulness with which he set about his task ensured his detection; in the second attempt he made he was taken and imprisoned; he was tried, pleaded guilty, and was sentenced to be executed. At the period of which I now speak, he was in the same room with the others, destined to a similar fate; but upon him the effect of the surrounding circumstances was extraordinary, as well as dreadful; for he was impressed from the beginning with a belief that his life would not be forfeited. The lenity which so many confirmed offenders had experienced, the small amount of a crime he had committed, his previous character, his distress, all combined to strengthen that opinion, and it became stronger and deeper as all rational hope declined. The following day was now fixed for his execution, but still he believed that his life would be spared; the sands of his existence were rapidly dropping, and still, though he might have counted them, he insisted with a desperate infatuation on believing that years of life were yet before him. With a smile, which was full of horror, he dismissed the exhortations of the clergyman, recommending to his care the other culprits who really had need of them; and to every other suggestion he either turned a deaf ear, or received them with an incredulous shake of the head, adding, occasionally, as he strode about in feverish anxiety, "It is quite impossible; they will not, they cannot, they dare not commit so needless, so useless an injustice!" It was evident to all of cooler reason who observed him that he had nourished this fatal belief until it had taken the place of his judgment, and in this belief until the morrow, until the preparations for his death begun, he resolutely continued.

At the desk near the lower end of the room a young man was engaged in writing a letter. He was pale and looked ill, but his features were handsome, and his clothes made in the extreme of fashion; hanging over him stood a young woman, dressed in a splendid but awkward manner; her clothes were of a very expensive description, but tawdry and unsuitable for the state of the weather and the time of day. When she looked up, I recognized one of those unfortunate women whom "the dangerous gift of beauty" has brought to the most fatal destruction. The appearance of these two persons in this place of unmixt wretchedness, and among people of whom privations and confinement had fixed their hard and degraded stamp, formed a distressing contrast; and a sense of the ridiculous,

which intruded itself among the other sensations to which the scene gave rise, made it horrible. The young man, whose fate at this period made some noise in the town, was an artist of respectable talents; he had long been pursuing dishonest courses, and at length, being engaged in a burglary, he was sentenced to death. The female had shared his short lived prosperity, and now, with a rare fidelity, clung to him in his lost fortunes, when all the world besides had abandoned him. This instance of the power of that passion which rules the world, struck me as being infinitely more remarkable than many of those proofs of female affection which are cited as heroic.

Here were two persons whose life had been base and profligate to the last degree; that of the woman too vile to be thought upon; and yet that holy and purifying passion which neither vice, nor crime, nor misery could extinguish, now seemed as it were to triumph over all; and in the very hour when it was the turn of the most hateful qualities to have uncontrolled sway; when every inducement, even the opinion of the world; of that world by which she was abandoned, was in favor of her deserting the man, she was impelled by the unaided, irresistible power of her affection to comfort him in his hapless wretchedness; to strip herself of all that she possessed to furnish him with food and such aid as might bestead him; and this too for a man whose claims upon her affection, if they could have been estimated, were probably, as such men's claims mostly are, less than that which he would have had upon a brute devoid of reason! I know that most females know no limits in their exertions for men whom they love; and that this should be the result of a sincere, and ardent, and pure attachment, excites no wonder; but that a woman divested of the most estimable attributes of her sex, degraded in mind and in person, regarded by the better part of society as an anomaly; a monster, belonging to neither sex, but the reproach of both, that she should, in the depth of her humiliation, practise, and in one instance at least, the same devoted virtue which would have added dignity to the most exalted of women; that she should do this with a disinterestedness which admits of no doubt, for the object of her love was a wretched criminal, whose days were numbered, and whose name was wedded to contempt and disgrace; this it is that excites my astonishment, and the highest veneration for the passion which can work such wonders.

The treasures of the deep are not so precious
As are the concealed comforts of a man
Locked up in a woman's love!

In a corner near the door stood another group, which had commanded my attention from the moment of my entering. It consisted of a hard featured ugly young man who was also to die on the morrow, for uttering forged bank notes, an old man of most respectable appearance, and a middle aged person, upon whose arm the old man was leaning. The elder of this party appeared to be about eighty years of age; he was dressed in a fashion long gone by; his head was bald at the top; but from about his ears some few silver locks hung curling down and reached his shoulders. He was talking to the criminal in a solemn manner, but in so low a tone that its purport did not reach me. The frequent use which the other persons made of their handkerchiefs induced me to believe that he was earnestly exhorting the culprits to prepare for the fate which awaited them. The youth listened with unmoved features, and when at length the old man bade him farewell for the last time, and, blinded by his tears, felt his way down the stairs, the criminal accompanied him into the court yard, when the gate which separated them for ever was closed upon him. He immediately came back to the dismal prison in which his fellows were, and after standing for a few moments with his eyes fixed, and the same dull, impenetrable expression in his countenance, he uttered a loud yell, and dashed himself with a frightful violence on the floor. It is impossible to describe the effect which this scream, accompanied by the noise of his fall, and the clashing of his fetters against the floor, had upon every one present. The criminal looked aghast towards the spot, and the terrified woman grasped the arm of the young man near whom she was standing. It seemed as if the poor wretch had resisted, as long as he was able,

the feelings which flowed upon his heart, and that at length the force which they had acquired by being thus bent up enabled them to burst through the restraint with overpowering violence. The old man was his grandfather, and had not seen him for several years before this last fatal interview.

I could endure no more, but made a hasty departure from a scene of horror and despair, which I am conscious that I have failed in attempting adequately to describe, but which I can never forget.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

ON THE PASSIONS.

OF FEAR. NO I.

First fear, his hand, its skill to try,
Amid the horrors bewilder'd land,
And back recoiled, he knew not why,
E'en at the sound himself had made. [Collins.]

The learned Dr. Johnson, than whom there can be no better authority, has said that the passion of fear is essentially necessary to the human mind; inasmuch as it points out the dangers which surround the body, and gives timely notice to escape. It is a safeguard both to the mind and body; because were it not for the intercession of this passion, the mind would often be wrought up to the commission of crimes, which would eventually end in the ruin of both. Fear does not exist the same in every individual; and by certain causes it may be expelled from a mind where it once had powerful influence; as in the case of a coward who has been so fortunate as to escape from death in one or more battles. We are told that the best disciplined soldiers fight much more valiantly after the first engagement, and many have ceased to dread the billows of the ocean after a successful voyage.

The symptoms of fear are so familiar to every one, that it is needless to enumerate them here, any further than to observe that fear generally arises, in its strongest forms, in weak nervous systems; as in delicate females. However, this hypothesis will not always be exempt from exception; for we read of the heroic exploits of females as well as men; among whom we find Philippa, the brave queen of Edward III, who defeated the Scots at the time they invaded England, and led their sovereign, David II, prisoner to London. We are also informed that the Amazonian Queen carried succours to the Trojans in the time of the Trojan war; and Pliny says she invented a battle-axe. Joan of Arc, or the maid of Orleans, celebrated in history, is said to have relieved Orleans by driving the English; and by defeating Talbot at the battle of Patrai, to have recovered Champagne. She was bred a shepherdess, and finally, by pretending to inspiration from Heaven, she was burnt at the stake for a witch, about the middle of the fifteenth century.

Fear may be excited by many causes. I have known a young lady to be much alarmed at the presence of a simple worm; and probably had an innocent lizard been placed upon her neck, she would have been thrown into convulsions; and I have read of an instance where death was the consequence from opening a closet where a human skeleton was suspended. The fear excited by dead bodies, (with the exception of Physicians,) is almost universal. It would seem strange that a body divested of life, and consequently unable to injure, should frighten, did we not know, from daily experience that it is a fact. I can well remember my feelings when a lad, on first entering a dissecting room, containing ten dead bodies; but habit, the powerful ruler of the passions, soon made it familiar, by sitting among them alone; and so far from being terrifying, it finally became the most interesting place and avocation I could possibly find. Prejudice was overcome by familiarity, and fear by the acquisition of knowledge. The belief in the existence of ghosts and witches, has a powerful influence in exciting fear; and should be overcome by reasoning upon the fallacy of such incongruous opinions, and by sending the persons to such places as they are said to inhabit. When night shades her mantle over the realms of creation, parents, instead of allowing their children to be lighted to bed, and

persons to remain with them, should drive them alone in the dark, which finally will eradicate all fear. I remember to have been frightened at a side-saddle, and had not resolution carried me to the spot, I could have sworn that it was a demon with horns and glaring eyes: so wonderfully did my imagination transform the object. There was once a man within the sphere of my knowledge, who was actually deranged, partially, on the subject of witchcraft. He never permitted a horse-shoe to be torn from the sill of his door, because he said it prevented the entrance of the witches; and he would describe, with all the appearance of truth, the manner in which the witch forced her bridle into his mouth, and what she said when they both "popt" through the key-hole together. This man would bring forward the Scripture to prove the existence of witches; but he should have recollected that "old things are done away, and all things become new." Death is the cause of fear to many persons, and I know of but one specific remedy, which is religion. This balm will soothe the cares of the approach of death, and mitigate the pangs of a dying moment. The venerable Dr. Johnson, before quoted, declared in the waste of life, that the prospect of death was terrible; but we are informed by the celebrated Dr. Rush, that General Miranda, and the Marquis de Chatelet while confined in Paris, and every day expecting to be led to the guillotine, prevented the fear of death by reading history and other entertaining books constantly, and never permitting themselves to speak of their expected fate. This circumstance was told to the Doctor by General Miranda, in his visit afterwards to Philadelphia. The fear of death is often more terrible than death itself; for Voltaire tells us that Louis the fourteenth said, "It is not so difficult a thing to die as I expected." We are informed that the celebrated John Hunter subdued the fear of speaking in public by taking opium, but I would not recommend it, as it too often ends in a confirmed habit. There are many persons alarmed at the idea of venturing upon water; and history furnishes an instance, in Peter the Great, of Muscovy, who was born with a dread of that element, but which was obliterated by subjecting himself to the mercy of the waves, which frequently produced fainting, until finally he crossed oceans for the benefit of his country, by introducing many important arts. Fear may be occasioned by a variety of causes, which the limits of my essay will not permit me to mention, and therefore I pass on to take an observation of the most singular and astonishing effects arising from the excess of this passion.

The excess of fear has often ended in death, but at present I do not recollect any authenticated cases to bring forward as testimonies. The excess of fear has also occasioned a falling off of the hair of the head, as related by Dr. Rush, of a gentleman who witnessed the great earthquake at Lisbon, in the year 1775. It has also occasioned the erection of the hair perpendicularly, which may be found elegantly described by Virgil and Shakspeare. I recollect to have entered the university at night, and on going up the dark flight of stairs where no lamp was permitted to be kept, I put my hand suddenly upon the cold face of a dead carcase. Before reason could give her impulse, I directly felt my hair elevate my hat. But the most singular phenomena in the effects of this passion, are the sudden changes in the color of the hair to gray and white. There is a case recorded in the Duke of Sully's memoirs, in the following words,—"Henry IV. told the Marquis De la Force, that the moment he was informed that Henry III. had published an edict, ordering all the Hugonots either to go to mass, or to abandon the kingdom in six months, his mustaches turned suddenly white on that side of his face which he supported with his hand." Mr. Wesley gives an account of a nobleman in Germany who had received the sentence of death for a crime which he had committed, and whose execution was to take place the next day. In the course of the night previous, fear operated so powerfully upon him that the jailer did not know him; his hair, instead of being black, having turned perfectly white. The Emperor was informed of the circumstance, and said, "he has suffered enough," upon which he was pardoned. A gentleman of veracity once informed me of a similar circumstance, which

took place in the East Indies, where the hair turned gray. A certain author recites the case of an Englishman being wrecked at sea, and who saved himself on a very small rock, surrounded by the roaring ocean, without a single hope of ever being liberated. He was taken off by a boat several hours after, and his hair had changed, to the astonishment of his friends, to a silver color. It is almost incredible that fear should operate so powerfully on the human system; but it is substantiated by good authority. The reason why fear does not have this effect in all cases, is that death supervenes before the system can be so powerfully acted on; which proves that they suffer more than death in fearing it. How wonderful is the connection of mind and matter, and how still more wonderful is the power of the one when acting on the other!

MILFORD BARD.

ALBANY:

SATURDAY, FEBRUARY 10, 1827.

THE CASE OF WILLIAM MORGAN.

Previous to its adjournment this afternoon, the Grand Royal Arch Chapter of this state had the following proceedings:

To the Most Excellent the Grand Chapter of the State of New-York:—

The committee appointed by resolution of the Grand Chapter, on the affair of William Morgan, RESPECTFULLY REPORT:

That they have attended to the duties assigned them, and that from the highly agitated and inflamed state of public feeling on this subject, and from the false and undeserved imputations which have been thrown upon freemasons, and the masonic order generally, your committee deem it proper that this Grand Chapter should make a public expression of its sentiments in relation to the affair alluded to. Your committee as expressive of their views on the subject embraced in this report, would offer for the consideration of the Grand Chapter, the following preamble and resolutions.

Whereas, the rights of personal liberty and security are guaranteed by the free constitution under which we, the members of this Grand Chapter, in common with the rest of our fellow citizens, have the happiness to live: And whereas we esteem the preservation of these rights of vital importance to the perpetuity and full enjoyment of the blessings of our republican institutions: And whereas the community has lately witnessed a violation of the same, under the alleged pretext of the Masonic name and sanction, (in the case of William Morgan): And whereas, the principles of our ancient and honorable fraternity contain nothing which, in the slightest degree, justify or authorize such proceedings; but, on the contrary, do in all their tenets and ceremonies, encourage and inculcate a just submission to the laws, the enjoyment of equal rights by every individual, and a high and elevated spirit of personal as well as national independence:

Therefore Resolved, by this Grand Chapter, that we its members, individually and as a body, do disclaim all knowledge or approbation of the said proceedings, in relation to the abduction of the said William Morgan; and that we disapprove of the same, as a violation of the majesty of the laws, and an infringement of the rights of personal liberty, secured to every citizen of our free and happy republic.

Resolved, That the foregoing report, preamble and resolution be published.

A true extract from the minutes of the Grand Royal Arch Chapter of the state of New-York.

J. O. COLE, G. Sec'y.

To the sentiments above expressed, every true mason will respond AMEN.

UNITAS, CONCORDIA FRATrum.

LUX EX TENEBRIS.

The GRAND COUNCIL OF PRINCES OF JERUSALEM which forms the subject of this notice, was originally established by authority emanating from Thr. Ill. Br. Henry Andrew Francken, D. G. Inspector General, &c., who received his high powers from Thr. Ill. Br. Stephen Morin, appointed 27th Aug. 1761, Inspector General over all lodges, &c. &c. in the new world, by the G. Consistory of S. Princes of the R. S. convened in Paris, at which presided the King of Prussia by his Deputy Chaillon de Johnville. The authority of this G. Council has been duly recognized by the Supreme Council of the 33d, &c. for the United States of America.

This G. Council is now in a flourishing condition, owing principally to the exertions of Thr. Ill. Brn. Giles F. Yates and James M. Allen.

They held their annual convention at the G. East in the City of Albany, on the 8th day of the 11th month Shevat 5587 (5th Feb. 1827), Br. G. F. Yates declined a reappointment as G. Sov. The election of officers then took place and the result was as follows:—

John W. Bay, M. D. of Albany, M. Eq. G. Sov.
James M. Allen M. D. of Skaneateles, Onondaga County, E. Sub. G. Sov.

John G. Van Deusen, of Palatine, Montgomery County, M. En. G. Warden.

Dwight F. Lawton, of Saratoga Springs, En. G. Counsellor.

Giles F. Yates, A. M. of the City of Schenectady, Ill. G. Chancellor.

Rev. Nathan N. Whiting, A. M. of Ballston, Saratoga County, Ill. G. Priest.

Eli Savage, of New-Hartford, Oneida County, Ill. G. Recorder.

Nathaniel Calkins, of New-Hartford, Oneida County, Ill. G. M. Finances.

Almos Mathews, of Mayfield, Montgomery County, Ill. G. M. Ceremonies.

Samuel H. Drake, of Saratoga Springs, Ill. G. Herald.

Lorin Putman, of Saratoga Springs, Ill. G. Pursuivant.

Collins Odell, of Mayfield, Montgomery County, Ill. G. Guard.

At this convention there was a full representation of the five Lodges of Perfection under the jurisdiction of this G. Council, and Warrants passed the seal of said Council for the creation of a new Lodge of Perfection at Clarkson, County of Monroe, and for another at Amber, County of Onondaga. Of the former Ill. Brn. Simon B. Jewett, Esq., of Clarkson, County of Monroe, Elihu Mather, Esq., of Gaines, Orleans County, and Gen. Jacob Gould, of Rochester, and Samuel B. Bradley, M. D. of Greece, Monroe County, were appointed officers; and Ill. Brn. David S. Van Rensselaer, Killian H.

Van Rensselaer, and Samuel Selkirk, Esqs., of Amber, County of Onondaga, were appointed officers of the latter.

A system of "Mandates and Decrees" for government of this G. Council, and of the Lodges and Councils under its jurisdiction, was unanimously adopted.

Virtus junxit, mors non separabit.

The GRAND ROYAL ARCH CHAPTER of the State of New-York commenced its annual session in this city on Tuesday last, and adjourned this day. Upwards of one hundred and ten subordinate chapters were represented, and much business of importance to the craft was transacted. On Wednesday an elegant and appropriate address was delivered by Rev. Com. Joseph Prentiss, Grand Chaplain, a copy of which, together with the proceedings of the chapter we shall hereafter present to our readers. A body so numerous and respectable has seldom convened in our city. The following are the officers elected for the ensuing year:

M. E. Asa Fitch, of Washington county, Grand High Priest.

M. E. Richard Pennell, of the city of New-York, Deputy Grand High Priest.

E. Orville Hungerford, of Jefferson county, Grand King.

E. Jacob Gould, of Rochester, Grand Scribe.

E. John O. Cole, of Albany, Grand Secretary.

E. Gerrit L. Dox, of Albany, Grand Treasurer.

E. and Rev. Joseph Prentiss, of Catskill, Grand Chaplain.

LITERARY. We have received the February number of *The Casket; or Flowers of Literature, Wit, and Sentiment*. This work, (the prospectus of which was repeatedly published in the *Ecritoir*) is devoted to the best articles in prose and verse which appear in the *Saturday Evening Post*. It is neatly printed on good paper with fine type, and embellished with copperplate and wood engravings, and issued in monthly numbers of forty octavo pages, at \$2.50 cents a year, payable in advance.

The *New York Crystal Hunter* is a weekly literary publication conducted with more than ordinary spirit and singularly good taste. Its editor (C. E. E.) is a poet, in the true sense of the word, and a very clever writer of good natured prose. The *Crystal Hunter* is published every Saturday, in numbers of sixteen octavo pages, and is sent to subscribers in the country for \$3 50 cents a year, payable in advance.

The gold medal of fifty dollars value, offered by the editor of the *Philadelphia Album* for the best original tale, has been awarded to Richard Penn Smith, Esq. assistant editor of the *Aurora* and *Franklin Gazette*, Philadelphia. The tale is entitled *The Sea Voyage*, and is very well written.

Mr. William G. Simms, of Charleston, S. C. has published a volume under the title of *Lyrical and other Poems*. The editor of the *New-York Literary Gazette* says, "the fire of true genius burns in his song, and its light is pure and brilliant."

Mr. Fairfield has published a volume under the title of *The Cities of the Plain*. The subject is taken from Scripture. The poetry is said to be defective; yet the volume is, on the whole, spoken of favourably.

There are a number of volumes of fugitive poetry in embryo; one by a lady in one of our western counties; another by a lady of Philadelphia, and so on.

We have received a few numbers of *The Halcyon*, a literary journal, published at New-Orleans. Its columns tell favourably of its editor's talents.

Messrs. Bliss & E. White, Booksellers of New-York, have in press, nearly ready for publication, a work entitled *Father Clement*, a Roman Catholic Story, by the author of *Decision*, &c.

The following article is from the *Troy Budget*. If we pleased, we could every week extract a score of articles which place the scribbler for the *National Observer* in a truly contemptible and awkward situation; but we have other matters to attend to: and, besides, we believe the good sense of the community has something in keeping for him—something in the shape of a reputation which will be posthumous to his journal, though not to himself—which will be a sufficient curse for his present temerity. He will one of these days be overthrown by a whirlwind of his own creating.

PROPHET Solomon Southwick, within a few months has killed, in his paper, two notorious men. The first was Kean the tragedian, who died a few days after he left New-York. Mr. Southwick wrote his eulogy in the most pathetic and woe-begone terms, burying the faults of Kean, beneath the deep blue wave, and lauding his talents and performances, touching a little withal upon the treatment he received from the public, to the highest pitch of bombastic biography.

Soon after this, Mr. Southwick laments in doleful accents, the "awful fate" of Captain Morgan, who was set afloat in an "open boat" on Niagara river, fifteen miles below the falls, but who came to his untimely end by a "salmon leap" up this foaming and unequalled cataract.

Now the truth is, the late arrivals from England inform us that Kean arrived there "in good health." Mr. Southwick's story, therefore, about the "awful fate of Morgan," will probably turn out to be as true as that of the death of Kean.

We cannot condescend to continue a war of words with such a man as the editor of the *National Observer*. In his remarks respecting masonry and ourselves, he has manifested a total disregard for truth and justice, and has basely sacrificed the courtesy which is due from one gentleman to another. We shall leave Mr. Southwick to baffle with the contempt of good and honest men. He is welcome to the plaudits of the vulgar; and if the eclat which the wicked bestow upon iniquitous acts be congenial to the thirstings of his soul, he may drink the draught, and like a loathsome and detested thing, sink, neglected and despised, into an oblivious grave. We do not deem it necessary to enter into a refutation of the calumnies in yesterday's *Observer*—they bear their character on their face. What we have said respecting Mr. Southwick's motives, is correct in every particular. His attack upon the Grand Chapter and upon masonry will be duly appreciated.

NEWS AND TABLE TALK.

The King of Spain has issued an order for dismissing all the Censors of the Spanish Theatres, for having permitted the representation of a piece called the *Mysteries of Isis*, which was supposed to allude to the Masonic Lodges.—The commerce of Calcutta, as stated in the French papers, amounts on an average to fourteen millions of pounds sterling a year. About 600 vessels enter that port annually. In 1717, Calcutta was nothing but an inconsiderable little village, surrounded by marshes and forests: it now contains more than one hundred thousand houses, and extends more than two leagues along the banks of the river. The English are estimated at 600,000; and the whole population of the city and environs within the compass of 70 miles each way, is stated at more than two millions.—The brig *Sun*, of Calcutta, has been lost in the India Seas, and the 1st and 2d officers, and 22 lascars, perished.—A writer in the *Springfield (Mass.) Journal*, recommending an

increased manufacture of Potatoes Starch, states that 40,000 lbs. per annum of Starch, are consumed by the Springfield, Ludlow, Wade, Monson and Brimfield Factories.—There are twenty-six newspapers in Maine, two of which, at Portland, are published semi-weekly, the rest weekly.—On the 20th ult. it was 23 years from the cession of Louisiana to the U. States; it then contained about 8000 persons and 1000 houses. It is now estimated to contain 50,000 souls and 6000 houses.—From South Carolina there are pending 100 applications for admission to West-Point Academy, about one third of which are from Charleston. The whole state is entitled, by law, to only three admissions in a year.—It is stated that the business of manufacturing whips, in Westfield, (Mass.) furnishes employment to two or three hundred hands in that village.—One inhabitant of Guatemala collected from a part of his land last year, \$12,000 worth of Cocchineal. The territory is represented as more healthy than Cuba. The Priests say the Deity has blessed Guatemala with both hands. In Guatemala they say earthquakes are not so numerous as formerly—and they add it is because the earth has a better opportunity to breathe, by the help of wells.—The *Richmond Whig* states, that 42 bushels of letters and papers were brought to that city in two mails.—*Was it so?* The *National Intelligencer* says: "*House of Representatives*. A new member, viz: James W. Ripley, elected in the place of Mr. Lincoln (now Governor of Maine) appeared, was sworn, and took his seat upon the floor.—Bell's (London) Weekly Messenger, of the 10th ult. remarks: "If emigration is to take place from this country, we decidedly object to Canada. A Canadian soon becomes an American: eventually he must be one. Canada never was, and never will be, worth keeping."—A man engaged in splitting timber for rail-roads, near Kensall, in Chester, (England) a few weeks since, discovered, in the centre of a large pear tree, a live bat, of a bright scarlet color. The tree presents a small cavity in the centre where the bat was inclosed, but is perfectly sound and solid on each side.—The jail limits in Ohio, for debtors, are co-extensive with the county—and an Ohio county is no small space.—An advertisement appeared in a London paper, a few months ago, offering a parrot for sale, which was represented to be perfectly good tempered—could laugh, sing and talk—used no bad language—and was well worth the attention of any person in want of a companion.—One of the counties composing Randolph's Congressional District in Virginia, has invited him to become a candidate for the House of Representatives. No doubt he will be returned.—England now possesses about twenty islands in the West Indies, but the single one of Cuba is worth them all. Should she take the latter, by any way, it would make enemies to her of six great republics. This will teach her caution.—There is a great mourning made over Mr. Randolph by some of the Virginian newspapers. One says that the only fault of Mr. R. is his eccentricity.—A public meeting has been held in Pittsburg in favor of the Greeks. It was well attended. Mr. Livingston's resolution in Congress was cordially approved. The workmen of the various factories contribute in that city. The workmen at a factory contributed \$11; those of a foundry \$49; those of a hat factory \$7.—The editor of the *Boston Evening Gazette* and a wild-beast-caravan-man are quarreling about the number of lions in the United States. The caravan-man says there is only one, but the editor says ten.—The Pennsylvania legislature have decided against the removal of their seat of Government to Philadelphia.—It is said that a man and two boys were drowned recently at Philadelphia, by falling through the ice on the river.—The *Boston Banks* refuse the bills of the *Mechanics' Bank* of New-Haven.—A committee of the Massachusetts House of Representatives have made a report, expressing their confidence that Congress will protect the woollen manufactures.—There are insinuations in a Boston paper that *Judge Story*, of the U. S. Supreme Court has been writing to several of the members of the Massachusetts legislature, respecting the choice of a Senator.—It is said that the Corporation of Philadelphia will not permit their arcade to be lighted with gas. They have a horror to gas lights in Philadelphia.—In the United States there are 2139 Sunday schools, 19,293 teachers, and 135,074 scholars.—The Greek Fund in Philadelphia has increased to \$4,670.—Philadelphia paper says that the British have entirely out-generalled our government on the subject of the colonial trade, and that whether we regain that trade depends not in their wisdom, but the supposed feelings of the people.—Mr. Robert Gifford, of Schaghticoke, came to Lansingburg market the other day, with a load of pork of his own fattening, and among other mammoth hogs, was one that weighed, after dressing, seven hundred and sixty pounds, decidedly the heaviest hog ever brought to that market.—Amos Warner, Esq. of W. rightstown township, Bucks County, Pa. slaughtered and sold lately, a hog, weighing eight hundred and sixty-two pounds! This hog from his nose to his hind hoofs measured 9 feet! Girth behind his shoulders 7 feet 6 inches, and was 2 years and 4 months old.—A coach

is about to be established, to run from Bridgewater to London (a distance of 150 miles) in one day! It is to be called the *Wonder*.—Judge Pendleton, of Dutchess County, has recently imported three *Thibet Goats*, of the purest race. They are entirely white, and their distinguishing mark is a long and pendant ear. They are hardy, and, it is believed, will thrive in our climate. It is from the wool of the Thibet goat, that the Cashmere Shawls are made.—The legislature of Maryland have had the following bills before them: "The bill to divorce Hannah Boudet, of the city of Baltimore; the bill to divorce Elizabeth Blakely, of Baltimore county; the bill to divorce Rebecca Thrush, of Baltimore city; the bill to divorce Mary Davis, of Washington county; the bill to divorce Lucinda M. Watkins, of Anne-Arundel county; the bill to divorce Elizabeth Smith, of Washington county; the bill to divorce Ann Culverwell, of Baltimore city—being the order of the day, they were taken up and passed."

The following items are gleaned from the news received by the packet ship *Canada*, which arrived at New-York, on Sunday evening last:—The President's Message at the opening of the present session of Congress, was published in *Billing's Liverpool Advertiser* of the 2d ult.—Mr. Kean, the tragedian, arrived in Liverpool on the 31st December, in the ship *Silas Richards*.—John Brie, Esq. a celebrated Irish Barrister, and one of the leaders of the Catholic Association, had been killed in a duel with a Mr. Hays. The catastrophe was caused by a dispute relative to the Cork election.—The *Austrian Observer* states expressly, that the infant Don Miguel had not refused to take the oath to the new constitution of Portugal.—M. Poletica (the late Russian Minister to the United States) has been appointed by the Emperor of Russia, to the station of Inspector of the civil authorities in the Government of St. Petersburg.—Amongst other Regiments ordered to Portugal, is the 10th Hussars—which has made itself so conspicuous for its extravagance, turbulence, and coxcombry throughout England.—The New-York Packet ship *Canada*, was seized at Liverpool, by the officers of the Customs, in consequence of having on board 10 hogheads purporting to be filled with Quercitron bark, but in reality filled with tobacco and snuff. Jeremiah Platt, the consignee of the hogheads, was taken into custody, and proceeded against and fined 100l.—Several outrages have been committed by the turn-out spinners at Oldham. The injury done to the works and workmen was considerable.—The converts from Catholicism to Protestantism are getting to be very numerous. Sometimes they amount to 50 or 60 in a day. In the county of Cavan, alone, they amount to 253 within 2 months.—Letters from Constantinople, dated Dec. 17, state that the foreign ambassadors in that city, have exerted themselves with so much activity, that a result favorable to Greece might be expected.—The *Journal de Paris* contains a very silly extract from a pretended Madrid letter, of the date 14th Dec. The letter states that the message of the King of England, and the speech of Mr. Canning on the subject of Portugal, were received at Madrid on the 13th. The simple fact is, that Mr. Canning's speech was delivered on that very day, the 13th Dec.—Mr. Hutchinson, the son of the late member, has been elected for Cork, and Lord John Russell has been returned for the borough of Bandon.—It is calculated that a camp of 10,000 French troops will speedily be formed in the Department of the eastern Pyrenees.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

SONG.

TUNE—"Has sorrow thy young days shaded."

The flowers I loved best soonest faded;
Yet I looked on their death with a smile.
And thus is my life ever shaded
By clouds of decay and guile.
The friends I loved best have departed,
Ah!—far from fond friendship's call.
But now I am thrice deserted,
By thee—the most cruel of all.

I looked on the harbour I cherished,
And guarded with tenderest care,
When its promising boughs had perished,
And death sits exulting there.
I sighed—but I wept not o'er it,
Though sorely I grieved for its fall.
But thou wert beloved before it;
And thou wert more cruel than all.

O how did thy young Love flatter!
But sorrow has withered up
The hopes too serene to scatter:
They were watered from misery's cup.
And now to the desolate hearted,
Affection in vain may call,
For all that I loved has departed
With thee,—the most cruel of all.

MELANCHOLY.

Far in a wild sequestered vale,
Pale Melancholy dwells;
And to the winds her piteous tale,
The musing maiden tells.

Where crystal cascades dashing pour,
At noontide oft she strays;
And listens to the rocks that roar,
In dreams of happier days.

At midnight's solemn sacred scene,
Where steals the winding wave,
With wild-buds and with flowrets green,
She strews the new made grave.

And now, in Memory's glass she throws
Her kindling eye of fire;
Starts wild!—and in her dream of woes,
She sweeps the Lydian lyre.

Fired at the sound of pity's tale,
She beats her bosom bare,
Rends the loose silken snowy veil,
And waves her hanging hair.

And now again, when Luna's light
Illumes the gurgling rills,
Her song awakes the shades of night,
And dies along the hills.

But ne'er the joys of youthful years
Shall bless that heart of care;
She wanders o'er the world in tears,
The victim of despair.

Milford, Del.

MILFORD BARD.

DIRGE OF THE YEAR.

BY PERCY BYSSHE SHELLEY.

Orphan hours, the year is dead,
Come and sigh, come and weep!
Merry hours, smile instead,
For the year is still asleep.
See, it smiles as it is sleeping,
Mocking at your untimely weeping.
As an earthquake rocks a corpse,
In its coffin in the clay,
So White Winter, that rough nurse,
Rocks the death-old year to-day;
Solemn hours! wail aloud
For your mother in her shroud.

As the wild air swirls and sways
The tree-swing cradle of a child,
So the breath of these rude days
Rock the year;—be calm and mild,
Trembling hours, she will arise
With new love within her eyes.
January gray is here,
Like a sexton by her grave;

February bears the bier;
March with grief doth howl and rave;
And April weeps—but, O, ye hours,
Follow with May's fairest flowers.

JULIA.

AN ANCIENT BALLAD.

To the graves, where sleeps the dead,
Hapless Julia took her way;
Sighs to heave, and tears to shed
O'er the spot where Damon lay.
Many a blooming flower she bore,
O'er the green grass turf to throw;
And, while fast her tears did pour,
Thus she sang to soothe her woe:

"Soft and safe, thou lowly grave,
Fast o'er thee my tears shall flow;
Only hope the hapless have,
Only refuge left for woe.
Constant love and grief sincere
Shall thy hallowed turf pervade;
And many a heartfelt sigh and tear,
Hapless youth, shall soothe thy shade."

"Lighted by the moon's pale shrine,
See me, to thy memory true.
Lowly bending at thy shrine,
Many a votive flower to strew;
But how little do those flowers
Prove my love and constancy!
Yet a few sad fleeting hours,
And, dear youth, I'll follow thee."

"Rose, replete with scent and hue,
Sweetest flower that nature blows;
Damon flourished once like you,
Now o'er him the green grass grows.
Rose, go deck his hallowed grave,
Lily, o'er the green turf twine;
Honour meet that meets shall have,
Beauty's bed and virtue's shrine."

"Primrose pale, and violet blue;
Jasmin sweet, and eglantine,
Nightly here thy sweets I strew;
Proudest deck my true love's shrine.
Like you, my Damon bloomed a day;
He did die, and so must you;
But such charms can you display?
Half so virtuous, half so true!"

No, sweet flowerets, no such charms,
No such virtues can you boast;
Yet he's torn from my fond arms;
Yet my faithful love is lost.
But a radiant morn shall rise
(Loitering moments faster flow!)
When with him I'll tread the skies,
Smile at death, and laugh at woe."

Thus she sung, and strewed the flower,
Beate her breast, and wept, and sighed;
And, when toll'd the midnight hour,
On the green turf grave she dy'd.
Many a night forlorn,
Sung her knell, while breezes sighed;
Haughty grandeur heard with scorn,
How so prone a maiden dy'd.

From the New York Crystal Hunter.

THE BLACK BOOMING BILLOW.

"Heigh, my hearts; cheerly, cheerly, my hearts; yare, yare; take in the top-sail; tend to the master's whistle.—Blow, 'till thou burst thy wind, if room enough!"

The lad of the valley may send his mild glance,
O'er fields where the yellow corn waves;
May smile, where the summer lambs gambol and dance;
And watch, where the woodland duck laves.
The soul of the artist may glow in the sun—
The poet sit under his tree:
But I love the wave, with its beautiful run;
The black booming billow for me.

I heed not the flame in my mother's warm home;
The smoke rising up to the cloud;
Within the neat garden I wish not to roam,
Where spring covers winter's white shroud.
I love the small spark of the binnacle light;
The rainbows that dance on the sea;
Give me the vast spread of the wave in its might:—
The black booming billow for me.

The light-freighted palanquin glides o'er the plain;
The horse rushes wild through the wood;
From the vines on a hill comes the villager's wain—
Where I, in my young days, have stood
But I have no joy with the motion of these:
My courier's my vessel so free;
I heed not the cart, with the swell of its trees:
The black booming billow for me.

'Tis there I can smile, when the morning-beams rise;
Can weep, when the night-watch is set!
Can sing my love-song, when the thunder-cloud flies;
Stand firm, when the capstan is wet
And when the hot ball, like a comet, shall come,
No one will my monument see;
The hill of the wave is the dead sailor's home:—
The black booming billow for me.

C. E. E.

THE HUMOURIST.

THE DOCTOR OUT-DONE. Some three or four sleigh loads of lads and lasses halted at one of our Hotels, on the first ultimo—among the number was a loving couple who were about to commence the new year by a matrimonial connexion; the rest were to witness the ceremony. A worthy divine was sent for; ushered into the room among the company, and the groom and bride pointed out to him. Somewhat surprised to see them at opposite sides of the apartment, the minister asked the man if he wished to be married? "No!" was the reply, in a gruff and determined tone. At this the bride fainted—the girls screamed—the young men were confounded—the holy man withdrew, and all prospect of joy and merriment vanished. Convulsions succeeded the fainting fit, and a doctor was immediately sent for—he was of the Thompsonian school—he tried his never failing prescriptions, steaming and hot drops—good remedies, in their own way, for bodily complaints, but of little benefit to "a mind diseased"—all would not do, and the poor girl was evidently growing worse. At this juncture a sage magistrate of our village entered—he knew something of human nature, and had no faith in steam doctors, especially in such cases—assuming authority he cleared the room of all save the love-sick damsel and her quondam lover—gave them a little friendly advice, and then retired—the knot was tied, and so ended the adventure.

[Johnstown Herald.]

POLISHING. A person in a public company accusing the Irish nation with being the most unpolished in the world, was answered mildly by an Irish gentleman, "that it ought to be otherwise, for the Irish met with hard rubs enough to polish any nation on earth."

DESTRUCTIVENESS. The organ of destructiveness sometimes exhibits itself in a droll way. The mother of a family was the other day saying, that as soon as the youngest child was of such an age, she should break up the nursery. "La, mamma!" said one of the children, "that will be fine sport—I'll break up the chairs, and John shall break up the tables."

UNLUCKY QUESTION. A bishop, upon his visitation, found a curate of the diocese so ignorant that he knew not how to say the mass. The bishop, enraged, asked him, "Who was the ass of a bishop that gave you ordination?" "Your most illustrious lordship," replied the curate, with a humble reverence.

CROSS EXAMINATION. A witness lately examined in one of the courts, in Illinois, upon a trial concerning a horse trade, was asked by the counsel for the defendant how the plaintiff generally rode?

Witness. He generally rides a straddle, sir.

Counsel. How does he ride in company?

W. If he has a good horse, he always keeps up.

C. How does he ride when he is alone?

W. Really, sir, I cannot say, for I never was in company with him when he rode by himself.

C. You may stand aside, sir.

Mrs. W. the well-known theatrical Aspasia, asked Colman, last week, how she should go to Wright's next masquerade? "Oh in the old way," said George. "How is that?" "Without a character," responded the wag.

MASONIC RECORD.

*Semita certe,
Tranquilla per virtutem patet unica vitæ.* [Feb. Sat.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

THE MASON.

When life becomes a scene of woe,
Of pain and poverty;
When sighing man is doomed to know
Too much of misery;
Who then will seek his humble door,
And smooth his nightly bed?
Ah, who will pity then the poor,
When all his friends have fled?

The Mason.

When he is doomed to death, nor knows
His wife and children's fears,
Who then will soothe the widow's woes
And dry the orphan's tears?
Ah, who will then a father be,
To those in deep distress—
Extend the hand of charity,
And sorrow's sighs suppress?

The Mason.

If to the grave the mother fall
The victim of despair,
Who then the orphan boy will call,
His bounteous board to share?
Who will bind up his bleeding heart—
His little hands extend—
And bid him breathe, with lips apart,
His thanks unto his friend?

The Mason.

And who will bend his little knees
Before his God on high—
Teach him to reverence Heav'n's decrees,
And fit him for the sky?
Yea, teach him to shun paths of shame,
And honour virtue's laws—
A patriot on the page of fame,
In his dear country's cause?

The Mason.

Yet man denies the garland green—
The blooming bay of praise;
But calls the Mason's motives mean,
And tho' convinced, inveighs.
Thus prejudice thro' time hath been
The scourge of Masonry.
Of all—the worst that I have seen,
Is mental tyranny.

Milford, Del.

MILFORD BARD.

HON. W. S. ROCHESTER'S ADDRESS.

[Concluded from page 10.]

I am aware that many persons, strangers to the inviolate principles which unite the craft, make the misconduct of some of our associates, a radical objection to the institution.

Without intending to enter into a laboured strain of polemical disquisition with such fastidious cavers, it may be answered, that even the inspired precepts of the Mediator have not been secure from abuse and profanation. When Moloch fell, his defection left no blemish, on the white throne where sits Supreme Majesty. Shall Religion, that sacred principle (without a reverence for which it is morally impossible to become a Mason) be neglected and rejected? Shall the house of prayer and worship be avoided, because apostates and pretenders have forsaken the glories of perfection, to wander in the mazes of infidelity? No; forbid it genius of masonry; forbid it every promise which keeps alive the hope set before us, and intimates to fallen man, the bright prospect of immortality and salvation.

However numerous, and however flagrant may be the instances which furnish cause of regret for

the aberrations of frail human nature, I boldly maintain, and I call upon every brother within the sound of my voice, to support the declaration, that whilst on the one hand, masonry has confirmed the wise determinations of the virtuous and the pious; on the other, our history, our records, and our tradition, abound with memorable instances, where a misguided fellow-mortal has been entirely reclaimed from the haunt of vice, and suddenly arrested from a course of self destroying depravity, after every suggestion of native pride or intuitive principle had failed.

This is not ordinary praise. Yet I will go further; I solemnly declare, in the presence of this respectable assemblage, that I never witnessed among masons, when employed in their useful labours, any thing like envy, strife, or malice, nor the gleam of any sentiment incompatible with warm friendship, and cordial brotherly love; nothing to poison the feast of reason, which is seated in the heart, or to dim the calm sun-shine which plays upon the soul.

Never have I beheld within the body of a just and regularly constituted lodge, erected to God and dedicated to the holy order of St. John, a hypocrite, a pretender, or an apostate.

The occasion does not require that we should trace the unhallowed denunciations of every tyro who has thought proper to wield against us the shafts of ridicule and calumny. Indeed it would be equally useless and improper, at present to notice the several quips and cavils which have at various times been started by the weak, the vain, and the sceptical. We are taught by our cardinal principles to avoid disputations, and the unequivocal consciousness of their influence and tendency, denies to the contumacious levity of our enemies, any other feeling than that of silent charity. Let us, however, while on this branch of subject, glance for a moment at one inquiry, which has been the fruitful source of much idle and captious conjecture.

Every brother will at once anticipate the question. Why are not the gentler sex permitted to become members of our institution?

To this the answer is brief, and ought to be satisfactory.

Masonry is founded in the fitness of things, relative to men exclusively, which forbids the idea of subjecting female tenderness to the preparatory dispositions for initiation, and to the labours required to secure advancement. Besides, the implements of the craft are not adapted to the delicacy of the female hand.

The plan of the Deity has designed the fair for a different, and no less enchanting sphere in the wide range of intelligent existence. The advancement of female happiness, the protection of widows and orphans, the defence of "injured innocence," and "suffering virtue," peculiarly allotted to the harder sex, and among none, more than masons, have these laudable objects been cherished with more devoted zeal, from time immemorial.

All that is lovely, all that is virtuous, all that is dignifying to the most charming, and amiable part of creation, is held by us in sacred reverence. Eden was a wilderness, its fragrance was wasted in the "sad solitude" of man's companionless hour, "till woman smiled." She is "the glory of the man."

The mantle which surrounds the female character, is made of so delicate a texture, that even the breath of surmise will sully its purity; and that secrecy, which gives value to our indispensable labours, would render it, in the eyes of a censorious world, obnoxious to the blasts of suspicion. Man is formed of coarser materials, and in a rougher mould; he is doomed to encounter dangers and difficulties; he is apt to become morose, vindictive, and inexorable: he needs all the influence of masonic discipline to soften the ruggedness of his nature; to quiet his angry passions; and to render him mild, tolerant, and humane. But how different the attributes of the last, and more perfect part of creation! Who

that has seen the seraph form of beauty, bending with fond anxiety over the cradle of sleeping innocence, and guarding with a mother's care its infant slumbers; who that has beheld the tender wife, soothing the sorrows, encouraging the hopes, and whispering comfort to the bosom of an afflicted husband; or the affectionate daughter supporting the tottering steps of declining age, and smoothing the pillow of sickness; who that has seen woman, ever susceptible of generous emotions, dispensing blessings with "a hand open as day to melting charity;" who that has known her as the ministering angel of health, and in sickness, in weal, and in woe; who that has seen, and known, and felt all this, would willingly subject her to vocations, appointed by Providence exclusively for masculine exertions? Among the foremost ranks of her guardians and protectors, will masons ever be found; they cannot be accessory to a violation of the laws of nature.

It would ill comport with the situation or duty of any reflecting craftsman, to attempt to cull the meretricious decorations of fancy, or to scatter the flowers of persuasion among those who are not masons, for the purpose of procuring an accession to the numbers of the fraternity! Masonry needs no resort to such means, to give it either strength or durability. We expect, nay we wish, no one to approach our mystical altar, who comes not spontaneously, to undergo the severe difficulties and dangers which beset and embarrass the most courageous candidate at every gradation. That there are difficulties and dangers, and those of the most unexpected and trying nature, a regard to truth will not allow us to deny. We who have surmounted some of them unhurt, may well exclaim, cold must be that bosom, which has not been warmed by the electrifying ordeal! and obdurate indeed must be that heart, which has not been softened by the trials and tribulations.

Brethren: It is time that my present work were finished. Let me earnestly entreat you to cherish with devotional affection, the cardinal principles of friendship, morality, brotherly love, and charity; make them your morning study, your evening meditation. The bible, the great light of masonry, will guide you to all truth, and direct your march to the temple of happiness. Let no dazzling delusion, no ephemeral glare, no false estimate of mere worldly acquisitions, lead you astray from the straight line of moral rectitude, which this sacred book points out and illuminates. One false step often leads the bewildered traveller through the intricate mazes of folly, into the labyrinths of vice, whence nothing short of divine interposition can rescue him. "Let your light so shine before men that they may see your good works." "Mark well the entering of the house, and every going forth of the sanctuary." May your deeds of charity be as constant as the returning wants of the distressed widow, and the cries of the helpless orphan. "Take good heed of these things, for the night cometh when no man can work." The all seeing eye of the Supreme Architect is upon us. He sees not as man sees. He looks directly on the heart.

"While you have the light, believe in the light, that you be not cast into outer darkness; that you may not knock when the door shall be shut." May the rules and designs laid down on your tessel boards be well gauged and plumbed. If any of you have passed the veil of the sanctuary, let no stain or blemish tarnish the spotless purity of the white banner entrusted to your care; clasp to your embrace with redoubled fondness the immovable jewel, and let nothing short of the last throes of departing life, disengage it from your grasp.

May you be enabled to perform with honour every kind office, and every endearing charity of life: may your first and last care be to diminish the aggregate of human misery: may you be taught to win all who come within the sphere of your agency, to the exercise of those tender duties. May you as fathers, as husbands, as friends, as worthy men, and

worthy Masons be enabled to distinguish and adorn the profession.

Let every brother be faithful to his conscience, that inward monitor, whose warning voice no human art can silence: pause for a moment, behold how swiftly the sands run! how rapidly our lives are brought to a close!

May we all, amidst the cares and troubles of this transitory life, prepare for the approach of the king of terrors; may we be more strongly than ever cemented by the ties of union, hospitality and friendship; may the short, but precious time of our mortal existence, be wisely employed; may we cherish an unceasing desire, in the interchange of kindness and affection, to promote not only our own mutual interests, but the happiness and welfare of all around us; may the whole fraternity spread over the globe, be not weary, but persevere in well doing; and finally, by the unmerited grace of Immanuel, be invigorated to finish all their work, and to take a seat in that "spiritual building, that house not made with hands, eternal in the Heavens."

LECTIONS.

Ames Royal Arch Chapter, Lockport, Niagara Co.

Elected December 12, 1826:—Hervey W. Campbell, High Priest; William Buel, King; Eli Bruce, Scribe; Jared Darrow, Captain of the Host; David Haigh, Principal Sojourner; Levi E. Rounds, Royal Arch Captain; Hiram B. Hopkins, Orsamus Turner, and Daniel Pomroy, Masters of Vails; John Gooding, Treasurer; Stephen B. Pond, Secretary; John Ladd, Tyler.

Niagara Council of Royal and Select Masters.

Election held in Lockport, Niagara County, on the 31st January, 1827:—Henry Maxwell, Thr. Ill. G. R. G. Master; Hervey W. Campbell, Thr. Ill. D. G. Master; Alfred Barrett, Ill. G. Warden; Levi E. Rounds, Ill. G. Treasurer; David Haigh, Ill. G. Recorder; Seymour Scovill, Ill. G. Marshal; Orsamus Turner, Ill. P. C.; Eli Bruce, Ill. G. C.; William Buel, Sentinel.

Delphi Chapter, No. 44, De Ruyter, Madison Co.

Nathan B. Wilbur, High Priest; Richard W. Allen, King; James Nye, Scribe; Jeremiah Wilbur, Captain of the Host; Bradley Merchant, Principal Sojourner; Stephen G. Sears, Royal Arch Captain; Jonathan Shed, Elias Benjamin, and Elmer D. Jencks, Masters of Vails; Sylvester Aylesworth, Treasurer; Thomas C. Nye, Secretary; Epaphrus Leete, Steward.

Moriah Lodge, De Ruyter, Madison County.

Marvel Underwood, W. M.; Timothy Miner, S. W.; Bradley Merchant, J. W.; Sylvester Aylesworth, Treasurer; Nathan B. Wilbur, Secretary; Esic Patten, S. D.; Samuel Jones, J. D.; J. Wilbur, and R. Allen, Stewards.

Hamilton Lodge, No. 121, Eaton, Madison County.

Elected and installed December 8, 1826:—Joseph Morse, W. M.; Lyman Gardiner, S. W.; Stephen Coman, J. W.; William Morse, Treasurer; Harry C. Gardiner, Secretary; Lewis Pierce, S. D.; Lyman G. Hatch, J. D.; James Peterson and William Abbot, Stewards.

Regular meetings on Thursday preceding full moon.

Steuben Chapter, No. 101, Hornellsville, Steuben Co.

J. R. Stephens, High Priest; Asa Hovey, King; Thomas Bennet, Scribe; James Jones, Captain of the Host; Philip P. Rich, Principal Sojourner; William Stephens, Royal Arch Captain; Elijah Stephens, Christopher Doty, and Roswell Clark, Masters of Vails; John S. Livermore, Treasurer; Otis Thatcher, Secretary; Rev. Jedediah Stephens, Chaplain; Stephen Webb, jr. Sentinel.

Regular communications, Thursday after full moon.

Grand Royal Arch Chapter of the State of Ohio.

Elected January 10, 1827:—M. E. Charles R. Sherrnan, Grand High Priest; E. John Satterthwaite, Deputy Grand High Priest; E. Joshua Downer, Grand King; E. Lemuel Stokely, Grand Scribe; E. Lincoln Goodale, Grand Treasurer; E. Bela Latham, Grand Secretary; E. and Rev. J. McAbey, Grand Chaplain.

Evening Star Lodge, No. 259, Hornellsville, Steuben County.

Christopher Doty, W. M.; Bazy Barker, S. W.; Stephen Webb, jr., J. W.; James Jones, Treasurer; Otis Thatcher, Secretary; Jesse Harding, Tyler.

Regular communications, Thursday preceding full moon.

SCIENCE AND THE ARTS.

THE ARTS IN FRANCE.

Within these twelve years France has made immense progress in almost every branch of manufacture. Pins are now made at a single operation, the "heads and tails" being of a piece; so that the proverb, "As useless as a pin without a head," is likely to be soon lost, from the thing not being possible.

A new discovery has been made in printing, by which classical works used in every country need only be set up once; thus, if an edition of the classics be printed at Paris, editions may be published in England, Germany, Holland, &c. without being at the expense of a new composition. Besides the advantages of cheapness, the text, once established, can never vary, and the type is always new. We have seen three volumes in 8vo. printed upon the new principle; they are beautifully got up, and sold to the public at less than 3s. the volume.

In the article of plated goods, the French seem even to surpass the manufacture of Birmingham. We have seen plated candlesticks of which the making only cost five sous the pair, and they are sold at thirty pence in retail. The same manufacturer has discovered the method of making coffee-pots, tea-pots, &c. of one piece of metal, without soldering, and that too at a cheaper rate than by the old method: we have seen several articles of this kind, of very elegant forms.

NORTHWEST PASSAGE.

In a letter from Mr. Douglas, the botanist, to Dr. Hooker, dated from the Great Falls on the Columbia river, the 24th of March, 1826, there is the following curious paragraph respecting the North West Passage:

"There is here a Mr. Macleod, who spent the last five years at Fort Good Hope, on the Mackenzie river. He informs me, that if the natives, with whom he is perfectly acquainted, are worthy of credit, there must be a North West Passage. They describe a very large river that runs parallel with the Mackenzie, and falls into the sea near Icy Cape, at the mouth of which there is an establishment on an island where ships come to trade. They assert that the people there are very wicked, having hanged several of the natives to the rigging; they wear their beards long. Some reliance, I should think, may be laid on their statement, as Mr. Macleod showed us some Russian coins, combs, and several articles of hardware, very different from those fur-

nished by the British Company. Mr. Macleod caused the natives to assemble last summer, for the purpose of accompanying him in his departure for Hudson's Bay. The sea is said to be open after July.—This gentleman's conduct affords a striking example of the effects of perseverance. In the short space of eleven months, he visited the Polar Sea, and the Atlantic and Pacific Oceans, undergoing such hardships and dangers as, perhaps, were never experienced by any other individual." The letter from which this is an extract, with various others from Dr. Richardson and Dr. Drummond, will be published in the forthcoming number of Dr. Brewster's Journal of Science.

SCIENTIFIC APPARATUS.

Academy of Sciences, Paris, December 11, 1826.

"An apparatus to examine the interior of the Bladder.—M. Segelas read a notice on a method of lighting the urethra and bladder, so as to see into the interior of these organs. The plan is as remarkable for its simplicity as for its results. It consists in two candles; two looking-glasses and some cylindrical tubes, and constitutes a species of optical instrument, to which M. Segelas has given the name of Speculum Urethro-Cystic. This physician, to illustrate the idea of the quantity of light thus thrown into the bladder and urethra, asserts that with the aid of his instrument he has read in the darkest spot at fifteen inches distance, the finest printed characters, those of the classics in miniature for example. In fact, after the session, M. Segelas demonstrated this circumstance to many members of the Academy, in the Library of the Institute. The Speculum Urethro-Cystic will afford useful information not only on the state of the mucous membrane of the bladder and urethra, but likewise upon the foreign bodies which are found there, particularly stone. As the author remarks, it is likewise susceptible by slight modifications of being applied to other parts heretofore inaccessible to sight, as the deep regions of the rectum, of the pharynx, and of the nasal cavities."

LIGHT FROM BENZOIC ACID.

M. Buckner, of Magonza, having mixed impure, yet dry, benzoic acid with a sixth part, by weight, of powdered charcoal, left it exposed for several days at a moderate heat. The crystals had begun to form, when M. Buckner, to expedite the operation, placed the apparatus in a stove of high temperature. Half an hour afterwards, brilliant flashes of light were emitted from the mixture, and continued for half an hour. The flashes ceasing when each crystal was deposited, caused M. Buckner to consider that the light was produced by a neutralization of electricity. Similar phenomena have been observed in other salts; and M. Dobreiner is of opinion that those salts which contain no water of crystallization, are particularly powerful in producing light during the formation of their crystals.

NEW INVENTED RAT TRAP.

Take a barrel, and stretch a skin of parchment over it with a string; cut it across and athwart, nearly to the outside. Take some dripping, and mix it with meal; smear it on the middle of the parchment. The rats will smell it, and treading on the parchment it will give way, and they will fall into the water in the barrel. Put a plank for them to creep up to the barrel's brink outside, and strew some oatmeal on it. You must not let the water be too deep, but set a brick endways in it, and the first rat that is caught will make a noise, which will entice more; so that that they will fight for possession of the brick, and the noise will draw others. Thus, in one night, the house may be cleared of rats, be they ever so many. Mice and other vermin may be caught in a similar way.

FRUIT AND FLOWERS.

Mix one pound of nitre with two pounds of bole ammoniac, and three pounds of clean common sand; then, in dry weather, take fruit of any sort, which is not fully ripe, allowing the stalks to remain, and put them one by one into an open glass till it is quite full; cover the glass with oiled cloth tied closely down. Put it three or four inches down in the earth, in a dry cellar, and surround it on all sides to the depth of three or four inches with the

above mixture. The fruit will thus be preserved quite fresh all the year round.

NEEDLE MAKING.

I will attempt to give you some idea of needle making. The wire is first cut into suitable length for two needles. Each end is sharpened by taking fifty or a hundred between the fingers and rolling the points on a revolving stone. The needle is then placed on a die, exactly in the centre, and one blow makes two eyes, and, at the same time, cuts the wire nearly in two, between these eyes. This was done with so much rapidity that I asked how many times the die fell to make the eyes, not perceiving that the boy took up one at every blow. Two needles, are then parted, and you have two in an unfinished state. Tempering them is the next process. The needles while heated red hot, are thrown into cold water, and afterwards are brought to a spring temper by being rolled in plates of hot iron. Each is then filed in the eyes, and last of all, receives the polish in the same way as it is pointed, only on a finer stone. In the last room I visited were 15 or 20 young girls, from ten to fourteen years of age, busy in counting them out, putting them into papers, and labelling them. The principal part of the work is done by boys, who, from their appearance, must be poorly paid.

[London paper.]

NEW CELESTIAL BODY.

An astronomer at Marseilles, M. Gambard, discovered, in the month of November, in the neighborhood of a Serpentis, a body, in size and appearance much resembling the planet Mars. It was seen on four successive nights with different telescopes. The Royal Society of London were waiting with much interest for a second communication from the distinguished astronomer who observed this phenomenon. An attentive observation the nights of the 25th and 26th November, did not discover this extraordinary body, which, it is supposed, has not been visible in the latitude of London, or that if it has, is now invisible from the rapidity of its motion.

AMERICAN DRAMATISTS.

The London Magazine for December contains an article on American dramatists, purporting to be written from Philadelphia. The article itself is very defective; but it is considerably amended by the editors of the Galaxy and Literary Cadet. We shall publish it in its most perfect state. This department of American literature is very little understood, and any attempt to draw the public attention to it, must be witnessed with pleasure.

It appears to me that very little is known in Great Britain concerning the present state of American literature; and less of the dramatic than of any other department. Though nothing of commanding merit has appeared, still there are many dramas before the public which deserve a passing notice; and a brief sketch of our dramatists may prove neither stale nor uninteresting to the English reader.

The first drama written by a native Philadelphian, was a tragedy in five acts, entitled "The Prince of Parthia," by Thomas Godfrey, the son of the inventor of the quadrant, now known by the name of Hadley's Quadrant. This production contains much fine poetry and nervous writing; but as the amiable and gifted author died before he had completed his poem it is not as perfect as it otherwise would have been; a defective education is also discernable in many parts. It was intended for representation, but never performed; and after his death which occurred in his twenty seventh year, it was printed in Philadelphia, in a volume of miscellaneous poems, in 1765.

Peter Markoe, a citizen of the same place, published in the year 1784, a tragedy in five acts, entitled the "Patriot Chief;" and also a comic opera, entitled "Reconciliation," which, I believe, were never performed; they possess but a moderate share of merit.

John Leacock, at one time coroner of Philadelphia, published, 1767, a comic opera, entitled "Disappointment, or the Force of Credulity," which was designed to ridicule the belief at that time prevalent, that Blackbeard, the pirate, had buried vast treasures along the American coast. The piece contains much broad humour, and passed through a second edition in 1796, but was never introduced upon the stage.

In 1824, Lemuel Sawyer, a member of Congress from one of the southern states, published a comedy in ridicule of the same absurd opinion; and also to satirize the practice which prevails in the district from which he was elected, of treating the voters with liquor at the polls on election days. His satire is not, I fear, sufficiently pungent to effect the laudable purpose of the writer, who died since the publication of his play, which was never performed.

Between the years 1785 and 1800, a hair dresser, named Murdock, published two or three dramatic pieces: among the number is one entitled the "Triumphs of Love or the Happy Reconciliation," which was accepted by the managers of the Philadelphia Theatre, performed, and permitted to pass peaceably into oblivion by an indulgent audience. The writer, no doubt, understood the mystery of slaving as well as Allan Ramsay, but not the art of poetry.

In the year 1801, Charles Jared Ingersoll, Esq., then in his nineteenth year, published a tragedy in five acts, entitled "Edwy and Elgiva," founded upon incidents in the history of England. This production was highly promising, considering the youth of the writer; and was performed with flattering success upon the Philadelphia boards. Mrs. Merry, to whom the piece is dedicated, sustained the character of Elgiva. Mr. Ingersoll has since been in Congress, and is at present one of the most distinguished members of the Philadelphia bar, and has held for some years past the office of attorney general for this district, under the United States' government. Mr. Ingersoll is also the author of "Inchiquin's Letters," and other publications.

There are several dramas of considerable merit before the public, from the pen of James N. Barker, Esq. an alderman of the city of Philadelphia. Mr. Barker was, during the late war with Great Britain, a major in the artillery service, and served on the frontiers. After peace was declared, he returned to his native city, received a commission as a magistrate, and established himself. He served for one year as mayor of the city: and is now about forty years of age, of small stature, and spare habit of body. His visage remarkably sharp: high and capacious forehead, small pointed nose, and a robust chin, which indicates firmness and decision of character; qualities which he possesses in an eminent degree. His eyes are small, but at times full of animation and meaning. As early as in 1807, he produced a comedy at the Philadelphia Theatre, entitled "Tea and Smiles;" and a melo-drama, founded on the story of Pocahontas, which he called "The Indian Princess, or La Belle Sauvage." These were favorably received by the audience. The popularity of Sir Walter Scott's *Marmion*, led the manager of the Philadelphia theatre to believe that if dramatised it could not fail of being successful; and he accordingly desired Mr. Barker to undertake the project. The play was speedily finished, introduced upon the stage, and had an astonishing run. Those concerned, apprehending a prejudice existing in the public mind against native productions, thought it politic to announce "*Marmion*," as from the pen of Thomas Morton, and as having been received "with unbounded applause in London." By this stratagem the piece obtained an impartial trial; and thousands lavished applause, who otherwise would not have endured the strains of an American muse, lest their critical acumen might be called in question. In 1817, Mr. Barker published a remarkably neat and sprightly comedy, entitled "How to try a Lover;" and in 1823, he produced a tragedy, entitled "Superstition, or the Fanatic Father," the scene of which is laid in New England, and, one of the principal characters is Goff the regicide. This piece possesses a considerable share of merit, but was not successful upon the stage. Mr. Barker has written some smaller pieces for the stage, several tales and miscellaneous poems.

(To be Continued.)

CHARACTER.

LORD ERSKINE.

The eloquence of this remarkable man was an era at the bar. His addresses to juries have not been equalled; they alike captivated their understanding, their imaginations, and their passions. He often rose to the highest oratory; but it was always simple, and even in his sublimest flights, there was much that was very familiar, but this rather set off than clouded his splendour, rather increased than diminished their general effect. His skill in the conduct of a cause, and in the examination of witnesses, has never been surpassed; his discretion never forsook him, even in his highest forensic enthusiasm; his manners were always most gentlemanly; at the bar he was uniformly loved and admired; and, when he accepted the seals, no one, as Lord Eldon justly remarked of him, could have a greater wish to discharge properly the office which was conferred on him, or greater talents to qualify him for a proper discharge of it. A true friend to constitutional liberty, he was its constant and animated advocate; but he never failed in respect to the crown, or sacrificed to the prejudices or vagaries of the populace. It is highly to the credit of the two noble lords, that though the difference of their politics repeatedly placed them in a state of forensic conflict, neither ever said that to the other, which it was displeasing to him to hear. This circumstance Lord Erskine himself noticed to the Reminiscent.

[Butler's Reminiscences.]

BROWNE WILLIS.

AN ANTIQUARIAN ODDITY.

Browne Willis, the first person who undertook a detailed and general survey of the English cathedrals, acquired his love for this pursuit by passing many of his idle hours in the Abbey, when a Westminster boy. That abbey was open to the boys till within late years, when they were deprived of a liberty which produced some injury to the monuments, and annoyance to the visitors and showmen. Browne Willis, who became one of the oddest of all men, had his share of peculiarities as a boy. The monuments were his books, and before he left school he imbibed there a love of churches and church antiquities, which fixed the bent of his after-life. He was a great repairer of churches and steeples, attended cathedrals, etc., wherever he could so time his visits, upon their dedication days; and when he came to Bath would lodge nowhere but in the Abbey-house. A lively lady described him as having, with one of the honestest hearts in the world, one of the oddest heads that ever dropped from the moon. He wrote the worst hand of any man in England; it was more unintelligible than if he had not learned to write, by copying the inscriptions upon old tombstones. He wore three or four coats at once, each being of a different generation, and over them an old blue cloak, lined with black fustian, all of which were girt with a leathern belt, giving him the appearance of a beggar, for which he was often taken in the course of his enthusiastic wanderings. His weather-beaten wig was of a colour for which language affords no name; his slouched hat, having passed the stage between black and brown, was in the same predicament as the wig; and the lower part of his equipments had obtained for him, in his own neighbourhood the appellation of Old Wrinkle Boots, for, during the wear and tear and repair for forty years, the said boots had contracted as many wrinkles as their quantum of calf skin would contain, and consequently did not reach half up the legs which they once covered. Being far too deeply engaged with past ages to bestow any portion of his thoughts and care upon the present, he suffered a fair fortune to be deteriorated by neglecting his worldly affairs. And having lived long enough to hold a distinguished place among antiquities himself, he left behind him the character of a diligent and faithful antiquary, in which he will long continue to be remembered.

Louis XV. was extremely afraid of death. "You are getting old, commander," said he, once addressing M. Souvre; "where will you buried?" At your Majesty's feet," replied the commander. The King spoke not another word the whole evening.

POPULAR TALES.

THE BOY WITH THE GOLDEN LOCKS.

The following story is from the pen of the editor of the New-York Crystal Hunter.

And there was, too, in that same bark,
A father and his son. *H. K. White.*

He watch'd it wistfully, until away
'Twas borne by the rude wave wherein 'twas cast;
Then he himself sunk down. *Byron.*

Mr. Albert was an Englishman who had married a delicate woman, possessed of amiable manners. It was an union of love; and Mrs. Albert had the misfortune to find her husband's pecuniary circumstances in a declining state, prior to the period of giving birth to a first child. A knowledge of Mr. Albert's difficulties preyed upon the fine mind of the wife, and brought on a premature illness.

A noble, blue-eyed boy, beheld a father's face; but, at the same moment, a mother's spirit sought a sphere for which her purity and amiable manners had entitled her.

It would be idle to say Mr. Albert did not mourn, and useless to describe his grief. The fond heart of a sorrowing husband experiences a dreadful void.

Feeling acutely the loss of his wife, and the derangement of his affairs, Mr. Albert determined to leave his little living treasure in the care of a kind maiden aunt, sail for the shore of America, and try to gain, by his talents and industry, a settled home for himself and his boy.

Only three years passed over his head before he realized his wishes; and, with an anxious heart, he sought again the British shore, to receive his child, and carry him to the land of liberty. Mr. Albert could not refrain from a father's and widowed husband's tears, when he "called back the tangles" of the fair boy's bright locks, and saw, in his laughing eyes, a semblance of his sainted mother.

When Mr. Albert got on board the vessel, which was bound for the western continent, oh, how he watched each look, smile, and tear of the child with the golden locks! Never did the first Adam nurture a plant of paradise with more fondness than this father cherished his only son.

The British channel is always a dangerous one to vessels, especially in the winter season—and it was at that time of the year Mr. Albert and his fair-haired boy left Albion's isle. But, the ship bravely rode the waves, and "walked the waters like a thing of life." The captain had the pleasure of safely passing Cape Clear, (the most southern point of Ireland,) and was soon enabled to get all that a seaman, possessed of a good vessel, requires—plenty of sea-room.

Mr. Albert did not leave the side of his little child during the period of sea sickness; but, with all the intense anxiety so beautifully displayed in a mother's love, the father watched the feverish form, and ministered to every little fancy. The boy was naturally strong, and he soon shook off this universal troubler of all persons unused to the sea. And then did he display all those beautiful wild flights, and innocent joys, which a father's sight enjoys, and with which every kind disposition is gratified. The little merry fellow became a favorite with the captain, officers, and even the very crew.

It was upon a bright day, when the ship was sailing a southerly direction, that the child stole from the cabin. His father was occupied at the time in listening to an account of the perils encountered by the captain upon a former voyage. The boy climbed up the side of the ship, and stooped over her bulwarks for the purpose of looking down upon the broad waves. A frightful situation!

"Your bright-haired boy has gone up the cabin stairs," said the captain to the father.

Mr. Albert immediately ascended to the deck; and all the blood of his cheek shrunk to his heart when he saw the situation of his son. But the boy gave him no time to think; for, partly turning round his neck, and taking his small hands from their resting place, he attempted to wave his father towards him.

At that moment, a sea struck the opposite side of the vessel—the boy lost his balance—he fell into the black water, and a huge billow displayed him upon its swelling back!

The wretched father uttered a dreadful shriek, and sprang over the bulwark into the sea.

The man at the helm was the only person at that time upon deck. He instantly left the wheel, ran down the cabin stairs, and, with a trembling lip, told the master of the accident.

"Out with the boat in an instant!" roared the captain, and, at the same time, running wildly about the deck, "call the fresh watch! and about-ship immediately! Mate, up the shrouds directly; keep a sharp eye upon the poor gentleman and his boy, and let your arm be directed to where the waves carry them."

The captain was the first to spring into the boat, and his crew eagerly followed him. For never did a true American sailor want for a second order, when his aid was required. Bravery and kindness of heart are often synonymous.

"Pull, my lads; for God's sake pull!" said the captain, as he kept turning round, at one time to see the mate on the mast, pointing out the direction the bodies had taken, and then, to steer the boat aright. The men did not utter a word; but pulled at the oars with all their power.

"Tis a drifting sea," said the captain. Not one of the men answered him; but each continued to labour away.

"I have my fears!—keep a good look out at the head of the boat, Atkins!"

Here the captain turned around to look again, at the directing arm upon the ship's mast; and he turned deadly cold when he saw the mate raise, as if in alarm, his hands on high!

"God of Heaven!" cried the captain; "then they have indeed sunk!"

"I saw it," exclaimed the second officer, who was stationed in the bows of the boat. "I saw it shake its jaws! And look, Sam, is that the yellow gulf weed between his teeth? Surely it can't be the poor child's hair!"

The dreadful catastrophe was soon partly told. A billow, lightly tinged with blood, rose around the boat, and displayed within its centre a huge shark!

No traces of the poor father were perceivable. The captain grew sick at heart.

"Take the helm, Atkins," he said, keeping his eyes fixed upon the bottom of the boat. The second mate's cheek had a cold tear upon it, as he, in silence, obeyed his commander's orders. And a fine expression of still sorrow was perceivable upon the face of every man composing the boat's crew.

Slowly and faintly did the captain ascend again the side of his ship.

"Let me not be called during the night," he said, addressing his first officer; "and do not show me the log-book for some days to come."

He then entered his state room, fastened the door, and fell upon his bed, sobbing violently.

The night-watch was set. But not a man disturbed the stillness of the deck with a heavy tread. The heavens looked cold and bright. Nought was heard through the dark hours but the light cry of the wheel, as the man at the helm looked at the binnacle-light, and kept the vessel up to the wind.

C. E. E.

THE DEVIL'S OWN.

Among the multitudes who daily pass along the great square at Presburg, thoughtless or full of care, merry, busy, or sad, or in that agreeable state of listlessness, the furments of the Italians, probably few among the number have remarked the animated Fresco painting which stands over the door of the senate house of the city. The structure itself is traced as far back as the native dynasty of the Arpades, and that it has, since the year 1388, been the senate and council house of this second capital of the Hungarian kingdom, is clearly authenticated. During the reign of Ferdinand the First, in 1747, there were many improvements and alterations made on the building; in particular, he added a few vaulted chambers and the entrance hall, which still remain in the original form. To this period, also, belong the small arched gothic windows which run along the whole front, two of which jut out over the door, and form a projection. Close to the right of these twinkle windows, and opposite the observer, there leans the figure of an old man painted to the life, in long black garments and with a snow-white

beard which reaches to his girdle, who appears deeply absorbed in the contents of a book which lies open before him. The figure is as large as life, but the upper half alone is visible; his back is turned towards the little side window of the projection. But, in truth, he did not always turn his back when he was among the living, and when the measure of his iniquity was not yet full.

He often looked down from this window upon the crowded city, as a spider from its web upon the flies which it watches to ensnare. This figure, which has bid defiance to the power of time, is the representation of a citizen and senator of Presburg, which the artful and deluding destroyer of mankind had in an instant painted upon the wall.

About the conclusion of the sixteenth century, and in the turbulent days of Rodolph, there lived a man in Presburg, who never allowed either the public or private transactions of the citizens to escape him.

They never loved nor respected, but on the contrary, feared and abhorred him. It was impossible to discover in his dark and austere countenance what was passing within, and his voice was low, hollow, and almost sepulchral; yet there were times when lightning glances shot forth from under his bushy eye-brows, illuminating, in a fearful manner, the dark and stormy tempest of his countenance. As a poor boy this dreaded one came to Presburg, but whence no one knew. In the course of a few years he raised himself to the first employment in the city; but, how, or by what means, seemed an inexplicable enigma, for he had neither friends nor relations, and, at the commencement of his career, apparently no resources save within himself. Whatever was intrusted to him prospered, whatever was opposed to him fell to the ground.

All yielded to him. Opposition to his will he never forgave. The destruction of those who opposed him became a warning to others, and he ruled with undisputed sway. All sought, but all feared him. He lived in solitude and apparent indigence. He heaped up riches and no one knew for whom, for his whole household consisted of but one cross old woman. Many curses and many tears hang upon his accumulated mammon, but this brother hardly dared to whisper to brother, so much was this powerful being dreaded. The philosopher's stone, the course of the stars, and the secret powers of nature were supposed to occupy those hours, which the duties of the city did not require. He was generally supposed to be a conjuror and a confederate of the destroyer's, to whom the grey haired sinner, for the goods of this world had sold his immortal soul.

Once on a time, when the council of the city had assembled to administer justice to the oppressed, and to hold arbitrary abuses within the iron limits of the law, a poor woman, with loud complaints, threw herself in the hall of justice. Miserably had she and her husband (this was the purport of her complaint,) struggled with innumerable misfortunes and persecution, to support themselves by the labour of their hands, and the produce of a small piece of ground, which bordered the possessions of a wealthy citizen. Some days since, after a long illness, her husband had been taken from her by death, and her rich neighbour had seized upon the little field to add to his own possessions. She called upon God and the fathers of the city for protection against the crying injustice; but alas! the robber sat in the midst of their honourable circle. He was the dreaded senator. Consternation soon became general, and the most opposite resolution alternately agitated the assembly. The accused alone retained his immobility. His voice, his countenance, his manner altered not. Without looking up, he drew out a roll of parchment from his bosom, which testified, that many years since this piece of ground had been lawfully acquired by him, but that for some service rendered by the deceased, it had been made over to him during his life, and now that the man was dead, he had, according to custom and right, which no one can prevent or object to, taken back his property again. "Impossible, inconceivable!" exclaimed the complainant. She asserted that it was known to the whole city that this piece of ground had not only belonged to his father but grandfather, and if the document asserted otherwise, it was a base forgery. Contrary to custom, a diffe-

rence of opinion divided the assembly, and doubts arose upon the authenticity of the deed; but, at length, the greater number took part with the oppressor. Then the poor woman, wringing her hands, insisted upon his making good his claim by oath; and were he able, with an undisturbed conscience, to assert his right in the face of Heaven, then the field might remain with him, and with her only the mercy of God. Slowly, but determinately, the enigmatical being arose, and walked with a firm step, to the end of the table, and stood, with downcast eyes, before a crucifix—opened the book of law, and read, with his sepulchral voice, the fearful words of the oath; he ended, and raised his right hand to swear. Then there burst a clap of thunder which shook the very earth. The tower seemed to bend, and all present grew stiff and cold, as bodies risen from the grave. The tempest rushed howling through the crevices, and tore and rent the windows; and fearful screams appeared to issue from the walls.

When recollection was restored to the assembly, the senator had vanished. A large opening in a side window marked the place where the deceiver had carried away the criminal to everlasting perdition; and, as a warning to perjurers, his image, which makes one shudder to look at it, was left behind, and still baffles the various attempts which have been made to efface the representation.

MISCELLANY.

AN EXTRACT.

Could we draw back the covering of the tomb; could we see what those are now, who once were mortal—Oh! how would it surprise and grieve us to behold the prodigious transformation that has taken place on every individual—grieve us to see the dishonour done to our nature in general, within these subterraneous lodgments—here the sweet and winning aspect, that wore perpetually an attracting smile, grins horribly—a naked ghastly grin! The eye that outshone the diamond's lustre, and glanced its lovely lightning into the most guarded heart; alas! where is it? Where shall we find the rolling sparkler? How are all those radiant glories totally eclipsed! That tongue that once commanded all the charms of harmony, and all the powers of eloquence, in this strange land hath forgot its cunning. Where, where are the strains of melody, which ravished our ears? Where the flow of persuasion which carried captive our judgment? The great master of language and of song is become silent as the night which surrounds him.

SATURDAY EVENING.

A week is past; let my thoughts run through its business; and let my conscience pass a faithful sentence. Am I a better man, a better husband, a better wife, a better neighbour, or whatever be the duties which it lays upon me? Am I more satisfied with my conduct than I was the week before? If I am not, I have lived in vain. What have I done for the good of the neighborhood; what for the public good? How have I been prospered in business; and how have I shown my thankfulness by administering to the necessities of those around me? Are no sick, afflicted strangers in my vicinity? If not, this is the most favourable spot under heaven. And, if there are, what have I done for their relief? If in none of these things I have been improving, I am living for myself, a selfish niggard, unworthy the name of man or Christian. Am I better prepared for dying than I was last week? And when I look forward, how am I to spend the next week, and what new project for improvement have I in mind? And what can I do for the good of others?

FEMALE TEMPER.

It is particularly necessary for girls to acquire command of their temper, because much of the effect of their powers of reasoning and of their wit, when they grow up, depend upon the gentleness and good humour with which they conduct themselves. A woman who should attempt to thunder with her tongue, would not find her eloquence increase her domestic happiness. We do not wish that woman should implicitly yield their better

judgment to their fathers, or husbands; but let them support the cause of reason with all the graces of female gentleness.

A man, in a furious passion, is terrible to his enemies; but a woman, in a passion, is disgusting to her friends; she loses all that respect due to her sex, and she has not masculine strength and courage to enforce any other kind of respect. These circumstances should be considered by those who advise that no difference should be made in the education of the two sexes.

The happiness and influence of woman, both as wives and mothers, and indeed, in every relation, so much depends on their TEMPER, that it ought to be most carefully cultivated. We should not suffer girls to imagine that they can balance ALL HUMOUR by some good quality or accomplishment; because, in fact, THERE ARE NONE WHICH CAN SUPPLY THE WANT OF TEMPER IN THE FEMALE SEX.

ALBANY:

SATURDAY, FEBRUARY 17, 1827.

MASONRY IN MEXICO.

The editors of the National Intelligencer have received information from Mexico, of as late date as the close of December. From this information we learn that the subject of masonry is warmly debated throughout that republic. "The papers of the last of December contain the answer of the acting secretary of state to a resolution of the senate, asking information 'upon the existence of masonic lodges, their number, denominations, objects, and effects.' This report, which is an analysis of the reports of the governors of seventeen states of the federal district, and of the territories of Colima and Tlaxcala, also published, shows that masonry exists under two denominations—York and Scotch. Of the first, besides many lodges in the capital, there are two in Guadalajara—one in the state of Michoacan—and it is extending itself to various other states. Of the second, none are known to exist elsewhere than in the capital; nor is it known that there is any masonic lodge in the states of Cheapas, Chihuahua, Guanajuato, Ojaca, Puebla, Sonora, Tabasco, Zacatecas, or in the territories of Tlaxcala and Colima." The Intelligencer says, "ten of the governors recommend a suppression of such associations;" but we are not informed whether this recommendation is founded in prejudice, or whether it is made in consequence of the existence of actual evils, which the governors suppose to have arisen from a support of the masonic institution. Others refrain from an expression of their opinions upon this point; and the editors of the Intelligencer remark, that "the governor of New-Leon, while he suspends his judgment, observes that masons are very numerous in England, France, and in the United States, whose institutions they do not subvert, and that Spain presents a contrary picture." These various opinions, the acting secretary has, with some ingenuity, brought into a support of his own notions; which, though expressed with the moderation which the subject and his official character demand, are evidently intended to operate against the genuine principles of liberty which masonry inculcates. The report, which is long and intricate, thus concludes: "The government, then, disapproves all clandestine meetings, which, by fixed rules or institutes, form bodies or colleges, and profess secrecy; and in the interesting conflict between the guarantees of liberty and of the public security, is confident that the wisdom of the congress will interpose its power with that steady and judicious vigour which is necessary to conciliate them, so that neither may suffer the

the slightest detriment." After this report had been received, Senor Cavallos, a fanatic priest, and senator from Coahuila and Texas, offered a resolution "that masonic lodges, of whatever denomination, be suppressed—that their officers be deprived of their places or privileges, if they hold any, either civil military or ecclesiastical; the political rights of the other brethren shall be suspended for four years. Those who hold no employments nor privileges, shall be fined, according to the grade of their offences, not exceeding 3,000 dollars. Such as are not able to pay the fine imposed, shall be banished to California, or elsewhere, for a term proportionate to the offence, not exceeding two years."!! This resolution was of two sweeping a nature to suit men so recently recovered from the thralldom of tyranny; and be it said to the eternal credit of the Mexican senate—it was supported by ONLY TWO VOTES!!

We do not think that the masonic fraternity have good cause to fear a new foe in Mexico. Liberty in that country is still young, and cannot exercise so favourable an influence over the minds of all, as it would if it were less modern. But it is hourly growing older and waxing stronger; and there are souls that will foster and cherish it in that republic, till it becomes mighty, and then will it crush every unholy arm that shall be raised in opposition to its well-being. The present show of hostility is undoubtedly indebted to various causes for its origin; among which are prejudice, ignorance, and the conflict of opinion upon certain subjects which custom, and not law, should regulate. But it would avail little, were we to enter into an examination of this affair; and so we will pass it by. We think, however, that the Mexican governors exhibit an extraordinary perversion of intellect, or an uncommon share of ignorance, in classing the masonic institution with the political clubs of Europe; which they have done, as evidently appears from their general recommendation respecting "such" institutions, and their indeterminate censure of all "clandestine" meetings.

THE "MORGAN AFFAIR."

Our readers are undoubtedly weary of this subject; and so are we: but the mighty importance tacked to it by one means and another, renders it worthy of more notice than its intrinsic nature really demands. The proceedings of the Grand Chapter, published in our last, must convince every unprejudiced mind that masonry is not in any manner accountable for the abduction of Morgan. Our future allusions to this subject, must be made for the purpose of giving our readers some idea of the progress of discovery, and not to keep up an unprofitable warfare with writers who are determined to stick by their opinions, whether right or wrong. We have already expressed our opinion of the public meetings occasioned by this affair. A few persons recently met together in Seneca county, and passed a few ridiculous resolutions, in which they denounced the court which sentenced the conspirators, threatened the printers, declared masonry to be dangerous and useless, and avowed it as their determination never again to vote for a mason, who may be a candidate for any office of honour or profit. These fanatical resolutions have called forth the indignation of many independent editors. We copy the following remarks on this subject from the Saratoga Sentinel:

"Here is an insult offered to a highly respectable judicial tribunal, for which the authors would be strictly bound to suffer the punishment inflicted on the conspirators in the case of Morgan. The attempt,

too, to muzzle the press, to sit in judgment on what shall, and what shall not be published, and to prescribe an ancient and highly respectable institution, can find a precedent only in the despotic censorship of the press, in France, and in the edicts of the late autocrat of Russia, and his inglorious ally, the king of Spain.

"It were well if the names of the individuals composing the Seneca meeting could be brought before the public, that printers might know before whom they are required to bow and tremble, and that masons might also know to whom they are indebted for moral and political degradation.

"Such a despotic assumption in a republican government will not be tolerated. We are willing to join in condemning individuals who are guilty of outrages, whether masons or not. But when we are threatened with a censorship over our press, because we do not think proper to feed the credulity of bigots; and a degradation, because we happen to belong to an association, a few unworthy members of which have committed an outrage; we feel a spark of native republicanism and independence, which bids defiance to these usurpers of our rights. And it is the duty of every printer, with his pen, to hold up such usurpers to merited censure. They should be taught, if they do not already know it, that the only monarch in this country is the *sovereign people*, and that the only inquisition permitted, is *conscience*."

A convention was recently held at Lewiston, Niagara county, to deliberate on this subject, and, if possible, to gain knowledge respecting it. For obvious reasons, this convention has not yet disclosed any thing touching the fate of Morgan. It is thought that secrecy may prevent the interested from interfering with its inquiries. A few letters have been published, it is true; but, *we know the history of the most of them*, and place no dependence upon them. When an *official* report appears, we shall inform our readers of its nature. Sir P. Maitland, Lieut. Governor of Upper Canada has issued the following proclamation:

£50 REWARD.

"His Excellency the Lieut. Governor, having received a communication from his Excellency, the Governor of the state of New-York, by which it appears that WILLIAM MORGAN, who some years ago, exercised the calling of a brewer in this place, and who has subsequently resided at Canandaigua, in the state of New-York, was, some time in the last year, conveyed by force from that place, and is supposed to be forcibly detained, under false pretences, in some part of this Province, any person who may be able to afford any information respecting the said William Morgan, shall, upon communicating the same to the Private Secretary of His Excellency, the Lieut. Governor, receive the reward above offered.

"Government House, Jan. 31st, 1827."

✂ A paper, entitled *Masonic Intelligencer*, was commenced at Batavia, on the 7th inst. Its design is, to furnish a correct view of this affair. It is conducted with much spirit, and lashes the Batavia knaves in the style that they deserve. It is published at the rate of *twenty-five cents for three months*. This is cheap; and those who want a paper devoted wholly to this subject, had better subscribe. We extract the following from an article of some length upon the origin and growth of the Batavia riot.

"Some time after the book came out, which at first had a rapid run, and a shilling pamphlet was selling at the *patriotic and disinterested* price of one dollar, the publisher, in one of those moods, which great success in selling had heightened into an unusual glow of self complacency, unbosomed himself, by way of compliment to his own sagacity, talents and foresight, in the following manner. A neighbour said to him—"Sir, you really have succeeded in making considerable noise in the world; and have made Batavia a place of more notoriety than any other in the country."

"Yes," said he, "it has turned out exactly to my wish; just as I intended and predicted. I shall make my fortune, at least; and I am not sure but I have immortalized myself. If the masons had been as cunning as I was, and understood their interests as well as I do mine—if they had paid no attention to us, and never spoke of our book, *we never could have got enough for them to pay for the paper they were printed on*. I was sensible of that when I first undertook it. I knew I had a great task to perform, which was both arduous and dangerous. But my situation in the world was such, and as things were going on with me, I had rather hazard my life, or even lose it, if I could do it in any way to immortalize my name, than to go on in the dog-trot manner I was then compelled to do. I told Morgan so, and that we must *raise a breeze*, or nothing could be made out of it. I knew I had ingenuity and talents sufficient to effect it. I was aware of the advice and determination of the masons here, not to take any notice of it; but I was determined they should. And I knew that by abusing, insulting and provoking them, I should get them mad after a while. We could have got it out secretly, without any fuss or danger; but that would not do. I was determined to make money out of it, and I have."

"This is the language of the champion, who stands sleepless upon the towers of freedom—watching over the Morgan affair with untired zeal."

The following is an extract from a letter, received by the editor of this paper, from a friend in Tompkins county, dated February 8th.

"There are powerful exertions making here to excite the public mind against the institution of masonry, and the most illiberal and unfounded reports are put in circulation. But from whence do they come? From those whose moral character is such that her sacred portals are forever shut against them; or from those who have been cast out for violating the most noble and heaven-born principles of our order. There is no character in society, however base he may be, but what will have his influence. Hence it is no ways surprising that so much clamour and excitement should be raised against an institution so honorable as that of masonry; which ranks among her members a majority of the wisest and best of men.

"And does it all, forsooth, originate from the fact that a few reputed individual members of the fraternity, have been guilty of an outrage upon one William Morgan, in which there appears more mystery, than perhaps truth in the numerous reports now current; and of which the masonic fraternity were as ignorant, and are as innocent of any participation, as the most scrupulous of our opponents or censorious persecutors? Could but the truth be unfolded, and the secret motives from which they act be presented to human view, I doubt not but that it would place many of their most conspicuous actors in no very honorable light.

"But time will develop the matter, and truth will appear. An institution founded in virtue, will not be destroyed by the combined influence of the wicked and malicious, nor by the prejudice and fanaticism of the ignorant and superstitious."

"Persecution we shall endure, but it will doubtless prove salutary, and make us more prudent, and strengthen the bonds of our affection.

✂ We have already said that we cannot condescend to continue a war of words with such a man as the editor of the *National Observer*. We are not disposed to discuss the merits of the "Morgan affair" with a bedlamite. The Grand Chapter of this state has expressed the opinions of the masonic fraternity, upon this subject; and that expression was so plain, so entirely free from equivocation,

that we do not believe any honest man will ever take exceptions to it. A personal altercation we shall not enter into, even with *Solomon Southwick*: we have seen too much of the man to suppose that he has any respect for truth, justice, or individual worth. The street, the barber's shop, and, indeed, almost every place which he has visited for some weeks past, has been nauseated by his disgusting invectives, and gross aspersions of some of the most respectable individuals in this community; and all this abuse has been dealt out because its subjects are members of the fraternity of freemasons. Now we would ask every honest man whether such actions are worthy of a gentleman and a friend to the public peace? Are they such as any man, having at heart the public good, would stoop to the performance of? There can be but one answer to these questions, and that will be in the negative. It will be useless for Mr. Southwick to attempt to excuse such actions by a reference to his conduct in his youthful days. That he has been both a gentleman and an honourable man, no one will deny; but that he is neither now, is scarcely susceptible of being made a question. If it were true that a virtuous youth should excuse an iniquitous old age, then, indeed, would the case be different; but such is not the fact, nor is Mr. Southwick's opposition to the "white cockade" in '98, any excuse for his enmity to a virtuous and benevolent institution in 1827. We are not easily driven into an allusion to a man's private vices; nor do we think the press has any right to touch upon them, unless they exercise an influence over the public character of their possessor; but we subscribe to the opinion, advanced upon high authority, that "measures, and not men, is the common cant of affected moderation; a base counterfeit language, fabricated by knaves, and made current among fools;" and Mr. Southwick's conversation has lately so well accorded with his editorial phrenzy, that one cannot be illustrated without speaking of the other. We care not in what light he considers what we say; for we do not ask his approbation unless it can be purchased at a less price than the sacrifice of every gentlemanly and honourable principle. We now not only repeat that Mr. Southwick's motives are none of the best; but say explicitly, that it was through his direct interference that Miller's book was introduced into a certain book-store in this city, there to be sold, for the benefit of we know not and care not whom. This circumstance, together with the fact of his having an agent at the west, and the gross personal abuse privately dealt out by him, is sufficient to show that he will say any thing which can contribute to the interests of himself or his colleague at Batavia. But we understand the man perfectly; these are not his only motives of action. It is well known to the public that every attempt he has lately made to sustain the editorial character, has proved fatal to every publication with which he has been engaged—to say that a newspaper is edited by Solomon Southwick, is furnishing it with a true passport to oblivion. The sheet which he at present pretends to conduct, only six months after it was commenced, dwindled from a semi-weekly to a weekly publication; and, probably, by the time a year has expired the unfortunate thing will retire to "the tomb of the Capulets." In the vain hope to escape this inevitable fate, he commenced his attacks upon the masonic fraternity,—intending to excite opposition and gain popularity: but here he failed, and becoming frantic, he descended into the grossest personality.

A history of this personality would be too disgusting for our columns. We refer to it, merely, to show to what means he has resorted, to attach a little interest to a contemptible sheet, which has not intrinsic merit enough to keep it in circulation one month. We have, perhaps, already said too much upon this subject; but after being treated as we yesterday were, we thought it proper to say what we have. Mr. Southwick's editorial sins are of the blackest kind, and almost infinite in number; but we cannot, consistently with our sense of duty to our readers, continue to fill our columns with remarks respecting them. We have here given an abridgement of our knowledge of him; and with it we must close our notice of him forever. So, "a long good night to" this indecent and revolting subject.

MASONIC. The members of the masonic family will be pleased to learn that Br. R. Pardessus, well known to the fraternity, and to the public generally, as a man of unblemished reputation, moral deportment, and affable manners, has leased for a term of years, the new masonic hall now building in Broadway. We wish him every success in his new undertaking. [*New-York Mirror.*]

IRELAND. In Mr. Chateaubriand's Speech relative to England and Portugal, there is a particular reference to the state of Ireland, as exhibiting an angry conflict of interest and opinion, equally ominous to the welfare of England in case of hostilities, as that which Mr. Canning had thought proper to speak of as existing in the bosom, and threatening the power of the other nations of Europe.—This retort was to have been expected; but we did not think it, at the moment of perusal, so entirely justified by fact, as it would appear to be from another speech delivered almost simultaneously with it and on the same subject, in the unhappy country referred to. The orator was Mr. Shiel, the celebrated catholic barrister, and his language is no doubt that of all his catholic brethren.

After calculating the probabilities of war, and adopting the conclusion that it must take place, he says that, in the spirit of discontented fearlessness, he rejoices at it: that it is from calamity alone, the Irish catholics can hope for an amelioration of their condition; that they are like the wretches confined in the hold of a ship, who rejoice at the roaring of the storm, because the wave that carries the vessel upon the rock, tears their prison assunder, with nothing to lose by destruction, and something to hope for in the chance of preservation! He says that it is an awful situation to be in, where a sentiment of desperate and disastrous exultation is felt in what ever portends calamity! "We are like the negroes in a slave ship." "As things stand at present, we are compelled to exclaim in the language of the fallen spirit, "Evil, be thou our good." It would, indeed, be absurd to question, that it is from the distresses of the empire, that our best expectations must be derived. Facts bear us unhappily out in this most unfortunate calculation. There never was a concession made to Ireland, which was not wrung from disorder, and extorted out of fear." "It may be said that I have been speaking the language of violence. To be sure it is: and what other language becomes the times? I repeat it—the people of Ireland exult in war, and in the prospect of its terrible results. They expect that war will awaken justice. They expect that it will lead to emancipation."

The whole speech is a continued strain of indignant resentment, and is not without an intimation—sufficiently disguised only to avoid the charge of absolute treason—that in case the hope of concession founded upon the anticipated contention of Europe, shall prove vain, the people will not neglect the opportunity of doing themselves the justice that is denied. The speech was received with loud applause! From the turn that events seem to be taking, it is to be presumed that Mr. Shiel's expectations will not be realized; but the state of feeling which his remarks exhibit, sharp and burning to a degree almost bordering on frenzy, leaves but little room to doubt that the Irish catholics are uttering

estranged from their fellow subjects, and that, wearied with remonstrance, they will, on a suitable occasion, appeal to arms. [*Statesman.*]

A NEW REPUBLIC. New-Orleans papers to the 13th were received at Mobile on the 17th ult. They contain intelligence from Natchitoches of a revolution in Texas. On the 16th ult, the united forces of Nacogdoches and Ayeh Bayou had declared the province of Texas free and independent of the United States of Mexico, and hoisted a flag in Nacogdoches with the words "Liberty and Independence" on it.

It is said that a few days previous, six Indian Chiefs, in that vicinity, held a council, and promised to assist—and 200 Indians, principally Cherokees, had actually joined the new party. The new republic had been christened, "Republic of Fredonia"—and their flag consist of a stripe of red and white, emblematical of the union between the red and white men. Later accounts, received at Natchitoches, furnishes a treaty entered into between the insurgents and twenty-three tribes of Indians.—A national congress is to assemble at Nacogdoches on the first Monday in February.

REBELLION IN JAVA. A letter received at Boston by Mr. Topliff, dated Batavia, Oct. 30, says, "The rebellion is not put down, and I do not perceive any progress making to accomplish so desirable a purpose. The restored Sultan gets no adherents, and the Dutch forces in the interior accomplish nothing but marches and counter marches. Gloomy indeed are the affairs of Netherland India. It will require at least forty millions of guilders more, ere the troubles will be ended."

CENTRAL AMERICA. Official documents from this country, received by the editor of the Pensacola Gazette, represent it to be in a state of extreme anarchy. In consequence of the actual disorganization of the legislatures of one or more of the states, the irreconcilable divisions of the federal congress, and the want of due representation in it of several members of the confederacy,—together with the disorders pervading the country, especially in Guatemala, which is in actual rebellion,—the president of the republic has issued a decree for the election and assembling of a new national congress. In the mean while, till this measure can be effected for quieting the national disorders, the executive declares his intention to preserve the public peace, without derogation to the constitution, or the laws in force, and to answer for his measures to the extraordinary congress. His decree is dated the 10th Oct. 1826.

FLORIDA. A paragraph in the Pensacola Gazette places in a striking point of view the rapid progress of Florida, under the benign influence of our free and happy institutions. In 1821 when the United States received the possession of this territory, with the exception of Pensacola and St. Augustine, it was a total wilderness. There was a few families settled on Escambia river and Bay, who received their supplies from these places, but all the country between the extremes of the territory was unexplored and unknown. In 1823 about 60 bales of cotton were made on the Appalachicola river. In 1826 it is computed at 10,000 bales of cotton, Upland and Sea Island, were made in Florida for market, besides several large crops of sugar. The number of souls probably exceeds 25,000. Sugar is beginning to receive the exclusive attention of many of the best planters, and in a few years will probably constitute the chief article of export. When the good land shall be principally devoted to this crop, it is asserted that the United States may be bountifully supplied with sugar, without dependence on foreign countries.

BANKRUPT BILL. The Bankrupt Bill was finally rejected in the Senate of the United States, on the 2d inst., by a vote of 21 to 27, notwithstanding that the 93d section had been previously stricken out. Every member of the Senate was in his place and voted on the question. It is now settled beyond doubt, adds the National Intelligencer, that we shall never have a uniform system of Bankruptcy, until the public mind undergoes such a revolution as may yet, in time to come, be effected by a per-

ception of the great inconveniences arising from the variant, unequal, and clashing systems which now exist in the several members of the Confederacy.

BURIAL OF A MAN ALIVE. The last papers from the Arabian Gulf, brings an account of the seizure and barbarous murder, at Bissorah, of a courier, conveying letters of a rebel chief, to persons in that town. The unfortunate man was bastinadoed, to extort a confession, that might implicate certain innocent persons, whose integrity, perhaps, had caused them to be expelled from the sunshine of court favour, but without effect: he was then conveyed to a public cross road, where, on requesting some water to drink, it was poured into his mouth, mixed with clay; after which, his two feet were fastened separately to stakes at the sides of a pit, in such a manner, that his head and body hung reversed within it; the earth was then thrown in, and the wretched sufferer buried alive.

CHURCH IN BREMEN. A letter from the Rev. Mr. Kurtz, a Lutheran minister now in Europe, published in the New-York Christian Advocate, states that there is a Lutheran church at Bremen, Germany 370 feet long, of a proportionable width, with a steeple seven stories high, exclusive of the spire.—The congregation embraces 28,000 souls, has four clergymen and one assistant. Under the building is a cellar in which are a number of dead bodies in a state of preservation, although they have been deposited there 200 years. "With my own eyes," says Mr. Kurtz, "I saw the bodies in full as they were centuries ago. The entrails are dried away, but the external parts are yet complete; and even the caps with which they were interred 200 years ago, and other parts of the grave cloths, are in a state of preservation." These bodies are not mummies, but are preserved by the peculiar nature of the atmosphere.

Mr. Kurtz says there is a wine cellar in Bremen containing some wine that is several centuries old.

M. BOMPLAND. Madame Bompland, who has been separated five years from her husband, whom Dr. Francia, Ex-Dictator of Paraguay, caused to be carried off by main force, returned some time ago from Brazil to Europe in order to interest different Cabinets, and particularly that of France, in favor of the distinguished companion and scientific fellow-laborer of the Baron de Humboldt. This Lady is about to quit Paris to return to Brazil, and endeavor to reach, by that country, the place of her husband's detention. Several Cabinets have already claimed M. Bompland of Dr. Francia. Bolivar, who is an old friend, and the Emperor Don Pedro, have hitherto used, in vain, the most pressing solicitations. Nothing has been able to bend Dr. Francia. It is to invoke again the interest of Bolivar and Don Pedro, and try to put an end at length to so protracted a term of captivity, or to go and share it with her husband, that M. Bompland is going to return, by the way of England, to South America.

ORIGINAL ANECDOTE. A school-master in one of the neighboring towns, while upon his morning's walk, passed by the door of a neighbor, who was excavating a log for a pig's trough. "Why," said the school-master, "Mr.—, have you not furniture enough yet?" "Yes," said the man, "enough for my own family, but I expect to board the master this winter, and am making preparations."

[*Worcester Spy.*]

DIED.

In Paris, on the 14th of December, M. MALTE BRUN, a distinguished French author, particularly in the department of Geography, one of the contributors to the *Journals des Debats*, and one of the editors of the *Annals des Voyages, de la Geographie, et de l'Histoire*.

Suddenly, on Monday the 15th inst. in the vicinity of Pottsville, Pennsylvania, Joe Webb, the Natty Bumpo of the Schuylkill Mountains. Joe was a hunter. His language, his manners, his hunting shirt, his rifle, and his faithful hound, to which he was much attached, almost led one "to believe he sat to the author of the Pioneers for the interesting picture of the celebrated Leather Stocking. Joe inhabited for many years a rude cabin in the wild and romantic defile, formed by the Sharp and Second Mountains, remote from the habitation of the rest of his species. There he lived and there he died. Though rough in his language and uncouth in his exterior, he possessed much of the milk of human kindness in his composition, and will long be remembered.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

COMMEMORATION

OF THE BIRTH-DAY OF WASHINGTON, FEBRUARY 22.

Hail! glorious morn, Columbia's Jubilee,
Roast of the good, the great, the brave and free:
Hail! ever hail! the bright immortal morn,
When our illustrious WASHINGTON was born.
O, for a harp of heaven's exalted quire,
Or that some angel would attune my lyre,
That I might gild the patriotic dream,
Nor do dishonour to the noble theme.

I sing the hero whose undaunted hand
Dispelled the foe, and saved a sinking land;
What time red war death's banner had unfurled,
And bellowing thunders shook the western world.
When Albion's legions crossed the billowy wave,
The exiled sons of freedom to enslave;
When whirlwinds wheeled the crimson car of war,
And vivid lightnings told the tale afar;
When vale and valley and the mountains rung,
With awful shrieks ne'er told by human tongue;
When the wild woods were ambushed by the foe,
And wives and children buried in one woe;
When midnight glittered with the baring dome,
And wandering orphans mourned a happy home;
When fathers, brothers, in one carnage fell,
And death-groans mingled with the savage yell;
When the wild war-whoop woke the cradle's dear,
And the sweet babe smiled at its mother's tear;
Say who then taught the generous breast to glow,
And throb with anguish at his country's woe?
Who taught the arm to strike the alarming stroke,
And spurn the British tyrant's galling yoke?
'Twas he whose fame, from age to age shall run,
The great, the good, the generous Washington.

Homermay sing of Peleus' wrathful son,
Who in his vengeance myriads had outdone;
Who stood like Mars upon the sanguine fields,
And dragged the Trojan at his chariot wheels;
Of Agamemnon who a brother's claim
Espoused, and straightway sought the Spartan dame;
Who saw proud Priam's son in death expire,
And wrapped a sinking oak in one fire;
Of hostile Hector, Troy's avenging son,
Who saw Sarpedon fall and was undone;
Who killed Patroclus and then met his due,
From dread Achilles, whom young Paris slew;
Athens may sound great Solon's wondrous praise,
And Sparta lift Lycurgus to our gaze,
Let History emblazon Philip's name,
And his proud son eclipse the father's fame;
Let Rome's brave heroes shine in legends bright,
And her wise statesmen with illustrious light;
Let Cæsar triumph in his laurel'd brow,
And Cincinnatus leave his humble plough,
Columbia still can boast a noble son,
The sage, the brave, the immortal Washington.
All Grecian glory in its brightest blaze,
All Roman reason, once the mind's amaze,
Soon fade before the patriot's shining shield,
Sage in the council—hero in the field.
Sweden may boast of her brave Charles who fell
At Frederickshall, torn by a blazing shell;
And Bonaparte, whose dread tremendous voice
Made Europe tremble, and his slaves rejoice,
May live with partial and with loud applause,
But not with freedom's universal laws:
And when their names shall be in ruin hurled
Great Washington's shall wake the wondering world;
Yea, when the stars shall lose their lonely light,
The silver moon sink in the realms of night,
The sable sun blush thro' a veil of blood,
And Nature stand confest before her God;
When even nature shall herself reverse,
And devastation fire the universe,
He shall exist, and view with smiling eyes,
Dread ruin ride around the flaming skies.

O muse, 'tis thine to sing the deathless son,
Who fought for freedom, and who freedom won;
Not all his glories flourished in the field,
Nor all his virtues crowned the saviour's shield;
'Twas his to frown the tyrant minion down,
'Twas his on monarchy to ever frown—
The demi-god before his glance expired,

The patriot's bosom with his smile was fired,
Fell faction fled before his eagle aim,
And wild confusion died without a name;
Intrigue retired before his light of truth,
And dark conspiracy ne'er passed its youth;
Each nobler virtue graced his mammoth mind,
Friend to his country and to all mankind,
Corruption's gold, nor flattery's proffered fame,
E'er built one triumph on his nobler name;
Faction beheld him, with an evil eye,
Mount on her ramparts, to destroy or die,
And dark corruption cried, with glittering purse,
"Renounce your country and your comrades curse;
Then shall this gold be at your own command,
And you the king of all Columbia's land."
Gods! had you seen him at that awful hour,
Then swelled his mighty heart with giant power;
He snatched the trump, and the loud blast was blown,
That made all England tremble to her throne,
To Europe's bounds went forth the stern decree—
America shall yet be great and free.

O muse! with cypress bind the Lydian lyre,
In death reposes freedom's faithful sire.
His course is finished, and his task is done,
He fought the best of fights, and freedom won;
He kept the faith in spirit and in truth,
And now he dwells in everlasting youth.
Sound, sound your lyres, ye tuneful Nine once more,
And let the strain reach England's utmost shore;
Let the proud Psan on wide wings unfurled,
Sail round the skies and charm the listening world.

Goddess of freedom, grant the glorious hour
When Liberty shall crush Monarchical power;
Let the auspicious moment soon arrive,
When kings and tyrants shall no more survive,
When thrones shall totter to their gilded height,
And tumbling, mingle in the realms of night;
When crowns and crosiers shall yield up their sway,
And in the flood of empires pass away;
When usurpation, from her cloudy car,
Shall fall to nothing, like the shooting star;
When tyranny, who ages hath withstood;
Shall sink and strangle in a sea of blood;
When slavery shall off the earth be hurled,
And a REPUBLIC spread o'er all the world.
Hail! glorious era, earth's millennium hail!
When songs of peace shall swell on every gale,
When Washington shall o'er the bending skies,
Lean his blent head and feast his famished eyes,—
Columbus write the deed in golden verse,
On the bright pillars of the universe.

O muse! to thee I owe the idea new,
Which the subservient pen but lately drew;
The bright example sprang from freedom's son;
From north to south already has it run;
May it from thence like lightning quick retire,
And the four quarters of the globe inspire.
But O, ere that blest day the poet's hand,
Must mouldering lie beneath his native land,
Ere that the Bard must close his earthly eyes,
And a new generation round him rise.

Milford, Del.

MILFORD BARD.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.
TO *****.

Remember him—remember him,
Whose heart is with thee far and near;
By day in sighs—by night in dim
And fleeting views of fancy's sphere.
But not when friends and pleasures woo
Thy heart to their warm, warm embrace;
Thy joys are pure—thy friends are true,
And I would not pollute their place.

Remember me when o'er the west
Soft night lets down her spangled wing;
When tender thoughts which cannot rest,
Run thrilling backward to their spring.
And while from our own wonted seat,
Thou gazest on the moonlight stream,
And weary objects once so sweet
To Love's bewitching early dream.

Remember me when over thy calm
Imagination, heavenly sleep
Drops from her wings her pensive balm—
The dream which makes a lover weep.

And we may in that hour renew
The raptures we have tasted, when
Hope told a thousand tales, less true
Than dreams of sleeping hours have been.

Remember me when stern regret
Shall heave thy bosom up with pain;
The thoughts of moments when we met
May drive the demon forth again.
And when unburdening tears have brought
The halcyon calmness back to thee,
And Love's delicious feast of thought
Is thine—O, then remember me!

Feb. 14.

G.

THE HUMOURIST.

EXAMINATION OF A WITNESS.

Question.—Did you see the defendant throw the stone? Answer—I saw a stone and I am pretty sure he threw it. Q.—Was it a stone of considerable dimensions? A.—Why, it was considerable of a stone. Q.—How large was it? A.—I should say it was a large stone. Q.—What was its size? A.—Why it was a sizeable stone. Q.—Can't you answer definitely—how big was it? A.—I should say it was a stone of some bigness. Q.—You are a singular witness—can't you give the jury some idea of the bigness of the stone? A.—Why, as near as I can recollect, it was something of a stone. Q.—Can't you compare it with some other object? A.—Why, if I was to compare it, so as to give my notion of the stone, I should say, as near as I can judge, it was about as big as a *piece of chalk*!

A REAL KENTUCKIAN.

A Kentuckian, we believe of that class familiarly called a "Hog Merchant," rode up to a public house in the west, where a number of gentlemen were seated in the piazza. After a low bow to the company, he inquired if any present could tell him what was good for a burn. A young physician (there being several present) stepped forward, and with much complaisance, gave him a learned lecture on burns, the mode of treatment, &c. &c., for which he was thanked politely by the Kentuckian who informed him, that his prescription would not answer his present complaint, as his saddle blanket had been very badly burnt the night previously. On hearing this the physician became exasperated, and told him if he would alight he would give him a good flogging. The Kentuckian again bowed and said, that he would not alight for two floggings let alone one, and rode off with much gravity and self satisfaction.

ATHANASIAN CREED.

Parson Paten was so much averse to the Athanasian creed that he never read it. Archbishop Secker having been informed of his recusancy, sent the archdeacon to ask his reason: "I do not believe it," said the priest. "But your Metropolitan does," replied the archdeacon. "It may be so," replied Mr. Paten, "and he can well afford it—he believes at the rate of seven thousand pounds a year, and I only at that of fifty pounds."

Two wits riding from London to York, and seeing a miller journeying slowly before them on his sacks, resolved to quiz him; so one went on one side of him and one on the other side, saying, "Miller pray tell us, which art thou, more knave or fool?" "Truly," says he, "I don't know which I am most, but I guess I am between both."

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

From the *Batavia Masonic Intelligencer*.

Masonry not only unfolds to our minds the solemn dictates of *Morality*, but also prompts us to obey those dictates by every consideration that is awful and tender. To the humble she points out a "star-decked heaven, where all good Masons hope to meet"—to the indolent, the duties of active benevolence and the brevity of life—to the proud, death and the grave, the grand levellers of every earthly distinction not founded in virtue: and above all things, leads us to consider the Everlasting God as the architect of the Universe, and as the tender parent watching over the happiness and existence of every created being.

But whilst Masonry inculcates the necessity of the cultivation of our moral faculties, she also teaches to her votaries the propriety of intellectual improvement—to be not only good but wise. Hence, in the second degree, the *fellow-crafts* are exhorted to study the whole circle of the arts and sciences, so as to derive from these subjects more exalted ideas of the wisdom of God, and more distinct impressions of the nature, state and destination of man, and thus to lay the foundation of a rational and deep-toned piety, which alone can elevate man in the scale of creation, and lead him to subject every unholy passion and unsanctified desire. And, my brethren, allow me to add, if our hearts have not been thus influenced, we are masons only in name; and our duty and happiness imperiously demand that we should not only cultivate our moral and intellectual faculties, but also "divest our hearts of all the vices and superfluities of life, thereby fitting our minds as living stones for that spiritual temple not made with hands, eternal in the heavens."

Permit me, with all possible brevity, to make a few observations on the second section of the second degree.

ARCHITECTURE. None of the Arts exhibits more clearly the inventive and imitative powers of man, than Architecture. The bird prepares its nest with wonderful skill—the beaver has manifested a sagacity in its aquatic embankments which man has done well to imitate—and the bee proceeds with geometrical exactness in the construction of its cells, yet still their instincts are very limited. But who, whilst observing the savage sheltered in summer by the foliage of the forest, and shielded from the inclemencies of winter by the gloomy cave—as pitching his scanty tent in the southern desert, or erecting his rude conical wigwam in the northern wastes—could predict that man possessed a genius which would enable him to rear the stately palace, fix the sublime arch, and poise the ærial dome in imitation of the canopy of heaven, to resound with the anthem of heartfelt praise, uttered with the intelligence and pathos of the cherubim.

Architecture may be considered in a two-fold relation—as an object of taste, and as a mechanical art; and is capable of exciting a variety of agreeable emotions: of these, utility, grandeur, regularity, order and proportion, are the chief. And the proper union of these different principles, and their adaptation to the species of building intended, forms the chief study of the architect, and constitutes the cause of all the pleasing emotions which the beholder experiences; and the skilful architect will give an *expression* to a structure which cannot be mistaken. The rural temple suggests the pleasing scenes of nature, and the bounties of Providence; the cottage reminds us of frugality and contentment; and the sombre abbey produces a train of reflections concerning the tomb and eternity.

The Orders of Architecture.—The conical hut being found very inconvenient, led to the adoption of the cubical form. They fixed the trunks of trees

in the ground at proper distances, when they could not find them growing in suitable positions, and filled the intervals with branches closely interwoven, and covered them with clay. Four large beams were then placed horizontally on these uprights, which being closely jointed at the angles, gave stability to the upright trunks. These beams supported the roof, which was composed of many rafters, covered with reeds, leaves, and clay. As men improved in the art of building, they rendered their dwellings more handsome and durable: the trunks which formed the supports were smoothed by the removal of the bark, and were elevated above the surface of the ground, on pillars of stone—the ends of the joists were carefully fitted, and the intervals between them filled with stones and clay. In this we perceive the rude original of the orders of Architecture. The upright trunks when imbedded in stone and marble, gave rise to columns; and the beams, joists, rafters and covering, suggested architraves, frizes, triglyphs and cornices.

The orders of Architecture are *five*, viz: the Doric, Ionic and Corinthian, invented by the Greeks, and the Tuscan and Composite, of Italian origin.

The parts that compose an order are two—the first being analogous to the primitive hut; the second are mouldings, contrived for ornamenting the first. There are eight regular mouldings: the fillet, astragal, torus, scotia, ovolo, inverted-cyma, cyma-recta, and cavetto.

An order consists of two principal members: the column and entablature; each of which is composed of three parts. Those of the columns are, the base, shaft and capital; and those of the entablature are, the architrave, frieze and cornice. These parts are again subdivided into lesser parts, whose number, form and dimensions characterize each order, and express the degree of strength, delicacy, richness or simplicity peculiar to it.

I. **The Tuscan Order.**—This order is supposed to have been invented by the Tusci, or Etruscans, the aborigines of that part of Italy which is situated west of the Tiber. Before the Romans had any intercourse with the Greeks, they were a polished and prosperous nation, and their glory was at its height before Rome was yet founded. The only examples of antiquity remaining which resemble the present proportion of this order, are the Trajan, and antonine columns at Rome. The doctrines of Vitruvius concerning this order are very obscure, and the profiles of Palladio and other architects are all imperfect.

This order, on account of its strength and simplicity, has been denominated the Gigantic. Its proportions are as follow:—one fifth of the whole height gives the height of the pedestal; one fifth of the remainder is the height of the entablature; and the residue, the height of the column. One seventh of the height of the column is its diameter at the base; and if this diameter be divided into sixty equal parts, called minutes, forty-five of these parts give the diameter of the neck of the column—thirty, the height of the base and capital, severally—the architrave thirty-five, the frieze twenty-six and a half, and the cornice forty-three and a half minutes.

This order is suitable where strength and simplicity are required.

II. **The Doric.**—To Doris, the king of Achaia, son of Hellen, who reigned in Phthiotæ about 1495 years before the christian era, is attributed the invention of this order. "He built," says Vitruvius, "a temple to Juno, in the ancient city of Argos, which happened to be in the manner of this order, now called Doric. This manner was afterwards imitated in many other temples in the several cities of Achaia."

It retains more of the structure of the primitive hut than any other order, and is doubtless the most ancient. The triglyphs in its frieze represent the ends of joists, and the mutules in its cornice, the

rafters. In many instances the columns are short in proportion to their diameter, and without bases.

The general proportions of this order are similar to the Tuscan, except that the column is but one eighth of its height in diameter. The width of the triglyphs is thirty minutes, and their distance from each other forty-five minutes. In most of the antiques, the doric column is executed without a base, and fluted to prevent the spears from falling which were placed against them by the worshippers at the temples. On account of the grave and masculine appearance of this order it has been called the Herculean.

III. **The Ionic.**—The Athenians sent thirteen colonies into Asia Minor, under Ion, the grandson of Hellen. "Ion conquered all Caria, founded many cities, and called the country Ionia. The first temple he built was after the Doric manner, but afterwards he built a temple to Diana, of a more delicate structure, and formed upon the proportions of a female body, as the Doric had been on that of a robust man. The capital was adorned with volutes to represent the curls of a woman's hair, and flutings were cut in the shafts of the columns in imitation of the folds of her garment. This order got the name of Ionic, in honour of the Ionians, who invented it."

The appearance of this order is simple, yet majestic; it is sparingly ornamented, and has been compared to a sedate matron, in decent, rather than magnificent, attire.

The ancients were unanimous concerning the profile of this order; for in all the Roman antiques it is exactly the same. The moderns also copy the proportions of this order nearly as found in the Coliseum, the temple of Fortune, and the theatre of Marcellus. The capitals were generally made to face but one way in this order.

The pedestal occupies one fifth of the whole height,—one sixth of the remainder is the entablature; and the column being divided into nine parts, one of them is the diameter. The modillions are ten minutes in width, and twenty distant from each other.

IV. **The Corinthian.**—The Corinthian order, according to Vitruvius, owed its origin to the following accident:—A young girl of Corinth having died, her nurse placed on her tomb a basket containing certain trinkets, in which she delighted when alive, and covered it with a tile to prevent the rain from spoiling them. The basket happened to be placed on a root of acanthus, which, pushing out its leaves, covered the sides of the basket; some of the longest of which being obstructed by the corners of the tile, were forced downwards, and curled in the manner of volute. Calimachus, the sculptor, passing near the tomb, was so pleased with the beautiful appearance of the acanthus growing in this manner, that he imitated it in the columns which he afterwards made at Corinth.

Villalpandus treats this story of Calimachus as a fable, and maintains that the Corinthian capital took its origin from an order in Solomon's temple; and this opinion is rendered probable by comparing the remains of architecture in the ruins of Palmyra, or Tadmor in the desert, which was built by Solomon, with the Corinthian, and several biblical descriptions intimate strongly that this was the fact.

The proportions of this order are extremely delicate, and it is divided into a great variety of members, enriched with a profusion of ornaments. Scamozzi calls it the Virginal order, since it has all the delicacy of form, and gaiety of dress of a Grecian maiden. The three columns in the Campo Vaccino at Rome, the remains, it is thought, of the temple of Jupiter Stator, are considered the most perfect specimens of the Corinthian now extant. One fifth of the whole height is appropriated to the pedestal; one sixth of the remainder to the entablature; and one tenth of the column gives its diame-

ter: the modillions are eleven and a half minutes wide, and the dentile three and a half.

In most of the Roman antiques, the capital of this order is enriched with olive leaves; the acanthus being seldom employed but in the Composite. De Cordemoy, however, prefers the acanthus; the laurel and parsley leaves are sometimes substituted. The base of the column may be either Attic or Corinthian; they are both very beautiful. If the entablature is enriched, the shaft should be fluted, and the liability to injury may be diminished by filling the dutes to one third of their height with cablings, as in the inside of the Pantheon at Rome, where the statues of departed philosophers and heroes stimulated the living to imitate their virtues and glorious deeds.

V. *The Composite*.—The Composite was combined rather than invented, by the Romans, being only a species of Corinthian, with a capital formed from the Corinthian and Ionic.

The ancients do not appear to have given a definite form to the entablature of this order. In the temple of Bacchus the cornice is entirely plain. The arch of Septimus Severus has dentils resembling the Ionic, and the arch of Titus is enriched with both modillions and dentils.

Modern architects have varied more in this than in any other order—each consulting his own taste. The height of the composite column, and the parts of the entablature are similar to the Corinthian. The different bunches of leaves require to be strongly marked and the ornament of the volutes must not project beyond the fillet that enclose them.

The turgid embellishment of this order, like the latter Epic poems of the Romans, manifest the departure of genuine taste, and the influence of Oriental luxury, which wrested the sceptre of a mighty empire from nerveless hands, to be broken by the Vandal and the Goth.

These remarks, I trust, will not be tedious nor uninteresting to those imbued with the true spirit of Masonry—a spirit which raised the pyramids of Egypt, and formed the Grecian Rock into beautiful temples—a spirit imitative of that awful Being, who from chaos by his word created a glorious Universe.

A whale requires a sea, an ocean, to sport in, about 150,000,000 of these animalcules would have abundant room in a tumbler of water.

From the London Mechanic's Magazine.

CHINESE SHEET LEAD.

This article is manufactured by two men; one is seated on the floor, with a large flat stone before him, and a moveable flat stone-stand at his side. His fellow-workman stands beside him with a crucible filled with melted lead, and having poured a certain quantity upon the stone, the other lifts the moveable stone, and dashing it on the fluid lead, presses it out into a flat and thin plate, which he instantly removes from the stone. A second quantity of lead is poured in a similar manner, and a similar plate formed, the process being carried on with great rapidity. The rough edges of the plates are then cut off, and they are soldered together for use.

A SUBSTITUTE FOR IVORY.

Take fine sawdust of lime-tree wood, put it in a clean pan; tie it close up with paper; dry it with a gentle heat; beat it in a stone mortar to a very fine powder. Then take one pound of fine parchment glue, the finest gum tragacanth, and gum arabic, of each four ounces; boil the whole in clean pure water and filter it; add as much of the wood as will make a thick paste. When it is finely mixed, set it in a glazed pan in hot sand till the moisture evaporates, when it is fit for casting. Pour such colours in the paste, (crimson, yellow, &c.) as you wish, and scent it with oil of cloves, or roses.

The moulds should be made of pewter, and well oiled. When dry, it will be as hard as ivory, and may be turned, carved, or planed like other wood. Among the various uses for which it is designed, chess-men, boxes, &c. are enumerated.

From the Cabinet Maker's Guide.

ANIOS.

The goodness of saws, chisels, and other edge tools, depends upon the quality of the steel, which should be uniform throughout, and it is always better to have them tempered rather too hard than too soft, for use will reduce the temper. If, at any time you wish to restore the temper and to perform the operation yourself, the best method is to melt a sufficient quantity of lead to immerse the cutting part of the tool. Having previously brightened its surface, then plunge it into the melted lead for a few minutes, till it gets sufficiently hot to melt a candle, with which rub its surface; then plunge it in again and keep it there until the steel assumes a straw colour, (but be careful not to let it turn blue;) when that is the case take it out, rub it again with the tallow, and let it cool; if it should be too soft, wipe the grease off, and repeat the process without the tallow, and when sufficiently hot, plunge it into cold spring water, or water and vinegar mixed.

By a proper attention to these directions, and a little practice, every workman will have it in his power to give a proper temper to the tools he may use.

If a saw is too hard, it may be tempered by the same means; if you are near a plumber's shop, you may repeat the process conveniently and without expense, when they are melting a pot of lead.

In other cutting tools you must wait till the steel just begins to turn blue, which is a temper that will give it more elasticity, and, at the same time, sufficient hardness.

TEA.

The cheapest and most expensive teas are all the leaves of the same tree, at least they should be so, and if there were no shoe-leaves nor privet leaves, they would be so. The high flavour, therefore, of some of the sorts of tea, and the want of flavour in others, must arise from the manner of preparing them, and must be in some measure artificial. It follows, that if we can discover any fine flavoured substance, and add it to the tea in a proper manner, so as to make it agree and harmonize with the original flavour, we shall be able to improve low priced and flavourless tea, into a high priced article of fine flavour. The flavouring substance found to agree best with the original flavour of tea, is the oil of berga-

SCIENCE AND THE ARTS.

ANIMALCULES.

A notice of the inhabitants of the ocean belongs more particularly to the zoologist. I shall give only two extracts, tending to show the immense number of minute animals in the Greenland seas.

They will at the same time exhibit the close investigation and research of that accurate observer, Captain Scoresby.

On examining some olive-green water, he found the number of medusæ to be immense. They were about one fourth of an inch asunder. In this proportion, a cubic inch of water must contain sixty-four: a cubic foot 110,592; a cubic fathom 23,887,872; and a cubical mile 23,888,000,000,000. It may give a better conception of the amount of medusæ in this extent, if we calculate the length of time that would be requisite, with a certain number of persons, for counting this number. Allowing that one person could count a million in seven days, which is barely possible, it would have required that 80,000 persons should have started at the creation of the world, to complete the enumeration at the present time, (1820.) *Account of the arctic regions.* (Vol. 2. p. 279.)

In examining the colouring matter of a yellowish green water, he found it to be animalcules—"Some advancing at the rate of 1-180 of an inch in a second, others spinning round with great celerity. But the progressive motion of the most active, however distinct and rapid, it appeared under a high magnifying power, did not in reality exceed an inch in three minutes. At this rate it would require one hundred and fifty-one days to travel a nautical mile. A condor, it is generally believed, could fly round the globe at the equator, in a week; these animalcules in still water, would not accomplish the same in less than 8955 years.

The vastness of their numbers, and their exceeding minuteness, are circumstances of uncommon interest. In a drop of water, examined by a power of 28,224, (magnified superficies) there were fifty in number, on an average, in each square of the micrometer glass, of 1-840th of an inch in diameter; and as a drop occupied a circle on a pane of glass containing 529 of those squares, there must have been in this single drop of water, about 26,450 of these animalcules. Hence, reckoning sixty drops to a drachm, there would be in a gallon of water, a number exceeding by one half, the amount of the population of the whole globe. The diameter of the largest of these animalcules, was only 1-2000th of an inch—and many only 1-4000th of an inch. The army which Buonaparte led into Russia, in 1812, estimated at 500,000 men, would have extended in a double row, or two men abreast, with two feet three inches for each pair of men, a distance of 1081-2 English miles. The same number of these animalcules, arranged in a similar way, but touching each other, would only reach 5 feet 2 1-2 inches!

mot; by the proper management of which, you may produce from the cheapest teas, the finest flavoured bloom, hyson, gunpowder, and cowslip. There are two ways of managing the bergamot. Purchase at the perfumers some of the perfumed pieces of wood which they call bergamot fruit. Keep one such piece in your cannister, and it will flavour the tea in the same way as a tonquin bean flavours snuff. If the cannister be a small one, the flavour perhaps would be too strong; in that case you may chip the bergamot fruit in pieces and put only a little bit among your tea. Or procure a small phial of the oil of bergamot; take some of the smallest of your tea, and add it to a few drops of the oil, till you form a sort of paste, which is to be carefully mixed with the whole tea, in proportion to its quantity, and the degree of flavour you like best. If you make the flavour too strong, you have always an easy remedy, namely, by adding more unflavoured tea. When it is thus improved, it is often sold at eighteen shillings, and a guinea a pound. Cowslip tea has been as high as thirty-two shillings.

AMERICAN DRAMATISTS.

(Continued from page 19.)

Charles Breck wrote two comedies, entitled "The Fox Chase," and "The Trust," the first of which was performed, and both were published in 1818. They are not very creditable to the talents of the writer, who recently died, I understand, while on his travels in Europe.

The name of Joseph Hutton is upon the title page of several plays performed upon the Philadelphia stage; among others, "The School for Prodigals," a comedy; "The wounded Hussar," musical piece; and "Fashionable Follies," a comedy. He has also written several romantic tales, and published a volume or two of poetry. He pursued the business of a schoolmaster for some years, and then went upon the stage—but met with very little success—and is at present in North Carolina, writing a tragedy upon the shocking murder of Col. Sharpe, which lately took place in Kentucky.

The name of William Dunlap stands at the head of the list of American dramatists: his muse has been prolific, having produced forty-five pieces of this nature, many of which indicate respectable dramatic talent. Being for many years manager of the New-York theatre, in imitation of Colley Cibber, he availed himself of the labors of others; accordingly we find many of his pieces are translations from the French or German. He has for some years past, abandoned the unprofitable trade, and is now a successful historical painter, displaying, in his old age, fine talents for the art, which occasions a sigh of regret that he ever abandoned the brush for the pen. Besides his dramatic writings, Mr. Dunlap published a life of George Frederick Cooke, the actor, and of Charles Brockden Brown, the American novelist.

M. M. Noah, the editor of the New-York Enquirer, has exercised his pen in various departments of literature, as a traveller, moralist, and dramatist. He writes with rapidity, a habit acquired by being the editor of a daily paper: but, from his vocation, his style has become diffuse, and ill adapted to the drama, which should be terse and pointed. Mr. Noah's first dramatic attempt was a small piece, in two acts, entitled "The Fortress of Sorrento," which was printed in 1808. In 1820 he produced his comedy, entitled, "She would be a Soldier," which is still a favorite on the stage, notwithstanding its insipidity in the closet. The author has displayed considerable knowledge of the stage effect; and from the military display throughout, this piece is well calculated to please a large portion of any audience. In addition to these, he has produced "Yussef Caramalli;" "Marion;" "The Grecian Captive," &c. During the run of "The Grecian Captive," the Park Theatre at New-York was unfortunately reduced to ashes; and may it ever be recorded, as an instance of Mr. Noah's liberality, that he gave his profits arising from this play, which were considerable, to be distributed among the lower order of players, who had been sufferers by the fire. Some years ago Mr. Noah was presented with a pair of silver goblets, by the managers of the Park Theatre, for his dramatic ser-

vices. Besides the above mentioned writings, he has published "Travels in the Barbary States;" and a small volume of Essays, under the signature of "Howard."

Samuel Woodworth of New-York has written the following dramas, all of which were performed and favorably received: "The Deed of Gift;" "Lafayette, or the Castle of Olmutz;" "The Locket;" "Widow's Son;" and "Rose of the Forest." He is at present the editor of a literary paper for the amusement of the ladies; and besides the pieces enumerated, has published a dull incongruous romance, entitled "The Champions of Freedom." He has also written much lyric poetry, and acquired considerable reputation by it.

Mr. Hillhouse, the author of a highly polished poem, entitled "Judgment," claims attention, from having produced two exquisite dramatic poems, "Percy's Mask," and "Hadad," neither of which however, was intended by the author for representation. Mr. Hillhouse was, and I believe still is, in the hardware business in New-York. He is entitled to a conspicuous place among the poets of modern date.

Dr. Percival might here be mentioned as having written a tragedy, entitled "Lamor;" and also Mr. Potter of New-York, who wrote "Phelles, or the Fall of Tyranny," a tragedy superior to the ordinary run of tragedies.

Mrs. Rowson, the authoress of "Charlotte Temple," is better known as a novelist than as a dramatist. Her plays, however, which are four in number, possess considerable merit. "The Slaves of Algiers, or a Struggle for Freedom," founded on a story in Don Quixotte. The "Volunteers," a farce, written after the whiskey insurrection in Pennsylvania. "The Female Patriot," altered from Massinger's "Bondman;" and the comedy of "Americans in England." Mrs. Rowson was for several years an actress; she then became the principal of a seminary for young ladies in the vicinity of Boston, which character she sustained with great reputation until the time of her death, which occurred in 1824.

Colonel Humphreys, of the revolutionary army, imitated from the French of M. Le Mierre, "The Widow of Malabar, or the Tyranny of Custom," which was repeatedly performed in the various theatres, and finally published in a volume of miscellaneous writings by the same author.

Mrs. Mercy Warren, authoress of a History of the American Revolution, published two tragedies in a volume of miscellaneous poems, in 1790: "The Sack of Rome," and "The Ladies of Castile." It does not appear that either was ever performed.

John D. Turnbull, of the Boston theatre, wrote "The Maid of Hungary;" "Rudolph, or the Robbers of Calabria;" and "The Wood Demon, or the Clock has Struck."

William Charles White, of Boston, wrote a tragedy on Mackenzie's "Man of the World," which he called "The Clergyman's Daughter;" and also a comedy, entitled "The Poor Lodger" founded upon the novel of Evelina; they were both played and printed. He appears to have been the friend of Robert T. Paine, the poet, as the prologue to the first, and epilogue to the latter performance, were from his pen, which was considered no small favor in those days.

(To be continued.)

MISCELLANY.

TEMPLE OF EPHEBUS.

The temple of Diana, long celebrated for its magnificence, was situated out of Ephesus, in a marshy place at the foot of a hill, such situations being considered by the ancients as least exposed to earthquakes. The expense of forming the drains must have been great, as the stone used for that purpose exhausted all the quarries in the country. These conduits and quarries are now taken for a labyrinth. To remedy any inconveniences which might arise from damp, they very judiciously placed under the foundations strata of charcoal, and thin strata of wood.

Vitrucvius says, that its figure was octastyle dipteral; that is, on all the four sides there was a double

portico of columns, eight of which were seen in front. The ascent to the portico was by ten steps. The length of the portico was 398 feet, and its width 193. The intercolumniations were two diameters and a quarter; the length of the cell 246 feet, and its width 63. At one extremity was a niche in which was a statue of the goddess. The temple was ornamented with 127 columns of fine Favian marble, of the Ionic order, 60 feet high; 37 of which were the gift of as many kings, and were of exquisite workmanship. A small statue of ebony, representing Diana, which some fanatic, or impostor, said had fallen from heaven, gave the occasion for raising this temple, to the construction and embellishment of which all Asia Minor contributed with the greatest zeal. This great work was 200 years in finishing, and soon after its completion, Erostratus set fire to it, to render his name immortal. Alexander the Great wished to rebuild it, but the Ephesians courteously rejected his offer by replying that it was "inconsistent for the god Alexander to erect a monument to a goddess."

It was re-erected by themselves and made even more magnificent than at first, and the expense defrayed from the public treasury. This superb edifice was destroyed by the barbarians in the 3d and 4th centuries. Many of its finest ornaments now adorn the Mosques at Constantinople.

GARRICK AND BANNISTER.

"I was," says Bannister, "a student of painting in the Royal Academy, when I was introduced to Mr. Garrick—under whose superior genius the British stage then flourished beyond all former example."

One morning I was shown into his dressing-room, when he was before the glass preparing to shave—a white night-cap covered his forehead—his chin and cheeks were enveloped in soap-suds—a razor-cloth was placed upon his left shoulder, and he turned and smoothed the shining blade with so much dexterity, that I longed for a beard, to imitate his incomparable method of handling the razor.

"Eh! well—what young man—so—eh! You are still for the stage? Well, now, what character do you, should you like to—eh?"

"I should like to attempt Hamlet, sir."

"Eh! what Hamlet the Dane! Zounds! that's a bold—Have you studied the part?" "I have, sir." "Well, don't mind my shaving. Speak your speech, the speech to the ghost—I can hear you. Come, let's have a roll and a tumble." (A phrase of his, often used to express a probationary specimen.)

After a few hums and haws, and a disposing of my hair, so that it might stand on end, "like quills upon the fretful porcupine," I supposed my father's ghost before me, "armed cap-a-pie," and off I started.

Angels and ministers of grace defend us! [He wiped the razor. Re thou a spirit of health, or goblin damn'd! [He strapped it. Bring with thee airs from heav'n or blasts from hell!]

[He shaved on.]

Thou com'st in such a questionable shape. That I'll speak to thee. I'll call thee Hamlet! King, father, royal Dane!—O, answer me! Let me not burst in ignorance. [He lathered again.]

I concluded with the usual—

Say, why is this? wherefore? what should we do?

but still continued in my attitude, expecting the praise due to an exhibition, which I was hoopy enough to fancy was only to be equalled by himself. But, to my eternal mortification, he turned quick upon me, brandished the razor in his hand, and thrusting his half shaved face close up to mine, he made such horrible mouths at me, that I thought he was seized with insanity, and I showed more natural symptoms of being frightened at him, than at my father's ghost. "Angels and ministers! yaw! whaw! maw!" However, I soon perceived my vanity by his ridicule. He finished shaving, put on his wig, and, with a smile of good-nature, he took me by the hand. "Come," said he, "young gentleman—eh, let us see now what we can do." He spoke the speech—how he spoke it, those who have heard him never can forget. "There," said he, "young gentleman; and when you try that speech again, give it more passion and less mouth."

POPULAR TALES.

From the Nantucket Inquirer.

TRADITION OF THE TAUMKHODS.

At what period the Island of Nantucket was originally peopled by savages, or whence its primitive human habitants emigrated, are subjects lost in the gulf of oblivion. It is known, however, that two several tribes or clans occupied its northern and southern sections, at and after the date of its first settlement by civilized beings; and, as the very appellations by which these tribes were distinguished have disappeared with the whole race, it will be sufficient for the purpose of this narrative, to designate them as the *Khauds* and the *Taumkhods*. The former held sovereign sway and dominion over that portion of the Island, reaching from the South Shore to the Great Point: while the latter claimed jurisdiction over the remainder, including what is now called Smith's Point, and extending to the Cliffs at the North Shore. Long, sinuous ponds, narrow glens, and compact forests, formed a sort of natural line of separation between the respective territories, whose outskirts were bounded only by "the salt sea ocean."

There have been discovered from time to time, since the extinction of those hordes, very satisfactory indications that they were numerous and warlike. The ruins of their encampments, and the remains of their cemeteries may still be traced in remote and deserted spots; where the curious wanderer may find vast masses of broken shells, and fragments of rude pottery, half buried in the shifting sands, or bleaching on the surface—with now and then an arrow-head of stone, or some dilapidated instrument of mischief. In exploring these decayed and melancholy marks of a departed generation, the contemplative mind would fain muse on various and solemn topics—ruminating on the rise and declension of nations—pondering on the vicissitudes of fortune—moralizing on the strange destiny of mortals—and making multitudes of other sad and sober reflections; all which, the kind reader is humbly desired to do at his leisure.

The ordinary customs and domestic habits of those aborigines, must necessarily have been very simple. They doubtless took their game by dint of such stratagems as a sort of instinctive genius suggested; dressed it in the most summary mode, by means which nature alone afforded—and devoured it with good appetites, unprovoked by artificial stimulants, and unspoiled by fastidious ceremonies. The *Khauds* subsisted chiefly upon fish and wild fowl—the woods with which their precinct abounded furnishing them with bark for lines and nets; while the *Taumkhods* preferred oysters, crabs, clams, clappers, lobsters, poquas, periwinkles, muscles, and other testaceous and crustaceous residents upon, around, and beneath the shores of their two principal bays, Mattekut and Nauntookkett. Both tribes also cultivated patches of land here and there, whereon they raised pumpions, maize, and some other vegetables; a part of which they exported in canoes to Naushaun, whence they procured tobacco. The various esculents above enumerated were prepared for deglutition by a culinary process unknown to the gourmands of modern times—yea, by a method which has yet escaped the graphic delineations of those all searching gastronomists, Dr. Kitchener and Mrs. Glasse. They excavated the ground to the depth of about three or four feet, making a pointed-hollow that might contain some three or four bushels, and lining the sides with smooth stones weighing from six to ten pounds each. Within this subterranean oven they kindled a fire, and heaped on fuel until the stones became duly calorified; then, removing the coals, they threw in promiscuously their respective contributions, gathered from the sea, the strand, the ponds, and the glebe; and overlaid the whole with a thick lid of sea-weed. When this medley was sufficiently seethed, the covering was withdrawn, and the feast ensued. The sanhops most ungallantly helped themselves first; then came the squaws, among whom commonly there was a deal of clapperclawing; and lastly the papooses, who breakfasted, dined, or supped, as the case might be, on the residuary abstract of a blue-claw, or the straggling catastrophe of a codfish.

With all their unpolished characteristics, it can-

not be supposed that these rough rudiments of humanity were destitute of feeling, or even of sentiment. Corporeal strength, it is true, constituted the basis of their government; yet, acts of injustice were as likely to produce compunction on the one hand, and resolutions of revenge on the other, as though their faiths had been disciplined in all manner of metaphysical subtleties. In illustration whereof, the subjoined legend may be cited—the which, though never before unprinted, is not on that account the less veracious.

Belonging to the *Taumkhod* tribe, there was a kind of soothsayer, called by an Indian name that signified *Mudturtle*. He dealt in rat-skins, smoked snakes, poke-weed, and future events. A more uncouth animal nature never undertook to manufacture: for his frame seemed to have been compounded of limbs and organs picked up at the four corners of the earth, and huddled together without order or object. No one part tallied with another; his feet, legs, hands, arms, ears and eyes, though coupled, were not mates—nor did they appear to act in concert; each individual agent being, as it were, independent of its neighbour, and having to perform separate and peculiar functions. His feet diverged at unmeasurable angles; one knee curved inward, and the other had its joint in the rear; the palm of his right hand faced outwardly, and the thumb of his left stood in the centre; his arms differed a foot in length, the shortest measuring an English ell—they seemed hung upon axles, for he could twirl them about, laterally, and in opposite directions, like the shafts of two windmills in a hurricane; his ears were either inverted or misplaced; and his eyes, one yellow and the other brown, stood awfully apart, so that when the yellow optic looked east, the other stretched off in a four-point course. His dark copper visage, speckled with green spots, seemed in a state of oxydation; and his black bristly hair, twisted into thongs, resembling rats' tails, gave his head the appearance of a caulker's mop. Moreover, there was an enormous hump upon his back—and finally, an inhuman elongation of the spine—something like the appendages worn by demons—to which adjunct, the credulous natives were wont to ascribe his extraordinary powers.

He dwelt alone, under a high cliff overhanging the sea, some twenty furlongs northwest from Brant Point—where he scooped a large cave, the foundation of which, consisting of several huge rocks, may now be seen, partly sunk in the tide upon the beach below; all other traces having long since been obliterated by the perpetual dashings of the restless surge. Although no apparent connection could be discerned among the divers members of this shapeless figure; yet, there was an intimate correspondence between soul and body—the mind being equally warped and convoluted. His malicious temperament, united to his prodigious personal strength, rendered him an object of dread and of hatred to both man and beast: and whenever he moved—which was neither straight-forward, sideways, nor diagonally, but in a direction partaking of each, like that of a knight on a chess-board—all classes of beings hurried fearfully out of his way. If nature had any design in the construction of this paragon of ugliness, it was, it may be safely surmised, that he might dig clams, overtake bull-frogs, and frighten owls.

The king of the *Khauds* resided at Skwom, a hamlet lying far up the harbor of Choartoo. He was a warrior of great prowess, though peaceably disposed; and his picture is preserved to this day upon the Commonwealth's escutcheon, with the motto, "ense petit placidam, sub libertate quietem." The hand of his only daughter had been successfully solicited by a young chief of that tribe. He was tall and agile—she, gentle and squaw-like. A certain evening was appointed for the nuptials. *Mudturtle* knew it, and, bent on schemes the most diabolical, launched his canoe after sunset, and paddled towards Skwom. It was a voyage of some miles, and the tide set against him, so that he did not land until midnight. Before him lay the unguarded wigwams, silently basking in the white effulgence of a full round moon. Prowling through the village, he at length entered the open cabin of the young couple. All was still. Taking from his neck a huge bag made of the skins of rats and squirrels,

he hastily drew it over the head of the slumbering bride; and before she was fairly awake, he had seated her in his canoe, and pushed from the shore.

Having torn off this suffocating head-dress, she succeeded in alarming, by violent shrieks, her sleeping friends. They soon mustered upon the strand, whence they could distinguish the unearthly yell of *Mudturtle* mingling exultingly with the cry of terror. A vigorous chase immediately commenced, and the monster, finding himself nearly overtaken, when off the peninsula of Khoartoo, plunged his affrighted captive into the deep, and scrambled with redoubled diligence to escape his enraged pursuers. This he effected while they were engaged in seeking the half-drowned female; but he dare not approach his own domicile—for, in the hurry of his flight, he had unhinged an elbow and dislocated an ankle. So villainous an enterprise as that which he had undertaken, lived not among the most ancient traditions of his tribe. Stung with this reflection, he looked upon his wounds as evil omens, portentous of horrible consequences—and in a fit of despair, he whirled himself overboard.

Meantime, morning dawned—the tawny damsel, being a swimmer, had reached land, whence, after some hours, she arrived among her astonished kindred. The *Khauds*, exasperated at this unexampled outrage, resolved on obtaining full satisfaction. A large body, armed with deadly weapons, hastened forthwith to the *Taumkhod* encampment, and demanded the head of *Mudturtle*. What could be done? No one dare approach his den—in fact it was inaccessible to all but its zig-zag proprietor. The aggrieved insisted—the assailed remonstrated—and agreed to transmit their ultimatum in two days. Numbers of the *Taumkhods* then assembled round the accustomed abode of *Mudturtle*, shouting, and occasionally darting arrows into the cave, in order to bring him forth; but he appeared not—and the tribes prepared for battle. They met at a place called the valley of Mattekajahm—and the *Taumkhods* fell on that day, like the Ephraimites at the passes of Jordan, in the days of Jephtha, judge of Israel.

Having inflicted ample vengeance, the *Khauds* granted a truce. Some days had elapsed, when, after a violent storm, the body of *Mudturtle* was thrown upon Brant Point, where it was buried without delay at low-water mark. It was again cast up, and again interred, three several times—whereupon a council was called, which decreed that the corpse should be buried with the face downwards, and a conch-shell in each hand. This was accordingly done, and *Mudturtle* has by this time dug his way through the exterior stratum of our onion-shaped planet. It should not be forgotten by the faithful historian, that at the final inhumation of this naughty necromancer, the reputed engine by which he wrought all manner of magic and mischief, the *os coccygis*, was absconded, and sent as a peace-offering to the king of the *Khauds*; who, ever after, wore it as a trophy, and a charm against the nightmare.

ORIGINAL ESSAYS.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

NOVELS AND ROMANCES.

There is nothing, perhaps, in common and unrestricted practice, more deleterious to public taste, or more pernicious to the public morals, than the extreme prevalence of novel and romance reading. It has become the fashion of the day; and all classes, from the dignified professional character down to the lower and more humble ranks of society, seem to have been infected, to an alarming extent, with this dreadful mania. To speak against this fashion, or rather vice, is to incur the displeasure of most, if not of all; and to denounce it altogether, is to draw upon yourself the severest censure, if not to become the object of laughter, and the butt of ridicule. These consequences are considered by some so great and dreadful, that they would rather see the evil extended, than make an attempt to arrest its progress, if not to effect its total removal. The well disciplined mind, whose hours, or a good proportion of them, are occupied in sober reflection, in useful study, and in acquiring solid information; whose precious time has not been engrossed, whose pure taste has not been corrupted, by this light and

frivolous kind of reading, and values the peace and happiness of society; views, with serious alarm, and well grounded apprehensions, the rapid advancement of this growing evil, and the total indifference evinced by parents in this point. There are, it is true, some novels that recommend themselves to our perusal by their exalted merits, correct sentiment, brilliant imagery, commanding and often felicity of diction, and sublime morality, and should therefore be exempted from unqualified reprobation. But the number of this description in comparison with those which are worse, if possible, than worthless, is so small that the risk is too great not to include them all under the ban of proscription.

Is there a parent who wishes to see his child, as he advances towards manhood and increases in years, become useful to society and an ornament to his country, that would not interpose his authority to interdict whatever might endanger the one or tend to prevent the other? and is there, I would inquire, any mode which is better calculated to effectuate this grand purpose, than by placing in his hands, such works as will store his mind with wholesome, and practical information, to the exclusion of that species of knowledge which, though it may enable him to appear for a while to advantage, surround him with a factitious glare, and give to him an artificial and unsubstantial consequence, must finally terminate, however, in both his moral and intellectual ruin. Effects like these are too momentous in themselves, and durable and distinctive in their nature, not to deserve profound consideration; and, when they can so easily, not to be avoided.

To the aspiring youth who, in this free and happy land, looks forward to some future time, when he expects to serve his country and receive her honors; whose bosom glows with the love of truth and virtue, and who is animated, by the impulses of honorable ambition, to great exertion and high and laudable endeavours, to acquire a name and a distinction which shall render him not only conspicuous and beneficial to his country, but secure to him that immortality which is the reward only, of distinguished worth and illustrious actions, let him shun these dangers; let him steer his course clear of this terrible shoal and this fatal rock against which thousands have been dashed and destroyed, and he may be successful. His country may be proud to claim him as one of her most glorious sons, and delight to do him honor. A. A. P.

MAN.

Oh, Man! I blush for thee.

[Shaks.]

There have not been wanting philosophers, who, in every age of the world, have employed themselves in speculating upon the character of man, and the great end for which he is created. Theories and opinions, at once wild and absurd, have been formed by men of the acutest intellects; and while some have considered man, in reference to his moral character, as being actuated solely by the worst passions of his nature, others have gone to the opposite extreme, and contended, that he is a being pure and virtuous, and fit to hold "communion with the skies." Others again there are, and they are the most numerous, who consider that man holds a midway rank between a devil and an angel;

"Half dust, half deity,
Alike unfit to sink or soar;"

and that no situation, however debased, or however exalted, can free his bosom entirely from vexation, disappointment and misery. Revenge, love, hate, jealousy, ambition, pride, assert their empire over his mind, whose alternate dominion consequently render him a reckless, mutable being, as fickle in disposition as inconsistent in conduct.

Under the influence of so many turbulent passions, it cannot be expected that man can arrive at that happy tranquil serenity for which he pants; for the gloom of disappointment is ever sure to close around and destroy the bright visions of happiness that his imagination has formed.

But while man cannot attain perfect felicity, it is certain he can be reduced to a state of absolute misery. We see a person, for instance, moving in all the glory of wealth and power: Pride glitters

in his eye, and Flattery tells him his hopes of happiness are secure. Years roll on, and he is still the same: calamity and misfortune are terms that amuse his imagination, and he jeeringly asks the meaning of misery. Years yet roll on. Amazing! there is his loud reckless laugh, but its tone, how fearfully changed! Can it be a mere careless burst of delight, or sounds it a knell, ominous of a broken heart? Alas! his golden dream of happiness is dissolved to terrible reality! The whirlwind of desolation has stripped him of his wealth and friends; and, can you have a heart to believe!—the wife of his bosom has scorned and deserted him! Pride has clothed him with loathsome rags; and dissipation and vice have ruined his boys. Misery! thy work is complete! thy victim raves in the Maniac Asylum!

It will be a melancholy hour in the life of any person, and deeply humiliating to his pride, when he calmly and coolly reflects upon the conduct of mankind from the creation to the present period. Stripped of the glare of their power, how degading appear the characters of those mighty ones of the earth, who have held the destinies of miserable millions in their hands, when we contemplate their cruelty, their inhumanity and their baseness. Myriads, at their nod, have been compelled to follow in the path of their unholy ambition; and we have seen, in their bloody and desolating track, cities and empires crumble into ruin, stained with the blood of fanaticism and misery!

But amid the gloom of misery and corruption that pervades the world, is heard the sacred voice of virtue, imparting the balm of her holy precepts to the desponding hearts of the sons of men. It is her province to teach, that "wealth is vanity, pleasure a shadow, and power a pageant;" that the seducing glitter of our passions will but serve to lead us deeper into the quagmire of despair; but that temperance and contentment are the true heralds to happiness.

ON THE PASSIONS.

NO. II. OF JOY.

Vain is alike the joy we seek,
And vain what we possess;
Unless harmonious reason tunes
The passions into peace.

[Carter.]

The subject of my essay is one of the characteristic features of the mind, denominated joy. Joy cannot be mistaken, for it sparkles in the eye, flashes on the cheek, smiles on the lip, and vociferates its happiness from the tongue, while the heart palpitates with unusual sensations, peculiarly fascinating to the mind of sensibility. The affections which were dormant, are aroused in all their warmth of enthusiasm, and the whole intellectual cabinet appears to be illuminated with a profusion of the most brilliant and vivacious ideas. Nothing is more grateful to the heart than joy; and there is no balm in life equal to its influence whether it arise from celestial or terrestrial causes. Man, without occasional periods of joy, would be far less happy, because this joy casts before it all those pleasing and endearing emotions of anticipation. Hence, Horace has said,—"pleasure goes before you, but keeps her retinue out of sight," and M. de la Rochefoucault observes,—"that it carries on an agreeable road through life." The pleasures arising from anticipation, are to joy what the rays of light and heat are to the sun. Joy is an antidote to melancholy; and it is a delicious draught to the old man tottering on his cane, as the excitation of the mind always increases the excitability of the corporeal system. The youthful part of the community instead of neglecting old age, should pay a strict regard to it, and endeavor to keep up a gradual excitement of joy, which will prolong the lives of our silver headed venerable sires; so that when they die they may leave us like the evening sun, as he casts his last red beams on the horizon of a clear sky. I remember to have been delighted in the company of an old gentleman bordering upon ninety years of age. He recited to me the circumstances of General Braddock's defeat, in the time of the French war, and upon my telling him some anecdotes which I had read concerning that hero, he was excited to moderate laughter, though his limbs were palsied, and joy shone upon his aged face. Let us not then

through pride and folly, neglect the society of our reverend sires; but endeavor to gild the evening of their days with the smiles of mirth and joy, and bid the vernal sun reanimate the decayed bosom of nature. Let us bear with their temporary peevishness, which is in a great measure occasioned by neglect; for the most serene sky usually succeeds the most impetuous and most stormy clouds.

Joy is the most pure where it is attended by a good conscience. Slander, calumny nor reproach can then throw a cloud over it; for the mind can say to its calumniators, as Diogenes once said,—"Nobody will believe you when you speak ill of me, any more than they would believe me were I to speak well of you." Here was a sweet joy experienced from the consciousness of being guiltless. Anaximander being told that the boys laughed at his singing; "ay," said he, with a smile, "then I must learn to sing better." He was happy in the idea that he had an opportunity to improve, by which he might overcome the shafts of ridicule.

Laughter is the most prominent symptom of joy, and is peculiar to none but the human animal. A French writer observes that "laughter is the ensign of joy, and frequently the trumpet of folly." This observation appears to savour of the truth; for we find that the wisest men seldom laugh, and Goldsmith says the loud laugh speaks the vacant mind. Hence we find that those who have but little in their own minds, will laugh at every thing which proceeds from others, or laugh through the weakness of what their own intellectual chaos may produce. We should never permit joy to transport us beyond the bounds of reason and propriety; for it never fails to render us ridiculous in the sight of the more chaste and wise. I have read of a man who, when he was excited by mirth, would throw himself into the most ludicrous postures, bursting into what is called a *horselaugh*. Being one day at the table of a friend, and being also a true parasite, he wished to give acclamation to a witty observation, made by his host, when unluckily he threw his ponderous arm around, and drew the *claret* plentifully from the nasal organs of a young lady who sat beside him, for which he was peremptorily ordered out of the room. Joy is like all other passions, absolutely necessary to the human fabric; but like all other passions, and like all other blessings, it proves a curse when allowed to triumph, and proves the overthrow of reason when allowed to hold the reigns of wisdom's chariot. There is a species of joy which has not yet been mentioned, and which I shall designate *perpetual*. This consists of an evenness of temper, united with tranquility of mind, where the person views the bright and dark sides of the picture of life alike, and never permits any thing, unless it concern eternal welfare, to molest. And it is where the mind extracts pleasure, or rather happiness from every passing circumstance, prefers the jollity of Democritus, who laughed at every thing he saw, to the tears of Heraclitus who was ever weeping at the follies of mankind. Of this kind of perpetual serenity of mind, the author of this essay can boast as large a share as any man in the United States America. He is in a great measure like the miller in unhappy occurrences, who cared for nobody, and nobody cared for him. Is the author sick? Then he is pleased with the idea of soon being well. Is he in pain? Then he flies to the arcana of medicine for a remedy, and marks with joy the gradual progress to ease. Does a cloud present itself to his mind to-day? Then he smiles and is contented with the anticipation of a blooming sun to-morrow. Does any one slander him? Then he says with Plato—"I am sure he would not do it unless he had some reason for it." Does any one slander him? Then if he is able, he endeavors to make a settlement with his adversary. Does any one love him? Ah, then he is completely blest. This process of thought never fails to produce composure, and to keep his mind at a regular standard of happiness and contentment.

But joy, when indulged to excess, is sometimes as fatal to human life as the deadly passion of grief. To substantiate and corroborate this fact, I might adduce a variety of instances; but at present I shall only produce a few of the best authenticated, by way of satisfaction to the mind not easy of belief. It is said by respectable authority that the son of the celebrated Leibnitz opened an old chest in his

possession, which he had never looked into, and found to his utmost astonishment, a vast quantity of gold. His joy on this occasion arose to such an immediate height, that he died in a very short time. The Italian historian, Guicciardini, informs us that Pope Leo X died of a fever on hearing the joyful news of the capture of Milan, so great was his joy on knowing that a calamity had befallen France which he had long desired. There is a circumstance recorded which almost every American has heard, and which runs as follows: In the time of the great struggle between the United States and Great Britain, the news was carried to Congress of the surrender of Lord Cornwallis and all his troops. This animating intelligence had such an effect on the patriotic mind of the door-keeper of Congress, that he fell dead with apoplexy occasioned by his excessive joy. I think Mr. Hume mentions several who died from the same cause, at the time of the restoration of Charles II to England's throne. Livy makes mention of an old lady, who was in great distress, from having heard the awful intelligence of her son having been slain in battle; but whose joy was so extravagant, on his safe return, that she died in his arms. Pliny records the circumstance of Chilo, the Lacedemonian, who expired in triumphant joy and rejoicing, on hearing the animating intelligence, that his son had gained the prize at the Olympic games. Valerius Maximus recites a similar circumstance, as it respects the fatal cause, of Sophocles, whose life paid the forfeit of the extravagant joy which he felt on having a contest of honor decided in his favor. It occasioned his death almost immediately. Aulus Gellius record a very singular instance of the effect of extravagant joy. It is respecting one Diagora, the father of three sons, each of which received a crown of victory on the same day; the first as a pugilist, the second as a wrestler, and the third received the crown of victory in the capacity of each of his brothers. Through the vast multitude of applauding spectators the father was carried on the shoulders of his sons whose path was strewn with flowers but amid the numerous concourse who applauded his glory in having such noble sons he died in their embraces. One more instance I shall mention as a proof of the powerful effect of the higher grade of joy. In the reign of Henry VIII a nobleman, who had been sentenced to death, received his pardon unexpectedly a few hours before the time appointed for his execution which so transported him that he died immediately of excessive joy. Many such instances might be adduced to prove the influence of this passion on the corporeal system but the above will suffice. The communication of joyful tidings is, says Dr. Cogan, "Like a stroke of electricity, indirectly directed, the violent percussion has probably produced a paralysis of the heart, by the excess of its stimulus."

The higher grade of joy is not perhaps more fatal than that of laughter. There is a story mentioned by Valerius Maximus of one Philemon, a very jocular lad, who ordered some figs to be brought and given to an Ass. He was highly diverted to see the animal eat them, and he ordered some wine to be brought and poured down his throat, that the figs might be prevented from giving him the colic. This sight excited his risible emotions so high, that he died immediately on the spot. There is another story which I shall relate, and which is recorded by Caelius Rodeginus, of a fellow called Xeuxis, a painter of great celebrity, who painted an old woman in a ludicrous posture, at the sight of which his levity was so great that death alone could put an end to it. Thus two fools pursued the same ridiculous road to death. I know of no manner of dying more contemptible than that of laughing; for we behold few leave the world without leaving behind a sigh and a tear. MILFORD BARD.

No accidents are so unlucky from which the prudent may not draw some advantage; nor are there any so lucky which the prudent may not turn to their prejudice.

A patient determination of purpose is among the most trying exercises of practical philosophy; it is, in fact, the essential and indispensable quality, which at once makes men great, and is chiefly instrumental in keeping them so

ALBANY:

SATURDAY, FEBRUARY 24, 1827.

INTemperance. It appears, from a statement published by the medical association of New-Haven county, Conn., that *more than one third* of the deaths which occurred in that county during the year 1826, were directly or indirectly caused or hastened by *intemperance*; and that, for the two preceding years, a similar proportion of deaths was imputable to the same cause. The New-York Times says, "Such a state of things existing in a section of our country, 'steady' and sober to a proverb, may well lead to the question—Are one third who die in the United States, above twenty years of age, the victims of intemperance? The fact is too well established, says the report, to require discussion, that such diseases, as are of themselves not usually fatal, frequently become so in persons of intemperate habits; and that in all acute diseases the chance for recovery is greatly lessened by this circumstance."

To this we add the following paragraph from the Providence Microcosm: "Of 739 persons admitted as tenants of the Baltimore almshouse, in one year, 554 were or had been persons of intemperate habits! One hundred and sixteen of the number admitted were children, many of them, doubtless, the unhappy offspring of intemperate parents. What a picture is here presented to those who drain the intoxicating bowl to the dregs; a habit which hurries its victims down the precipice of ruin, involving those who are dearest by kindred ties."

THE LEWISTON CONVENTION. The report of this tardy body has not yet appeared. If this convention be possessed of information relative to Morgan's fate, it should publish it, and not suffer garbled statements of its deliberations to trifle with the public credulity. Contradictory accounts are continually jesting with reason. The Rochester papers state, on the authority of members of this convention, that Morgan was murdered in the most barbarous manner at Fort Niagara. The Batavia Press states, upon tantamount authority, that the fort did not present any traces of foul usage. Which of these statements is worthy of the most confidence we will not pretend to say. The official report of the investigating convention is looked for with much interest; and when it is made it will doubtless receive that attention and respect which is due to its character.

As an act of justice to the memory of the dead, we publish the following circular. The letter containing the allusion to Mr. Chapin was written by F. F. Backus, of Rochester, a member of the Lewiston convention, and, as stated in the Rochester papers, was not for publication. Our readers should recollect that Mr. Backus' letter contains the pith of all the others; and that they are all indebted for the chief of their consequence to information said to be derived originally from Mr. Chapin. It is not impossible that, if these letters were closely criticised, they would be found to be totally destitute of truth.

TO THE PUBLIC.

The feelings of myself and family have been cruelly outraged by a communication recently published in the National Observer, and republished by a number of other papers, implicating our departed friend, Mr. Seth Chapin, as being concerned in the alleged murder of William Morgan. It is a duty which I owe as well to myself and family as

to the memory of our departed friend, to announce to the public, that the publication referred to so far as it respects the late Seth Chapin having any knowledge or concern in the affair of William Morgan, is an entire fabrication and wholly destitute of the least semblance of truth, and could have originated in no other feelings than those of the basest and most malignant kind. At the time of the alleged murder of Morgan, Mr. Chapin was with his family attending his domestic concerns, and for a number of days both preceding and following that time, was confined at home by the sickness of his family, and was not during that time absent at all from the village of Buffalo. Incontestable proof of these facts will shortly be laid before the public; and I have only to observe, further, that proper measures will immediately be taken to ferret out the author of this most wicked and malignant slander, and if those measures shall, as I trust they may be, successful in unmasking the vile calumniator, he shall not escape that punishment which his wickedness and unprovoked malignity has so justly merited.

CYRENIUS CHAPIN.

Buffalo, Feb. 19, 1827.

OLD BACHELORS. A comic burletta, interspersed with new songs, called "Old Bachelors, or a hint to the Single," has been produced with laughable effect at the Lafayette Theatre. The following ditty, sung by Mr. Summerville, we copy from the New-York Mirror. The editor observes that it never fails to be encored.

TUNE—*Smokers' Club.*

Four and twenty old maids, all in a row,

Four and twenty old maids, all in a row.

(Spoken.)—There were Miss Sally Neverwed, Jenny Single, Sarah Spinster, and a few other old maids, sitting round a small tea-table. The tea being too hot, they all began to puff! puff! puff! puff! "I wonder you don't get married!" said Miss Jenny Single to Miss Nelly Neverwed. (Different voice, as Miss Nelly.) "So I would, if I could—but between you and I—now that we are here by ourselves we may speak our own minds—I'll tell you what it is, ladies, none of us are youngsters—and I have a plan in my head by which each of us may obtain a husband." (In different voices.)—"O, do! my dear soul—do!—tell us what it is!" (Miss Nelly.)—"Well, my dears—I am going! going! going! going!—You must know, ladies, I am well acquainted with a certain member in the house of assembly, who shall be nameless. I have spoken to him on the subject—and he intends to bring a bill in to the house to tax old bachelors between the ages of thirty and forty-five—which will have a good effect throughout the state—both up above and down below—"

TUNE—*When those who are single.*

When all who are single may wed to their minds—

Or those who refuse be taxed double—taxed double—

Or those who refuse be taxed double."

VERSE II.

Four and twenty old bachelors, all in a row—

Four and twenty poor decrepit miserable old bachelors, all in a row—

(Spoken.)—The bachelors hearing of the aforesaid bill being presented to the house of assembly, they all began to puff! puff! puff! puff!—after which they came to the determination to hold a meeting at the National Hotel—where they unanimously agreed that the great hero who introduced the bill was in some measure right—as they all knew that dogs were faithful animals, and ought not to be taxed in this land of liberty; upon which one of the bachelors offered a resolution whereby the tax might be taken off the dogs without interfering with the bachelors!—"Hear! hear! hear! hear him!" resounded from every corner of the room. "Silence!" said the gentleman—"for I'm going! going! going! going! I submit," said he in an audible voice, "that the tax be taken off the dogs and laid upon the cats!"—"Not me!" says one of the members, "but he's an old monster!"—upon which they all agreed to the resolution—both up above and down below.

TUNE—*Hail Columbia.*

Firm, united, let us be

In bonds of unanimity—

And bachelors for ever be

In this land of liberty.

We last week stated it as our belief that no honest man would ever take exceptions to the proceedings of the Grand Chapter of this state upon the "Mor-

gan affair." Be the truth of this belief as it may, the Rochester Telegraph of the 16th inst. pronounces the report of the committee "a most unsatisfactory and unmeaning declaimer"—"a cold, evasive, technical denial." This is shallow, wholesale stuff, and does not look well in the Telegraph. If the editors of that paper had rubbed up their spectacles and looked around them for a moment—it would have required but a moment—they would have discovered that none but the most crazy lampooners and bedlamites of the day have endeavoured to connect the whole body of Freemasons with the "Morgan affair;" and that if perchance there were men of sense who entertained a rational doubt of the injustice of this attempted implication, they expected nothing more than a plain and manly disavowal of participation in, or approval of, any acts which set at defiance the laws of the land. It could not, certainly, be expected that the Grand Chapter should so far forget its dignity, and high standing as to enter into a refutation of each particular slander thrown out by the petty he-bawds who have got astride this subject for the purpose of riding into notice. We have the pleasure of learning from every mail that the document in question is almost universally regarded as satisfactory and full of meaning, and that it is in no way entitled to the appellation of "declaimer." The calm spirit of masonry may appear "cold" during the present state of the atmosphere at Rochester; but the assertion that the expression of the Grand Chapter is "evasive" is not founded in truth: the language may appear "technical" to those who are accustomed to blazing capitals; but we do not know that the words are peculiar to the arts, or that they are out of common use. So much then, for the peculiar *justness* of the Rochester criticism.

If we were in the habit of being surprised by the eccentricities of our western brethren, we should not fail to wonder a little on observing the editors of the Telegraph, by means of an "if," or any other word possessed of a conditional meaning, insinuate against the sincerity of the Grand Chapter. The propriety

offering a reward is certainly questionable; and therefore, the Grand Chapter was at liberty to act as it thought proper, in this particular. If Morgan be living, a small reward would not entice him from his hiding place; and a large reward would be met by scores of villains, who stand ready to gratify the popular wish, by swearing to third or fourth rate circumstances, if they can, by so doing, serve their pecuniary interests. Murder is serious business, and men should not be accused of it upon slight grounds. The lives and reputation of individuals should not be made a matter of traffic among interested panders. What right have we to consider men as murderers when we have no positive proof that they are such? Certainly none. And we would ask the editors of the Telegraph if they, as editors, are more easily satisfied in such cases than they would be if they were members of a jury? and if they are, what justice or propriety is there in strengthening circumstantial evidence with ungenerous feelings when forming their judgment? A judgment thus formed, it appears to us, must necessarily be erroneous; and premises rested upon it consequently fallacious. Truth alone should govern men in their deliberations; and if the truth cannot be discovered, it will not be denied that a state of doubt is preferable to an erroneous settled belief. The declaration that certain members of the Grand Chapter are stained with the blood of

Morgan is, therefore, ill-founded and unjust, though it may not be *impolitic*, considering the present state of the public mind.

ORTHOGRAPHICAL TIT BITS. A Philadelphia paper says that a farmer inscribed the following notice on the side of his wagon, which stood the whole morning in one of the streets of that city: "*Gud Pertaturs for Sall.*"

The last Truth Teller says, "The following is a *literal* copy of a medical certificate produced a few days since in excuse for the non-attendance of a witness at court.

"Brooklyn, February 10th 1827.
this is to saterfy that _____ of Bronklyn is under Doucter Care and is not abel to leve his room with the Doter will righd his name. _____ M D.

NEWS AND TABLE TALK.

Literary. Mr. Boaden's Life of Mrs. Siddons has made its appearance in London. Boaden, although he has the vanity to place his work beside Cibber's *Apology*, is not the best of compilers; but his works are valuable nevertheless, and we presume the present one will be republished in this country, as a companion to his life of Kemble.—"Transalpine Memoirs, or Anecdotes and Observations shewing the actual state of Italy and the Italians, by an English Catholic," has made its appearance. It is very well spoken of by the London Literary Gazette. Also published, "The Golden Violet with its Tales of Chivalry and Romance, and other poems, by L. E. L." It is unnecessary to add that it is an interesting volume.—"The mode of spelling the great Shakespeare's name has been hitherto uncertain. Mr. Mathews, at a late visit to Stratford upon Avon, by laboriously investigating the parish register, during the time of the poet, has ascertained that in every instance Shakespeare's name is there written 'Shakspeare,' omitting the e in the first syllable. Although we have always preferred the other mode, we think this may be considered definitive of the point.—M. Chateaubriand's forthcoming work, "*The Natchez*," is the great romance upon which he has best wed the labour of many years. The celebrated *Tales, Rene* and *Atala*, are only episodes of the present grand design, which would, indeed, have been published some years ago, had not the MS. been left by M. Chateaubriand in an obscure lodging-house in England, when, in the year 1800, he was obliged to return to France under an assumed name. This important deposit was subsequently recovered, but not without great difficulty. The history of the lost manuscript, and the search after it, is, in itself, highly interesting.—A large edition of Woodworth's *Melodies* has been disposed of in New York in a few weeks; and the continued demand for the work warrants the printing of a second edition, which will be put to press immediately. Several corrections, alterations, and additions, will be made in the forthcoming impression, both as respects the text and engravings. There is not a single copy of these *Melodies* now to be had, either in boards or sheets. The author, however, has about twenty, bound in calf, and gilt, for which he charges \$1.50 cents per copy.—*N.Y. Mirror.*—We learn that Mrs. Royal's new Novel, called "*The Tennesseean*," is now published—or rather has been printed at New-Haven, and it is further said, upon the authority of the authoress herself, that the present work is much more able and interesting than the *Sketches*—if Mrs. R. is not a judge of these matters, we know not who is—in her opinion. We are glad to hear, that Mrs. Royal expects to rank as one of the first American Novelists, and become a successful rival of the great unknown. The editor of the Connecticut Herald, from whom we hold these facts, asserts that the assembled wisdom of the people at Washington, are to have the first chance of patronizing native genius. We hope that Mrs. Royal will not neglect to supply our city, as she passes through, especially when we have had little entertainment of late in the novel line.—*U.S. Gaz.*

A specimen of oriental magnificence, a Burmese Imperial State Carriage, was lately sold at Piccadilly, London. The auctioneer estimated its original cost at a lac of rupees. He said that the number of stones set in it amounted to twenty thousand; but he was not authorised to vouch for them, as being precious. After a good deal of preliminary puffing, the first bid he obtained was 100 guineas, on which it slowly advanced, and was ultimately knocked down for 1000 guineas. The throne of the Burmese monarch was bought by the same purchaser for fifty guineas.—The verdict of a jury on the body of a boy aged fifteen, who had hung himself, was that he had unintentionally destroyed himself whilst gratifying the most absurd curiosity of desiring to feel hanging sensations!

—A pelican was shot about two weeks ago, on the Mahoning river, in Ohio, which measured six feet from the toes to the extremity of the bill, and eight and a half feet from the end of one wing to that of the other. Its bill was fifteen inches long, and its pouch capable of holding two gallons.—William B. Giles has been chosen by the legislature of Virginia, Governor of that State, in the place of Gov. Tyler, who has been elected to the U. S. Senate.—The Trustees of the Roman Catholic Church of Rochester, Monroe County, have advertised their Pastor, the Reverend John M'Cormick, as having "eloped with a young woman, in violation of morality, of the obligations of his sacred office, and all other ties which good men reverence."—There is a lady at Rockaway, Long-Island, who was married at the age of 15—she is now 37 years old, and has had 16 fine children; 14 of them are now living, and the eldest child is but 16 years and five days younger than its mother.—There is a lady in East Haddam, Conn. not yet thirty-nine, who has twelve daughters—two of whom are married, and have children. This lady is described as an active, sprightly person.—No doubt of it.—The Boston Centinel says, that the instructions received at the Navy Yard there are for putting in readiness the launching of the two Seventy-fours, and the Cumberland frigate of the first class, in the course of the present year, and to fit for sea the Java, of forty-four guns, which wants nothing but her stores.—The U. S. Supreme Court have at last decided the important question that has been long pending before it, namely, whether the State insolvent laws were or were not constitutional, and determined, four to three, that they were so, as to all contracts entered into between citizens of the State subsequent to the passing of such laws.—Mr. Parmenter of Brooklyn, Long Island, has tried the experiment of leaving grape vines exposed to the weather during the winter, and found that, notwithstanding the extreme cold of last season, and what is worse the rain which froze upon the vines, that they have sustained no injury, and remain as if they had passed the winter in France.—I bought the King of Prussia has subscribed £1200 towards the Greek fund, yet he will not allow his Agents or Ambassadors to give any one of his soldiers a passport for Greece.—The late Mr. Brown, of Newburyport, Mass. has left by will, a legacy of \$1000 for the Howard Benevolent Society, and a donation to that town for the establishment at a future period, of a grammar-school. It will be recollected that this truly munificent man had during his life time given 25,000 dollars to the Andover Theological Institution. He died without any lineal descendants, except an only grand daughter, who is probably the richest heiress in New-England.—The Ohio river at Wheeling, is twenty feet above low water mark.—Dr. Neuhoff, of Brussels, is said to have discovered an operation, by which he can cure the deaf and dumb.—The committee of the legislature of Massachusetts on education has reported an abstract of the returns of the state of the schools, made in pursuance of the act of March last. Of the 302 towns in the commonwealth, returns have been made from 214, and from the other eighty-eight no returns had been received. The sums raised annually for the support of Public Schools, in these 214 towns, amount to 226,220 dollars. This sum is expended in 1,726 school districts. The number of scholars attending public schools, in these towns, is 117,189, of whom 62,417 are males, and 54,772 females. The number of Private Schools, and Academies, in the same towns, is 953; in which the estimated number of pupils is 35,083; and the estimated annual amount of tuition fees 192,465 dollars. The number returned, of children from seven to seventeen years of age, who do not go to school, is 2,974—of children prevented from attending by want of books, 318, and of persons over 14 years of age unable to read, 530.—On the 27th November, at Zlatoria, in Poland, a boy, eight years old, threw up from his stomach with the most violent efforts, a live lizard, four inches long and an inch thick.—The Maryland House of Delegates has passed a bill, giving the Colonization Society, \$1,000 annually, to be expended in the transportation of free negroes from the State of Maryland.—London paper of December 23 says—at the embarkation of the troops last week, from Deptford for Portugal, one old woman took leave of six of her sons, all fine young fellows, belonging to one company in the Guards. The separation was painful in the extreme.—Capt. Rush, from Montgomery County, Geo. was burnt to death in his own house a short time since. He was alone, and had lain down before the fire, which it is supposed communicated to his clothes.—Since 1819, fifteen cargoes of fur seal skins, taken within the southern Arctic circle, have been brought into the port of Stonnington, Conn. and sold for 277,697 dollars. Four vessels from Stonnington are now engaged in the sealing business.—Hon. Poyhattan Ellis has been elected a Senator in Congress from Mississippi in place of Mr. Reid the present incumbent.—Letters from Malta received in Paris state positively, that the Greek frigate *Hellas*, from the port of New-York, reached that harbour on the 29th Nov. and sailed again the 1st Dec. for Napoli.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

WHERE THOU ART NOT.

Where thou art not, I turn in vain
For ease to the throbbing heart and brain,
And rest to ceaseless quivering sigh,
Which knows no rest but beneath thine eye.
'Tis in vain I think of thy truth to cheer
The coldness and gloom that revel here;
'Tis in vain I dream of the coming bliss
That thou wilt bring with thy meeting kiss;
And sure it is a dark and dreary spot
Where I am alone—where thou art not.

Where thou art not, it may be day,
But all its delights have passed away.
The sun may shine,—but his cheering heat
To the heart of the desolate is not sweet.
It may be night, but refreshing rest
Visits not my wearied eyes and breast;
And stars of the wakeful midnight shine
Not less for the eyes of the dead than mine—
—Light and shade and rest are forgot
And all save thee, where thou art not.

Where thou art not, I string my lyre
In vain;—and the unformed tunes expire,
Or grate like discord on the ear,—
For nought is sweet thou dost not hear.
I cannot sing of the grove, or the bower,
Or the rivulet's bank at evening hour,
Or the gentle ripples of the shore;—
Their charms are known to the strings no more;
And lone and sad is the minstrel's lot,
In the whole wide scene, where thou art not.

Where thou art not, O, who could be
Forgetful of Love like thine for me.
I could bear the clank of the captive's chain,
And forget to sigh for every pain:—
I could toil unwearyed on, and share
The bitterest dole without despair;—
And the heaviest rod of fate were light,
And the dungeon's deepest gloom were bright,
Didst thou but smile on the sufferer's lot;—
But who can live, where thou art not!

FAIR CLARA.

Fair Clara was a comely maid,
As any to be found;
Her wit and beauty have been said,
To charm the country round:
But ah! she would not, lovely girl,
At one thing take rebuff;
Still she would rub her teeth of pearl,
I blush to say, with *snuff*.

Such virtues you can seldom find,
In one sweet maid agree;
Blest with an educated mind,
As well as charity:
To view her lips of ruby red,
To love were charm enough;
But ah! those lovely lips she fed,
I scorn to say, with *snuff*.

The features of her beauteous face,
Were dear to soul and eye;
And on her form sat many a grace,
Her dress of crimson dye:
None of her features, save her chin,
From beauty's mould was rough;
And that without, and that within,
Was stained with filthy *snuff*.

Young Damon came to woo—her breast
With generous passion strove;
Upon her lips a kiss impressed,
The tribute of his love:
But ah! her balmy breath he found,
A most unpleasant puff;
His angel with the graces crown'd
A devotee to *snuff*.

Yet still his bosom felt the pang,
Of love still lingering there;
And whilst the beauteous Clara sang,

He thus addressed the fair—
"Claim me, my dear one, for thy own,
Nor at me take rebuff;"
She placed her hand above her zone,
Upon her box of *snuff*.

Still she continued every day,
The same thing o'er and o'er;
Her lovely looks soon fled away,
And beauty was no more:
Her skin assumed a yellow hue,
Her lips were dark and rough;
Her teeth were neither black or blue,
But like the solid *snuff*.

MILFORD BARD.

From the Boston Patriot.

THE SERAPH GARLAND.

BY MRS. HALE.

The flowers of Paradise are sought,
The Seraph Garland given,
And the earthly brow where it faded not,
That brow it will deck in heaven:
Mine, mine the prize, proud Valour cries,
And doff'd his nodding plume,
And the awed world, with eager eyes,
O'er his laurels saw it bloom;
There fell a drop on its brightest leaf,
The hue of blood it wears—
There fell a dew—'twas the mourner's grief,—
It withered 'neath her tears.

Go, warrior, claim the wreath of fame,
But this may not be thine.
Then jocund Pleasure laughing came,
'Around me let the Garland twine;
And a glow as bright as morning gleams
On the blended blossoms played;
And then like hues of sunset streams
Alternate light and shade;
A moment—glow and hue are past,
The Garland droops in death!
So fades the flower beneath the blast
Of the Siroc's deadly breath.

Next, Wealth advanced with lordly air,
And spread his shining gold;
Then glanced his eye on the Garland fair,
And asked if it might be sold:
And he proffered pearls had decked a throne,
And gems of costly dyes,
And deemed the hallowed Wreath his own,
And sought to seize the prize:
It shrunk like ashes in his clasp!
Yet he showed no shame, nor pain;
But gathered his gold with firmer grasp,
And counted it o'er again.

Then a sound like the myrtle's sigh is heard,
When its leaves the soft wind stirs;
And Beauty, led by Youth, appeared—
O, the Garland must be her's!
And on her fair, white brow it beamed,
A stainless coronal,
Till her idle vanity hath dreamed
Each gazer is her thrall;
And she hears her mirror call her fair,
And her heart with pride doth swell;
But while her face claimed all her care,
A blight on the Garland fell.

Then learning laid his volume down,
On his lip was a lofty smile;
And his glance with the lightning's brilliance shone,
For the meed will reward his toil;
Genius, aye, the dream is thine,
To win all glorious things;
Yet oft on thy mind in its flights divine,
There fall deep shadowings;
And then doth the ærean world prevail,
To lure thee from the skies:
For this the Garland waxeth pale—
Thou can'st not wear the prize.

But now, her meek eye raised to heaven,
All bathed with the contrite tear,
As she had erred, and been forgiven,
Sweet Piety drew near;
Her humble heart no claim preferr'd,
Already was she blest;
For in her hand was the Holy Word,
Its precepts on her breast;—
O, bind the Garland round her brow,
That is fann'd by the breath of prayer!
With Hope the buds are glowing now,
With love the blossoms fair.

EPIGRAM.

"Well, Edward, what news from the wars?" exclaims Joe,
"Has the edge of your sabre been felt by the foe?"
"You may judge if he felt it," cries Edward, quite warm,
"When I tell you it cut off a corporal's arm!"
"His arm," echoes Will, "why, in such a vocation,
'Tis my poor opinion, that *decapitation*
Had evinced greater gallantry." "True," replies Ned,
"But our cannon had, previously—*blown off his head*."

THE HUMOURIST.

"PICKLED COCKLES."

A Parrot, the property of a lady, was one day detected by the enraged cook, for the fiftieth time, in the act of larceny, stealing pickled cockles. The matter was upon him, and she inflicted a summary punishment on the green headed delinquent. "What, you've been at the pickled cockles again, have you?" said she, hurling a ladle of hot soup at him. The feathers of his head were scalded off; from being excessively talkative he suddenly became dumb; he was mute, bald, and solemn for nearly a year. At last the stubs began to peep out on his pate, and the mistress' father came from the country to see her—the old man was bald—the bird had never seen him before, and was doubtless struck with the coincidence of naked heads, for the moment the old gentleman entered the room, the parrot broke his long silence by vociferating with immense emphasis and glee, "What, you've been at the pickled cockles again, have you?"

A certain baron had a son, who, at the age of eleven or twelve years, rose to the rank of Major. One morning, his mother hearing a noise in the nursery, rang the bell to know the cause of it. "It is only," said the servant, "the Major crying for his porridge!"

A gentleman, seeing an Irish woman skinning eels, said to her, "how can you bear to be so cruel? Don't you think you put them to a great deal of pain?" "I might sir," she replied, "when I first commenced business; but I have dealt in them twenty years, and by this time, they must be quite used to it."

Two friends exchanging pinches of snuff at a coffee-house, an observer remarked, "you are making a profitable barter, gentlemen." "That cannot be," said one of the snuff takers, "as it is only pinch for pinch." "Nay," rejoined the observer, "you each get scent for scent by it!"

SONG.

Composed for the Installation of Syracuse Lodge, Syracuse,
Onondaga co

BY BR. L. S. BURN.

TUNE—*Indian Philosopher*.—Quick Time.

Hail! masonry, thou craft divine,
Where nature's arts combine
With Science, to unfold
The glories and the bliss of heaven,
Th' man, whose image God has given
A form of first mould.

Atheists may seek the wond'rous cause,
Why craftsmen, urged by craftsmen's laws,
Oppose all arts in vain;
An Architect has form'd a plan,
That reason govern, godlike man,
On nature glorious scene.

Our lodge shall rise on reason's laws,
And reason tell the wond'rous cause,
Why man by God forgiven,
Here various sects as one combine,
Lead captive love in chains divine,
On earth, a mason's heaven—

Thus spake the trumpet of the Lord,
And angels with attention heard,
Through heav'n's ethereal sphere;
The architecte wand for earth,
First gave to masonry a birth,
To dry the orphan's tear.

The widow shall not sigh unheard,
But as by oil on Aaron's beard,
Choice blessings were bestow'd;
A mason's love shall soothe her grief,
A mason's hand bestow relief,
The holiest gift of God.

Then Eden's blooming garden bow'd,
While in the East the Master stood,
Euphrates ceased to flow,
Havilah's precious bdellium shone,
Her sons brought forth the Onyx stone,
As gifts of richest glow.

Gilead, the place where Moses stood,
Proclaimed the power of Israel's God—
A mason's rod beheld—
Widdekel spread her eastern charms—
Chose the embrace of mason's arms,
And Three in One reveal'd.

Join, masons join, in Sign and Word,
The East is guarded by the sword,
Of flames and cherubim
Science her joyous lights reveal,
The cordial every wound shall heal.—
We praise the King of kings.

BR. W. C. WATSON'S ORATION.

The following Oration was pronounced before the Plattsburgh Chapter, and Clinton Lodge, June 24th, 1825, by Br. WINSLOW C. WATSON, the respected son of ELKANAH WATSON, Esq. of this city.

To distinguish by the solemn festival, mighty events which constitute landmarks in their annals, and to commemorate the nativities of heroes and sages, philosophers and patriots, have been common among all nations, and in every era of the world. Whilst we contemplate the splendour of the former, we are taught the hallowed obligating patriotism enjoins upon us of cherishing our national glory,

and of vindicating our national character—and whilst we listen to the recital of the achievements of the latter, we are taught to love our country. The contemplation of their virtues animates the ennobling faculties of our hearts, and we learn to emulate with sacred ardour their examples.

We are assembled here, my brethren, on this occasion, to celebrate, not an epoch that saw an empire burst into political existence—not the birth day of one, whose brow may have been entwined by the laurel of victory, nor of one whose life may have been pursued by the bays and huzzas of the multitude; nor do we offer fulsome incense on the altar of flattery to the living great. Far different and holier are the purposes for which this day has convoked us. We are here assembled, to observe the anniversary of him, who although he was "hapless, and miserable, and in want of all things," was the chosen servant of the living God the morning star that preceded the great sun of revelation, the patriarch of our religion, the patron and the pillar of our order. On this holy and august occasion, venerable to us, alike as christians and as masons, let us reiterate on the altar of our hearts, the sacred vows we have imposed upon ourselves; let us strengthen the cement of fraternal love, and in one voice, and one spirit, invoke from the Supreme Architect of the universe, his superintending care over our designs, approbation of labours.

The institution of masonry is presented to our consideration, clothed with all the venerableness and interest the profoundest antiquity can attach to a human system. The curious inquirer may pursue its principles through the long vista of ages, to the remotest point illumined by the torch of history; when he leaves her beaten track and wanders in the mazes of traditionary lore, the irradiation and the influence of masonry will still be revealed to him. What event may have called the system into existence—what circumstances of human necessity may have cherished its infancy, or what stupendous designs it may be in its inception calculated to promote, it is not my province or my purpose on this occasion to investigate. The awe which is shed around asserts the antiquity of masonry; its modern principles and designs demonstrate the purity of its conception, and the sublimity of its character.

Where are the mighty of the earth, who witnessed the early glory and promulgation of masonic principles? Where are Babylon, Persepolis, and Palmyra? Where the tremendous power of Tyre, of Athens and of Rome?

In vain the traveller wanders on the banks of the Euphrates, to discover the gorgeous domes and mighty towers of Babylonish power and magnificence. The torrent of ages, the bosom of human passions have swept in oblivion all that constituted the splendour and glory of Assyrian pride. The "queen of the sea" has illustrated the desolation of human grandeur, and in the language of that "holy writing," is a "rock where fishers dry their nets." Athens contemplated for centuries the sublime rituals of masonic principles, her mightiest temples were consecrated to masonic orgies. But the fane; the altar; and the god of mythology, have sunk together to the dust. Masonry has alone survived these devastations of human power.

The mighty Roman, whose eagle first perched upon the cliffs of our mother Isle, there introduced and promulgated the sacred mysteries of our craft. Where are now the attributes of the mistress of the earth? Her work stamp an immortality upon the name of Rome; her achievements blazon and adorn the page of history: her glory flourishes in the mind of the scholar and the antiquarian. But where is her puissance? Her seven hills indeed still remain, but the spirit that ennobled them is extinct. The diadem of power has been torn from her brow. Her eagle has been plucked of its plumes. The Goth and the Vandal have rioted in her high places; Attila has polluted the sanctuary of her glory. The voice of liberty is reverberated no

longer in her forum. The destiny of empires has overtaken her. Humanity weeps over her desolation, and history inscribes upon her moral and political ruins, "hic fuit Roma." Amid all these mighty revolutions, the humble system we this day commemorate, which was propagated wherever the Roman standard was planted, has flourished in perpetual beauty and vigor, and in expanding energy and influence.

I will ask for no other vindication of the purity and august character of masonic principles, than is afforded by these facts, at which scepticism itself cannot cavil. The mightiest empires of antiquity have been swept away in the surges of revolutions, but the sublime institution of masonry has flourished amid the storms which desolate them. Dynasties have been subverted: political tempests have shaken the world to its centre; the rage of national conflicts have prostrated the sublimest systems of human wisdom and the proudest monuments of human art: amid all this wreck of empires, and this crush of magnificence and power, the humble spirit of masonry has careered in a march steady, onward and irresistible.

To the mere superficial observer, I am aware this language may appear the utopian declamation of enthusiasm, or the hollow profession of bigotted zeal; but before it is denounced, let us observe the discrepancy which exists between the elements of political institutions, and the principles of the masonic system. We there shall find an obvious solution of the problem presented by the assertions of the advocates of masonry. The former are generally engendered in the conflicts of human passions; they too often rest upon transitory interests; are directed by the selfishness of individual ambition, and calculated alone to subserve the purposes of some evanescent policy. When, therefore, neither the exigency, nor the motive, which created them, longer exists, the foundation upon which the superstructure rested, must be demolished, and the edifice itself will crumble to the earth. But the fabric of masonry stands upon the immutable basis of eternal virtue, and is supported by the pillars of charity and philanthropy. Recognizing no distinction of empires, the principles of masonry can be affected by no revolution of political power. When crushed in the ruin of one empire, its spirit seems to be animated with fresh impulse and vigor in another. The revered and sacred purpose which inspire it, and its moral energy, have endowed it with the principles of immortal existence.

Infidelity may sneer at our obscure rituals, and our mystic symbols; trumpet tongued calumny may utter her denunciations; the world may pursue us with reproach; despotism may endeavor to annihilate masonry by oppression; but a system which reposes on the rock of ages, and is covered by the moss of centuries, vindicates itself from aspersion, and from arbitrary power.

In every era of the world, and among all nations, at intervals, masonry has felt the iron grasp of persecution. Where bigotry has enthroned herself in the human mind, and superstition has seared the best sentiments of the heart, masonry has been denounced as obnoxious to the precepts of our holy religion. Where despotism has careered over the rights, and trampled upon the liberties of man, masonry has been pronounced discordant to the principles of well organized government. The rack has groaned beneath the torture of our brethren—the stake has witnessed the awfulness of their devotion—the scaffold has drunk the best blood of our order. But the agony of the former has served to animate our ardour; the illumination of the stake has irradiated our path to the altar of masonry, and the blood of the scaffold has cemented the arch of our union. Amid all these accumulated oppressions, masonry has never been called upon to weep over the degeneracy of her disciples. No effort of human power has been adequate to burst the bond of masonic obligations, to constrain a mason to the

recantation of his faith, or a violation of the arcana of our mysteries.

That masonry is repugnant to the spirit of our holy religion, has become a trite and hacknied theme of denunciation against its character. Sagacity itself would be bewildered in an attempt to define the origin of calumnies so palpable, and assertions so unfounded. The wisest men, the purest moralists, the most devout christians have in all ages assumed the panoply of our order, have subscribed to the articles of our faith, and have been the zealous and fearless champions of our cause. Do these facts speak no language of vindication from petulant and fastidious fanaticism? Is it nothing, that we present to the world, that holy volume, as at once the rule of our lives and the charter of our religion? Or is the exhibition of that venerated anchor of our immortal hope, the mere display of occasion, and the mummery of hypocrisy? And do ye, who listen to these foul aspersions believe that the reverend pastors of our church, the holy father of our religion, nay, he who we this day commemorate, would be accessory to so monstrous a deception and so atrocious a guilt.

By "their works ye shall know them," is a precept inculcated by the sublime oracle of our religion. Upon their "works" masons repose their vindication. Invidious scrutiny may pursue the career of masonry from the first throes of its existence to the present plenitude of its glory, and it will find not one feature in its history at which virtue might blush, that is contrary to the holiest doctrines of christianity or subversive of any moral or social compact.

(To be concluded in our next.)

ELECTIONS.

OFFICERS of the CHARLESTON (S. C.) LODGES, for 1827.

Solomon's Lodge, No. 1.

Br. William H. Inglesby, W. M.; Thomas E. Casey, S. W.; John J. Alexander, J. W. Meets first Monday in each month.

Marine Lodge, No. 2.

Br. John Bennett, jr., W. M.; William Schuyler King, S. W.; A. C. Dibble, J. W. Meets first Thursday in each month.

L'Etoile Renaiscente, No. 3.

Br. John Jamieson, W. M.; John Izard Wright, S. W.; William Nelme, J. W. Meets third Tuesday in each month.

Kikwinning Lodge, No. 4.

Br. Henry A. Dessansure, W. M.; George Timmons, S. W.; John Baker Rogers, J. W. Meets third Tuesday in each month.

Washington Lodge, No. 5.

Br. Amity Bailey, W. M.; Rufus Southworth, S. W.; Rev. Joseph Brown, J. W. Meets third Tuesday in each month.

Friendship Lodge, No. 9.

Br. Joseph Moss, W. M.; John C. Lozier, S. W.; Ezdale P. Coker, J. W. Meets second Wednesday in each month.

St. Andrew's Lodge, No. 10.

Br. A. McFeeters, W. M.; James Moorhead, S. W.; Archibald Wanless, J. W. Meets third Monday in each month.

St. John's Lodge, No. 13.

Br. William Lance, W. M.; John G. Laroche, S. W.; Charles Buford, J. W. Meets first Wednesday in each month.

Orange Lodge, No. 14.

Br. J. H. Honor, W. M.; J. S. Burgess, S. W.; Gershom Jones, J. W. Meets second Monday in each month.

Pythagorean Lodge, No. 21.

Br. J. Pillans, W. M.; Claus Von Allworden, S. W.; Robert Anderson, J. W. Meets first Friday in each month.

La Loge de la Candeur, No. 36.

Br. Vincent Barre, W. M.; Claude Rame, S. W.; Ulysse Roumillot, J. W. Meets first Thursday in each month.

SCIENCE AND THE ARTS.

METALIC WATERING.

This article of Parisian invention, is much employed to cover ornamental cabinet work, dressing-boxes, telescopes, opera glasses, &c. and is prepared in the following manner.

Sulphuric acid is to be diluted with from seven to nine parts of water; then dip a sponge or rag into it, and wash with it the surface of a sheet of tin. This will speedily exhibit an appearance of crystallization, which is the moire.

This effect, however, cannot be easily produced upon every sort of sheet tin, for if the sheet has been much hardened by hammering or rolling, then the moire cannot be effected until the sheet has been heated so as to produce an incipient fusion on the surface, after which the acid will act upon it, and produce the moire. Almost any acid will do as well as the sulphuric, and it is said, that the citric acid, dissolved in a sufficient quantity of water, answers better than any other.

The moire may be much improved by employing the blow-pipe to form small and beautiful specks on the surface of the tin, previous to the application of the acid.

When the moire has been formed, the plate is to be varnished and polished, the varnish being tinted with any glazing colour, and thus the red, green, yellow, and pearl coloured moire are manufactured. [Operative Mechanic.]

TO PLATE LOOKING GLASSES.

This art is erroneously termed silvering, for, as will be presently seen, there is not a particle of silver present in the whole composition.

On tin-foil, fitly deposited on a flat table, mercury is to be poured, and gently rubbed with a hare's foot; it soon unites itself with the tin, which then becomes very splendid, or, as the workmen say, is *quicken'd*. A plate of glass is then cautiously to be slid upon the tin-leaf, in such a manner as to sweep off the redundant mercury, which is not incorporated with the tin; lead weights are then to be placed on the glass, and, in a little time, the quicksilver tin-foil adheres so firmly to the glass, that the weights may be removed without any danger of its falling off. The glass thus coated is a common looking glass. About two ounces of mercury are sufficient for covering three square feet of glass.

The success of the operation depends much on the cleanness of the glass; and the least dirt or dust on its surface, will prevent the adhesion of the amalgam or alloy.

CASHMERE SHAWLS.

The New York Times gives a long and interesting article, extracted from the Scotsman (Edinburgh) relative to the progress made in the manufacture of what are called India Shawls in Great

Britain. "Thirty years ago," says the writer, "there was not a single shawl made in Edinburgh, and the number made in all Britain was absolutely trifling. At this day shawls are made to the value of a million sterling, and the manufacture now forms a leading branch of national industry."

Until lately the imitation shawls, as they were called, held no kind of rivalry with the genuine India; the latter selling at 100—200 and sometimes as high as 500 pounds sterling; while the domestic were never at a higher price than from 20 to 30 pounds. At present the India shawls except those of the very first class, have no superiority over the British, and the best ones, excel only in regard to pattern; and that is the result of the tedious process by which they are made.

The India shawls were made entirely out of a kind of wool. The British imitation ones were, at first, made of a mixture of silk and wool. Organzine silk was used for the warp, and on this a weft of silk and wool was thrown in. This was changed about the year 1804 or 5 for spun silk, that is India silk chopped fine and carded &c. like cotton. Afterwards there came into use a mixture of silk and merino wool, which was called "Persian yarn." This gave place about three years ago to what was called Indian wool, or Thibet wool; "which was in fact only picked quantities from picked English or Saxon fleeces." This effected a decided improvement, but still the shawls made from this material had not the exquisite softness of the India ones, and the figures could not be so well worked into them. At last it was discovered that the proper material was "an undergrowth wool of the Thibet goat;" a kind of down that grows among the long hairs which constitute the fleece of that animal. This article though dear can be procured in abundance: but many unsuccessful attempts were made before any mode of spinning it into thread could be discovered. The discovery is not mentioned in the article from which this account is prepared; but we have heard it said that the Thibet wool is *spun wet*.

Still one difficulty remains, and that is, to discover the Indian method of *weaving* in the patterns. The British manufacturers have as yet ascertained only this, that whatever the Indian method may be, it is extremely tedious.

CAMEL'S HAIR.

We obtain from a French paper the following facts concerning the manufacture of Camel's Hair.

It is not obtained by shearing, like sheep's wool, but is shed spontaneously by the animal every year, in the month of April, in large mats, after having protected it from the cold during the winter season. The Tartars who accompany the caravans collect them with care, and load the animals with their own cast off apparel. The young camels yield the finest hair; and in its best state it is finer than the most beautiful Angola. The article is obtained from Africa, a great part of Asia, and above all from India. In Persia it is made into the finest carpets. It is supposed that the English spin it wet, and deprived of oil. It is stated, that a single manufacturer in France has used a large quantity of camel's hair for several years; and the texture of his cloth makes it probable that he practices the mode adopted in England. Those who have tried to manufacture it without extracting the oil, have not succeeded in spinning fine threads.

At Rouen it has been successfully mixed with cotton, and stuffs made of it are much softer than the ordinary mixtures of cotton and wool.

Some exertions are making in France to improve and extend this branch of manufacture.

AMERICAN DRAMATISTS.

(Continued from page 27)

John D. Burke, Esq. the historian of Virginia, produced several dramas. The titles of the following occur: "The death of General Montgomery;" "The Battle of Bunker Hill;" "Female Patriotism, or the Death of Joan of Arc;" "Bethlem Gabot, Lord of Transylvania, or the Man-hating Palatine;" the piece is founded upon Godwin's interesting romances of St. Leon: "The Prince of Susa." All these dramas have been performed and printed. Mr. Burke was killed in a duel in Virginia; he possessed very respectable abilities as a writer.

Dr. William Joor, of Charleston, South Carolina, published in 1805, a comedy, entitled "Independence, or which do you like best, the Peer or the Farmer?" which he informs us was the first drama, written by a native South Carolinian. He also wrote "The Battle of Eutaw Springs;" and "Evacuation of Charleston, or the glorious 14th of December, 1782." Both these plays were performed with applause, when first introduced upon the stage but are now forgotten.

There are ample materials to extend this letter to twice its present length; but as I have shown sufficient to prove that something has been done towards the foundation of a national drama in the United States, I refrain from longer taxing the patience of the reader, lest I provoke him to cry out, in self defence *ne quid nimis*, and accuse me of attaching too much importance to trifles.

[Additions by the Editor of the Galaxy.]

Royal Tyler, Esq. was the author of a comedy called the "Contrast, written soon after the close of the war of the revolution, and played at Philadelphia and New-York, with considerable applause. It was also represented once or twice in Boston, in the old Board Alley Theatre, by Harper and Morris' company. In the year 1796, Tyler also wrote a farce called the Georgia Spec., or Land in the Moon; in which the rage for speculation in Georgia lands, (the Yazoo purchase) then at its height in New England, was very successfully satirized. It was performed several times at the Haymarket Theatre. This gentleman wrote about the period last mentioned, a novel called "The Algerine Captive," which for a time was very popular. He was also the author of an immense number of light and humorous articles, both in prose and poetry, that appeared in the Farmer's Museum, printed at Walpole, N. H. from 1796 to 1800, and in other papers since that period. He once held the office of chief justice in the State of Vermont, in which state he always resided from 1794, to his death, which happened at Brattleboro' during the last year.

David Everett, Esq. wrote a historical play in Blank verse, called Dranzel, the Persian Patriot, which was acted at the Federal-street theatre, Boston, in the beginning of the year 1800, and was soon after published: Mr. Everett was also considerably celebrated for his contributions to the literary departments of several newspapers; and a little volume of his essays was published some years ago, entitled, "Common Sense in Dishabille." He also published a series of essays on "The Prophecies that remain to be fulfilled"—a work, which we apprehend had but a limited circulation. In the early part of his life he conducted a village newspaper somewhere in the interior of New-England—we believe at Amherst, N. H.; and was also editor and part proprietor of the Boston Patriot, about 1810. Mr. E. died some years since, in Ohio.

William C. White, the writer mentioned in the preceding article, wrote, before he was twenty-one years of age, a tragedy, called "Orlando," which was several times performed at the Federal-street theatre. It is written in Blank verse and exhibits very considerable power of versification. The author was at that time, as we have been told, a clerk in a counting-room in this town: He performed Orlando, the leading character in his tragedy himself. He afterwards left both the counting-house and the stage, entered the profession of the law, and published in 1807, a Digest of the Laws of Massachusetts, in four volumes, octavo. He died a few years ago, at Rutland, in the county of Worcester.

J. A. Stone, formerly of Boston, now a player of some eminence in one of the New-York Theatres, is the author of several dramatic pieces whose titles are not now recollected, and which have been played at the amphitheatre in Boston, in Charleston, and in Albany. One of Mr. Stone's pieces which, we have not seen, is called "The Banker of Rouen," founded on the recent history of Fauntleroy, who was executed for forgery in England.

B. B. Curtis, a painter of some celebrity in Boston, is the author also of sundry dramatic pieces, not published. One of them was played two or three times, a few years ago, at the Boston theatre.

James Ellison of this city, many years a book keeper in the Boston Bank, wrote a play in five acts, founded on the history of the blockade of Tripoli, by commodore Preble and the campaign of General

Eaton, called "The American Captive." It was represented several times at the Federal-street theatre, when first written, and several years after, underwent some revision by the author, and was performed at the amphitheatre. Mr. Ellison died in Boston some years ago.

Henry J. Finn, one of the present managers of the Boston theatre, wrote a play called "Montgomery," which had something of a run at the time it was produced. The scene of the piece is laid on the frontiers of Vermont and Canada, and the fable is woven of incidents connected with the revolutionary war. One or two other pieces we have heard attributed to Mr. Finn, but with what accuracy we have not the means of knowing.

Perhaps we ought not to close this supplementary catalogue without recording "The Mercenary Match," by BARN A BIDWELL. This was a tragedy in two acts, written in blank verse while the author was a pupil or a tutor in Yale College. It is thirty years at least since we have seen it, and we have no recollection of its merits. Mr. Bidwell afterwards removed to Massachusetts, and obtained the appointment of attorney-general. He was a violent politician of the Jefferson school at the period of the highest political excitement, and his tragedy was made the theme of much merriment and reproach by his political adversaries. He left the state many years ago, and went into Upper Canada, where he made something of a figure among the colonial politicians. He died at Kingston or in its neighborhood.

[Additions by the (Providence) Literary Cadet.]

Doctor Joseph Shecutt, a physician of some eminence in South Carolina, was the author of two Dramatic performances, the one entitled "The Battle of Cowpens," and the other, "The Battle of Eutaw Springs." These productions, were for several years held as a kind of sacred property by the author, and for a long time he obstinately refused to suffer them to come before the public, even when he had the most pressing requests for their performance. At last, however, the author relented, and at the time the late Mr. Holman was manager of the Charleston Theatre, Dr. Shecutt most earnestly solicited him to bring his productions before the public. Mr. Holman took the dramas into his possession, and promised to bring them forward, but ere he could do so, an unfortunate difficulty occurred between him and Mr. James H. Caldwell, now manager of the New Orleans and western Theatres, which put an end to his theatrical career, and in all human probability, contributed very largely, to hasten him to the grave. After his demise, the plays were returned to the author, together with a note from Mr. Holman written some months previous to his demise, in which he remarked, that he had not had an opportunity of reading even the title page of the productions; and as he was then much engaged and probably would not soon be at leisure, he returned them unhonoured and unnoticed. The fact was, Mr. Holman was himself the author of several dramatic productions, which he then was in the habit of keeping on the boards, and had but a very small disposition to give place to the writings of a competitor. We have had the pleasure of reading these performances, and although we think they are deficient in dramatic effect, we are ready to admit that they possess many merits. The incidents are happily arranged, their catastrophe unusually effective, but the language of the dialogues are often inelegant, unnatural and ridiculous. With a little pruning from the hand of a skilful master, we think they would be well received, and might be considered considerable acquisitions to the reputation of the American Drama.

Pierre La Mootie, a native of St. Louis, Missouri, but who graduated at Oxford, as early as the year 1739, produced a Comedy, entitled "The Chase, or a way to catch them," which he carried to England, and offered to one of the managers of the principal London Theatres, which was instantly accepted and put in rehearsal, after which it was once performed and then suppressed in consequence of the licentious principles it inculcated. The author, chagrined and distracted at the ill success he had met with, threw himself into the Thames, and thus put an end to his miseries and misfortunes. Some few years since the original manuscript was found by a distinguished American now in Europe,

who caused it to be published. Several copies of the work were forwarded to this country, one of which is now in our possession. It possesses to our mind more than ordinary merit, and the dialogue is easy and frequently elegant, notwithstanding it is too often injured by a roughness which whilst it discovers the genius of the author, speaks his deficiency as a scholar.

Our townsman Paul Allen, so advantageously known as a poet and newspaper Editor, was the author of two or three dramatic performances, but as he found they would be opposed by the malignity of literary enemies, and newspaper competitors, he never could be persuaded to bring them before the public, although he was strongly solicited to do so by several of the managers of the American Theatres. Mr. A. died in Baltimore about a year since. His literary performances were numerous and interesting. His greatest fault was an eternal indulgence in parenthesis, metaphor and hyperbole—but few men possessed a richer or more luxuriant fancy.

G. R. Lillibridge, a native of New-York, but for several years a resident of this town, in the year 1823, produced a play, entitled "Tancred, or the Rightful Heir of Rochdale Castle." It was rather a compilation than an original production, and many of the scenes were copied verbatim from a novel from which the play took its name. Mr. Lillibridge endeavoured to introduce it upon our boards, a year or two since, but meeting with but little encouragement, he gave up the project, and migrated to Philadelphia, and it is said, Mr. Warren, manager of the theatre in that city, has promised to bring it forward. A year or two since, we gave the play a casual reading, and we must confess that we found but little in it, either interesting or original. Mr. Lillibridge is a printer by profession, but is as completely "Stage-stricken" as was the famous Sylvester Daggerwood. We believe that he still resides in Philadelphia, and at this time is engaged in attempting to get up a Quixotic crusade against the infidel Turks, and in favour of the Christian Greeks. He is a man of some talents, but of a wild and enthusiastic fancy, always in pursuit of fame, and rarely realizing the objects he may have in view.

ETIQUETTE.

The wife of Charles II of Spain, was very fond of riding, and several fine horses having been brought her from Andalusia, she had a mind to try one of them; but she had no sooner mounted, than the proud steed began to prance and caper, and at length threw the royal rider; and what was worse, her majesty's foot hitched in the stirrup, and the horse dragged her along, to the utmost peril of her life. All the court were spectators of this unlucky accident, but nobody had thought of succouring the queen: the etiquette formerly opposed it; for it forbid any man whatever, on pain of death, to touch the queen of Spain, and more especially her foot. That was the law, and therefore nobody durst approach her. Charles, who had a great love for his queen, and who, from a balcony, saw the danger she was in, cried out vehemently; but the custom was inviolable, and the untouchable foot restrained the grave Spaniards from intermeddling in so delicate an affair. At length, two brisk cavaliers, one named Don Louis de las Terres, and the other Don laine de Sotomajor, resolved to hazard all, in spite of the law of the queens foot. One seized the bridle of the horse, and the other laid hold of the queen's foot, and took it out of the stirrup; and, in rendering her this service, displaced one of his fingers. When this was done, the cavaliers took the advantage of the confusion this accident occasioned, and, without stopping, went home, got their horses saddled, and fled from the punishment they had incurred, for daring to offend against so strict and so august a ceremony. By much intreaty, the queen obtained their pardon from the king, her husband.

A man is thirty years old before he has any thought of his fortune; it is not completed before fifty; he falls to building in his old age; and dies by the time his house is in a condition to be painted and glazed. [Bryere.]

Solitude damps thought and wit; too much company dissipates and hinders it from fixing.

POPULAR TALES.

THE DWARFS.

The Nine Mountains, at Ramin, are inhabited by dwarfs, who dance, and sing, and sport in the moonlight, and more particularly when the earth is visited by spring or summer. These dwarfs are rather mischievous than malicious; they are fond of alluring children into their power, who then are compelled to serve them in their subterranean abodes; but this service is not hard, and, at the end of fifty years, by a law of the dwarf-kingdom, they are again set at liberty; nor do these fifty years add an hour to the age of the captives; time and the sun have no influence upon these realms of middle earth; and it is farther said, that such people have ever after been fortunate in the world, either from the wisdom they learnt below, or from the assistance of their masters, who have wished to recompense their servitude.

The unearthly beings who dwell in the Nine Mountains belong to the class of Brown Dwarfs, and they are not malicious; but in two other mountains are White Dwarfs, and they are the friends of all in the upper world. There are also Black Dwarfs, who work the metals with an ingenuity far surpassing that of man; but their hearts are evil, and they are never to be trusted. I will now tell a story of these Brown Dwarfs in the Nine Mountains, which happened long ago; I had it, in my childhood, from Henry Fierk, who was a peasant at Giesendorf, and who was well acquainted with all such matters. You must therefore suppose that it is Henry who tells this story.

There once lived at Ramin a peasant, named Jacob Dietrich, with his wife and family. Of his children, he most loved the youngest, who was then in his eighth year, and tended cows in the meadow by the Nine Mountains: here the little Hans got acquainted with a cowherd called Klas Starkwolt, a grey-headed man, whose brain was like a volume of ancient fairy tales. But if the old peasant was fond of repeating his legends, the boy was no less fond of listening to them, till at last his young fancy was so inflamed, that he could neither speak nor think of ought but Dwarfs and Gnomes, and golden cups, and crowns of diamonds. Above all, he wished to get a Dwarf-cap, for Klas had told him that whoever was fortunate enough to find or gain one, might safely descend into the mountain, and would have all the Dwarfs at his command. At last he resolved to try, and one night stole away from home, and laid himself on the top of the highest mountain, though his heart beat all the time like a hammer, and his breathing was as the wind of autumn. And now the clock struck twelve! On a sudden he heard a murmuring, and a whistling, and the song of voices, and the tramp of little feet in the dance, though as yet nothing was visible to his sight but the flowers and the leaves, that were still sleeping in the moonshine.

At last a cap fell close before his feet; in an instant he seized it, and in the pride of his heart set it upon his head—when, O wonder! the little dancers were at once visible. The Dwarf would fain have got back his cap by flattery, but Hans was inexorable, and showed his knowledge of his newly acquired power, by ordering the little brownie to provide a supper. The Dwarf was forced to obey, for his power had gone from him with his cap of invisibility.

The cock now crowed for the third time, and the young light streaked the east, when "away! away!" sounded from the bushes, and the stalks, and the flowers; and the mountain opened, and all sank below in a silver cistern. Hans was astonished at the majestic glitter of the walls; they were as if inlaid with pearls and diamonds, such was their exceeding brilliancy; while beneath, and in the distance, he heard the sweetest music, that stole upon his senses like May odours, and at length wrapped him in a gentle slumber. What time had passed he knew not, but when he awoke, his little brownie was by his side, ready to do him services; and he found himself in a chamber that was brilliant beyond the splendour of the earth. The tables were of spotless marble, the walls of emerald; and the frames of the mirrors were covered with diamonds. No sun shone in this subterranean

kingdom, but the precious stones shed around a perpetual light, that was fairer and clearer than the fairest and clearest night of earth. They were the stars and the moons of this country, but their splendour was borrowed from no sun, and eclipsed by no clouds.

It was mid-day when a bell rang, and the brownie said, "master, will you dine alone, or in the great assembly?" "In the great assembly," replied Hans, whither he was on the instant conducted by his servant. Here he saw an infinite crowd of little men and women already collected, while others poured into the hall from every side; in many places the ground opened, and tables arose, covered with the most costly vessels, and the most delicious meats, and wine that sparkled in the goblets like water beneath the sun-beams. The chiefs of the little people invited Hans to their table, and placed him between their fairest maidens. The feast began, and soon the mirth waxed loud, for the Dwarfs are a lively race, whose spirits are light and brilliant as the wine that bubbles in their glasses. Birds of the richest plumage were ever on the wing above them, pouring forth their songs of harmony, with a strange music that floated through the air, so soft, so sweet, so wild, that it drew from its throne the anxious and delighted soul, to leave it quivering on the lips.

Crowds of servants waited around the tables. Some bore about the golden cups and crystal fruit-baskets; some strewed the ground with flowers, that must have grown in gardens near the sun, such were their exceeding beauty, a beauty that was even undimmed by the lustre of the diamonds; others scattered odours so sweet, that the senses ached with pleasure. These servants were the children of men who had fallen into the power of the Dwarfs. At first Hans was inclined to pity their estate, but when he observed their rich clothes, and their rosy cheeks, and the sprightliness of their steps, he thought to himself, "after all they are not so badly off as I was in running after cows and oxen; and moreover, a time will come when they may be free again." And he thought no more of them, but sported with his little companions, happier than any earthly king upon his throne.

They had sat thus for two hours, when the principal rang a little bell; in a trice sank the seats and the tables, and the company was again upon the foot. He rang a second time; and where the tables had been, there arose orange trees, and palms, and myrtles, rich with fruit and blossoms, and upon the branches sang the sweetest birds; but though their numbers were many as the sands in the desert, yet all their voices united in a perfect harmony. Hans, however, soon found out the cause; in a niche within the roof, sat an aged man, who gave the note, to which they were compelled to sing. He was silent as hoary time, and spoke no mortal word, while the rest were often wont to talk too much.

The old man above now sounded to the dance, and the birds all echoed back the old man's tune. In an instant the whirl began, and the little maidens, that had sat by Hans, caught him by the arms, and sprang about with him in the dance for two hours long, and yet neither his breath was short nor his feet weary. The more they danced, the wilder rose their spirits, till every soul was bathed in ecstasy. Often in the time of his old age was Hans accustomed to say, when he described this scene, "there may be, and no doubt are, greater joys in Heaven, but earthly imagination is too weak to picture them."

Hans had lived thus many months, when at last he resolved to visit the schools, and become a student with the servants; for the Dwarfs make a rule of instructing all the children of earth who fell into their power, as far as they may be capable of receiving their lessons. But the little people have apprehensions infinitely finer than any human beings, and are well acquainted with all the mysteries of nature. They are besides exceedingly industrious, and work the metals with a minuteness that can only be equalled by the texture of the blossom or the flower.

Among all his companions in the school, the one he loved best, was a little fair-complexioned maiden, called Eliza, who came from his own village,

and was the pastor's daughter. With her he passed his childhood in brotherly affection, without any thought of the earth or its inhabitants, till at length he had reached his eighteenth year, and she her sixteenth year, when this affection ripened into love. The Dwarfs saw this with pleasure, for their great desire is to rule, and they hoped to enslave him by means of his passion for Eliza: but in this they were mistaken; he had learnt from his attendant, that he who was master of one dwarf, was master of them all, and could command the utmost exertions of their power.

The affection of the lovers increased with the lapse of time, and every evening was spent in lonely twilight walks; for in the hours that darkness was upon the earth, the lustre of the diamond would wax dim here below; an artificial night then succeeded, not dark indeed, but pale as the evening glimmer in the aisles of some antiquated abbey. On such occasions, Hans was ever pleased and cheerful, but Eliza would often think of the life above, where men dwell beneath the changing orbs of Heaven. Still, however, this was but a passing shadow of the moment; in listening to him she loved, all else was speedily forgotten.

It once happened that they walked farther than was their custom, until they at last found themselves beneath the very spot where the mountain opened to let out the Dwarfs into the upper world. On a sudden they heard the crowing of many cocks from the earth above, a sound that had not reached them for twelve long years; with it awoke, in Eliza's breast, a thousand recollections of the earth, of her home, and her dear parents, and the playmates of childhood; of the flowers of spring, and the winter's fireside. Her heart was full; she fell upon the bosom of her lover, wetting his cheek with tears, while, for a time, the words died away upon her lips. At length her passion found language for expression. "It is beautiful here below, and the little race are kind and gentle, but yet my heart is not at home here, and never can be. This is not a life for human beings; every night I dream of my parents, and of the church, and of the Sunday crowds waiting around my father; and then, oh! then my heart throbs to be with them. Here, too, we can never be man and wife, for here is no priest to marry us, and we must grow old and grey in singleness. Think of this, and contrive some means for our departure."

"Yes, Eliza, for the first time my heart is heavy. I will not stay here a day longer, for they dare not keep me: I am their master." At these last words Eliza became pale as death; they reminded her of what she had too lightly forgotten—of her servitude, and its necessary duration for fifty years before she could revisit earth. "Alas," she said, "this is well for you who have power above that of the dwarfs; but a cruel law holds me to this place for fifty years; what have I to do on earth, when my father and mother are dead, and the play fellows of my youth are old and grey? Age will be upon your head also, and what then will it avail me that I am young, and only in my twentieth year? Poor, poor, Eliza!"

Hans felt the truth of what she had spoken; but he pressed her hand to his heart, and promised never to leave that place of middle earth, until he could leave it with Eliza. With this they parted, sad and almost hopeless.

The whole night through Hans meditated upon the way of freeing his beloved. When morning broke, he summoned to him the six chief Dwarfs, with whom he always sat at dinner. Much as they were astonished at this call, they were forced to obey it; and when all were present, he demanded of them his Eliza. This was at once refused; upon which Hans, in great wrath, exclaimed, "you can and shall give up Eliza. You know my orders; I entreat no more; let me see you again with the morrow."

And the morrow came, but with it came no alteration in the resolves of the little people. Hans therefore began to show his power, by employing them in breaking and dragging huge stones, and other hard work, that martyred their tender limbs as if they had been stretched upon the rack. Still all was in vain. He made them mangle each other with iron scourges, till the blood poured down

in torrents; but he got no nearer to his object. At last he could no longer bear the sight of their torments, and, ceasing to plague them, he separated himself from their society, and lived almost as a hermit.

In one of his lonely walks, he was breaking the stones against each other for want of occupation, when suddenly a toad sprang from a piece of rock that he had just shivered. At this sight the tales of the old cow-herd flashed upon his memory, and he exclaimed, "now, then, Eliza is mine: the malicious Dwarfs could endure the scourge, but here is an enemy, whose sight will sting them worse than the sting of iron, or the bite of a scorpion." With this he enclosed the creature in a vase of silver, and again summoned the little people to his presence.

No sooner had they come within a few paces of their noxious enemy, than its influence acted upon them like an electric shock. They fell to the earth convulsed, shivering, shrieking, and writhing, like half-bruised serpents. Every hand was stretched forth to pray for mercy, and every voice was loud in promises. Hans, feeling that the power was now with himself, told them he should depart that night, between the hours of eleven and twelve, with his Eliza, and ordered them to load five wagons with the riches of their kingdom; their books, their gold, their emeralds, and their diamonds. To this they promised assent, and even to his wish, that all their servants should be free, who according to earthly reckoning, were more than twenty years of age.

It was an hour after midnight; the mountain opened, and they stood again upon the earth, and for the first time for twelve long years they saw the red of morning glimmering in the east. The Dwarfs swarmed like bees about the wagons; all were busy, though in silence, for the hand of their master lay heavy on them; it looked like the breaking up of their kingdom. And now Hans took the brown cap from his head, waved it thrice in the air, and flung it among the crowd. In an instant all had vanished; nothing was to be seen but a few bushes; nothing to be heard but the whispers of the grass, that waved in the morning wind like the gentle rise of ocean when it swells but no wave breaks its surface. The clock from the Ramin church struck two. All fell down upon their knees, and gave praises unto Heaven.

Great was the surprise of the whole village, when this singular cavalcade appeared before the cottage of Jacob Dietrich. But wonder was soon lost in joy when the tale was told: the old men and the pastor blessed their children, and at their wedding danced forty maidens in their shoes of glass, a thing unheard of since the marriage of Hans Dietrich with the fair Eliza.

ON THE PASSIONS.

NO. III. OF GRIEF.

Life, filled with grief's distressful train,
Forever asks the tear humane.
Assist them, hearts from anguish free!
Assist them sweet humanity! [Langhorne.]

Grief is the most deadly of all the passions of the human mind. It not only destroys the vigour and vivacity of the mind, but it is equally fatal, when indulged to an excess, to the corporeal system. The man of grief may be generally known by his appearance; as melancholy is invariably his attendant. The dark dreary caverns of despair are his places of resort, where not a sound of mirth can break in upon the eternal solitude of his thoughts. He looks upon the beauties of nature as objects worthy to be regarded; but which he must entirely shun. The dark and solitary hour of midnight witnesses his long drawn tremulous sigh, and the tears of sorrow gush from his eyes at the appearance of a friend, which render, for a moment, the gloom of his soul less terrible. Sleep has departed from his eyelids, and sometimes he is insensible to all around him; and again, syncope or fainting is induced by the hollow reverberation of a groan. His stomach sympathises with the brain, and indigestion is the conse-

quence. Hypochondriasis attacks his mind, loss of memory ensues; leading in its train the silver locks of premature old age; and finally, when nature can no longer support the conflicting emotions of the afflicted faculties, she sinks, like the tumbling ruins of a stupendous fabric, and buries, in a moment, the magnificence of reason, beneath the undistinguishable rubbish of madness and despair. The long continuance of grief, not only terminates in the subversion of the mental faculties, but it often winds up its career in the awful catastrophe of death; and sometimes by its own hand. I had almost forgotten to mention, that the celebrated Dr. Rush enumerates profound sleep as one of the symptoms of grief. He tells us that he has witnessed the sound sleep of mothers, soon after the decease of their children, and he also informs us, that the son of General Custine indulged in a repose of nine hours duration, the night preceding the fatal day on which he was led to the guillotine in Paris. Scripture informs us, that the disciples of Christ slumbered whilst he was experiencing his agony, which was occasioned by their "flesh" being "weak," and "sorrow having filled their hearts." Grief should never be indulged by retiring to the solitary shades of rural scenes; but the unhappy wretch, instead of brooding over his sorrows, should fly, by the persuasion of his friends, to the lively circle of society; or the mind should be applied with unremitting diligence, to some interesting employment. A variety of scenes and amusements should be presented to the mind in grief; changing constantly, in such a manner as to occasion a continual flow of ideas, by which the old ones of grief will be entirely eradicated. How many hospitals now echo with the lamentations of those, who from love, loss of property, absence from country, or bereavement of friends, have given way to its destructive influence! Could the walls of Pennsylvania Hospital re-echo the many thousand groans of the victims of grief, they would corroborate what is here mentioned.

But independent of real grief, arising from real causes, there is a distressing depression of the mind, originating from imaginary causes. Indolence or idleness may be called one of the remote causes of this languor or depression of the intellect. When the mind is left vacant, imagination grasps the reins of wisdom's chariot, and drives, with impetuosity, over the ruins of reason and judgement. Hence Cowper has said with his usual perspicuity—

Absence of occupation is not rest.
A mind quite vacant is a mind distressed.

Nature never designed man for a life of idleness; but he indulges in it, and hence becomes the tormentor of his own mind. The brute creation never suffers this distress, because *instinct* has never been known to teach idleness; and it would seem in man to arise from an absence of reason. No man should permit that disgusting species of pride to persuade him that he cannot stoop to an humble avocation, for that pride springs from false modesty, and that false modesty from the most egregious ignorance. Every man is respectable, be his profession what it may, so long as he preserves his character inviolate; or in other words, free from reproach. If there are any people who have reason to complain, they are certainly the poets; for, with a few exceptions, they die miserably poor. Historians tell us, that the great Homer was a beggar in the streets of Athens. I have often thought that the man who procures an honest livelihood, though in the most humiliating manner, is far superior in point of merit, to the splendid monarch, dying with imaginary grief, upon the couch of indolence. Nature is never tired or wearied in her grand operations; but is constantly at work to repair the ravages of time and decay, while man, frail man, on the contrary, languishes under an imaginary evil, which a little energy of intellect, and exertion of body, might easily eradicate. He should never allow his mind to dwell upon those Utopian visions: for we are told, in the Heathen Mythology, that Narcissus, a very beautiful youth, the son of Cephus and Eriope, fell in love with his own shadow in the water, and grieved so much to embrace it that he pined away into a daffodil.

This species of grief, arising from indolence, is a common malady among fools; but it is rarely the companion of a wise man; because when he is de-

barred from the cheerfulness originating from muscular exertion, he puts his intellectual wheels in motion, which never fail to repay the mind threefold in knowledge, virtue and happiness. It is absolute fallacy for a man to complain of evils which he cannot point out; and would the laws of free-agency admit of it, he would derive a benefit from being chained to a galley, by which means he would very probably be dipt in the river Lethe, and forget his chimerical miseries. I have read of a man, who was distracted with the gout, attended by its companion *ennui*, brought on by luxury and idleness, and instead of applying to labour, to relieve his distress, he embraced an opportunity of going as a passenger to sea. Whilst he was endeavouring to enjoy himself on the ocean, he fell into the hands of the Turks, who did not fail to treat him with that usual liberality of hard labour which is characteristic of their tenderness, and which did not fail to return the gentleman back to his native country perfectly safe and sound, both in body and mind.—It is folly for a man to seek after happiness where discretion forbids; for we are told that Prometheus, the legislator of the Egyptians, committed the sacrilegious act of stealing fire from heaven, in punishment for which, the Gods decreed him to be chained upon the summit of Mount Caucasus, exempt from death, where vultures should eternally tear his liver. Thus it is with him who goes contrary to the dictates of reason; for instead of finding that relief which he foolishly seeks after, he plunges himself into a wider labyrinth of misery and despair. Orestes, it is said, very often complained of the miserable depression of his mind; and being overheard one day by a friend, that friend exhorted him to arouse himself from his mental lethargy, and spend his time in some useful employment. Orestes heard him with a sigh, and replied,—"Since there is no better method of being revenged on time, which destroys every thing, I am determined to let it pass in doing nothing." This speech was degrading to human nature, and such a man was unworthy the advice of a friend.

Every species of grief should be avoided; and in avoiding them every latent power of the mind should be called into action; and so far from transforming the mind into a theatre of pantomimic despair, it should be the Olympic one of athletic and gymnastic exercises, where all the philosophers, poets, sculptors, painters, musicians and gladiators should be invited. Fly from wretchedness, and it will not long pursue; but when the mind relinquishes all hope of a return of peace, then grief triumphs in her cloudy car, and builds her ebony throne on the former seat of vivacity and cheerfulness. It is a melancholy reflection that some minds of the most extraordinary magnitude, have been predisposed to the tumultuous pangs of grief; and among that number we find the names of the chaste and sublime poets, Cowper and Collins. Pity has long since dropped her cold tear upon the green hills where they sleep in peace, which they knew not scarcely at intervals while living; and memory has paid the tribute of gratitude to their remembrance, by irradiating their characters with the trophies of fame, which their depression of mind seldom permitted them to enjoy while living. Grief, in some instances, cannot be avoided; but at all times we should consult reason and propriety as early as possible; for it is a passion which gains strength by continuance, and fatality by indulgence. Plautius, from gazing on the dead body of his wife, is said to have become frantic; and throwing himself on the corse, he expired immediately. We are informed that the Dutchess of Burgundy, the wife of the grandson of Lewis XIV. and a princess of the house of Savoy, informed her husband that she had not long to live, and desired to know what lady he would choose for his second wife. "I hope," said the duke, "that God will never inflict so severe a punishment on me, as to deprive me of you; but, should I experience such a misfortune, I should not, most certainly, think of taking a second wife, since, being unable to support your death, I should follow you in less than a week." The presentiment was correct, for in seven days after the death of the dutchess, the duke died of grief. Grief is like the dreadful disease which appears gradually, but which never fails, when indulged, to ruin the constitution, and even to destroy life itself.

MILFORD BARD.

ALBANY:

SATURDAY, MARCH 8, 1827.

THE MORGAN AFFAIR.

Every week explains some of the mysterious and dastardly acts of the host of villains who, for the last five months, have thrown out the seeds of discord, and revelled with a feverish fanatical excitement. That mystery should overhang mysterious things, is not at all wonderful; but that manœuvres professedly the offspring of the nicest regard for the public safety, should eventually prove to have taken their origin from the most corrupt and villainous designs of interest, malignity and spleen, is a circumstance too singular in nature to be placed among the common occurrences of the day. Men born in the first circles, endowed with competent judgment and cultivated reason, have forgotten their obligations to society, hoodwinked the public with canting hypocrisy, and disgraced humanity by the basest acts. It was hoped that the members of the Lewiston Convention would confine themselves to a relation of the truth; it was hoped that they would not enter the lists as colleagues to the common daubers and interested scoundrels who seem to have staked their souls upon the issue of this affair; but these hopes have been disappointed—these men have penned the most merciless falsehoods, and under the shallow pretence that these falsehoods constituted confidential communications, pushed them upon the public notice to serve purposes which they dare not advocate in their official capacity. This convention entered deliberately upon its labours, it deliberately pursued its mechanical mummery, and it has deliberately trifled with the public credulity and the public patience. Its members have made the boldest assertions and offered them no other support than mere declamation. They have declared that they were possessed of information which rendered the fate of Morgan obvious; yet weeks have passed away, and they have did nothing more, in their official character, than make an unseemly general declaration. In short, their silence proves either that they have been egregiously imposed upon, or that their mighty pretensions to deep and laborious research are without foundation. The conclusion is natural, that they have made this subject a hobby upon which to ride into notice; and that they know nothing at all upon the subject with which they pretend to be so intimately conversant.

We give below two letters; one is from F. F. Backus, of Rochester, to Mr. Chapin, of Buffalo, and the other, Mr. Chapin's answer. The quibbling attitude assumed by Mr. Backus, is cowardly and dishonourable,—it is as mean as his attack was infamous. Mr. Backus harrowed up the soul of the widow, and threatened the character of her helpless offspring; and his cold evasive language, denotes a want of gentlemanly candour. While speaking of Mr. Backus, it may not be amiss to observe that the letter from him which was alluded to by the card of Mr. Chapin, published in our last, has, by piecemeal, been proved to be totally false. Among other things, he asserted that when the convention arrived at Lewiston, the "fraternity was in a terrible stew." This assertion is a silly attempt at pleasantry, upon a subject which was considered of vital importance to the community; and displays more cunning than wisdom. In good sooth, this

gentleman's famous epistle appears to be nothing else than a sorry collection of falsehoods.

ROCHESTER, Feb. 20th, 1827.

"Sir—I received yours of the 15th this evening. You requested me to answer it immediately. As to my promulgating a report that 'a man named Chapin, of Buffalo, confessed upon his death bed that he had assisted in the execution of Morgan,' it is false. Last Wednesday, for the first time, I heard a report that a man by that name at Buffalo had made some disclosures to his physician previous to his death relative to the Morgan affair; but what they were I was not told. Sometime in the course of the day, I saw Mr. Fitch, of Batavia—inquired of him; he said he had never heard any thing of the kind. I then was satisfied that it was a fabrication, and have said nothing on the subject since, only that it was a fabrication. You further observe that you have seen a letter said to have been written by me in our Daily Advertiser, in which I mention a Mr. C. of Buffalo, as being an actor in the scene, &c. and that he is since dead. On my return from Lewiston, I wrote a line hastily, late in the evening, to Col Norton, at Albany, stating to him a brief outline of some of the discoveries of the Committee. This letter was of course a private one, and I knew nothing of its publication until I saw it in an Albany newspaper. But you observe I state it as information related by the Dr. of whom I there speak. Your informant whom I know, is therefore mistaken as to the first charge—and as to that contained in the published letter, my author is probably known to you.

I regret extremely to have wounded the feelings of any man by any thing that should have fallen from my pen—and probably can but faintly appreciate your feelings; but hope this explanation will be satisfactory. If not, I ever stand ready to communicate further.

F. F. BACKUS

G. CHAPIN, Esq. Buffalo.

The following letter of Dr. Chapin, in reply to the above, precludes the necessity of any further remarks.

BUFFALO, Feb. 25th, 1827.

Sir—In the absence of my nephew, I have opened your letter to him, of the 20th inst. which is in reply to one written you by him, requesting you to inform him from whom you derived the information to which you have given publicity, that **SERENUS CHAPIN**, deceased, was concerned in the alleged murder of William Morgan. You was requested to state explicitly the name of the author of this most wicked slander. This you have evaded—and you must allow me to say, sir, that the wound you have inflicted, requires a different mollifier than the one proffered by you. As I was the father-in-law of Mr. C. to whom you alluded, can you for a moment conceive that I can, or shall, look tamely on and see my daughter's feelings torn by so cruel an outrage; and at a time too, when they were sufficiently lacerated by her severe afflictions, without the aid of base and infamous slanders, to extinguish every vestige of hope and comfort? Neither shall I sit and quietly see her innocent babes, just expanding into life, laying under the infamy and disgrace of the imputation, that the foul crime of murder is suspended over the grave of their deceased father. Can any one be so base, and so divested of all feeling, as to shrink from such infamous slander?

Although you might have been heated in your imaginations, and your misguided zeal might have carried you far beyond the bounds of reason, still I am at a loss to conjecture what malignant fiend could have entered your brain and induced you to endeavour to fix the stain of guilt and infamy on the innocent—and one too, whom the silence of the grave deprives of the privilege of repelling the foul calumny; when by so doing, you must have been sensible that the only effect would be to wring the hearts of surviving relations.

Now, Sir, if your only motives had been to investigate truth, you would not have turned aside from the track and been guilty of spreading abroad this slanderous report. Was it not more your intention to create an excitement than to promote inquiry and investigate truth? Had you been the gentleman I expected you was, you would have unhesitatingly answered who your informant was.

Now, Sir, as you have given publicity to so wicked a slander, depend upon it, you shall not be suffered to shield yourself by saying you wrote confidentially to Col. Norton, without any expectation that your letter would be published. In the first place, I have some regard to Col. Norton's good or bad opinion. And in the second place, as you have been the cause of giving publicity to this most wicked and vile slander, you must and shall answer me who your informant was: and disclose to me the grounds you had to put in circulation such a false and wicked report: otherwise measures will be taken in this business, of a decisive and unequivocal character.

Your reply to this is expected.

DR. F. F. BACKUS.

CYRENIUS CHAPIN.

The following proceedings will explain the sentiments of particular portions of the masonic fraternity, upon this subject.

The committee appointed by Cyrus Royal Arch Chapter, No. 57, at their last communication, on the 23d ult. to draft resolutions expressive of the sense of this chapter in relation to the affair of Capt. William Morgan, respectfully beg leave to report:

That inasmuch as the several chapters in this state, by their representatives, at the last annual communication of this State Grand Chapter, on the 10th inst. have fully expressed the sentiments of the

masonic fraternity on this subject, any further notice on the part of subordinate chapters, might by some be deemed unnecessary. Yet in obedience to the wishes of this Chapter, and as expressive of its views, your committee would submit the following resolutions:

Resolved, That the many censures heaped upon the masonic order, by the uninitiated; and the sweeping denunciations of certain public prints are deemed ungenerous and unfounded, and owe their origin to say the least, to the hostile prejudices of those who "speak evil of things they know not."

Resolved, That the charging the Grand Chapter of this state, and freemasons generally, with the alleged misdemeanours of a few individuals does not "excite our special wonder," as the inference is no less usual than illiberal, that because a Peter and a Judas have unfortunately gained admission within the walls of the masonic temple, therefore all its inmates are unworthy, and the temple itself is an unhallowed structure.

Resolved, That while we are convinced that all the shafts of malice and prejudice levelled against our institution, will spend their force in vain, yet we deem it due to the ingenuous part of community, to make an explicit disavowal of any right in masonic bodies, to exercise any discretionary power in punishing persons for any pretended crimes whatever; and as masons, who are bound in the most solemn manner to respect the laws of their country, and the rights and liberties of their fellow citizens, we feel it a duty to express our pointed disapprobation of the conduct of all concerned in the abduction of the said William Morgan.

I. M. SCHERMERHORN,
GILES F. YATES,
MILO SMITH,

Committee.

Schenectady, Feb. 24th, 1827.

At a meeting of the members of Charity Lodge, held at the Lodge Room, in Danby, Tompkins co. on the 19th ult. the following preamble and resolutions were unanimously adopted:

Whereas the public mind appears to be under the influence of an almost unparalleled excitement, in consequence of the sudden and mysterious disappearing of one William Morgan, from Batavia, in this state, in September last; and whereas it is publicly asserted that those who were concerned in that transaction were Freemasons; and whereas Freemasons, as a body, have been charged with conniving at those unlawful proceedings:

Resolved, therefore, That we disclaim any knowledge or participation in that transaction, either as masons or as citizens; and that this Lodge disapprove of the proceedings of those persons who were concerned in that transaction, whoever they may have been; and that we consider it to be an outrage upon personal liberty, and a flagrant violation of the laws of the land.

Resolved, That we will co-operate with our fellow citizens, in all lawful efforts, to bring the facts pertaining to this mysterious affair to light.

Resolved, That we consider the resolutions that have been passed at certain public meetings in this and other counties, charging the masonic institution with conniving at the outrages committed on the person of Morgan, as manifesting a spirit and temper unbecoming the enlightened age in which we live.

ASHBEL PATTERSON, Master.

S. CANFIELD, Secretary.

THE GREEKS.

We are happy in the knowledge that the sufferings of the Greeks have attracted the notice of the legislature of this state. It is a source of gratification to know that cold-blooded policy has in this instance been met and conquered by the generous feelings of a free people. Sympathy for the Greeks is active, throughout the country; and the probability is, that these unfortunate christians will ultimately and speedily be possessed of their natural rights.

DESULTORY MUSINGS.

It is a fact, well established, that the wonderful machinery of the soul is in continual operation: its effects may elude the grasp of a listless memory, and escape the notice of a sluggish consciousness; but its action never ceases, till the vital spark surrenders its authority over the corporeal system. The body, being naturally inert, can act only upon the command of the mind; but the mind itself, whose component parts are its effects, and the only proofs of whose existence are its operations, abhors inactivity. It is a self-evident truth, that God is the author of the soul; hence, we have no reason to believe that its evil propensities are more powerful than its good qualities; if they were, the boasted intelligence of man would be a curse, rather than a blessing. Since, then, the mind is in continual operation, and has greater affinity to good than evil, the conclusion is natural, that it is at all times pursuing a train of noble thought. This conclusion, however, is very exceptionable, as daily experience demonstrates; and these exceptions engender a belief that the affections of the soul are equilibrated between good and evil. If, then, the power to direct the operations of the soul rests with particular faculties, and if those faculties are by nature inclined to the better side and yet easily blinded and cheated of their prerogative, it is a matter of the utmost importance that they should be properly cultivated, and taught to guard against hostile feelings. Thinking is a labour which the mind performs by virtue of its inclinations as well as its powers; but if the faculties whose business it is to direct the thoughts into a proper channel, neglect this duty and permit them to stray into the paths of error and pettiness; we must expect from their desultory nature, an unjust imbecile maturity.

He that is of a star-gazing propensity is heir to many pleasures as well as many follies. He is exactly the reverse of Mr. Fairfield's idea of hope, which,

Throned in heaven, doth ever rest on earth.

The star-gazer is throned on earth and doth ever rest in heaven.

Intemperance and profanity are the most prominent vices that "humanity is heir to." The latter is inferior to the former only in its immediate influence over the temporal welfare of its votaries: their debasing effects upon the intellect, are nearly, if not quite, equal. Weak and uncultivated minds are apt to consider profane volubility, surpassingly dignifying; hence comes the observation from the simpleton in the play—

I would rather than an hundred pounds that I could swear like that gentleman.

"POPULAR SENTIMENT."

At a very interesting meeting of some of the fools in the town of Ulysses, Tompkins county, "in the great and patriotic state of New York," the following all-to-nothing-crushing resolutions were brought forth amid the groans of the multitude:

Resolved, That the conduct of the editors of the Albany Escritoire, the Boston Mirror, and their humble copyists, in relation to the abduction and murder of William Morgan, betrays a total destitution of honesty and moral feeling, and merits the unqualified contempt of every good citizen.

Resolved, That the manly and honourable course pursued by Solomon Southwick, Esq. editor of the Albany Observer, with respect to the above outrages, evinces a character, superior to the paltry arts of fraud and deception, and eminently entitles him to the thanks of the community."

Since the above was put in type, we accidentally

cast our eyes upon the following resolution, which is said to be the joint production of a few hair-brained enthusiasts, who stumbled together in the town of Covert, county of Seneca, and state aforesaid, on the 23d ultimo. This meeting puffed David C. Miller and Solomon Southwick;—Miller is considered the best fellow. In speaking of Mr. Southwick it is observed that he is a mason—such is not the case.

Resolved, That we consider the Albany Escritoire, Boston Mirror, and Ithaca Journal, and all editors which have copied their falsehoods, and all other editors which have omitted to publish the outrages which relate to Morgan, to be in a good degree indirectly accessory to all the vile transactions, and deserving the just contempt of good citizens."

Perhaps we may offer a few remarks upon the above resolutions in our next; for the present, we have devoted too much attention to the Morgan affair. We will now merely observe, that the malignancy of fanatics and disappointed politicians will not weaken our endeavours to unmask hypocrisy and villany, whenever they become so conspicuous as to attract our notice.

NEWS AND TABLE TALK.**THE DUKE OF YORK.**

The New-York papers of Wednesday state that the Duke of York died at London on the 5th of January. The Lying in State was to commence in the new State Room, in St. James' Palace on the 18th, and to continue two days. The funeral was to take place on Saturday, January 20th, and would move in procession from St. James' Palace to the Castle at Windsor, without stopping. All the military which could be spared from duty, were to be called into requisition. The yeomanry corps are called upon to volunteer. Minute guns are to be fired, and all the church bells in London and in the country, to toll throughout the day. The body to be placed on an elegant hearse drawn by eight of the King's black horses. Orders have been given for all batteries, where there are no ships, to fire 60 minute guns before sunset on the 20th inst. the day appointed for the funeral. If there are any ships, only 30 guns are to be fired. Any man-of-war lying alone in port, must fire 60 guns before sunset, on the day mentioned, but squadrons are to fire 30 each. The Duke of York was in the 64th year of his age.

According to an estimate in a Massachusetts paper, the whole depth of snow which has fallen during the present winter is sixty-one inches.—The Ohio river had risen twenty-five feet in Cincinnati on the 6th inst. and was still rising fast. Much ice had passed down; and a snow which had recently fallen made it probable that the flood would be unusually high. A steamboat from Pittsburgh had arrived, which reported that the Allegany and Monongahela rivers had broken up.—In the course of a debate, in the senate of Pennsylvania, relative to laying out roads, General Ogle stated that "he had known a case where an application had been made to the court for a view of a road, and one of the judges descended from his seat, and kicked the applicant out of the house!"—In the county of Barnstable, Mass the vats in which salt is manufactured, are said to cover, in all, fifteen millions of square feet, and to be worth, at a fair estimate, \$1,300,000. The salt manufactured in them amounts to about 450,000 bushels. The senate of the United States have agreed to reduce the duty on foreign salt to fifteen per cent. till Dec. 1823, and after that to ten per cent. Memorials against the bill in the House, have been forwarded from Barnstable, as it would discourage their branch of manufactures, and cause a total loss of the capital they have invested in it.—In the village of Fall River, a short time since, about twenty-five young men formed themselves as a society for the purpose of improvement by debates; of that number, says the Fall River Monitor, twenty-one, we are informed, have entered the bands of Hymen, in about a year past.—The following curious circumstance happened at Illogan, in Cornwall, Eng. A poor man of the name of Blight had twelve geese and a gander, which were fattening for sale at

Redruth fair on Thursday. He saw them on Monday evening; they were in prime condition, and in the pride of his heart he was calculating the handsome sum he should receive for them. Alas! little did he imagine that he was then bestowing his last "look of love." When he went to revisit their domicile on the morning, the geese were gone:

"Gone!—like traces from the deep—
Gone!—like spectres grasped in sleep."

He stood like one bewildered—recalled the remembrance of their beauty and their fatness, and the still more touching recollection of the grains he had given them—and again gazed on the happy spot where he had last beheld them, but "they were not," and nothing was before him but the blackness of desolation! And as one living thing in a solitude makes it yet more gloomy, so was the misery of the scene heightened by the presence of the solitary, bereaved gander, around whose neck was fastened a small bag, in which the owner found a shilling, and a slip of paper, containing, not a pound note, but the following exquisite stanza:—

Mr. Blight, Mr. Blight,
We wish you good night,
For we cannot stay any longer;
We have bought all your geese
At a penny a-piece,
And left the amount with the gander.

—Peter Rickart and his wife have petitioned the legislature of this state for leave to live together again. They were married nineteen years since—immediately separated—and have lived asunder ever since. The legislature was of opinion no leave was necessary—they could live together as soon as they pleased.—A Gibraltar paper states that the Bey of Tunis has established powder manufactories, and has prohibited further importations of that article.—The total value of the ship Beverly and cargo, of Boston, recently lost at sea, is \$117,710 14. The portion owned by Mr. I. Thorndike, including the value of the ship, is \$94,163 31.—At a recent entertainment given to Sir Walter Scott, his majesty is reported to have requested the worthy Baronet to write the History of the Reign of George the Third; adding the assurance of free access to all the papers and documents in the Royal Archives. Sir Walter is said to have declined the honour; stating at the same time, his utter inability to do justice to the subject.—In all the German States there are twenty-two universities, with 1,055 professors and 15,746 students. The greatest number belonging to any one of them is 1683, at Vienna; the smallest 201 at Rostock. The population of Germany is 36,000,000; Catholic Germany has 19,000,000, and only six universities; the Protestant States contain 17,000,000 and have sixteen universities.—The cost of the inland transportation from Boston to the towns on the Connecticut river is at the rate of \$26 a ton. It is calculated that by a rail road the cost of a ton would be \$1 50, exclusive of tolls.—It is estimated that \$150,000 worth of wool has been transported within the last year, eastward from Pittsburgh, Steubenville and Wheeling, Pa. A few years since, when the Steubenville factory was established, wool enough to keep it in operation could not be obtained west of the mountains. The produce of a flock, owned by Mr. Spring, near Wheeling, was sold for \$2,400.—A corner's inquest was held in Canada on the body of a vagrant who died in the House of Correction. The jury returned for verdict that the deceased perished from misery, cold, and want of clothing, in said House.—In Centreville, Indiana, Pork sells, for cash, at \$1 25 per cwt.—The Providence Journal mentions that a quarry of slate stone, such as is used for covering roofs of buildings, has been lately discovered near the coal mine on Rhode Island. The quantity is inexhaustible, and can be got from the quarry at a small expense, and of any size less than three or four feet square. It is said to be very tough, and the plates are about a quarter of an inch of thickness.—The Greek frigate Hellas, arrived at Malta Nov. 20th, in thirty-two days from New-York; took on board thirty-nine Greek prisoners, (who had been detained on suspicion of being pirates,) and sailed Dec. 1st for Napoli. On entering the harbour of Malta the Hellas hoisted the Greek flag and fired a salute, which was returned from the forte.—During the last year there were built in the port of New-York—twenty-three ships, three brigs, forty-nine schooners, sixty-eight sloops, twelve steamboats, fifteen towboats, and nineteen canal-boats, making 29,137 tons.—Pins are now made at one operation in France—the head and body being of one piece. We hope the French have not got the machine of Mr. Morse, of Boston, which used to make similar pins with great rapidity on the turning of a crank: and yet it failed for want of a protecting duty.—The Indians near the Rocky Mountains west of the Missouri, are said to have from ten to twelve white persons, whom they hold as prisoners. \$1000 was some time since offered for the recovery of a Mr. Adams supposed to have been taken by them.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

INGRATITUDE.

I've felt the storms of passion blow
Upon my hapless head,
And many a tear of wasting wee
Hath dew'd my nightly bed.

Fell Envy oft hath caused the smart
Of poignant pangs combined;
Yea, plunged into my helpless heart
The dagger of the mind.

And Slander, too, dark fiend of hell,
The scorpion of the soul,
Hath joy'd to view my bosom swell,
My eyes in anguish roll.

I once had friends—but where are they?
The winds around them rave;
Alas! from life they pass'd away—
Go ask the gloomy grave,

Ay, ask my own yet youthful years,
Cheeks perishing and pale,
And many a tide of tender tears
Shall tell the piteous tale.

But ah, the many, many woes,
That wring my youthful heart,
Can ne'er the thousand thrilling throes
Unto my breast impart:

That flow from one ungenerous soul
To faith and feeling dead;
They far, yea, far surpass the whole
That beat upon my head.

And shall I tell the baleful name
Which feeling doth exclude?
O, 'tis to man a matchless shame,
'Tis dark INGRATITUDE.

Milford, Del.

MILFORD BARD

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

TO A****.

There was a beauty on thy youthful cheek
That moved the envy or delight of all;
But Time the tyrant came, and blew the bleak
Mildews of care upon it:—and his call
Brought from the depths of apathy a spell,
Whose gloomy influence none but thou canst tell.

And were there none of all thy many lovers
Whose heart took hold of thine?—Could not even one
Awake the blush which flattering love discovers?
Or didst thou deem it best to stand alone
Against the storm incessant strife hath hurled
On the devoted tenants of this world?

Thy cheek is changed,—thy flower of hope is faded,—
Thy flatterers have grown dumb,—but thou art free
From envious tongues; and though thy cheek is shaded
By cold neglect, I fain would be like thee,—

Calm, passionless, unenvied, and untorn
By the regrets this bleeding breast hath borne.

Feb. 27.

G.

THE BRAGG AND LEADER AND HIS WIFE.

BY MRS. HEMANS.

Dark chieftain of the heath and height!
Wild feaster on the hills by night!
Seest thou the stormy sunset's glow,
Flung back by glancing spears below?
Now for one strife of stern despair!
The foe hath track'd thee to thy lair.

Thou, against whom the voice of blood,
Hath risen from rock and lonely wood,
And in whose dreams a moan should be,
Not of the water, nor the tree;
Haply thine own last hour is nigh,
Yet thou shalt not forsaken die.

There's one, that pale beside thee stands,
More true than all thy mountain bands!
She will not shrink in doubt and dread,
When the balls whistle round thy head;
Nor leave thee, though thy closing eye,
No longer may to her's reply.

Oh! many a soft and quiet grace
Hath faded from her soul and face;
And many a thought, a fitting guest,

Of woman's meek religious breast,
Hath perished, in her wanderings wide,
Through the deep forests, by thy side.

Yet, mournfully surviving all,
A flower upon a ruin's wall,
A friendless thing, whose lot is cast,
Of lovely ones to be the last;
Sad, but unchanged through good and ill,
Thine is her lone devotion still.

And, oh! not wholly lost the heart,
Where that undying love hath part;
Not worthless all, though far and long
From home estranged, and guided wrong;
Yet may its depths by heaven be stirred,
Its prayer for thee be pour'd and heard.

From the Monthly Magazine, for January.

THE PALM TREE.

BY MRS. HEMANS.

Has his heart forgot, so far away,
Those native scenes—those rocks and torrents gray;
The tall bananas whispering to the breeze;
The shores—the sound of those encircling seas
Heard from his infant days—and the piled heap
Of holy stones, where his forefathers sleep. [Bowie.]

It waved not through an eastern sky,
Beside a fount of Araby;
It was not fanned by southern breeze,
In some green isle of India seas;
Nor did its graceful shadow sleep
O'er stream of Afric, lone and deep.

But fair the exiled palm tree grew,
'Midst foliage of no kindred hue;
Through the laburnum's drooping gold
Uprose the stem of orient mould,
And Europe's violets, faintly sweet,
Purpled the moss-beds at his feet.

Strange looked it there!—the willows streamed
Where silvery waters near it gleamed;
The lime-bough lured the honey bee
To murmur by the Desert's tree;
And showers of snowy roses made
A lustre in its fan-like shade,

There came an eve of festal hours—
Rich music filled that garden's bowers;
Lamps, that from flowering branches hung,
On sparks of dew soft colours flung;
And bright forms glanced—a fairy show—
Under the blossoms to and fro.

But one, a lone one, 'midst the throng,
Seemed reckless all of dance or song:
He was a youth of dusky mein,
Whom on the Indian sun had been;
Of crested brow, and long black hair—
A stranger, like the Palm-tree, there.

And slowly, sadly, moved his plumes,
Glittering athwart the leafy glooms;
He passed the pale green olives by,
Nor won the chestnut flowers his eye;
But when to that sole Palm he came,
Then shot a rapture through his frame!

To him, to him, it rustling spoke,
The silence of his soul it broke!
It whispered of his own bright isle,
That lit the ocean with a smile;
Aye, to his ear that native tone
Had something of the sea-waves moan!

His mother's cabin-home that lay
Where feathery cœnas fringed the bay;
The dashing of his brethren's oar;
The conch's wild note along the shore;—
All, through his waking bosom swept;
He clasped his country's tree and wept.*

Oh! scorn him not!—the strength, whereby
The patriot virds himself to die—
Th' unconquerable power which fills
The freeman, battling on his hills—
These have one fountain, deep and clear,—
The same whence gushed that child-like tear!

* This incident is, I think, recorded by De Lille, in his poem of "Le Jardins."

THE HUMOURIST.

FALSE EMPHASIS.

A writer on English grammar gives the following example of wrong emphasis:—A clergyman on reading the 27th verse of the 18th chapter of 1st Kings, generally placed the emphasis on the words denoted by italics—And he spake to his sons, saying, saddle me the ass. And they saddled him!

A gentleman having built him a house wanted some place to put the rubbish. He asked his paddy what he should do with it. Why dig a hole and bury it up, was the reply. What shall I do with the dirt, asked the gentleman. By my soul, said the paddy, then dig a hole large enough for both.

A negro had so cruel a master, that he dreaded the very sight of him. After exercising a variety of tyrannical acts among his slaves, the tyrant at last died, and left his son heir to his estates. Some time after his death, a gentleman meeting the negro, asked him how his master behaved; "I suppose he is a chip of the old block."—"No, no," says the negro, "Massa be all block himself."

Mr. H***, the professor of Chemistry in Dublin, who was more remarkable for the clearness of his intellect than the purity of his eloquence, adverted, in one of his lectures, to the celebrated Dr. Boyle, of whose talents he spoke with the highest veneration, and thus concluded his eulogy:—"he was a great man," said the professor, "a very great man. He was the father of chemistry, gentlemen, and brother to the Earl of Cork."

A Biblepole of some eminence was once asked if he had a copy of *Cæsar's Commentaries*? I am sorry I have not, said he, but I have got *Blackstone's*.

An aged pair, in the highlands of Scotland, of the name of Grant, were sitting one morning in their cottage. The gude man was crooning a portion of Scripture in the good, old, singsong way, to the auld wife, who sat perched upon her stool, an attentive auditor. He came to that passage in Genesis, which runs—"There were giants in the earth in those days"—and his dim eye mistaking the *i* for an *r*, he read "There were Grants in those days!" He paused in complacency at this testimonial of family antiquity, while the auld woman exclaimed, "Ah, was there Grants so far back as that?" "Oh yes," replied he, "we're an auld race."

THE RIGHT OF DISCOVERY.

A gentleman praising the personal charms of a very plain woman before Foote, the latter said, "And why don't you lay claim to such an accomplished beauty?" "What right have I to her?" replied the other. "Every right by the law of nations, as the first discoverer," said Foote.

[No. 6.]

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vita. [Juv. Sat.]

BR. W. C. WATSON'S ORATION.

[Concluded from page 34.]

Its mighty charities, its universal benevolence, its fundamental truths, are sanctioned by the first attributes of our religion. Its mighty spirit of philanthropy passes with gigantic strides, over the whole structure of society. The barriers of empires are subverted in its march. The predilections of national partialities, the bias of local prejudices, the feuds of domestic faction, and the rancour of individual animosities, wither before its omnipotent influence. A sacred and indissoluble bond of fraternity unites masons, in one universal family. Children of a common father, participants of common bounties, aspirants after the same happiness, and associated for purposes too stupendous and holy to recognize the arbitrary distinctions of language and denunciation, masons afford an illustration of that beautiful theory of our religion, which pronounces all men members of the same family, and children of the same Almighty Father. The beneficence of masonry knows no discrimination of name or rank; wherever adversity has wounded, its balm extends. Its voice is heard above the tumults of war; in the whirlwind of battle it arrests the arm of death and teaches man no more his brother man to slay. I cannot refrain from noticing an anecdote well authenticated which recently has fallen under my observation. It forcibly illustrates the potency of those principles, which controul even the ferocity of savage nature, and in the wildest storms of passion recall man to virtue—to himself. During the late war, at a period when our western frontier was desolated by savage barbarity, when the tomahawk gleamed from every thicket and carried death into every hamlet, an American officer, wounded weaponless, was overtaken in pursuit by an Indian warrior, intoxicated by victory, reeking in blood, and breathing vengeance and slaughter. The tomahawk already trembled over its victim—when haply, the idea occurred that many of the savage chieftains had been initiated in our solemn mysteries—he presented that mystic symbol, which, unutterable to the world, speaks in a voice of thunder heartfelt to the mason.—The weapon of death fell from the nerveless grasp of the ferocious Tecumseh (for it was that mighty warrior) the tear of masonic love gushed from his eye,—he sprang to the bosom of the wounded man—pressed him to his heart and called him brother. Away with the idle denunciation that pronounces masonry discordant to the religion of my God. Away with the sneering sarcasm that demands its practical efficacy. A fact like this redeems the system from whole ages of calumny.

The apologists and disciples of despotism, would justify the proscription and persecution which have characterized the history of our institution, by urging that the purposes of masonry are political, that it tends to the subversion of regal power and human government. Those who are most familiar with the genius of masonry know how utterly incompatible the feuds of faction, and the excitements of political conflicts are with the first principles of its system. The indulgence of passions which tend to destroy a harmony of sentiment, and the bond of fraternal affection, would strike at the roots of our institution. When despotism urges these imputations upon us, she seems to have forgotten the venerable antiquity of masonry. She seems to have forgotten that the acacia has flourished, not only upon the ruins of the cabals and factions which have agitated the world, but on the graves of the empires whose destinies they allege we would have controuled. All combinations of men calculated to subserve political purposes, must from the very nature of their constitution, decay when the objects which engendered them are consummated or defeat-

ed. They are as ephemeral as the passions or the interests that brought them into existence. This position is equally warranted by the suggestions of common sense, as it is an established axiom of political wisdom. How preposterous then the idea is presented that supposes principles, which seem to career above the elements of human passion and are unaffected by the revolutions of human power could descend to participate in the groveling interests and degrading contests of political rivalries. But the whole history of this institution, affords a tissue of triumphant refutation of these calumnies. Political tests in no age have constituted a criterion of masonic virtue or morality. The portals of masonry open to men of every political cast, and every christian denomination. The sovereign and the subject, the peasant and the noble, the freeman and the slave of despotism, the priest and the layman, the catholic and the protestant, are alike the disciples of its principles, are equally endowed with its prerogatives, and together partake of its bounties.

That individuals have conspired under the fallacious pretences of masonic combinations, not merely to prostrate the government of their country, but to subvert the religion of their God, and bury beneath their ruins all the principles of well organized society and social virtue, and have succeeded in deceiving the world by their pretensions, it is idle to deny. The obscene orgies, the deadly purposes and unhallowed machinations of the illuminati of Europe, are as opposite to the spirit of masonry, as they are abhorrent to every thing that is august, venerable and sacred in human institutions. To identify masonry with these monstrous excrescences upon society, would reveal a spirit that could denounce the religion of Calvary, because some of its disciples and priesthood may have perverted the holy functions of their offices. To disclaim the sublime principles of masonry, because the German illuminati have contaminated Europe, would be as absurd as to cast from us the antidote of disease, because it may have been appropriated to the purposes of murder and suicide.

When I pronounce masonry in its very genius abstracted from political influence, I allude to the immediate and ostensible power it has been contended it exercises upon the destiny of nations. Like the force of preeminent intelligence or transcendent genius, it exerts a powerful, moral influence, by the irradiation it sheds upon the minds of men, by the extension of the empire of the intellect it promotes, and the august truths it reveals. Masonry discloses man in the moral nakedness of his nature, she penetrates the gauze that the distinctions of society have thrown around him, and she recognizes no pretensions, but those of virtue and morality. At the portals of her sanctuary wealth and grandeur are stripped of their pomp and parade, the robe of power falls from official rank, the diadem of the monarch is laid aside, "episcopacy is stripped of her mitre," all men stand upon the LEVEL of equal rights and equal power. The sovereign removed from the glare of dominion lessens to contemplate the fallacy of ambition, and the frivolity of human empire. He is taught to reverence the rights of those who are equal to himself, by the laws of God and the ordinances of nature. The subject, while he is taught the veneration due to majesty and to law, beholds the monarch cast in the same mortal mould, and endowed with the passions and frailties of himself. He here learns to appreciate the dignity of his nature, and the sanctity of his rights.

In this era of refinement, of intelligence, and of christian influence, it seems paradoxical, that the humble institution we this day commemorate, should be pursued by the same unrelenting proscription that has characterized the gloomiest ages. The extended principles of its system, and the illumination they diffuse, appear to be repugnant to the atrocious policy of that crowned conspiracy, whose influence broods like an incubus upon the body

politic of continental Europe. In darkened and degenerate Spain and Italy, religious bigotry and political fanaticism, have opened the flood gates of the wildest persecution. The Autocrat of Russia assuming the attitude of a benefactor, has endeavored, under the specious pretence of patronage, to crush the system of masonry in his grasp. The arm of arbitrary power, has suppressed our lodges; our brethren have alienated from their altars, and their fire side; the sanctuaries of our order have been violated. The arbiter of Europe may controul its destiny, thrones may crumble before his colossal power, dynasties may wither beneath his frown, he may subdue the physical energies of mankind by physical force, but thanks be to Heaven, the dominion of the mind can be usurped by no human sceptre; the intellect and the conscience of man burst the trammels of earthly thralldom, and triumph over the power of earthly despotism. These constitute the empires of masonry. The despots of Europe may annihilate our visible altars; but where a mason survives, a living altar will be erected in the heart. They may preclude us from our sacred asylums, but in defiance of human majesty the sequestered wood, the desert cave, and the mountain cell, will re-echo the mason's anthem, and witness the solemnity of his rites. As well may despotism attempt to arrest the meteor's flight or quench the great luminary of Heaven; as well may human power attempt to extinguish the spark of immortality, as to endeavor to crush a spirit, so intimately blended and deep rooted in the best sensibilities of the heart; so admirable in its purposes, so omnipotent in its influence, and so universal in its extent. Masonry in all its tangible attributes may be annihilated, the animal may be destroyed. But

"They never fall who die in a good cause—
"The block may soak their blood—
"Their heads may soder in the sun—
"Their limbs be strung to city gates and castle walls—
"But still their spirits walk abroad."

Brethren, upon us the mantle of masonry has fallen, upon us is imposed the hallowed obligation, not only by our union and energy to shield it from the oppression of power; but by lives consistent with our pretensions to maintain its purity, and to vindicate it from the aspersions of the world. Let us remember the sublime debt we owe to each other; let us remember the fraternal solicitude which mutually watches over our lives, our fortunes and our reputation. Let us never forget to cherish a brother's name, to vindicate his fame from a censorious world, and to direct his erring steps to the temple of virtue and morality. Let us preserve the individual as well as corporate purity of our fraternity. It will then stand on the eminence where calumny cannot reach it. The waves of persecution will burst harmless at its base. Masonry, abstracted from the solemnity of its character, and the venerableness of its antiquity, will arrest the admiration of mankind. If the good and virtuous still doubt the efficiency of its moral influence, I will ask them to behold the stranger and sojourner, who was hungry and we fed him: naked, and we clothed him: who was friendless and we embraced him as a brother. I will ask them to accompany me to the home of affliction, I'll point to them the mighty power of masonic character, and will ask them to contemplate that stupendous philanthropy which elevates man above the repugnances of his nature, which can bring him to the bed of disease and contagion to administer to the sufferings, to smooth down the pillow, and to weep over the dissolution of those to whom he is bound by no endearment of social intercourse, no tie of consanguinity, and no sentiment of love or friendship. I will ask the sceptic to visit with me the hearth, desolated by the empire of death. I will point to him the desolation which is cheered; the widowed heart in whose wounds the balm of consolation is poured—to the orphan from whose cheek the tear of sorrow is wiped, and whose countenance beams with the joy-

ous smiles of reckless innocence. I will ask him to contemplate these scenes—when he has done so, I will triumphantly tell him, there are the works of masonic benevolence. And I will ask of him—ask, did I say—nay, I will demand of him his respect, his applause, and his reverence.

MASONIC CHARITY.

We have been gratified by a perusal of the Report of the Committee of the Windsor Lodge, No. 77 (Baltimore,) to which was assigned the duty of communicating with Lodges throughout the State of Maryland and elsewhere, on the subject of contributing to the American Colonization Society. It appears that the circular letter of the Committee has been widely circulated, and "the different Lodges, as far as known to the Committee, have, without a single exception, joined in its views; and where money could not be given, sent prayers and good wishes, to aid the great scheme of African Colonization on the principles of masonic benevolence. Mount Moriah Lodge of Hagerstown, appointed a Committee of its most distinguished members, which, in an able and lucid view of the subject, concurred with the Winder Lodge, and made a similar donation (\$20.) The Lodge at Princess Ann, without hesitation, gave the same sum, and sent a copy of the Resolution in making the donation. The Lodge at Georgetown, D. C. like Cumberland Lodge, could only send its good wishes, and its concurrence in the plan. Cassin Lodge, in Baltimore, gave thirty dollars. A distant Lodge in Pennsylvania, and another in Maine, have also generously contributed to the same object." The Grand Lodge of Massachusetts, possessing a fund of fifty thousand dollars, have the subject under consideration, and it is hoped may appropriate liberally in its behalf. The concluding passage of the Report of the Committee, follows.

"But this is not all—the humble effort of Winder Lodge has moved more important councils than those which are usually assembled under the eye of the Master; and so far as approbation is reward, each member of the Lodge is paid by the unanimous vote of thanks which was passed to the masons, on motion of the Grand Chaplain of the District of Columbia, at the late anniversary meeting of the American Colonization Society. When the motion was made, it was seconded by a mason from New England,* who appeared there as speaking the sentiments of the fraternity in that part of the Union. He stated, that he and those around him had, at first, doubted the propriety of making the appropriation, which the Winder Lodge had done, to the novel purpose proposed. Doubt led to investigation, and the importance of the subject made this investigation severe. It resulted in a complete conviction of the propriety of the measure, and the brother from New England did honour both to himself and to the order, by the eloquence with which, before an audience consisting of members of both houses of Congress, and the representatives of nations at Washington, he advocated the plan first proposed in this Lodge, and supported the principles here first asserted.

If an air of pride pervades the report of the Committee, and any should be inclined to smile at the apparent arrogance of the assumptions here made, let it be remembered, that on our long list of principles we recognise neither pride nor arrogance, and that, therefore, to suppose them, would be uncharitable and unjust. The warm feelings of satisfaction must at times express themselves, even though they break through that frigid restraint which the fear of egotism imposes; and with the expression of satisfaction at having projected a great plan of benevolence none surely can find fault." [Af. Repos. —* Mr. Knapp, P. D. G. H. P.]

Grand Royal Arch Chapter of South Carolina.

Elected at a stated meeting in Charleston, on the 22d February, 1827:—M. E. James Eyland, Grand High Priest; M. E. John M'Kee, of Chesterville, Deputy Grand High Priest; M. E. Rufus Southworth, Grand King; M. E. Ed. S. Courtenay, Grand Scribe; M. E. Ed. Sebring, Grand Treasurer; M. E. Moses Holbrook, M. D. Grand Secretary; Rev. —* Grand Chaplain; M. E. John Barker, Grand Marshal; M. E. John Roche, Grand Sentinel.

* The election of Grand Chaplain was postponed until the next meeting.

SCIENCE AND THE ARTS.

ON SOFTENING CAST IRON.

The subjoined is an extract from the Reports of Mr. Strickland, just published. The *Cumberland Red Ore* is, it appears, found in various parts of the Island of Great Britain; and there are undoubtedly, several varieties of iron ore in the United States, which will answer the same purpose. The *Cumberland ore* is probably an *argillaceous Oxide of Iron*. The *Ochery red Oxide of Iron*, [red ochre] is known to abound in many of the States, and is, probably, similar to that of Cumberland. The *Bog Ore*, so abundant in New Jersey, and in many other places, would be likely to answer the purpose, when not contaminated by phosphate of iron. Those who are interested in experimenting upon the subject, would do well to make the essay with the several varieties of ore which they can obtain, as the comparative goodness of each might then be ascertained, in a single operation. [Mechanics' Magazine.]

"There has been a method lately discovered, to make cast-metal soft and malleable; and there are already many large manufactories put up, for this very important process. I have visited one of them in London, and witnessed the operation. The method consists, in placing the cast-metal in a case or pot, along with and surrounded by a soft red ore, found in Cumberland, and other parts of England. The cases are then put into a common oven, built with fire-bricks, and without a chimney, where they are heated with coal or coke, placed upon a fire-grate. The doors of the oven are closed, and but a slight draft of air permitted under the grate; and thus a regular heat is kept up, for the space of seven days, or two weeks, depending on the thickness and weight of the castings. The cases are then taken out, and suffered to cool, and the hardest cast-metal is, by the operation, rendered so soft, and malleable, that it may be welded together, or when in a cold state, bent into almost any shape, by the hammer or vice. In this manner are all articles, such as harness-buckles, bridle-bits, horse-shoes, and even nails, made tough and malleable. Cast horse-shoes, submitted to this process, have, after being worn out by the action of the horses' feet, been converted into pen-knives, and other articles of cutlery, of a superior quality. I have procured a specimen of the red ore used in this valuable process, together with a few articles of the hardest cast-iron, which have been softened, and rendered perfectly malleable. Those castings, however, which are made from pig-iron, containing the smallest portion of carbon, are the best adapted for conversion into malleable iron; the only effect produced by the introduction of the red ore, along with the metal, is to deprive it of its carbon."

PROCESS OF HARDENING STEEL

Articles manufactured of steel for the purpose of cutting, are, almost without exception, hardened

from the anvil; in other words, they are taken from the forger to the hardener without undergoing any intermediate process; and such is the accustomed routine, that the mischief arising has escaped observation. The act of forging produces a strong scale or coating, which is spread over the whole of the blade; and to make the evil still more formidable, this scale or coating is unequal in substance, varying in proportion to the degree of heat communicated to the steel in forging; it is, partially, almost impenetrable to the action of water when immersed for the purpose of hardening. Hence it is that different degrees of hardness prevail in nearly every razor manufactured: this is evidently a positive defect; and so long as it continues to exist, great difference of temperature must exist likewise. Razor blades not unfrequently exhibit the fact here stated in a very striking manner;—what are termed clouds, or parts of unequal polish derive their origin from this cause; and clearly and distinctly, or rather *distinctly* though not *clearly*, show how far this partial coating has extended, and where the action of the water has been yielded to and where resisted. It certainly cannot be matter of astonishment that so few improvements have been made in the hardening of steel, when the evil here complained of so universally obtains, as almost to warrant the supposition that no attempt has ever been made to remove it. The remedy, however, is easy and simple in the extreme, and so evidently efficient in its application, that it cannot but excite surprise, that, in the present highly improved state of our manufactures, such a communication should be made as a discovery entirely new.

Instead, therefore, of the customary mode of hardening the blade from the anvil, let it be passed immediately from the hands of the forger to the grinder; A slight application of the stone will remove the whole of the scale or coating, and the razor will then be properly prepared to undergo the operation of hardening with advantage. It will be easily ascertained, that steel in this state heats in the fire with greater regularity, and that when immersed, the obstacles being removed to the immediate action of the water on the body of the steel, the latter becomes equally hard from one extremity to the other, to this may be added, that, as the *lowest possible heat at which steel becomes hard is undoubtedly the best*, the mode here recommended will be found the only one by which the process of hardening can be effected with a less proportion of fire than is, or can be required in any other way. These observations are decisive, and will, in all probability, tend to establish in general use what cannot but be regarded as a very important improvement in the manufacturing of edged steel instruments.

[Operative Mechanic.]

TO MAKE WHITE COPAL VARNISH.

White oxide of lead, ceruse, Spanish white, white clay. Such of these substances as are preferred ought to be carefully dried; ceruse and clays obstinately retain a great deal of humidity, which would oppose their adhesion to drying oil or varnish. The cement then crumbles under the fingers, and does not assume a body.

On sixteen ounces of melted copal, pour 4, 6, or 8 ounces of linseed oil, boiled and quite free from grease. When well mixed by repeated stirrings, and after they are pretty cool, pour in sixteen ounces of the essence of Venice turpentine. Pass the varnish through a cloth. Amber varnish is made the same way. [Ibid.]

TO MAKE VARNISH FOR SILKS, &c.

To one quart of cold-drawn linseed oil, poured off from the lees, (produced on the addition of unslacked lime, on which the oil has stood eight or ten days at least, in order to communicate a drying quality,—or brown amber, burnt and powdered, which will have the like effect,) and half an ounce of litharge; boil them for half an hour, then add half an ounce of the copal varnish. While the ingredients are on the fire, in a copper vessel, put in one ounce of chios of turpentine, or common resin, and a few drops of neat-foot oil, and stir the whole with a knife; when cool, it is ready for use. The neat-foot oil prevents the varnish from being sticky or adhesive, and may be put into the linseed oil at the

same time with the lime, or burnt umber. Resin or chios turpentine may be added, till the varnish has attained the desired thickness.

The longer the raw linseed oil remains on the unslacked lime or umber, the sooner will the oil dry after it is used; if some months, so much the better: such varnish will set, that is to say, not run, but keep its place on the silk in four hours; the silk may then be turned on the other side. [ib.]

DRYING QUALITY TO FAT OILS.

- 8 lb. nut-oil, or linseed oil,
- 1 oz. white lead, slightly calcined,
- 1 oz. yellow acetate of lead, (sal saturni,) also calcined,
- 1 oz. sulphate of zinc, (white vitriol)
- 12 oz. vitreous oxide of lead, (litharge,) and
- a head of garlic, or a small onion.

When the dry substances are pulverized, mix them with the garlic and oil, over a fire capable of maintaining the oil in a slight state of ebullition: continue it till the oil ceases to throw up scum, till it assumes a reddish colour, and till the head of garlic becomes brown. A pellicle will then be soon formed on the oil, which indicates that the operation is completed. Take the vessel from the fire, and the pellicle being precipitated by rest, will carry with it all the unctious parts which rendered the oil fat. When the oil becomes clear, separate it from the deposit, and put it into wide mouthed bottles, where it will completely clarify itself in time, and improve in quality. [ib.]

THE NATURALIST.

THE CROW.

"They are very docile birds, and may be trained up to following like hawks; to fetch and carry like spaniels; they may be taught to speak like parrots; and which is most extraordinary of all, they may be taught to imitate the human voice in singing. They have a great propensity to pilfering, often hiding things of value, to the great loss of the owner without use to themselves

[Dobson's Encyclopedia, article *Cervus*.

To those who are not personally acquainted with the fact, it will seem incredible that the common Crow should be said to possess the faculty of speaking intelligibly; and were there not now in this town many persons who daily witness the occurrence, we should hesitate to make the statement, lest we should be suspected abroad with dealing in visions and fables. But knowing, as we do that we shall be supported by the evidence of many and by actual daily occurrence, we venture to state, that there is now every day, flying and lighting about the roofs of the houses in Georgetown, a Crow, of the common size and color, which displays a remarkable proficiency, for any thing of its kind, in learning and pronouncing the English language. He is not yet two years old, having been taken when young, spring before last, and domesticated by the family of Mr. John Adams of this place. When he arrived at an age which enabled him to fly, he was permitted to go at large, and so remains returning every night to his native lodging, and manifesting no inclination to leave the town.

There are several children in the family where he was raised, whose names were necessarily frequently called in his presence; and hearing these names, and particularly some of them, he has learned to articulate with a clearness and distinctness, not to be excelled by any human being; and we are informed by those who are best acquainted with him, that he is capable of uttering many sentences, and does it in reply to what is spoken to him, manifesting strong evidences of his having a knowledge of the meaning of the language used by him. On this subject we have confidence in our information, because we are daily made eye witnesses to the fact of his using several words with clearness and distinctness, and particularly the words "O Bill!" which he pronounces with a shrill clear voice, so near like that of children or females calling a person at a distance by the name of Bill, that were a person not apprized of its being the Crow, he would have no doubt of its being the voice and words of a human being, for the correspondence in articulation and sound, we are confi-

dent, cannot be exceeded. In this exercise he seems to take a peculiar delight, especially when he is hovering about children at play, which is often the case, seeming to take a delight in echoing the words "O Bill!" to those who appear anxious of hearing him speak. For the sake of his seeming intelligence and speaking faculties, he is much respected by all who hear him, and in return, he appears to have a much greater regard for the society of the human family, than of his own species.

VARIETY.

EXTRAORDINARY PRIVILEGE OF THE KINGS AND QUEENS OF FRANCE. It is not, we believe, generally known that the rulers of France, whose government has ever been notorious for bad faith, can plead an authority for such conduct, which fully absolves them in the eyes of all good Catholics. In consequence of a brief addressed by Pope Clement VI. to John, king of France, the kings and queens of that country possess the exclusive privilege of not keeping any oath which they may have sworn or may hereafter swear, if it should not suit their convenience. This document, as printed in the folio edition of the Collections of Dr. Lucas of Archery, revised and improved by Louis Francoise Joseph de la Barre, (Paris, 1723, vol. 3, page 724,) among the miscellaneous papers belonging to the year 1351, is as follows:

Translation—"Clement the Sixth, the servant of the servants of God, to his very dear children in Christ, John and Joanna, king and queen of France, health and the apostolic blessing: To your prayers we willingly listen, and especially those piously desiring peace and salvation by the favour of God. Hence we, being inclined to your supplications, do by apostolic authority grant to you and your successors, the kings and queens of France, and to any of you for ever, that your religious confessor may have authority to commute, any vows already made or hereafter to be made by you or your successors (vows of chastity excepted), as well as any oaths taken or to be taken by and which you cannot fulfil, for some other pious purposes, which he shall consider pleasing to God and salutary to your souls. Let none therefore dare to dispute this our indulgence, and if any one do attempt to contravene it, he shall incur the indignation of Almighty God, and of Peter and Paul his blessed apostles. Given at Avignon.

PRIDE OF ANCESTRY. In the castles and palaces of the ancient nobility of France, the tapestry frequently presents memorials of their pride of ancestry. On the tapestry of an apartment in the palace of the Duke de Croy, at Paris, is a representation of the Deluge, in which a man is seen running after Noah, and calling out, "My good friend, save the archives of the CROYS!"

Another piece of tapestry in the palace of the Duke de Levis represents the Virgin Mary with an ancestor of the Levis standing bareheaded before her. "Dear cousin," says she, "pray be covered!" and he replies: "Cousin, I would rather remain as I am."

THE BLESSINGS OF INDEPENDENCE. A sovereign, in a progress through his kingdom, was informed, in one of his capital towns, of a singular fact. "That one of the inhabitants, a man of seventy years old, had never been without the walls." The man was called to the king, and, being poor, he obtained a pension; but upon the following condition: That he should forfeit his pension if ever he set foot out of town. But here, even custom could prevail over the love of liberty. The man did not continue long at ease; his confinement became insupportable, and he lost his pension in six months.

THE TUMBLE DOWN DANDY. One of the finest gentlemen in Dublin, about this time, indeed, the most remarkable for his dress and manner, was a young merchant in Cow Lane, who troubled himself no more about business, than my Bouquet, the hop merchant in St. Mary's Axe. This grand gentleman was one night at Crow-street, (the play, Murphy's "Orphan of China;") he sat in the left-hand stage box, and though he had the front seat all to himself, this did not content him. Turning

his back upon the stage, (upon Barry's Zamati, and Mrs. Fitzhenry's Mandane,) he placed himself upon the edge of the box, his legs stretched out at full length, crossing each other, his arms also folded, and his shoulder resting against the side of the box: under him was the door opening to the pit; and the flooring was rather deep. Thus he remained, enjoying his prime wish of an ample display of his person and dress to the whole house. His clothes were silk, and richly embroidered; his hair, tastefully dressed, with ringlets that played round his ears; ears; his sword, with a large and magnificent silver sword-knot, stretched itself all along by the side of his legs to complete view, the eyes of the audience were upon him full front, the eyes of the performers upon the back of his head and shoulder. In the very height of this proud and careless display of his six-feet-long person, whilst lolling with a smile of complacent non-chalance, he, at an instant, over-balanced himself, and tumbled into the pit; a clamour of mirth burst through the whole house, and, as no bones were broke, nobody was sorry for his downfall. This, though not the first, was most likely his last attempt to captivate the notice of the audience, and turn it from the stage, the true point of attraction, to his own fine self-admired self. [O'Keefe's Recollections.

THEATRICAL INCONGRUITY. The first night of R. B. Sheridan's "Camp," Parsons had in it the part of an exciseman or guager, and had seized a pound of tea from a smuggler; it was neatly done up in paper, and he had it in his hand. Mrs. Wroughton, who played a kind of tergitant follower of the camp, according to the violence of the character, was rather rough with the exciseman, and knocked the pound of tea out of his hand; it fell, the paper bag burst, and out came upon the stage a great quantity of saw-dust. This was property-man economy, but it made great diversion among the audience. [ib.]

ARITHMETICAL NONSENSE. Some wisacre in the National Intelligencer, several weeks since, propounded the following sage question—which, as appears from the number of answers published in that dignified paper, has puzzled the brains of numerous profound algebraists for a hundred miles round—viz: "How many dollars are 500 cents multiplied by 500 cents?" Pray gentlemen, how many men of sense are there among 500 blockheads multiplied by 500 loggerheads? [Nantuket Inquirer.

WHIMSICAL SUPERSTITION.—The following extract from "Transalpine Memoirs," describes a strange superstitious belief among the Italians, that people may be too ugly to be looked at with safety. This may be put on a par with the notion prevailing among us, that a marvellously ill-favoured person may break a mirror by looking into it.

There is at Naples a curious superstition I have not yet mentioned to you: it is that of the *iettatori*, a sort of evil-eye influence. Persons remarkable for the ugliness or sourness of their features, are fixed upon by the public as *iettatori*: are deserted by all the world; and those who chance to meet them firmly believe and expect that some unforeseen misfortune will, in consequence, overtake them. Few Neapolitans, even of the higher ranks, are free from this superstition. They carry about their persons a piece of horn, or coral, which they believe to avert the danger incurred by meeting with one infected with this power of doing evil. In some salons here I have seen large horns, beautifully polished and placed on stands in the four corners of the room; these are to defend all visitors from all *iettatori* who may chance to enter. An English gentleman, settled at Naples, told me, that having once had occasion to visit the administrator of police, he found horns placed in every part of his house, from the bottom to the top of the staircase: this the administrator accounted for by alluding to the number of suspicious persons whom his place obliged him to receive. The late king wore, at his watch-chain, a small piece of horn, which he continually twisted between his finger and thumb; but with redoubled violence and care on grand reception days, whilst new and unknown individuals were presenting to him.

We may give advice; but we cannot give conduct.

POPULAR TALES.

THE PARISH CLERK.

THE CURATE.

In the north aisle of — Church, there is a small marble tablet, which records the virtues and perfections of the Rev. Alfred Corsar, who died August 24th, 1804, aged twenty-nine years. The singular occurrence which produced the death of this young clergyman, Nehemiah was fond of relating; and soon after he gave me the account of his own love adventures, he gratified me with the following narrative:

After I had been clerk of this Church about ten years, (said Nehemiah) the then Rector became too old and feeble to fulfil his clerical duties, and a Curate was engaged to assist him; the Curate was the Rev. A. Corsar, and a more worthy or pious minister never preached in — Church. At his first introduction he won the hearts of all by the kindness and cheerfulness of his manners, and by the fervency and devotion with which he performed the duties of his office; but his career was short and fleeting, and before he had been long with us, an event occurred which blasted his future hopes, and laid him in an untimely grave.

Amongst the female part of his congregation, was a young lady, named Louisa Mordaunt, the daughter of a gentleman in easy circumstances, who was at that time filling the office of church warden: It was not long before Alfred Corsar was introduced to her, and his visits to her father's house became very frequent; a strong affection arose in his breast, and Louisa Mordaunt was its object; but he never had the courage to avow his love, nor, in truth, did the conduct of Miss Mordaunt give him the least encouragement, so that he continued to cherish a passion as hopeless as it was fervent, without daring to proclaim it to the world. I had some suspicion of his feelings, from his frequent inquiries respecting Miss Mordaunt, and I was soon dreadfully convinced of the truth of my surmises, and the extent of his love.

I was sitting one evening enjoying my usual beverage at the Griffin, when I received a message to attend at the Church. I went, and found a stranger writing, who informed me that he intended to be married on the following morning, having obtained a license from the rector for that purpose; of course I acquiesced, and inquired the name of the lady;—it was Louisa Mordaunt! I was much surprised at this, as I had never before heard of Miss Mordaunt having a lover; but I afterwards learned that the gentleman, who now addressed me, had long been her admirer, though living at a distance; their courtship had been carried on by letters, until her lover found himself in a situation to claim her as his bride, when she consented to bestow her hand where she had already bestowed her heart, only stipulating that the marriage ceremony should be performed in — Church. Having assured the stranger that every thing should be prepared for the ceremony he left the Church, and I proceeded to inform Mr. Corsar that his services would be required on the following morning. On being introduced I told him my errand. "Well, Nehemiah," said he, "and who is the Lady?" I mentioned Louisa Mordaunt. Never shall I forget his look at that moment; it was one of fixed despair, and he seemed as if his faculties were suspended and his frame withered by some sudden visitation of Heaven. At length, by an effort almost superhuman, he recovered, and waving his hand, said, "Go, go; I will attend." I left him, deeply commiserating his situation, as I now found he indeed loved Louisa Mordaunt.

On the following morning I proceeded to the Church at the hour appointed, and on entering the vestry, I found Mr. Corsar there, but the wedding party had not arrived. Mr. Corsar was standing near the window, absorbed in reverie; he looked dreadfully pale; and his eyes had a wildness quite unusual. When he was aware of my presence, he requested me to hand him a glass of wine, which he drank with frightful eagerness; he requested another, which he drank with the same avidity; and then sunk on a seat quite exhausted. To my inquiries he returned no answer, but pressed his hand violently to his forehead. At length the wedding party ar-

rived at the Church, and after the preliminaries, ranged themselves in order for the ceremony; the Curate left the vestry without speaking, and with a slow and faltering step, entered the altar; he then commenced the service; the exordium he gave with sublime effect, as if he expected his words would conjure up some impediment to the marriage, and when he arrived at that part which says, "If any man can show just cause or impediment why these persons may not be joined together in holy wedlock let him now speak," he paused, and gazed around with a look of eager expectation; but no answer being returned, he was compelled to proceed; yet he seemed to cling to the remainder of the passage with hopeless tenacity, giving the conclusion with a sublime and almost terrific energy. The party assembled were astonished, and gazed on each other with astonishment, not knowing what to make of so strange conduct of the minister. At length he asked the bridegroom the question, "Wilt thou have this woman to be thy wedded wife?" &c. to which, of course, the answer was, "I will."

A pause then ensued, during which Mr. Corsar seemed to be summoning all his energies for the next interrogation; he retreated some steps backwards, and then, hastily advancing, put the question to Louisa Mordaunt. The horrid calmness of his tone was appalling; when he had finished the interrogation, he stood with a look of the most intense interest and agony, expecting her answer; but his suspense was short, for the silver voice of Louisa Mordaunt soon returned for answer, "I will." No sooner had she pronounced these words, than the Curate, giving a convulsive shudder, fell senseless on the altar. All was now confusion—the ceremony was not half finished, and the Minister was lying senseless; every means was used to recover him, but for some time without effect. At length he slowly opened his eyes, and the first object he saw was Louisa Mordaunt, bending over him, her looks expressive of the utmost compassion for his situation. This had almost again plunged him into forgetfulness, and it was only by a very strong effort that he succeeded in raising himself; he then, by a great exertion, succeeded in finishing the ceremony, at the end of which he again became senseless, and was in this state conveyed home.

He did not long survive the marriage of Louisa Mordaunt, he soon after died the victim of that worst of all diseases—a broken heart. Louisa Mordaunt lived long and happily with him whom she made her husband, nor did she ever surmise the dreadful effect her marriage had had upon the Rev. Alfred Corsar.

THE WIDOWED MOTHER.

"Oh, mountain streams must lovelier be,
"Which, where their waters rise?
"Spring on immediate to the sea,
"Scarce shown to mortal eyes;
"Than those which glide with clouded tide,
"Slow o'er the wastes of earth,
"Nor keep one trace of that high place,
"Which gave their pure waves birth."

Mr. Granville had but recently settled in Roxborough, and was about commencing business with flattering prospects of success, when he was suddenly prostrated by a violent disease, against which the natural strength of his constitution, though in the prime and vigor of his days, afforded but a feeble defence. He died the sixth day after the attack—and they buried him in a quiet corner of the village church-yard, beneath the shade of a young willow, and, as it was in summer, the fresh turf with which they decked his grave, soon exhibited a luxuriant vegetation.

A wife and two lovely children were left behind; and they who have felt what such a bereavement is, alone know something of the bitterness of the trial that widowed mother was called to endure—and to endure alone; for her infant orphans were too young to know the full amount of the loss they had sustained. They wept with her; but their's were tears of sympathy. They sometimes asked, indeed, why their dear papa staid away so long, and if he would never come home, to bring them play things and claim the compensation of a kiss again—but when they saw their mother always answered them with a flood of tears, as she clasped them in her arms, they wept with her again and again, and ceased to ask these questions, which seemed, they

could scarce tell why, so painful. She used to lead them to the grave, often, in the cool and shadowy evening; and they at last understood that their papa lay there, and that he would, indeed, never come back to them—and then their little hearts would swell—but grief is a transient emotion in the infantine breast.

Mrs. Granville, however, had still much to be thankful for. She was left with a comfortable income, many kind friends, and a pretty rural home—and the natural fortitude of her nature in time triumphed over her grief, and her wifely heart found comfort in her pretty orphans—round them her affections clung—and in devoting herself to their care and education, she again became contented and happy.

I think it was about four years after the loss of her husband, that her eldest child—a lovely little girl, sickened. She watched by it day and night, with that intense anxiety which, while it pervades the very soul, fears to entertain a suspicion of danger. This heart breaking suspense was of long duration. But the child grew worse and worse, and she at last received the sad warning to prepare to give it up. She clasped her hands on her burning brow when she heard it, and exclaimed—Is there indeed danger—can Cornelia die! But she still clung to one fond hope—it absorbed every thought—and clung to it even for a time after the little innocent had closed its weary eyes, and sunk gently and softly, without a sigh, into its last long slumber. Then she thought she should never be reconciled to the world again—She retired to her chamber when the funeral obsequies were over, and brooded over her sorrows, till melancholy blanched her cheek, and almost mildewed her heart.

Cornelia's little brother was now left to wander to the church-yard alone. He often went to her grave beside his father's—He only distinctly remembered her—But ere a flower had sufficient time to blossom on that fresh mound, he was laid in sickness on the bed from which his departed sister had been carried. This roused up the sorrowing mother from her solitude, and called her, as it were, back to life. The thought of being entirely bereft, was utterly too much for her—her wasting frame—her sallow cheek and sunken eye, alarmed her friends. But she became again the watching mother, and she promised to be again reconciled to life, if her last her only remaining child was spared. Her prayer, tho' unmingled with resignation, was heard; and the boy recovered almost miraculously.

Years passed on; the mother forgot in time her sorrows. Her son grew up with many promises; and though too much indulged in youth's erring propensities, bid fair for manhood. But when manhood brought with it its freedom from restraint—he fell into dissipation—and sacrificed deeply at the shrine of vicious pleasures. The eye of parental hope turned to him—long and fondly—as a traveller still gazes on the last half overclouded star, in the lonely evening sky—as unwilling to believe those clouds portend a storm. It was in vain. In vain the efforts that were made unceasingly to win him back to peace, and virtue, and usefulness. The lights of reason had expired—and virtue took her flight for ever from his bosom.

Vice often prepares his victim by long discipline for his destiny. It was so in this case. The lamp of hope long burned in that widowed mother's bosom with a brighter or a feebler ray. But at last it went out. Alfred was detected in a robbery. Was tried. Was found guilty; and sentenced to a dungeon.

His broken hearted mother from her cottage window saw them convey him away—but not to the grave. Oh no! To the place of infamy. And she wrung her hands in a before unfeigned agony, as she exclaimed—"Oh Alfred—the last hope of these gray hairs, would to God that you had gone in youth and innocence to a peaceful resting place beside my poor Cornelia." She felt her error—but it was revealed now to a heart utterly broken. She died of grief—and was buried between her husband and her daughter.

The heart clings long and fondly to the object of its earthly loves—it is a natural—it is an innocent affection. But resignation to the decisions of that kind and all wise providence which presides over life and death, is our wisdom and our duty.

[Tren. Emp.]

THE HISTORIAN.

GREEK HEROISM.

As every thing relating to the Greeks is now a subject of interest, we have taken particular pleasure in collecting the following from the most authentic accounts, as a real specimen of the Greek character in the earliest periods of their history; and as disclosing also the origin of the city of Messina in Sicily.

The Spartans waged interminable war with their near neighbours the Messinians, who occupied a small district of territory a few miles from their city. It was the intention of the Spartans to reduce them to the condition of the Helots; but they fought desperately, and defended themselves with a bravery and perseverance in repeated wars, and for a long series of years, which secured the respect of even their cruel enemies. Their cities were razed, their people massacred, and they were pursued by those professional butchers, the Spartans, with a ferocity and pertinacity unknown to the savage warfare of the last century. They were first driven from their valleys and hamlets to their defended cities; thence to their mountains, and at last so diminished were their numbers, that they all retired, men, women and children, to a strong hold in Mount Ithome, which they fortified, and waited with a most heroic courage the assaults of their enemy. This citadel they defended ten years against the utmost force of the disciplined and ruthless Spartans.

The incidents which are related of Aristomenes, their chief and military leader, (for he refused to be their king,) during their protracted struggle for liberty, and the almost miraculous escapes which both himself and followers experienced, awaken our sympathy, and startle our credulity; while they show the abhorrence in which slavery was held, even in the remotest ages, by those high-minded nations. In one instance, after the whole nation was besieged in Ithome, Aristomenes, at the head of three hundred men sallied forth, and defied the Spartans. After the most incredible exploits, and achievements, they fell captive into the hands of their enemies. According to the spirit of the age, and the character of his adversaries, himself and his followers were thrown headlong into a cavern, which was the mode practised by the Spartans for executing felons.

Aristomenes craved the boon of being incarcerated with his shield, and it is supposed the edges of the butler hitting the sides of the cavern, broke the violence of his fall, so that it did not take his life. His companions all perished, but he lived two days in the suffocating abyss, among their mangled remains. On the third day he perceived a fox devouring his companions, and suffering it to approach him, he laid hold of it with one hand, while with the other he defended himself from its bite. The terrified fox immediately ran towards the crevice by which he had entered, and Aristomenes, keeping his hold of the animal, with immense difficulty reached the aperture, and effected his own escape.

The return of Aristomenes was indeed like one arisen from the dead; his friends rallied around him, and the Spartans soon found their unconquerable enemy ready for further contests.

The feats of valor achieved by this prince have but few parallels in ancient history. Three times he offered the sacrifice of the Heca-theopompeia, which none could make but those who had slain a hundred of their enemies.

At the close of ten years he was betrayed—himself and his brave and worthy Messinians most treacherously betrayed. The strong hold which had been maintained against the arts and the arms of practised, and confederated and savage warriors, for ten years, was now wrested from its primitive possessors, who had inherited those lands, according to their traditions, from Deucalion and Pyrrha (Noah). Finding all was lost, he placed the women and children in the centre of the battallion, and, himself in the van, marched forward, with his spear erect, to the camp of the enemy. Struck with a kind of superstitious astonishment at his extraordinary valour, the Spartans gave place to his adventurous band; and, unlike themselves, permitted them to depart unhurt. They abandoned their country

and sought refuge with the Arcadians, who gave them a hospitable reception, and assisted them in seeking an abiding place. *This they found in the island of Sicily, where they founded a city, and called it Messina, in remembrance of their beloved country.* This city was established six hundred and fifty years before Christ. Aristomenes appointed their leaders, attended to the fitting of their ships, with patriarchal fidelity gave them his counsel, and bade them farewell, declining to go with them. He turned his face toward Asia and visited Sardys, the capital of ancient Lydia, hoping, as was believed, that he might induce that rich and powerful king to engage with him in some enterprise for the recovery of his native state. But it was otherwise decreed. Aristomenes sickened and died at Sardys, and found a quiet grave in a distant land, while his beloved country became the undisputed prey of the tyrannical conqueror. [N. Y. Times.]

LITERARY.

CHINESE LITERATURE.

Mr. Remusat, a scientific gentleman, who has made Asiatic literature the object of his studies during his residence in the East Indies and China, has lately published in Paris, the translation of a Chinese novel, entitled *Yu-Kiao-Li*, or, *The Two Cousins*; which proves, that at Pekin, as at Paris, the *petiti maitresses*, are equally sentimental, the lovers equally extravagant, and the guardians equally imposed upon. This work is extremely interesting; many French, English, German, and Italian novels, highly valued, do not offer as well as *Yu-Kiao-Li*, a series of events artfully conducted, dialogues always natural, character well delineated, situations sometimes comical, and sometimes dramatic, with much wit and interest. We think with the learned translator, that novels representing with truth all the scenes of the private way of living of a nation, are more useful in giving a perfect knowledge of manners and customs, than the narratives, very often superficial or erroneous, of travellers. Thanks to the novel of *Yu-Kiao-Li*, we shall be able to judge of the interior of those of China, and of the mode of living of the women, of whom Europeans can hardly have a sight. We shall know all the mysteries of the private life of the young girls; their sentiments and their little intrigues shall be exposed to our view; and, finally, we shall for a few moments enjoy the illusion of being in a parlour at Pekin or Nankin; and, without much study, shall acquire more knowledge of China, than the most elaborate reading of all the memoirs, collected and published on that extraordinary country, could have supplied. But what will excite astonishment more, is, that the Chinese novel is written very much like the *ci-devant* great unknown, and now well known, Sir Walter Scott's, and that it has a great affinity with his masterly manner of preparing and conducting events. Marriage being a business of the highest importance among the Chinese, it is a marriage that forms the plot of *Yu-Kiao-Li*. The fair Hounpin, the heroine, daughter of the learned Pe, whom his extensive knowledge has raised to the highest dignities of the state, is herself a prodigy of science. She is acquainted with all the poets of her country, and composes verses admirably well; she is a young lady full of delicacy and taste, and is determined to become the wife of none but a man her equal in talents, and in knowledge, and who shall combine with all his accomplishments, an agreeable and handsome person. Such a lover would seem difficult to be found; but, however, the fair and learned Hounpin is happy enough to find one who possesses all these requisites. It is the young SSe Yeoupe, who, by virtue of his brilliant talents and lively imagination, has the good fortune to fix her choice. A number of incidents and difficulties prevent, however, for a great while, their union. Hounpin and her father are on the eve of becoming the dupes of intriguers, who use the talents and even the name of SSe Yeoupe, to deprive him of his mistress. Finally, the day of happiness shines upon the two lovers—but that very day shines upon an union which to us must appear very strange: By a sequel of incidents as interesting as they are romantic, SSe Yeoupe, the faithful SSe Yeoupe, mar-

ries at the same time two wives, equally handsome, equally young, equally amiable. This trait is not the least singular of the novel, and it has the peculiar advantage of making us acquainted with a custom very different from ours. In France, a man who would become at once the husband of two wives, would be disgraced, dragged before the tribunals, and condemned to the most infamous punishment. In China, such unions are considered as the greatest felicity. But, however, if unfortunately there are men in every country, who would not be afraid to load themselves with a double chain, it is wonderful to see two young and handsome women, like Hounpin and Mengli-lo, the two cousins of the novel, live together without any quarrel, and divide between them the heart of the same man. This singular oddity is not the only remarkable one in the novel of *The Two Cousins*—so well calculated to excite curiosity, not only by the new exotic scene which it opens to our eyes, but also by the elegance of the style, and the soundness of the observations contained in the preface, in which Mr. Abel Remusat speaks of novels, and novel-writers, as a man well acquainted with the first, and who knows how to appreciate the other. [N. Y. Mirror.]

THE HUMOURIST.

COOKE AND INCLEDON.

Cooke and Incledon, after playing at the Richmond Theatre, retired to the Star and Garter to sup together. The convivial habits of these two *historians* are well known; but soaker as Incledon was, he was by no means a match for George Frederick, and accordingly was the first who felt inclined to retire from the contest, and exclaim, "hold! enough!" "Sit ye down, Charley! sit ye down man," said Cooke, "we'll have another bottle." "No, no, my dear fellow—'tis late—'tis late—besides I've to sing before the king and the queen to-morrow night, you know at the Covent Garden Theatre, and must be careful of my voice, so good night—good night." "Phoo! phoo! sit ye down man—sit ye down. I tell you we'll have another bottle." "Impossible, my dear fellow, impossible. I've to sing before the king and the queen, and—" "Sit ye down, I say—sit ye down. Your voice! by heaven! 'tis harmony! the music of the spheres, Sir! and another bottle—" "Upon my soul now—" "Here! waiter!" "I tell you I—" "Well, sing me the Storm first—the Storm, my bully-boy!" "No, no, not to night, my dear fellow—not to night." "Come, Cease rude boreas—" "Impossible! I've to sing before the king and the queen, and—" "You won't, then?" "Not to night, good bye—good bye, You shall though, Charley—you shall sing me the Storm before morning," said Cooke; and Incledon retired. He had not been long asleep, however, before he was awoken by two constables, who approaching the bed immediately seized him. "Hands off," vociferated our vocalist as soon as passion permitted him to speak. "Hands off, I say! what do ye mean ye rascals?" "Come, come, no nonsense; bless you! we know the whole." "The whole!" "Ay, so put on your things quietly, Muster Smith, and come with us." "Muster Smith! I'm Charles Incledon, ye villains! Charles Incledon, sirrah! the native vocalist! I've to sing before the king and the queen to-morrow night, and unless you bundle this instant—" "I tell you it won't do, we know you. Charles Incledon, indeed! ha! ha! ha! that's a good one, aint it, Sam? What! I suppose you didn't rob that there poor woman of her bundle this here blessed morning, upon the green yonder." "I tell you I'm Charles Incledon—my friend George Frederick Cooke is now in the house, and will tell you the same." "Muster Cooke! why that's the gentleman as informed against you. Howsomdever if you're Charles Incledon, you can sing the Storm, you know." "To be sure I can, ye scoundrels—to be sure I can sing the Storm indeed! only stand aside, and I'll soon—" So saying, he cleared his pipes, and in this situation poured forth this celebrated ditty, with his usual pathos and power, at the conclusion of which Cooke thrust his head from behind the curtain, and saying with a sneer, "I told you you should sing the storm before morning, Charley," left him to his repose.

ALBANY:

SATURDAY, MARCH 10, 1827.

§ MILO A. HOLCOMB, Esq. will act as agent for the American Masonic Record, and Albany Saturday Magazine, for the city and county of Hartford, in the state of Connecticut.

"MASONIC MIRROR. The editor of the Mirror repeats the calumny of Childs, that the editor of this paper is interested in the sale of Morgan's book. This is a vile and malicious falsehood, originating with a scoundrel and a puppy; and if the editor of the Mirror be a man of honour, as we presume he is, he will give place to this denial of a charge which has not the least shadow of truth for its foundation. It is equally false, that we had a direct agency in introducing the work into any bookseller's shop in this city."

[Southwick's Observer of yesterday.

The intemperate and uncourteous tenour of the above paragraph would render it unworthy of notice, were it not for the contradiction it contains, of what we have said, and of what we still believe to be true. We shall now, for the sake of plainness, be more personal in our remarks than we could wish to be. We know Mr. Southwick's history, as connected with Morgan's book, but have no wish to descend into an altercation, to which a full disclosure would undoubtedly lead. It will suffice to mention a few items; which, we think, can not easily be made false by the philippics and ipse dixit of Solomon Southwick. In the course of the last fall, a man, named John Davids, made his appearance in this city, for the purpose of disposing of a chap-book, entitled *Masonry Unveiled*. Davids made several attempts to interest the booksellers in his behalf, but he found the unworthy traffic was every where held in contempt; for no bookseller would receive the book, through his representation. In this dilemma (but not for the first time) he had an interview with the editor of the National Observer, and informed him of his troubles. We could, if we pleased give a "sketch of the debate" which took place on this occasion, but as we wish to be brief on this subject, we shall pass it over. The result was simply this: through Mr. Southwick's information and interference the book was introduced into one store and there exposed to sale. Subsequently, a man, named James P. Powers, who was antecedently connected with Mr. Southwick, in the lottery business, accepted the agency of the National Observer, and, after being supplied with a parcel of *Masonry Unveiled*, set off upon a tour to the west, for the purpose of soliciting subscribers to the paper and selling the book. Powers, a short time since, returned from one journey, and is now accomplishing another. His last journey was through the river towns between this city and New York.

We have heretofore declared it inconsistent with our sense of propriety, to continue a war of words with such a man as the editor of the National Observer. Such words as "scoundrel" and "puppy" are the property of intellects which are too weak and vicious to create better things; they are the emblems of despair and madness; and as such we view them and suffer them to sink, uncontradicted, into oblivion. If a catalogue of epithets could militate against the good name of an individual, it would be an easy thing to destroy the reputation of the most virtuous. Could not any man lost to a just sense of truth, say to one honest neighbour, "you are a scoundrel and a puppy," to a second,

"you are a villain and a liar"—to a third, "you are a kidnapper and a murderer"—and what effect would these charges have upon his guiltless head? They would not destroy his peace of mind, for he knows himself innocent. They would not destroy his reputation among his friends, for they know him to be above vile practices. With strangers, and with strangers alone, must they spend their influence; and if these strangers be men of common scrutiny, they will not mistake scurrilous bombast for argument. There is a truth of which Mr. Southwick is apparently totally ignorant, and that is this: *invectives, when misapplied, are words without meaning*. We shall not hereafter notice any thing of this nature, which may proceed from the same source.

We are sorry to be under the necessity of alluding to circumstances, whose only importance is derived from a vicious origin and connexion: but if men will deny facts which are almost as notorious as day light, they should be exposed. The course of the National Observer, as far as relates to the Morgan affair, has been an interested one. Many in this city have been convinced of this fact by the tongue of its proprietor; who, on particular occasions, has become a mere braggadocio. When the letters which have made so much talk were first published, he publicly boasted of the harvest he had reaped, saying that he had sold *two hundred and fifty* copies of his paper at *one shilling* a-piece. These letters were printed at the same office on a half sheet, and it is not probable that they were printed without the intention of circulation. The following remarks from the Saratoga Sentinel will unfold a portion of the mystery, "We have it from a source entitled to credit, that there are one or two papers in this state employed to keep alive the public excitement relative to *Morgan*, for the purpose of increasing the sale of his book. From the incredible statements which have appeared in some journals, and from the fact, that many parts of the country have been inundated, gratuitously, with extra sheets, containing such matter, we are led to believe that the information we have received is, at least, entitled to consideration. Merely a wish to disseminate intelligence, cannot be the moving cause for circulating thousands of newspapers free of expense." But we have said more than enough already.

§ Mr. L. G. HOFFMAN proposes to publish in this city, a religious and miscellaneous journal, under the title of *Christian Register*. Mr. Hoffman is a young man of talent and industrious habits, and if he meets with encouragement correspondent to his exertions and good intentions, he must succeed. The Register is not to be devoted to the peculiar notions of any sect: its aim will be to disseminate religious information on a liberal scale; and to circulate through society, the native influence of Christianity. The Register will be printed on an imperial sheet, with a new long primer and brier type, and furnished to subscribers in the city for \$2 50 cents a year—to those who receive their papers by mail, for \$2 00 a year.

MORGAN.

We are as weary of this name as any of our readers; but a proper illustration of the charges promulgated under the pretended authority of the Lewiston convention, is due to justice, and we cannot deny it. When the pretensions of this convention were put forth, notwithstanding its lofty assumptions, we were inclined to yield it respect; but its sub-

sequent proceedings have been such as in a great measure to destroy this respect, and supply its place, with indignation and contempt. If the procrastinating character of this body were thrown out of the question, its easy belief, and apparent recklessness of private character would be sufficient to destroy its influence upon public opinion. The private letters of its members, prematurely thrust upon the public notice, were at first pronounced by their thors, ill-founded and unwarranted; but as soon as it was discovered that the public mind was sufficiently inflated to support any opinion, however sophistical, which might be congenial to its fevered palate, the convention, in an official summary, virtually declared that the letters were true. It shall be our task this week to show, by incontrovertible proof, that the letters, and their official support, are both unworthy of confidence. It may not be amiss, at the commencement, to present our readers with a catalogue of the pretended discoveries of the Lewiston convention. We give it in the language of one of the most inveterate enemies to masonry. It is as follows:

First—That the unhappy Morgan was taken to Newark, U. C. gagged, bound, and blind folded.

Secondly—That he was there offered to the British masons of that place, with a request that they should get him on board of a British man of war, or turn him over to Brant, the Indian Chief, and a mason, to be executed with savage cruelty.

Thirdly—That the Newark lodge assembled, on this proposition, and sent for Brant, who came accordingly.

Fourthly—Brant proved himself too noble of nature, to have any thing to do with so cowardly, inhuman, and wicked a transaction. The savage hero declined to do that, which, cowardly white monsters urged him to do.

Fifthly—The Newark masons, thus rebuked by savage justice and magnanimity, likewise finally declined to take charge of the miserable victim.

Sixthly—The diabolical wretches who had him in custody, brought him back as far as Fort Niagara—and there murdered him in cool blood—cutting his throat from ear to ear; cutting out his tongue, and burying it in the sand!—and concluding the hellish rites by sinking his body deep in the lake!

To the best of our knowledge this is a full catalogue of the discoveries made by the Lewiston convention. We will now proceed to collect a few discoveries made without any direct assistance from this convention. First, then as far as the above discoveries depend upon Capt. BRANT, they are without truth, as is proved by the following letter, extracted from the York, U. C. Observer, of Feb. 26. Capt. Brant, says the Lewiston Sentinel, is a gentleman in high standing in Upper Canada, and of undoubted veracity, and his statement is entitled to entire credit.

We stop the press to insert a letter this moment received from our friend Captain Brant, which repels the foul charge attempted to be fastened on this province by our neighbours on the other side.

Sir—I have just read a paragraph in the New York Spectator of the 17th inst. wherein it is said, that the fraternity at Niagara had sent for me to receive and sacrifice the unhappy MORGAN, of whom so much has been lately spoken.

You will oblige me by contradicting this report, which is wholly false. Neither in that instance, nor in any other, has such a barbarous proposal been made to me, nor do I believe that a man exists who would have dared to wound my feelings in such a heinous manner.

I know nothing of the man nor of any transaction relating to him; and I am much surprised that my name has been called in question.

I am, Sir,

Yours respectfully,

J. BRANT.

Wellington Square, 24th Feb. 1827.

As far as the above charges relate to Newark lodge, we think they are, successfully refuted by the letter of Capt. Brant, they being mentioned in connexion. Capt. Brant is made to figure so conspicuously in the above charges, that his letter alone is a complete refutation of the whole; but the libeller with whom they originated has been ferreted out, and completely unmasked; and the story of Morgan's murder is, thereby, placed beyond the reach of probability. As we have not published any of the letters pretending to disclose

Morgan's fate, we state, in order to conduce to the better understanding of the certificate below, that the information upon which the Lewiston convention rested its belief in the murder of Morgan, was received directly from Dr. Terry, who said he was informed of the fact by a Mr. Somebody-else, who received his information from Mr. Chapin, of Buffalo. Our readers will see that the story is, at best, a farrago of nonsense; and when it is known that Dr. Terry is a reckless, irresponsible person, and that Mr. Chapin was not absent from Buffalo during the whole month of September, we are confident that the charges of the convention will meet with contempt and indignation. The card given below, is from the pen of the brother of Mr. Chapin; the first deposition is that of Mr. Chapin's widow, the second is that of his physician. Other depositions to the same effect, have been published, but we think the two below sufficient to answer every purpose.

It was with the deepest emotions that I saw, a few days since, in an Albany paper a letter written by a person in Rochester, implicating my deceased brother Seth Chapin, in the alleged murder of William Morgan. Knowing the report to be without the semblance of truth, the feelings of a brother would not allow me to remain in quiet and see the imputation of so foul a crime settled upon the memory of my deceased relative. I therefore repaired to Rochester, and learning that the letter which has appeared before the public was written by Doct. F. F. Backus, called on him for the author of the report, and for the grounds upon which he had predicated his belief that my brother was concerned in the unfortunate affair alluded to; upon which Doct. Backus gave me the name of a Doct. Terry, who resides at Niagara, Upper Canada, as the author of all the information which they had received implicating my brother, in any transaction relating to Morgan. To those who know this Doct. Terry, it is needless to say, that he is capable of all the baseness which the subjoined certificate and affidavit prove him to be guilty of. To those who know him not, it is but justice to add, that his utter recklessness of character and entire irresponsibility, place him beyond the reach of just and merited censure, but which indeed have made him a fit instrument in the hands of some rash and enthusiastic men, to inflame an already excited community by originating marvelous stories which had no other foundation than in his own perverse disposition.

The subjoined affidavits and certificate it is believed will be amply sufficient to establish the utter falsity of the report before alluded to, and it is hoped that the liberality of editors will induce them to give those as extensive publicity as the report has obtained; and in doing this I am satisfied of having discharged a duty which I owed to the memory of my Brother, and to the feelings of his surviving relatives.

G. CHAPIN.

State of New-York, Erie county, ss.—Sylvia Chapin, being duly sworn, saith, that Seth Chapin, her late husband, died on the 10th day of November last, after an illness of two days—that during the month of September last he was at home constantly attending to his domestic concerns—that he was not absent a single day or night—but was at his own house every evening before eleven, and generally before ten o'clock and there remained until morning without an exception—and that he was not absent from his table at any meal, nor has this deponent any knowledge or belief that he was out of the town of Buffalo during the said month of September.

SYLVIA CHAPIN.

Subscribed and sworn the 17th day of February, 1827, before me,

S. G. Austin, J. P.

State of New-York, Erie County, ss.—Bryant Burwell being duly sworn saith, that he is a practising Physician in the village of Buffalo, and well knew Seth Chapin,—was one of his physicians in his last sickness and spent considerable time with him. That the said Chapin was not confined to his bed until his decease, nor considered dangerously ill until the evening previous,—that this deponent never heard from the said Chapin, or any other person or source whatever, that the said Chapin was in any manner implicated or suspected of being concerned in any transaction affecting Capt. William Morgan, until this deponent saw on the 17th inst. a publication in one of the newspapers printed at Geneva. He further swears that the wife of the said Chapin was confined to her bed on the 11th day of September last, and claimed much of his attention from that time forward for more than a week, and this deponent so frequently saw him during that time that he knows it impossible that the said Chapin could have gone from Buffalo to Fort Niagara, a distance of about 37 miles, and returned without the knowledge of this deponent. And he further swears, that he has no knowledge or belief that the said Chapin went even out of the town of Buffalo for more than a week from the said 11th day of September.

BRYANT BURWELL.

Subscribed and sworn before me the 11th day of February 1827

S. G. Austin, J. P.

As a specimen of the opinion entertained by rational men, we publish a few extracts from articles upon the subject of Morgan's absence, which have

appeared in various public journals. At the same time, we think that the story of Morgan's murder at Fort Niagara is a lame invention. There are so many contradictory circumstances that we are compelled to consider it a vile fabrication. Let us compare the language of two of the members of the Lewiston convention. Dr. Backus, in his letter says: "After leaving Fort George we proceeded to Fort Niagara, and Col. Jewett being sick, we employed the tavern-keeper under the hill to assist us in examining the magazine, being the only part of the Fort that we thought worth examining, and we found appearances there, that satisfied us that Morgan must have been there, and probably was there executed." A writer in the Batavia Masonic Intelligencer says, "After they had finished their examinations at the Fort, Bates Cooke, [a member of the convention, and a letter writer] went to Col. Jewett, in his room, and informed him that he had come in behalf of the convention to inform him that after a thorough examination, they had found nothing to induce them to suspect that Morgan was ever in the Fort, or words to that effect—the truth of this can be verified by the testimony of more than one creditable witness." Such inconsistency is too glaring to escape notice, and if the Lewiston convention persists in it, the cloven foot will soon be discovered.

The Rutland (Vt.) Herald after publishing the horrid stories related by members of the Lewiston Convention, and first published in the National Observer, of this city, says:

"After all this, we confess we are among the number of the unbelievers to those frightful tragic tales. That Morgan was abused and carried off, we have no doubt. But that he is now somewhere in the British provinces, profiting and speculating by these repeated bloody recitals, by issuing edition after edition of his 'Mysteries of Masonry Unveiled!'—accompanied with all these seeming barbarous and unrelenting cruelties—we have scarcely a doubt remaining."

The (Wilmington) Delaware Gazette speaking of the Morgan affair, says:

"The probability, after all, is, that Morgan has voluntarily absented himself, and is continuing in seclusion with a view to promote the sale of his book; and that the excitement which has been raised about it, has been created for political purposes."

The Westfield (Chautauque co.) Star, a paper which has been second only to David C. Miller's "Advocate" and Southwick's "Observer" in the Morgan affair, in speaking of the implication of the deceased Chapin, by Dr. Backus, says:

"Humanity revolts at the idea of going among the tombs in search of characters for dissection. Shall an afflicted family, while yet weeping over the grave of their departed head, be called upon to appear before the public to vindicate his character from the unfeeling, wanton, and groundless aspersions of calumny? We are surprised that any gentleman, even in a private letter, has given currency to such a report, from no greater authority than Dr. Backus acknowledges for his; and still more so, to see men thrusting into the newspapers the confidential letters of their friends. We confess, this circumstance has impaired not a little our belief of the circumstances detailed in these letters. If the writers were imposed upon in one case, why may they not have been in others?"

We shall continue our extracts next week.

NEWS AND TABLE TALK.

The following is a list of the produce of one acre of land in the township of Rawdon and district of Montreal, for the year 1826. One hundred and eighty bushels of Potatoes—sixteen bushels Indian Corn—ten bushels Turnips—twelve cart

loads of Pumpkins.—The Chevalier Courtois, Envoy Extraordinary and Plenipotentiary of the king of Spain at the Papal Court, died lately at Rome. It is said that the deceased (who was an Englishman) had directed that his heart should be embalmed and transmitted to Spain!—A committee of the legislature of North Carolina was instructed to inquire whether the State had not a right to that portion of Gold and Silver Mines, (one half or one quarter,) which belonged to the king of England before the Revolution. They reported that it had no such right.—A person who lately died at Philadelphia left a legacy to the "Poor Saints" of a certain church. The determination of who these are is likely to be the subject of a law case.—Joe Strickland outdone.—The following is a literal copy of a recommendation, brought to a gentleman of New York by his cook. Polly Smith is the cook's name, although Polly seems quite out of her place. The good lady who wrote the recommendation ought to be the "Y" of a certain member of Congress.

New York, February 20.

I have knowen this girl gon on two year and know her to be a uprite in dusteris oneat girl Polly Smith.

—It is stated that the costs in one of the cases lately argued at the United States Supreme Court, Washington, amounted to thirty or forty thousand dollars. This was paying rather dear for the whistle of justice.—It is proposed in the legislature of Pennsylvania to constitute a geological survey of that state. It will be highly beneficial to science, and ought to be adopted elsewhere.—A bill has been introduced into the Maryland House of Delegates to prevent the sale of small quantities of spirituous liquors.—A man in New Hampshire lately hanged himself, after making his preparations with much sang froid. He took a bundle of flax to a neighbor's and broke it; he went to another's and swinged it; to a third's and made a rope! He then went home and hanged himself. Really this man deserved a patent for hanging.—Commerce of the United States.—From documents transmitted to Congress, by the Secretary of the Treasury, on Monday last, it appears, that the imports during the year ending on the 30th of September last, amounted to \$84,974,477; of which amount \$80,778,120 were imported in American vessels, and \$4,196,357 in foreign vessels. That the exports during the same period, amounted to \$77,685,322, of which \$53,055,710 were of domestic, and \$24,539,612 of foreign articles. That of domestic articles \$46,159,523 were exported in American vessels, and \$6,856,182 in foreign vessels; and of the foreign articles \$23,338,988 were exported in American vessels, and \$1,156,624 in foreign vessels. That 942,296 tons of American shipping entered, and 953,012 cleared from the ports of the United States, and that 105,654 tons of foreign shipping entered and 99,417 cleared during the same period. The Register of the Treasury states, that the amount of registered tonnage employed in the foreign trade on the 31st of December, 1825, amounted to 700,783; that the enrolled and licensed tonnage amounted to 657,899; that the tonnage of fishing vessels amounted to 61,424—total 1,423,111.

FOREIGN.

The Duke of Wellington has been appointed commander in chief of the British army.—The remains of the Duke of York were committed to the tomb on the 20th of January, with great pomp and parade.—The war between Persia and Russia still continues, and it is said the former has applied to England for assistance, in virtue of a treaty (in 1814) whereby the latter agreed to grant an annual subsidy of £200,000 in case of any aggression being made on the territories of Prussia. The question will in that case, involve the consideration whether the present war was provoked by the aggression of Persia or of Russia. The ascendancy of English influence in the Councils of Persia has always been viewed with a jealous eye by Russia, and it is well known, that many British officers have been employed in the Persian service.—The Greek frigate Hellas, Capt. Gregory, from New-York, arrived at Napoli di Romania on the 6th of December.—A serious conspiracy appears to have been formed at Malaga, for the express purpose of proclaiming the Constitution. Almost the whole third regiment of infantry was in the plot; and though it was betrayed and was prevented from breaking out by the sudden arrival of the Captain General of Grenada, General Campana, yet not less than two hundred men of the implicated regiment quitted their colors, and retired with their arms into the mountains of Ronda, where they joined the bands of partizans, or rather patriots, by whom almost all the passes of those mountains were occupied.—The Lausanne Gazette says, M. Eynard has received by the way of Ancona, a letter from Spezzia, of the 24th December, which confirms the defeat of Redschid Pacha, and the deliverance of all Upper Greece from Attica to Thessaly. Karaiskaki, and other Greek Commanders, at the head of a numerous army are in pursuit of the remains of the barbarians.—Another column of Rumeliotis had entered the Morea, marching against Ibrahim Pacha, who, being beaten at every point, had been obliged to quit the plateau of Tripolizza, and to retreat to Modon.—Admiral Miaulis, on board the Am. frigate and accompanied by the rest of the flotilla, had attacked the Egyptian fleet, and captured several vessels laden with ammunition.—Accounts from Trieste, of the 10th January, bring the important news that a ship from Zante has brought word that it was reported there that the Turkish garrison of Canea and Candia had surrendered for want of provisions. If this is true, the consequences in favor of the Greeks will be incalculable.—Letters from Constantinople of the 27th December say, "The military reform makes rapid progress, the Government neglects nothing to ensure its success; and, with this view, has lately banished to Asia a great number of vagabonds. The Captain Pacha is in the highest favor with the Sultan. The Marquis de Ribeaupierre is expected about the end of January. The defeat of Redschid Pacha, before Athens, is generally spoken of. The news has been circulated in spite of the prohibitions of the new police.—The Oriental Spectator of the 15th December, pretends that Ibrahim Pacha had advanced under the cannon of Napoli, and carried off 10,000 persons, who had abandoned Calamata, Tripolizza, and other places in the possession of the Turks.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO

It was thine own bright eye that told
The tale which I believed so.
And has that burning blush grown cold?
And has that sigh deceived so?
Can Love so sweetly spoken,
Grow languid and be broken?

I looked into that glistening eye,
And read amid its wildness,
A vision bright as morning sky
In its first dewy mildness—
A token of such sweetness
As challenged its own fleetness.

But now thou sayest, it was in vain
I trusted to thy kindness;
Then may these eyes and throbbing brain
Invoke eternal blindness,
Ere fickle fate shall proffer
Such hopes as thou didst offer.

Go then, and glory in thy throes;
(God grant thou may'st not share them.)
'Twere not so bitter half from foes
As thus from thee to bear them,
And when distress shall mate thee,
May truer friends await thee.

March 6, 1827.

G.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

MASONRY AND RELIGION.

When first th' Almighty mandate spoke
Creation into birth;
When light from chaos' cradle broke
Upon th' astonished earth;
Then Masoury, the maid of love,
From realms of light sublime,
Came in her beauty, sent by Jove,
To join the march of time.

From that supernal Lodge of light,
Not made with hands, on high,
She came to gild the gloom of night
Beneath her native sky;
And here, in Friendship's sacred shade,
She bade her temple rise,
And, thus obey'd, her sons array'd
In robes brought from the skies.

The Gods look'd down, and smil'd to see
The glorious Ark of art,
And blest the maid of Masoury,
Her hand, and generous heart,
And cry'd—*from henceforth thou shalt be,*
In every age and state,
The handmaid of sweet charity,
And all the virtues great.

And thou shalt be, to all the poor,
The kind and faithful friend,
In every clime, on every shore,
The helping hand to lend;
With fair Religion thou shalt go
Across the stormy wave,
To soothe the weeping widow's woe,
Poor men from sin to save.

Thus spoke the Gods—and hand and hand
With fair Religion, she
Departed to each foreign land
With blessed Charity;
But oft the sons of Bigotry,
With jealousy imbued,
Cry'd out against fair Masoury,
Least she should do some good.

Milford, Del.

MILFORD BARD.

From the New York Crystal Hunter.

THERE WAS A TIME I NEVER SIGHED.

"Did not I weep for him that was in trouble? was not my soul grieved for the poor?"

There was a day I never sigh'd;
There was a time I gladly sung:
Oh, how I wish that I had died,
When mind was pure and form was young.

If I were well, a father stoop'd,
Above my bed, to bless my sleep;

If I were ill, a mother droop'd,
And left my couch to think and weep.

My playmates were as brothers tried;
Yes, winter days had sunshine them;
I could not tell why people sigh'd;
Nor feel the cares of busy men.

Friends I have had, as kind and brave
As ever shar'd a pliant soul:
But now, affections foe, the grave,
Has made the floods of sorrow roll.

And I have lost my tide, my time;
Cast off the robe of innocence;
Have nurtur'd pride; encourag'd crime;
Ah! flung away my best defence.

Repentance hangs upon my heart;
Sweet thoughts for all are in my mind;
I would not throw a venom'd dart—
O no! I never was unkind!

Yet, when my stream of tears is wide,
My willow'd harp to this is strung;
"O, how I wish that I had died,
When mind was pure and form was young."

C. E. E.

From *Lays and Legends of the Rhine.*

THE SEVEN SISTERS.

The seven beautiful countesses, whose coquetry, cruelty, and punishment, are recorded in the following legend, are supposed to have been the seven daughters of the Gaugrave Louis I. Von Arnstein. The story runs, that the celebrated Rhein-Nixe, Lorelei, was the avenger of the jilted knights; and when the Rhine is low, and the wind causes the waves to foam around the protruding group of rocks into which it is supposed these cold and scornful ladies were transformed, the peasantry of the neighbourhood imagine the "Seven Sisters" are endeavouring to leap from the flood, and regain their paternal castle.

The castle of Schenberg was lofty and fair,
And seven countesses ruled there:
Lovely, and noble, and wealthy I trow,
Every sister had suitors enow.
Crowned duke and belted knight
Sigh'd at the feet of those ladies bright;
And they whisper'd hope to every one,
While they vow'd in their hearts they would favour none!

Gentles, list to the tale I tell—
'Tis many a year since this befell:
And ladies now so mildly reign,
They never sport with a lover's pain!
At the castle of Schenberg 'twas merriment all—
There was dancing in bower, and feasting in hall;
They ran at the ring in the tilt-yard gay,
And the moments flew faster than thought away!
But not only moments—the days fled too—
And they were busied when they first came to woo:
And spake they of marriage or bliss deferr'd,
They were silenced by laughter and scornful word!

Gentles, list to the tale I tell—
'Tis many a year since this befell:
And ladies now so mildly reign,
They never sport with a lover's pain!
Knight look'd upon knight with an evil eye—
Each fancied a favour'd rival nigh;
And darker every day they frown'd,
And sharper still the taunt went round;
Till swords were drawn and lances in rest,
And the blood ran down from each noble breast;
While the sisters sat in their chairs of gold,
And smiled at the fall of their champions bold.

Gentles, list to the tale I tell—
'Tis many years since this befell:
Times have changed, and we must allow
Countesses are not so cruel now.
Morning dawn'd upon Schenberg's towers,
But the sisters were not in the wonted bowers;
Their damsels sought them the castle o'er—
But upon earth they were seen no more:
Seven rocks are in the tide,
Ober-wesel's walls beside,
Bearing their cold brows to heaven—
They are called "The Sisters Seven."

Gentles, list to the tale I tell—
'Tis many a year since this befell:
And ladies now may love deride,
And their suitors alone be petrified.

THE HUMAN SEASONS.

Four seasons fill the measure of the year;
There are four seasons in the mind of man,
He has his lustrous Spring, when fancy clear
Takes in all beauty with an easy spas:
He has his Summer, when luxuriously
Springs honeyed cup of youthful thought he loves
To ruminate, and by such dreaming nigh
His nearest unto heaven: quiet coives
His soul has in its Autumn, when his wings
He furthest close; contented as to look
On mists in idleness—to let fair things
Pass by unheeded as a threshold brook.
He has his Winter too of pale misfeature,
Or else he would forego his mortal nature.

LACONICS.

BY THE DUKE OF ROCHEFOUCAULT.

We are never made so ridiculous by the qualities we have, as by those we affect to have. Interest and vanity are the usual sources of our afflictions, however specious may be our pretences to the contrary.

Those who apply themselves too much to little things, commonly become incapable of great ones.

Few things are impracticable in themselves; and it is for want of application, rather than of means, that men fail of success.

None but the contemptible are apprehensive of contempt.

There are two kinds of curiosity; one arises from interest, which makes us desirous to learn what may be useful to us: the other from pride, which makes us desirous to know what others are ignorant of.

He who imagines he can do without the world, deceives himself much; but he who fancies the world cannot do without him, is still more mistaken.

It is much easier to suppress a first desire, than to satisfy those that follow it.

Envy is more irreconcilable than hatred.

We need not be much concerned about those faults which we have the courage to own. We acknowledge our faults in order to repair by our sincerity the hurt they do us in the opinion of others. We confess small faults in order to insinuate that we have no great ones. Dishonest men conceal their faults from themselves as well as others: honest men know and confess them. We have few faults which are not more excusable in themselves than the means we use to conceal them.

We should manage our fortune like our constitution; enjoy it when good, have patience when it is bad, and never apply violent remedies but in cases of necessity.

When our hatred is violent, it sinks us beneath those we hate.

The calm or disquiet of our temper depends not so much on affairs of moment as on the agreeable or disagreeable disposition of the trifles that daily occur.

ALBANY, SATURDAY, MARCH 17, 1827.

[No. 7.]

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

[An obliging correspondent and worthy companion, of Charleston, S. C. has forwarded the following proceedings for publication. They took place at the time of Gen. LAFAYETTE's visit to that city in March, 1825.]

Agreeably to previous arrangements with Gen. LAFAYETTE, deputations from "South Carolina Encampment of Knights Templars," of Charleston, and from "Lafayette Encampment," of Georgetown, waited on him, and were received in the hall, and invited by him to an audience in his private room; where MOSES HOLBROOK, M. D. Grand Commander, and the other Knights, were formally introduced by the Rev. CHEEVER FELCH, of the U. S. N.

After the introduction, the following Address was delivered to him by C. C. SEBRING, in behalf of the Encampment of the city of Charleston.

We appear before you, General, as a deputation from "South Carolina Encampment of Knights Templars," to present their respects and congratulations on your arrival at Charleston. We had long indulged the hope of participating in common with our Brethren of every degree, in the pleasure of uniting with you in a Masonic dinner; but we have learnt with regret that your engagements will not permit you to accept the invitation offered by the Grand Lodge. But we could not allow the present occasion to pass without some testimony, in accordance with the example of our Brethren and Companions in other cities, how much we respect your virtues, and how grateful we feel for those labours of love which you, together with our great father, your honored friend WASHINGTON, and his gallant compatriots, have rendered to this country.

It has ever been the custom of the fraternity to cherish feelings of regard for those worthy members of the craft, who have distinguished themselves by the practice of our tenets and principles. We shall not, then, venerable brother, be accused of flattery, when we say that we can trace, in your long and faithful career, a strict adherence to "Brotherly-love, Relief and Truth." Your brotherly-love prompted you, even in your youth, to come to the assistance and relief of our fathers, when struggling in the cause of the violated rights of man; and your valor assisted them to achieve those victories that resulted in the formation of our present happy constitution, founded upon the immutable principles of Truth.

As the grand characteristics of Templars, a holy order in which we feel proud to hail you a Companion, are "unsullied honour, unwearied zeal in a brother's cause, and universal benevolence"—virtues which you possess in an eminent degree, and have so conspicuously displayed in a long life devoted to the welfare of your fellow men, permit us, as members of the same order, to add our feeble voice to the millions who greet you in your progress thro' this happy country—a country so much indebted to you for the happiness it enjoys. Accept, then, General and Companion, the best tribute we can offer you, the reverence and sincere homage of grateful hearts.

To which General La Fayette made the following reply:

KNIGHTS,

I am extremely happy in receiving this testimony of your respect and affection. During my present visit to this country, the attentions of my Masonic Brethren have afforded me the greatest pleasure. I wish them every prosperity. It is with pain that I

have to regret that my hurried visit through the southern section of the Union, does not allow me to accept those brotherly and friendly invitations of the Fraternity which have been offered me in this city. Nothing since my arrival in this country has afforded me more gratification than the kind favours I have received from my brethren. I beg you to assure the Masonic Institution to which you belong, that the reasons which I have already assigned only prevent me from accepting the invitation which the Grand Lodge of South-Carolina has tendered.

Knights, Companions, you will accept my best wishes for your Masonic and individual prosperity and happiness. Should I ever stand in need of defence, I can rely upon your Order.

When the General had finished his reply, JAMES COGGESHALL briefly addressed him in behalf of the Deputation from the Encampment in Georgetown, expressing their regret that his previous engagements had deprived them of the honour of a visit from him; and informed him, that as a mark of the respect and gratitude of its members, they had named it after him, and elected him an honorary member.

To which the General replied: That they had done him great honour in giving his name to their Encampment, begging them to return to the Encampment which they represented, his unfeigned thanks for such a notice, and assuring them that he should ever remember with gratitude the respect they had shown to his endeavours in the cause of their country, by electing him an honorary member of their Institution.

[From a Correspondent at the West.]

Brother Capt. JOSEPH P. BENDS, of Pompey, in the county of Onondaga, N. Y. died Sept. 28th, 1825. Brother Rev. WILLIAM J. BUCKLEY, (by whom he had been baptised sometime previous to his death) preached his funeral sermon.

Brother Doctor WILLIAM TAYLOR, at the special request of the deceased, read the masonic funeral service, and Brother Col. L. S. BURR, being present, at the request of the Lodge of James ville, Manlius, to which the deceased belonged, delivered an address at the grave, of which the following is an extract. It is worthy of remark, that the life of our deceased brother, and his conduct before his death, are set forth in their true pictures by brother Burr—insomuch, as that no other description can be necessary to illustrate his true character.

"Brethren:—Our brother is no more, except in our affections—his present condition will soon be ours—he rose in the morning of his glory; the flower of his youth was full; he glowed in the beauty of ripening honor; and wisdom sat upon the arch of his brow. The summer of his ripening years had come; and his mind raised an enquiring search for wisdom. In the language of the wise man he cried—give me wisdom that sitteth upon thy throne, and reject me not from among thy children. When but a youth, he was chosen to an important place of trust: he was commissioned by the rulers of our land; and he filled his office with dignity and honor. You entrusted him with the signet of your order; and he kept the records of your ancient institution. He walked upon the Square with a brother; and he circumscribed his actions by the Compass with the world. The Rule of his conduct was that of the upright man; and he drew his Line in the path of immortality: And unto him was given a white stone; and in the stone a new name written, which no man knoweth save him that receiveth it. Weep, Brethren! Weep! for a just man is dead:—Weep! for a righteous man is gone; Weep, brethren! But weep not for him! his cup was full; his harvest was as a field of corn, and of barley, and of wheat full grown: Yea,

as a bundle of fine wheat in the hands of the reaper. Contemplate the hour of his departure! The bliss of eternal joy enmantled his immortal spirit. The smile of heavenly bliss sat playing upon his lips, in holy converse with his soul, while the angelic hosts, assembled at the summons of his departing spirit to greet a brother with a cheerful welcome. Is this fiction or is it reality? As I believe in the divinity of this Holy Book—as I believe in the presence of God's Holy Spirit, with his repentant and prayerful subjects; so do I believe in the reality of our brother's happiness with angels, and the spirits of just men made perfect. With what kind, and pleasant gentleness, did he order and arrange his worldly concerns, when the hope of long continuance was gone. With what composure did he give order for these last obsequies! How tranquil! How lovely! How glorious were the beams of his countenance, when he gave to you his parting pass-word by a brother; and says I die a christian! I die a mason! How strong! How affectionate! How holy was his appeal to you my brethren, when he sent you his last parting grip by a brother's hand, and smiling, said, I hope to meet you all in the Grand Lodge above! O that my brethren could see a christian die! How ardent was his faith in his Maker's mercy! How anxious did his spirit labor for its glorious transition.

"Weep, brethren, in the fulness of your souls—and let the Lodge weep—for a double grief has come upon it. But weep ye not for him! Though he is dead, yet he liveth—Though he is buried, yet he shall be raised, and transported to that celestial Lodge above, where the Supreme Architect presides.

"But, brethren, weep ye for yourselves, and look well to the West!—It is the place of the going down of the sun! As the sun setteth in the fullness of his time, so shall the son of man go down to the place of his rest. Look ye well to the West—that ye may all say, God is our God, forever and forever, he will be our guide even unto death."

At a meeting of the Lodge, Oct. 24th 1825, a copy of this address was requested from brother Burr, and by a resolution of the Lodge the freedom of the Lodge was duly presented to brothers Burr and Buckley.

ELECTIONS.

Mount Horeb Chapter, No. 75, Kingston, Ulster co.

Seth Couch, High Priest; Henry Van Houtenbergh, King; John Beekman, Scribe; Edward Green, Treasurer; Lawrence Wilson, Secretary; Hiram Green, Captain of the Host; Henry F. Backus, Principal Sojourner; Henry Darling, Royal Arch Captain; Pierce Catlin, Abraham Myer, and Jacob Masten, Masters of Vails.

Regular communications Tuesday preceding full moon.

Kingston Lodge, No. 20, Kingston, Ulster co.

Elected December 27th, 1826: Henry Van Houtenbergh, W. M.; Henry S. Backus, S. W.; John Van Buren, J. W.; John Beekman, Treasurer; Lawrence Wilson, Secretary; Hiram Green, S. D.; Peter K. Allen, J. D.; Henry Darling and Lewis Mason, Stewards; Abraham Elmendorf, Tyler.

Regular communications, full moon.

Olive Branch Chapter, No. 99, Bloomingburgh, Sullivan county.

Daniel G. Niven, High Priest; Jacob Mills, jr. King; John J. Tappen, Scribe; Samuel G. Dimmick, Treasurer; ———, Secretary; Archibald C. Niven, Captain of the Host; Bevier Depuy, Principal Sojourner; James Marshall, Royal Arch Captain; Alexander Brown, Isaac B. Miller, and Stephen Newkirk, Masters of Vails.

Regular communications, Saturday on or preceding full moon.

Bloomingburgh Lodge, Bloomingburgh, Sullivan co.

Elected December 27, 1826: Alpheus Dimmick, W. M.; Flavel Mosely, S. W.; James Marshall, J.

W.; Cornelius Wood, Treasurer; John Drake, Secretary; Samuel G Dimmick, S. D.; Isaac Doolittle, J. D.; Joseph Miller, Tyler.

Grand Encampment of South Carolina.

At the annual meeting of the "Grand Encampment of Knights Templars, and the Appendant Orders, for the state of South Carolina," held in Charleston on the 27th February, 1827, the following Sir Knights, were unanimously elected officers for the ensuing year:—

Benjamin Green, of Georgetown, Grand Master; James Eyland, of Charleston, Deputy Grand Master; George Cuthbert, of Beaufort, Grand Generalissimo; Alexander M'Donald, of Charleston, Grand Captain General; William Lance of Charleston, Grand Prelate; D. V. Burton, of Georgetown, Grand Senior Warden; John M'Anally, of Charleston, Grand Junior Warden; Joseph M'Cosh, of Charleston, Grand Treasurer; C. C Sebring, of Charleston, Grand Recorder; C. W. Capers, of Charleston, Grand Warder; E. Benjamin of Georgetown, Grand Standard Bearer; Edward Sebring of Charleston, Grand Sword Bearer; John Roche of Charleston, Grand Sentinel.

Mount Vernon Encampment, Worthington, Ohio.

At the annual meeting of Mount Vernon Encampment, holden at their Asylum in Worthington, Feb. 22, the following officers were duly elected for the ensuing year, viz:

M. E. Sir John Snow, Grand Commander; E. Sir Ezra Griswold, Generalissimo; E. Sir Daniel Upson, Captain General; E. Sir. Bela Latham, Prelate; Sir Levi Pinney, Senior Warden; Sir Jonathan M. Smith, Junior Warden; Sir Potter Wright, Treasurer; Sir Joseph Leiby, Recorder; Sir Chauncy Barker, Sword Bearer; Sir Pardon Sprague, Standard Bearer; Sir George Sanderson, Warder; Sir Joseph Greer, Guard.

SCIENCE AND THE ARTS.

From the Rockingham Gazette.

The following paper has been communicated by the gentleman whose name is attached to it. It will probably excite the attention and investigation of those, to whom the subject may be in some degree familiar, who are qualified to judge of the merit of any new views exhibited in relation to it. We are assured that several gentlemen of respectability have expressed a wish, that a fair experiment may be made by the proper authority, under the direction of the gentleman by whom the theory is communicated.

THE GLOBE.

To ascertain whether the globe of earth on which we live is a solid or hollow sphere; and if hollow, how thick the shell of earth.

Old Theory.

It has been said that if the globe, (which is about

eight thousand miles in diameter) had an aperture through the centre, and that if a cannon ball was thrown into the aperture, it would gravitate towards the centre, and there after certain vibrations up and down, (as we should call it) settle at rest, four thousand miles from its surface.

New Theory.

It may now be stated, that if the Globe is hollow, and its shell or substance, composed of minerals, rocks, earth and water, should extend only thirty miles in depth, from the surface, all bodies or material substance, near the inward or outward surface, must be attracted, or gravitate to the centre of the side of the shell which is nearest, and those on the inside must also be strongly inclined the same way by the centrifugal force caused by the diurnal motion of the earth in combination with the polar attraction.* A ball thrown into a cavity of suitable size, made through the shell of earth, would vibrate up and down, come to a state of rest about fifteen miles below the surface. If two balls were thrown in at the same time, one from the inside and the other from the outside, they would meet at the centre.

If these axioms or propositions are admitted, and if the aperture in the shell was filled with water, and the water at any degree of depth was no more dense than at or near the surface, a ball weighing fifteen when under water near the surface, would weigh but fourteen pounds, at one mile deep, but thirteen, at two miles deep and so on; losing one pound each mile until about fifteen miles below or from the surface it would rest, and apparently, weigh nothing.

Such a weight would weigh one ounce less every twenty rods it was sunk in the water, and for any depth within fifteen miles. If the shell is sixty miles thick, the centre of its gravity must be thirty; such a weight would weigh but one ounce less for every forty rods in depth, and the proportion would continue the same for any depth under thirty miles. It may be inferred that the weight sunk eighty rods, or any given depth, would weigh less than at the surface in all cases; were the Globe solid, a weight would lose a portion of its gravity as it sunk towards its centre, but the loss would be too little in eighty rods, or any convenient depth of sounding, to be discovered by the most accurate method of investigation yet known. If no less can be discovered it must be admitted that the Globe is solid.

If loss of weight is discovered, by the proportion said loss bears to the whole weight and the known depth of water to which it was or may be sunk, the thickness of the shell of the earth may be found.

It must be remembered that the foregoing statements are made on the supposition that water at any depth, is no more dense than at or near the surface: Such a supposition, however cannot be admitted.

Water probably is, and may be proved to be elastic, and capable of being condensed into a smaller space than it naturally occupies.

It is not likely to have ever been known to what degree of density water can be compressed, nor what degree of force it may require, to condense it to any given degree of percentage.

The projector of this has invented a method or instrument by which the degree of density can be discovered and proved by actual experiment; by means of which a correct table of calculations can be made for the various depths of water, and so as to show the percentage of variation betwixt shoal and deep water.

The place for making actual experiment must be where there is a smooth deep water with little or no current.

If a table of calculations was made, that would correctly show, at one view, how much common sea water is condensed at twenty rods, how much at sixty rods deep or eighty rods and so on, and at what depth, if any there be, where two quarts are condensed into one. Such a table would show how to

* NOTE.—There is, undoubtedly, an attraction betwixt the inside of a hollow sphere, but that attraction may be exactly counterbalanced by the centrifugal force and the polar attraction. If the diurnal motion and polar attraction should cease, the several component parts of the Globe must tumble in a confused mass to the common centre.

If the diurnal motion was to be greatly increased, the Globe (having become too fragile to expand) must by increased centrifugal force, be severed into thousands of parts, and together with its rocks, hills and mountains in chaotic confusion be hurled into boundless space.

make correct allowance for loss of weight by density: and it may here be repeated that such an instrument and such a table can be made, and the method and proof be clearly, plainly and intelligibly demonstrated.

Should the foregoing theory, as far as explained, appear so plausible as to deserve a fair experiment; and particularly, if a government vessel should be directed to make the experiment when passing the calm latitudes, the necessary instrument, and particular directions for avoiding all inaccuracies that may seem liable to attend the use of dip lines when experiments are making, together with some further explanations deemed necessary can be had; and if it should be thought requisite, the particular attendance of the projector.

N. B. It is deemed important both to the theory of astronomy and to that of the tides, that the foregoing question should be settled.

BENJAMIN C. GILMAN.

CHARACTER.

DANTON, ROBESPIERRE, & MARAT.

From Sir Walter Scott's Life of Napoleon, just published.

Three men of terror, whose names will long remain, we trust, unmatched in history by those of any similar miscreants, had now the unrivalled leading of the Jacobins, and were called the triumvirate.

Danton deserves to be named first, as unrivalled by his colleagues in talents and audacity. He was a man of gigantic size, and possessed a voice of thunder. His countenance was that of an Ogre on the shoulders of a Hercules. He was as fond of the pleasures of vice as the practice of cruelty; and it was said there were three times when he became humanized amidst his debauchery, laughed at the terror which his furious declamations excited, and might be approached with safety, like the Maelstrom at the turn of tide. His profusion was indulged to an extent hazardous to his popularity, for the populace are jealous of a lavish expenditure, as raising their favourites too much above their own degree: and the charge of peculation finds always ready credit with them, when brought against public men.

Robespierre possessed this advantage over Danton, that he did not seem to seek for wealth, either for hoarding or for expending, but lived in strict and economical retirement, to justify the name of the Incorruptible, with which he was honored by his partizans. He appears to have possessed little talent, saving a deep fund of hypocrisy, considerable powers of sophistry, and a cold exaggerated oratory, as foreign to good taste, as the measures he recommended were to ordinary humanity. It seemed wonderful, that even the seething and boiling of the revolutionary cauldron should have sent up from the bottom, and long supported on the surface, a thing so miserably void of claims to public distinction; but Robespierre had to impose on the minds of the vulgar, and he knew how to beguile them, by accommodating his flattery to their passions and scale of understanding, and by acts of cunning and hypocrisy, which weigh more with the multitude than the words of eloquence, or the arguments of wisdom. The people listened as to their Cicero, when he twanged out his apostrophes of *Pauvre Peuple, Peuple vertueux!* and hastened to execute whatever came recommended by such honied phrases, though devised by the worst of men for the worst and most inhuman of purposes.

Vanity was Robespierre's ruling passion, and though his countenance was the image of his mind, he was vain even of his personal appearance, and never adopted the external habits of a sans culotte. Amongst his fellow jacobins, he was distinguished by the nicety with which his hair was arranged and powdered; and the neatness of his dress was carefully attended to, so as to counterbalance, if possible, the vulgarity of his person. His apartments, though small, were elegant, and vanity had filled them with representations of the occupant: Robespierre's picture at length hung in one place, his miniature in another, his bust occupied a niche, and on the table were disposed a few medallions exhibiting his head in profile. The vanity which all this indicated was

of the coldest and most selfish character, beings such as consider neglect an insult, and receives homage merely as a tribute; so that, while praise is received without gratitude, it is withheld at the risk of mortal hate. Self-love of this dangerous character is closely allied with envy, and Robespierre was one of the most envious and vindictive men that ever lived. He was never known to pardon any opposition, affront, or even rivalry; and to be marked on his tablets on such an account, was a sure, though perhaps not an immediate sentence of death. Danton was a hero, compared with this cold, calculating, creeping miscreant; for his passions, though exaggerated, had at least some touch of humanity, and his brutal ferocity was supported by brutal courage. Robespierre was a coward, who signed death warrants with a hand that shook, though his heart was relentless. He possessed no passions on which to charge his crimes; they were perpetrated in cold blood, and upon mature deliberation.

Marat, the third of this infernal triumvirate, had attracted the attention of the lower orders, by the violence of his sentiments in the journal, which he conducted from the commencement of the Revolution upon such principles that it took the lead in forwarding its successive changes. His political exhortations began and ended like the howl of a blood-hound for murder; or, if a wolf could have written a journal, the gaunt and famished wretch could not have ravened more eagerly for slaughter. It was blood which was Marat's constant demand, not in drops from the breast of an individual, not in puny streams from the slaughter of families, but blood in the profusion of an ocean. His usual calculation of the heads which he demanded amounted to two hundred and sixty thousand; and though he sometimes raised it as high as three hundred thousand it never fell beneath the smaller number. It may be hoped, and, for the honour of human nature we are inclined to believe, there was a touch of insanity in this unnatural strain of ferocity; and the wild and squalid features of the wretch appear to have intimated a degree of alienation of mind. Marat was, like Robespierre, a coward. Repeatedly denounced in the Assembly, he skulked instead of defending himself, and lay concealed in some obscure garret or cellar among his cut-throats, until a storm appeared, when, like a bird of ill omen, his death screech was again heard. Such was the strange and fatal triumvirate, in which the same degree of cannibal cruelty existed under different aspects. Danton murdered to glut his rage; Robespierre, to avenge his injured vanity, or to remove a rival whom he envied; Marat, from the same instinctive love of blood, which induces a wolf to continue his ravage of the flocks long after his hunger is appeased.

Danton despised Robespierre for his cowardice, Robespierre feared the ferocious audacity of Danton; and with him to fear was to hate—and to hate was—when the hour arrived—to destroy. They differed in their ideas also of the mode of exercising their terrible system of government. Danton had often in his mouth the sentence of Machiavel, that when it became necessary to shed blood, a single great massacre has a more dreadful effect than a series of successive executions. Robespierre on the contrary, preferred the latter process as the best way of sustaining the reign of terror. The appetite of Marat could not be satiated but by combining both modes of murder. Both Danton and Robespierre kept aloof from the sanguinary Marat.

Among the three monsters mentioned, Danton had that energy which the Girondists wanted, and was well acquainted with the secret movements of those insurrections to which they possessed no key. His vices of wrath, luxury, love of spoil, dreadful as they were, are attributes of mortal men; the envy of Robespierre, and the instinctive blood-thirstiness of Marat, were the properties of fiends. Danton, like the huge serpent called the Boa, might be approached with a degree of safety when gorged with prey—but the appetite of Marat for blood was like the horse leech, which says, Not enough—and the slaughterous envy of Robespierre, was like the gnawing worm that dieth not and yields no interval of repose. In glutting Danton with spoil, and furnishing the means of indulging his luxury, the Girondists might have purchased his support; but nothing under the supreme law of France would have gratified Robespierre; and an unlimited torrent of

the blood of that unhappy country could alone have satiated Marat. If a colleague was to be chosen out of that detestable triumvirate, unquestionably Danton was to be considered the most eligible.

From the London Monthly Magazine for January.

MR. SHERIDAN.

Taylor, of the Opera House, used to say of Sheridan, that he could not pull off his hat to him in the street without its costing him fifty pounds; and if he stopped to speak to him it was a hundred. No one could be a stronger instance than he was of what is called *living from hand to mouth*. He was always in want of money, though he received vast sums which he must have disbursed; and yet nobody can tell what became of them, for he paid nobody. He spent his wife's fortune (sixteen hundred pounds) in a six weeks' jaunt to Bath, and returned to town as poor as a rat. Whenever he and his son were invited out into the country, they always went in two post chaises and four; he in one, and his son Tom following in another. This is the secret of those who live in a round of extravagance, and are at the same time always in debt and difficulty—they throw away all the money they get on any new-fangled whim or project that comes in their way, and never think of paying off old scores, which of course accumulate to a dreadful amount. "Such gain the cap of him who makes them fine, yet keeps his book uncrossed." Sheridan once wanted to take Mrs. Sheridan a very handsome dress down into the country, and went to Barber and Nunn's to order it, saying he must have it by such a day, but promising they should have ready money. Mrs. Barber (I think it was) made answer that the time was short, but that ready money was a very charming thing, and that he should have it. Accordingly, at the time appointed she brought the dress, which came to five-and-twenty pounds, and it was sent in to Mr. Sheridan; who sent out Mr. Grimm (one of his jackalls) to say he admired it exceedingly, and that he was sure Mrs. Sheridan would be delighted with it, but he was sorry to have nothing under a hundred pound bank note in the house. She said she had come prepared for such an accident, and could give change for a hundred, two hundred, or five hundred pound note, if it was necessary. Grimm then went back to his principal for farther instructions; who made an excuse that he had no stamped receipt by him. For this Mrs. B. said she was also provided—she had brought one in her pocket. At each message, she could hear them laughing heartily in the next room at the idea of having met with their match for once; and presently after, Sheridan came out in high good humour, and paid her the amount of her bill, in ten, five, and one pounds. Once when a creditor brought him a bill for payment, which had often been presented before, and the man complained of its soiled and tattered state, and said he was quite ashamed to see it—"I'll tell you what I'd advise you to do with it, my friend," said Sheridan, "take it home and write it upon parchment!" He once mounted a horse which a horse dealer was showing off near a coffee house at the bottom of St. James' street, rode it to Tattersal's and sold it, and walked quietly back to the spot from whence he set out. The owner was furious, he swore he would be the death of him; and, in a quarter of an hour afterwards they were seen sitting together over a bottle of wine in the coffee house, the horse jockey with the tears running down his face at Sheridan's jokes, and almost ready to hug him as an honest fellow. Sheridan's house and lobby were beset with duns every morning, who were told that Mr. Sheridan was not yet up, and shown into the several rooms on each side of the entrance. As soon as he had breakfasted, he asked, "Are those doors shut, John?" and being assured they were, marched out very deliberately between them, to the astonishment of his self-invited guests, who soon found the bird was flown. I have heard one of his old city friends declare, that such was the effect of his frank, cordial manner, and insinuating eloquence, that he was always afraid to go to ask him for a debt of long standing, lest he should borrow twice as much. A play had been put off one night, or a favourite actor did not appear, and the audience demanded to have their money back again: but when they came to the door, they were told by the check takers there was none for

them, for that Mr. Sheridan had been in the mean time, and carried off all the money in the till. He used often to get the old cobbler who kept a stall under the ruins of Drury Lane to broil a beef steak for him, and take their dinner together. On the night that Drury Lane was burnt down, Sheridan was in the House of Commons, making a speech, though he could hardly stand without leaning his hands on the table, and it was with extreme difficulty he was forced away, urging the plea, "What signified the concerns of a private individual, compared to the good of the state?" When he got to Covent Garden, he went into the Piazza Coffee house, to steady himself with another bottle, and then strolled out to the end of the Piazza to look at the progress of the fire. Here he was accosted by Charles Kemble and Fawcett, who complimented him on the calmness with which he seemed to regard so great a loss. He declined this praise and said,—"Gentlemen, there are but three things in human life that in my opinion ought to disturb a wise man's patience. The first of these is bodily pain, and that (whatever the ancient Stoics have said to the contrary) is too much for any man to bear without flinching; this I have felt severely, and I know it to be the case. The second is the loss of a friend whom you have dearly loved; that, gentlemen, is a great evil: this I have also felt, and I know it to be too much for any man's fortitude. And the third is the consciousness of having done an unjust action. That, gentlemen, is a great evil, a very great evil, too much for any man to endure the reflection of; but that," (laying his hand upon his heart) "but that, thank God, I never felt." I have been told that these were nearly the very words, except that he appealed to the *mens conscia recti* very emphatically three or four times over, by an excellent authority, Mr. Matthews the player, who was on the spot at the time, a gentleman whom the public admire deservedly, but with whose real talents and nice discrimination of character his friends only are acquainted. Sheridan's reply to the watchman who had picked him up in the street, and who wanted to know who he was, "I am Mr. Wilberforce!"—is well known, and shows that, however frequently he might be at a loss for money, he never wanted wit!

VARIETY.

PATRIOTISM OF DEMOSTHENES.—While Alexander was pursuing his conquests in the East, Harpalus, to whom his treasure was entrusted, fled with the whole of it to Athens. Demosthenes advised his fellow citizens to expel him, to avoid Alexander's displeasure; but upon seeing the King's own cup of massy gold, curiously wrought, he asked Harpalus how much it weighed? "To you," said Harpalus, "it shall weigh twenty talents." He accordingly sent the orator twenty talents, with the cup, that night. Demosthenes came next day into the assembly with a cloth rolled about his neck, and his opinion being asked about Harpalus, he made signs that he had lost his voice!—*Patriar infelici fidelis*.

ORIENTAL JEALOUSY. The ladies of the Persian harem, when on a journey, are preceded, at about the distance of four score paces, by a troop of horse, who reiterate the cry of "couroue! couroue!" as a signal for every man to retire to a proper distance. So rigorous is the punishment of disobedience in this particular, that in the reign of Abbas 2d, one of the servants, whose employment it was to set up the tents, being weary with the march, after executing his office, laid down to sleep, the king and his women being then at a considerable distance. The poor fellow happened, however, to sleep beyond his calculation, and being found by the guards he preceded, was wrapped up in the carpet he lay on, and buried alive.

A man whose intemperance led him to crimes which brought him to the gallows, lamented that so many drops should end in one.

A gentleman going out a few days since to hunt with a friend of the name of "Horn," exclaimed, this is just as it should be, I shall hunt to-day both with *Hound* and *horn*.

POPULAR TALES.

THE HUSSAR'S SADDLE.

From "The Odd Volume," lately published.

Old Ludovic Hartz always regarded his saddle with the deepest veneration: and yet there appeared nothing about it capable of exciting his idolatry. It was a turkish saddle, old, and deeply stained with blood: yet, to the brave Ludovic, it recalled a tale of other days, when, young, ardent, and enthusiastic, he first drew his sword in defence of his country against its enemies.

He had been opposed in battle against the hostile invaders of his native Hungary, and many an unbelieving dog had his good sword smitten to the earth. Various had been the fortune of the war, and too often was the glory of the holy cross dimmed by the lustre of the triumphant crescent. Such sad disasters were seldom alluded to by the brave hussar, but he loved to dwell on the successful actions in which he had been engaged.

It was in one of these fierce combats that, suddenly cut off from his party, he found himself surrounded by four infuriated Turks. "But the recollection of you and your angel mother," would Ludovic say to his daughter, "nerved my arm. I was assailed by all my opponents. How three fell, I knew not; but severe and long was the conflict with the last of my foes, whose powerful arm was raised against me. Already I saw my wife a mournful widow and my child fatherless, and these dreadful thoughts infused fresh vigour into my arm; I smote the infidel dog to death, hurled him from his steed, and rifled him as he lay. At this moment, several of the enemy appeared in sight, but I was too much exhausted to renew the perilous conflict. My gallant horse lay wounded and in the agonies of death; I threw myself on the Turkish courser, and forced him on at his utmost speed until I regained my squadron. The saddle was steeped in the blood of my foe, and mine mingled with it. When a cessation of hostilities permitted the troops to rest for a space from the horrors of war, I hastened with the treasure which, during the campaign, I had acquired, to my home, purchased these fertile fields around my dwelling, and forgot for a season the miseries of war."

The good Ludovic would here pause. He still retained a lively recollection of his lost wife, and he could not bear to narrate the circumstances of her illness and death. After this sad event, his home became hateful to him, and he resolved again to engage in the arduous duties of a soldier. The little Theresa was kindly adopted into the family of his only brother, and there, after a lapse of some years, our good hussar found her blooming in youthful beauty.

Ludovic arrived only in time to close the eyes of his brother, who, on his death-bed, entreated him to bestow Theresa on his only son, when they should have attained a proper age. Grateful for his almost parental care of his child, and moved by the situation of his brother, whose whole heart seemed to be bent on this union, Ludovic promised that when his daughter should have attained the age of eighteen, she should become the wife of Karl, provided Karl himself desired the connection at that time; and, satisfied with this promise, the old man died in peace.

This engagement was concealed from Theresa, but it was known to Karl, who exulted in the thought that this rich prize would one day be his. With low habits and a coarse turn of mind, the delicate graces of Theresa had no charms for him, he loved her not, but he loved the wealth which would one day be hers, and which he looked on with a greedy eye. The thousand soft and nameless feelings which accompany a generous and tender passion were unknown to Karl. It was a hard task to him to attend his gentle mistress; nor did he ever appear disposed to play the part of a lover, except when some other seemed inclined to supply his place. It was a real fete, given by Ludovic to his neighbours at the termination of an abundant harvest, that Karl first chose openly to assert his right. He had taken it for granted that he should open the dance with Theresa. What, then, was his indignation, when, on entering the apartment, he saw Theresa, her slender waist encircled by the arm of a

young hussar, moving in the graceful waltz! The evident superiority of his rival, whose well-knit limbs, firm step and free and martial air, formed a striking contrast to his own clownish figure and awkward gait, only increased his ire, and, in violent wrath, he advanced to Theresa, insisting on his right to open the dance with her. Theresa pleaded her engagement; he persisted; she refused his request, and laughed at his anger. He became violent and rude. The hussar interfered, and the quarrel rose so high as to draw Ludovic to the spot.

Karl, in a voice almost choked with passion, laid his grievances before him. Theresa, in a tone of indignation, complained to her father of his insolence, and appealed to him whether she were not at liberty to select any partner for the dance she thought proper. "You have no such liberty!" thundered forth Karl. "You are my betrothed wife, and as such, you belong to me alone."

Theresa cast on him a smile full of scorn and contempt, but it faded as she looked to her father, and a deadly paleness overspread her countenance as she inquired, "Father, does this man speak truth?" "He does, my child," was the reply; and she dropped insensibly at his feet.

The young hussar now knelt down beside her, passionately kissed her fair forehead, and, raising her in his arms, bore her to an adjoining apartment, followed by the father and Karl. Theresa slowly revived. At first she saw no one, and breathing a deep sigh, murmured, "It was all a horrid dream!" An anguished groan startled her into perception and agony. She looked up and saw her father standing before her, with folded arms and a countenance clouded with grief. Karl also stood near with an exulting smile; and the hussar knelt beside her, but his face was buried in his hands. She then found it was no dream. She looked to her father. "Father, is there no hope?" "None, my honour is pledged." She then turned to the hussar, and placed for a moment her cold hand in his; then rising suddenly, threw herself at the feet of Karl.

"O Karl, I have mercy! I love and her—you do not love me—have pity on us!" "By all the powers of heaven and hell, you shall be mine, Theresa!" "I appeal to my father." "Will your father violate his promise to the dead?" "I will not," said Ludovic, with solemnity. "Then, Theresa," exclaimed Karl, with fiendlike exultation, "no power on earth shall save you from being mine!" and thus saying, he left the house.

Theresa rose from her knees, and threw herself into the arms of her lover. The presence of her father was no restraint on her pure tenderness. Her tears fell fast on his manly countenance, but his agony was too great for that relief. Ludovic was deeply moved. He approached them, endeavoured to calm their affliction, and related the circumstances under which this promise had been given; but his concluding words, "that he must hold it sacred," threw them into a new paroxysm of grief. "We must part, then, Arnhold," said the weeping Theresa; "we must part—ah! can we survive this cruel blow?" "No," said Arnhold, "no: I cannot live without you: let us once more entreat your father to have pity on us!" and the youthful lovers threw themselves at his feet. "Arnhold!" said Ludovic, sternly, "thou a soldier, and ask me to tarnish my honour!" Arnhold felt the appeal; he started up, raised the weeping Theresa, cut off with his sabre one long bright lock, embraced and kissed her, placed her in the arms of her father, and fled.

Every passing day carried with it some portion of the fortitude of Theresa, as if she saw the near approach of the period which was to consign her to a fate so dreadful. Three little weeks were all that lay between her and misery. Ludovic endeavoured to sooth her, but she would not be comforted. Had even her affections been disengaged, Karl would have been distasteful to her; but with affections placed on another, the idea of a union with him appeared insupportable.

"My child!" would Ludovic say, interrupting a passionate burst of grief, "by what magic has Arnhold gained possession of your heart?" "He is an hussar," replied Theresa. There was something in this reply which moved Ludovic: he recollected that he himself had imbued the mind of his daughter

with the sentiments of respect and esteem for the character of a good soldier; and conscience reminded him, that he had too often exalted the profession of arms above the peaceful and unobtrusive occupations of the husbandman. Was it wonderful, then, that Theresa should have imbibed something of this spirit? or that she should have yielded her heart to one who possessed courage to defend her, and tenderness to soothe her, under the afflictions of life? Arnhold dwelt near them; he had been the playmate of Theresa, and with glowing cheeks and sparkling eyes, they had often listened together to the warlike exploits which the good Ludovic delighted to relate to them; and to these conversations might be attributed the passionate desire of Arnhold to adopt the profession of arms. Accustomed to see them play together as children, and liking the society of the generous and spirited boy, Ludovic forgot the danger, when their childhood passed away, of their affection assuming a totally different character. It was so, and Ludovic now saw with deep grief that his daughter was unalterably attached to the young soldier.

If Theresa was unhappy, her father was scarcely less so: he blamed his own imprudence; and on contrasting the characters of the two youths, a violent conflict between his feelings and his duty arose in his breast; the stern honour of a soldier triumphed, and he deemed himself bound to complete the sacrifice. Unable, however, to endure the sight of her grief, he carried her to the abode of a youthful female friend, who formerly resided near them, but on her marriage had removed to a village about sixty miles distant. There he left Theresa, after receiving her solemn promise that she would return with him the day before that on which she should complete her eighteenth year. "Father," said she, with streaming eyes, "I have never deceived you. If I live, I will return: but do not grieve too deeply should my heart break in this fearful struggle." The old hussar dashed away a tear which strayed down his scarred and sunburnt cheek, embraced his child and departed.

Time wore gradually away, and at last the day arrived which was to seal Theresa's fate. It found her in a state of torpid despair. Exhausted by her previous struggles, all feeling seemed dead; but her mind was awakened to new suffering. A friend arrived to conduct her to her father. The good Ludovic lay, apparently, on the bed of death; and with breathless impatience Theresa pursued her journey.

On her arrival her father's sick-room was not solitary. The detested Karl was there, and there too was the youthful hussar. "My child," said Ludovic, "my days are numbered: my fate must soon be decided, and, alas! yours also! To my dying brother I solemnly promised, that on this day I would offer you to his son for his bride. Without fulfilling my engagement, I could not die in peace: even the grave would afford no rest. Can you sacrifice yourself for my future repose?" "I can—I will," cried the unfortunate Theresa, sinking on her knees, "so help me Heaven!" "Heaven will bless a dutiful child," said Ludovic, with fervour. "Karl, draw near." Karl obeyed—Theresa shuddered.

"Karl," said Ludovic, "you say you love my child: cherish her, I conjure you, as you hope for future happiness. In her you will possess a treasure; but I must warn you, she will bring you but one portion of my possessions." Karl started and retreated a few steps. "That, however," continued Ludovic, "which I look upon as my greatest earthly treasure, I give you with my daughter. You, Karl, believe me to have some virtues. Alas! alas! you know not the secret sins which have sullied my life—the rapine, the murder—but enough of this! I have confessed to my spiritual father, and have obtained absolution for the dark catalogue—but on condition that I leave all my wealth to the church as an atonement for my transgressions. I could not forget I was a father: I pleaded the destitute state of my child—I implored, I entreated—at length I wrung from the pious father his consent that I should retain my greatest treasure for my Theresa, I chose my saddle. Keep it dear child, in remembrance of an affectionate father. And you, Karl, are you satisfied to relinquish worldly goods for the welfare of my soul? Are you content to take my daughter with this portion?"

"Fool!" exclaimed Karl, "doting idiot! how dare you purchase exemption from punishment at my expense! Your wealth is mine; your possessions must be the portion of my bride. I will reclaim them from those rapacious monks, and tear them from the altar!"

"You cannot, you dare not," replied Ludovic, raising his voice in anger—"my agreement with your father had reference to my daughter only—my wealth formed no part of it."

"Driveller! dptard!" vociferated Karl, "think you that I will accept a portionless bride? You must seek some other fool for your purpose: I renounce her."

"Give her to me, father!" cried Arnold: "I swear to cherish and protect her while I live. Give her to me, and when she shall be the loved wife of my bosom, I will live for her—aye, and die for her!"

Karl laughed in mockery. "You value life but little," said he, "to talk of sacrificing it for a woman. I never knew one worth the trouble of winning, and least of all Theresa."

The young hussar laid his hand on his sabre. Theresa threw herself between them. At the same moment Ludovic sprang from his couch, tore the covering from his head, snatched his saddle from the wall where it hung, seized his sabre, with one stroke laid it open, and a stream of gold, bezants, Oriental pearls, and sparkling jewels, fell on the floor. "Wretch! worm! vile clod of earth! art thou not justly punished? Hence reptile! begone before I forget that thou art of my blood!" Ludovic raised his sabre, and the dastardly Karl fled, without daring to give utterance to the imprecation which hung on his colourless lips.

Trampling under foot the costly jewels which lay strewed around, Theresa rushed forward and embraced her father, exclaiming, "Is not this a dream? Are you indeed restored to me? Can this bliss be real?"

"Forgive me, my child," exclaimed Ludovic, "the pain I have been obliged to give your gentle heart. My effort to make that wretch resign his claim to your hand has been successful. Grudge not that part of our store has been appropriated to the holy church—not to purchase forgiveness of the sins I mentioned, and of which, thank Heaven, I am guiltless, but to be the blessed means of saving you from a miserable fate. Kneel down, my children—aye, support her, Arnold—lay her innocent head upon your bosom, and receive the fervent benediction of an old hussar."

COMMON SENSE AND GENIUS.

There is no greater error current, than the almost universal belief of mankind in the infallibility of genius. It is not only an error of juvenile years, but in many instances is advocated by men of riper age, whose experience ought to correct, and whose discretion ought to suppress its bias on the minds of those they are leading on to action.

We discover this dangerous confidence in many parents, who see, or imagine they see in their children, at a very early age, the most incontrovertible proofs of a great mind. For example, a mother notices the wonderful memory, or the amazing docility of a favourite child. This through the magnifying powers of maternal fondness, and the credulity or flattery of the family and neighbours, is sufficient to settle his fame forever. He is a genius. He must not be fed, clothed or taught like the other children of the neighbourhood. He must not debase the hand which is hereafter to lead the minds of millions,—the foot which is to step forth in the glory of intellectual superiority, by the mean and servile labours of the field or the shop.

The brow, of whose bend the remaining shades of ignorance and barbarity are to be driven from among nations, must not be soiled by the dust and sweat of rural toil. He must be taught and lectured till his unassisted faculties are disgusted; and the consequence is he grows up without a trade, without employment and a dunce.

But in the minds of youth, the effects of this evil are multiplied by the innumerable methods of its operation. No sooner does a young man, by some

bright flash of his fancy, draw the attention of some few friends "to him and literature,"—no matter how incompetent to criticise,—then he sits himself down as a finished scholar. He is no longer a student. His Xenophon and his Cicero are no longer needful to him. He is a genius. He has inherited from nature what those great critics acquired by industry and reflection. He deems that in his fancy is found the sublime in its purity, and that the crude utterance of his more crude thoughts is inimitable oratory. Here the evil begins; and whether the subject be a devotee to literature, the sciences, or the fine arts, the result only varies, as it is coupled with some ruling passion or foible of his own.

If the youth be excessively fond of praise, he is perpetually throwing his works in the way of such readers as he thinks most likely to flatter, or whose praise he esteems most flattering. If they praise him, it only increases his fever for applause; but if his works meet with censure from any source, his mouth is full of complaints against the ungrateful world, and its inherent enmity to genius.

A poem whose jingling rhymes, and imposing metre, have led the author to an alarming distance from originality, meaning or elegant expression; or a prosing article where his volubility of bombast carries him from object to object, with neither connection nor definite end,—or a musical performance with

"———charms to soothe a savage—
"To soften rocks, and——split a cabbage"

is often the source of great mortification to a young man, without producing the least advantage which common sense may always draw from every unsuccessful attempt.

There are some who cannot endure praise; as there are people who cannot abide prosperity. In this rank I might name some of our living poets. They shine like stars when they first discover themselves to the world, but the *soft soap*, so plentifully applied by those who are entirely beneath them in genius, soon obscures their brilliance, and they go out unnoticed.

I shall name only one consequence now, which is the most disastrous of the whole catalogue of aberrations of Genius. It is when this opinion of the omnipotence of the fancy is combined with an indolent and tardy disposition.

The little work of Miss Edgeworth, entitled "*To-morrow*," and another juvenile volume named "*The Son of a Genius*," are so expressive of the whole process of procrastination, in a person of this description, that I cannot read them without such compunctions as bring on a pretty severe fit of the hypo. They are faithful—too faithful representations of real life. The youth, when once confirmed in his belief, that he has a great genius, and that genius is to become, at no distant period, a source of honour, and profit to him, rests at his ease, and never awakes from his delusion, till the days of his usefulness are gone, and he is left with the same to-morrow before him which has promised him so much, now divested of all its promises, and threatening him with want and oblivion.

Any man who carefully reflects on the many promising ones who have fallen a sacrifice to this erroneous opinion, will not dissent from me when I say, that there is no real worth in a brilliant fancy without Industry—no profit, but on the contrary, a lamentable evil in Genius without Common Sense.

ON THE PASSIONS.

NO. IV. OF ANGER AND ENVY.

All human virtue to its latest breath,
Finds envy never conquer'd but by death. [Pope.]

In commencing this essay it may be necessary to observe, that the passions are occasioned by the reaction of the intellectual faculties on the nervous system. We cannot comprehend this inconceivable co operation; for it is one of those secrets which God has not entrusted to man, and it is a secret which perhaps will never be discovered in this world, though we may probably be acquainted with it in that which is to come. The seat of the mind has been variously conjectured, and is described by

Descartes, as making its place of habitation in the pineal gland; which has never been discovered to be of any signal use to the brain. But in the opinion of most learned men who have bestowed attention to the subject, the mind pervades the whole system, in the same manner that caloric, or the principle of fire is found throughout the universe. Had I the invention of Archimedes, the reason of a Demosthenes, the profound knowledge of the system of a Hippocrates, an idea of the operations of the human mind like a Locke or Bacon, and the sublime pencil of a Homer, Horace or Virgil, I should fall far below the power of describing the situation and operations of the human mind. We are certain, however, that the passions which agitate, and sometimes threaten, and even do destroy the human fabric, originate solely from the operations of the mind upon the body. Temper, in man, should never be destroyed; for that would take from the system a powerful spring; but should be so regulated by reason, that it may not prove detrimental to the peace and happiness of society. An excess in anything destroys its utility, and renders it, though it may be specific when properly used, poisonous in its effects. The abuse or excess of temper may properly be called anger.

Anger is the most tempestuous and unruly passion that agitates the human frame. It is like the deluge of burning lava, that rolls in restless floods, from the summit of Vesuvius or *Ætna*, sweeping all before it in its devouring course, until it is stopped by the billows of the ocean. So, when an angry man is aroused in his fiery zeal, he dashes down every opposing barrier before him, and often tramples upon the sacred liberties of virtue and religion. Nothing can stop him in his wild career, until the friendly voice of reason whispers in softest accents, and bids his troubled bosom to be still. Galled by the real or imaginary injury, he gives a loose to that most terrible trumpet in the universe, the tongue, and frequently destroys that friendship which he has been at great pains to secure, and which can never be regained. Plato says we may discover those internal faculties of a man by his words, which it would be otherwise impossible to behold; and hence we see an angry man belching forth a consuming flame. The emperor Marcus Aurelius, who was celebrated for the mildness of his temper, said that Cæsar gained the empire by the sword, Augustus by descent, Caligula by the merits of his father, Nero by his tyrannical power, Titus by conquering Judea, but he himself, who was of low birth had come to the throne by his patience and gentleness of disposition. How much more amiable was the character of Marcus Aurelius, who had gained a kingdom without shedding blood, solely by conquering his own temper! Anger deprives a man of the proper use of his faculties, and blinds the eye of judgment in such a manner that he often, in a fit of frenzy, precipitates himself headlong into the gulf of the vilest error. I do not recollect of ever having read a more just observation than may be found recorded by Seneca. "Alexander," says Seneca, "had two friends, Clytue and Lysimachus; the one he exposed to a lion, the other to himself: he who was turned loose to the beast, escaped; but Clytue was murdered: for he was turned loose to an angry man." This observation of Seneca should be engraved on every man's heart, who is subject to the inundation of this dreadful passion. A man in a paroxysm of anger may slay another, when a few minutes reflection from reason will persuade him that he would give all in his power that he had not committed the awful deed, though he may be so fortunate as to escape from the penalty.

But notwithstanding what has been written with respect to anger, there is still a more deadly passion to the mind, which is envy. Envy, according to Lord Bacon, never has a holiday; but is ever busy in tormenting others, and in gnawing its own vitals. The envious man is miserable when he views the prosperity of another; and is never happy but at the expense of the misery of his fellow man. If we view an envious man melancholy, we may, with propriety, ask him in the language of Bion, what distress has come upon himself, or what good or happiness has fallen to another. The envious man is a much more dangerous character than the angry one; because he generally wears the cloak of

friendship, by which means he conceals the fatal dagger which he plunges to the heart in an unguarded moment; and views with a secret pleasure, the crimson current of character which flows at his feet. He cannot feel, for his heart is dormant. Conscience cannot affect him, for it is seared; and he is a fit subject to be chained with the devil himself. The smiles of his fellow men are arrows to his heart; and he triumphs over the grave of the unfortunate, but he despises the praises bestowed on his monument. He is rich in the wants of another, and happy in the sorrows of his rival. He will profess to love, to admire, and even to adore the good qualities of another, when he is at the same moment preparing the poison of deadly hate which will kill the happiness of his neighbour; and he rejoices while he pretends to solace the grief which he has ungenerously inflicted. Anger roars like the lion, but envy bites like the serpent. Anger is candid in making itself understood, but envy has many ambiguities and sly insinuations, which wound deeper and deeper, until they are discovered. Anger is a warrior, that meets his enemy undaunted on the field, but envy is the midnight assassin, who creeps upon sleeping innocence, and dispatches the unhappy victim without an idea of the murderer. Anger uses truth in its recital of injuries, but envy is a notorious liar, yet creating plausible stories. Anger pays no respect to time and place in attacking his enemy, but envy waits for the secret opportunity to make the mortal stab. Anger makes the more noise, but envy commits the greater depredations. Anger is violent for a moment, but envy lasts through life. The angry man will readily forgive his adversary when he is laid in the dust, but envy dances in triumph on his grave. Envy cannot be easily extinguished; when it has viewed its opponent fall covered with sorrow, it envies the good name which some bestow; it envies the decent solemnity of his funeral; it envies the tears of his hapless wife and children, and like the serpent when irritated, it bites itself. Envy caused the arch enemy to seek the destruction of our first parents, which brought sin and death upon all the human race. A certain French writer, in speaking of the envious man, says, "his two greatest favorites are lies and falsehoods, and he feeds on his own heart, which he gnaws night and day." In his eyes may be seen despair, and beneath his tongue is the venom of the tarantula. His breath is the siroc wind, and his words are fatal as the Upas drop. He is despised by God, hated by men, and the darling jewel of the devil. His birth-place was hades, and his final resort will be hell. If conscience is intended to be the hell hereafter, how much more severe will it be to the envious man, when, like Dives, he lifts up his eyes in hell and views the innocent man afar off whom he persecuted in this world; and whose character he trampled under his feet. Anger and envy both have a tendency to debase the mind, and render man miserable to himself. They destroy health, cheerfulness and innocence, with all the social virtues of the soul; and not unfrequently doom the characters of their possessors to incorrigible ignominy and contempt.

MILFORD BARD.

ALBANY:

SATURDAY, MARCH 17, 1827.

G. and MILFORD BARD must accept our thanks for their attentions.

We hope LARA will forget to remember his promise. Mental labour improves the mind.

SIMON is received. We thank him for his essay, but decline publishing it, in consequence of having resolved to avoid intimacy, as far as possible, with the deluded and unfortunate man against whom his satire is directed. If SIMON will turn his attention to subjects more worthy of his pen, we shall be glad to hear from him as often as convenient.

The fifth day of April has been set apart by Governor LINCOLN, of Maine, as a day of Humiliation, Fasting and Prayer. An extract from the

proclamation is subjoined. The editor of the Boston Courier remarks, that "it is beautifully conceived and happily expressed. Happy will it be for the worshippers on that day, if clergymen will imitate the thoughts and style of the proclamation."

"I recommend to each citizen to observe the day as a Christian—if he be under the influence of any vice, to banish it—if in error, to correct it—if under obligations to others, honestly to discharge them—if suffering injuries, to forgive them—if aware of animosities, to extinguish them—and if able to do any benevolent act to any being, created by the Almighty Power to which he owes his existence and his faculties, to do it. And, with a conscience thus prepared, may we visit the Temple of God, to worship Him with that humble and happy disposition which always belongs to piety and innocence; beseeching Him that the religion he sent by our Saviour may not be perverted through the pride and prejudices of sectarianism, but may universally receive the homage of a correct faith and good works. Especially, I recommend that, being members of one great community, we unite as Christian Politicians, so that we may render perpetual the peace and prosperity of our country and of this State."

We have been denounced by another popular cabal. We do not view this as a matter of much importance, either to ourselves or any one else. These "specks of war" can never grow into consequence—their nature forbids it—they originate in dishonesty and intemperance, and must die with the disease that produced them. We never courted nor expected the approbation of such men as have aimed their venom at our well-being, and we are very confident that we shall never be intimidated by their ill-nature or their curses. Our conclusions relative to Morgan were drawn from rational premises, and we intend to stick by them until they are proved to be erroneous; and when that is done, we will freely exchange them for such as may be deemed more correct. We never did believe that Morgan was murdered, and, further, we never intend to believe so, until we hear some very good reason for it. Now, if this doctrine does not suit the Dr. Cantwells and D. Slops of the west, we can't help it. We are always proud of the good opinion of honest men; but to be the favourite of a parcel of enthusiastic fanatics, would, to us, be the source of much mortification and sincere regret.

We have received the March number of *The Casket; or, Flowers of Literature, Wit, and Sentiment*. Our readers are already acquainted with the merits of this useful and amusing miscellany; and it is scarcely necessary to add, that each subsequent number prefers new claims upon the patronage of the reading public. It is published monthly, by Atkinson & Alexander, Philadelphia, in numbers of forty octavo pages, for two dollars and fifty cents a year. The present number is embellished with a Likeness of John C. Calhoun, Vice-President of the United States; a view of Catskill Mountain House, at the Pine Orchard; four numbers of *The School of Flora*; and a Ballad, called "To Day, Dearest, is Ours,"—set to music.

The New-York Literary Gazette is discontinued and Mr. Brooks is now the literary editor of a new daily paper entitled *Morning Chronicle*. In his valedictory he says the *Literary Gazette* was never a profitable concern.

The New-York Mirror is to undergo many improvements at the close of the present volume.

The New-York Reflector and Firemen's Intelligencer, a very deserving publication, is soon to be united with the *New-York Spy and Dramatic Repo-*

sitory, which is also a publication of much merit, and possessed of peculiar attractions for dramatic readers.

The *Literary Gazette*, for the publication of which proposals were recently issued, is not to be published. The *Philadelphia Album* is to take its place, and Dr. M'Henry, the intended editor of the contemplated publication, will fill the editorial chair.

Last evening's western mail brought us a paper containing two letters from Dr. Terry on the subject of "the letters." One is short, and will be found below; the other is longer, and has a long postscript appended to it, and shall be published next week, unless it be crowded out by more important matter. The Doctor denies positively that he gave the account published in "the letters," and "conceives" himself "to be highly imposed upon by the committee." He says they had "no ground" to state that a lodge of British masons was called; that Mr. Brant was sent for; that Morgan was taken to Mr. M——'s house; that two or more masons from Niagara were present at the meeting, &c.: "the whole of these statements he totally denies as being the author." Yet the Doctor entertains "no doubt" that the committee did receive the "substance" of those statements from "some source." He says he did have a talk with the committee on the subject of the Morgan affair, on which occasion he was very particular to tell them that all he said was mere "hearsay;" and as to the implication of Mr. Chapin, he says he "never made any statement from which any man in his ordinary senses could have possibly taken such conception." This is a harsh dose for the "confidential" letter-writers, and may possibly improve their recollection a little—"a consummation devoutly to be wished." Bates Cook, the man that was so "happy" when the "able-bodied men, seventeen in number," arrived at Lewiston, said in his letter that Dr. Terry was a man "whom it would be difficult to impeach;" and if this be true, he must himself be a sort of dubious personage.

Niagara, March 10th, 1827.

I hereby certify, that I in no one instance gave the name of Seth Chapin as being concerned in the Morgan affair, and that Dr. C. Backus or any other man, had not, or now has, any right to say that I ever gave such information.

WILLIAM TERRY.

THE PETITION.

On Friday of last week, Mr. Granger, of the house of assembly, presented to that body, a petition, signed by forty individuals, praying the legislature to interfere in the case of William Morgan. This petition was immediately referred to the committee on the courts of justice, but that body was subsequently relieved from a consideration of it, and the petition is now in the hands of a select committee, composed wholly of men who are not masons. These forty petitioners, it appears, are the famous convention, whose minority of seventeen, with the help of one Dr. Terry, whose character is too notorious to need an illustration from us, recently contrived to make so much splutter about Morgan. The petition is a singular production; being a compound of credulity and wilful error. Its fate can scarcely be guessed at. The excited state of the public mind may induce the legislature to enter into measures which justice does not demand; but it is possible, though not very probable, that, after a proper investigation, the petitioners may be disappointed in their expectations. We certainly have no objec-

tions to the interference of the legislature in the affair of Morgan; for the interests of masonry require that the man's fate should be known, and that the guilty, if there be any, should be punished: but we do not believe it would promote the ends of justice to give a legal character to the proceedings of the Lewiston convention. It cannot be denied that at least the letter-writing portion of that body, has been guilty of indiscretions which disqualify it to use properly the power it seeks for. If any are to be clothed with authority, let them be men who are free from prejudice and hasty zeal—men who are possessed of enough moral courage to pursue an investigation till they arrive at the truth, and who can turn a deaf ear to the importunities of the knaves who stand ready to beset them on every side, and lead them astray with false reports and slanders against the living and the dead. That such men are not to be found in the ranks of the Lewiston Convention, is, we believe, generally conceded; and the necessity of selecting from another source, when it shall be thought proper to comply with the petition, is, we hope, apparent to the legislature.

THE LETTERS CONTRADICTED AGAIN!

From the Rochester Daily Advertiser, of March 8.

The articles given below require little other preface than the remark, that they reached here by the mail since our last was printed off.

The members of the Lewiston Convention must, we should think, see the necessity of making some official explanation to the people, now that such pointed contradictions are given to the letters recently published from individuals of their body. The unparalleled and increasing excitement that prevails around us calls more strongly than any thing we can say for such an explanation, including, of course, a statement of the authorities on which is founded whatever information they have—so that, if it be satisfactory, the accused may be taken, and the ends of justice fulfilled; or, if not, that indignation may follow the wretches who have trifled with the Convention, and the people set out once more to thread the maze in which they are left by the taking away of Morgan.

Niagara, U. C. March 3, 1827.

To the Editors of the Rochester Daily Advertiser.

GENTLEMEN—On my return from my parliamentary duties at York, I observed in the Albany Observer a letter dated "Lewiston, N. Y., Jan. 12th, 1827,"—in which I perceive some indirect allusions to the name of "M. . . .," a member of Parliament, to whose house, it is there stated, a William Morgan of Batavia was brought "blindfolded and tied." Now, gentlemen, I beg leave to declare through the medium of your paper, to your readers and the world at large, that no such occurrence ever took place—that on the night of the 14th September, 1826, nor at any other time, was Morgan in my house, to my knowledge. And I further declare the said Morgan is to me an utter stranger, except as to report; that I never exchanged a word with the man in my life, and would not know him from the greatest stranger in existence.

In justice to my own reputation, as well as that of my family and friends, I hereby most solemnly assert the whole statement to be utterly false and unfounded. And further, that I never conversed with the brother of . . . [Stocking] of Buffalo, on the affair of Morgan, as to his abduction or destruction, till after the appearance of the letters alluded to, in that paper, when I called on him for that purpose, and he then most explicitly declared that he had never given me as his author to Dr. . . . and admitted that I never had the slightest conversation with him on the subject previous. I could add to the foregoing declarations and assertions, my own affidavit, if necessary, as well as that of my family, consisting of three persons and a worthy and respectable gentleman and lady, who slept that night in my house. I cannot refrain from expressing my belief before I close this letter, that malice, envy, and foul revenge, are at the bottom of the heart of him, whoever he may be, that would thus villainously attempt to assassinate the character of any man in society. I mean to cast no reflection on the characters of the gentlemen who formed the committee of vigilance, but on him to whom it justly belongs. And from declarations made, even on the BED OF DEATH, that he, the Dr. . . ., would be revenged of me, for assisting to destroy a den of rogues and coiners, with whom he was implicated, has been his only inducement thus to do.

As, gentlemen, I am the only member of Parliament, residing in Niagara, whose name commences with the letter M I have come to the conclusion that I am particularly referred to, and beg you will insert in your paper, this refutation of the infamous and foul charges. I am, with respect, your obt. serv't.

EDW. M'BRIDE, M. P. P.

[* There is some obscurity in this sentence, arising partly from an allusion to a local circumstance, with which the public is not generally acquainted. The reader will, however, by an attentive perusal, collect enough to understand the writer's meaning.—Eds. R. D. Ado.]

Niagara, March 2, 1827.

To the Editors of the Rochester Daily Advertiser.

GENTLEMEN—I have lately seen in the United States papers a letter signed F—B—, dated Rochester, Jan 30th, 1827, containing a statement from one Dr. . . ., relating to the unhappy transaction of one William Morgan. In that letter it is

stated that the said Dr. . . . obtained his information from . . . a brother of . . . of Buffalo. As I am, to the best of my knowledge, the only person in this town that has a brother residing in Buffalo, I am induced to believe that Dr. . . . intended to allude to me.

I once had conversation with a Dr. Terry of this town, and told him that I had heard certain reports relative to Morgan, but I did not intend he should consider them as facts, but gave the report as I received it, as common place talk; and I would say further, that I know nothing of the transaction whatever, and never had any conversation with Mr. M— (M'Brade) on the subject, until after his return from York, which was about the 24th ult., when he called on me for the purpose of an explanation.

JARED STOCKING.

Since the above was put in hand, we received the Niagara Gleaner, containing the following, which, as will be seen, contradicts entirely one of the principal and most serious statements contained in the letters of members of the Lewiston Convention:

To the Editor of the Albany Observer:

SIR—We have seen a series of letters in a late number of your paper, purporting to be communications from certain persons who have (it would appear) been actively engaged in this neighbourhood to discover the fate of Morgan.

Now, sir, we the undersigned, who were office bearers of the Lodge at this place, at the time on which it is said this affair of Morgan occurred, deem it our imperative duty to repel the foul and slanderous charges, which are, in those communications preferred against us, relating to that transaction. It is there stated, from the information of a certain Dr. . . . of this place, that Morgan was brought here and offered to the Lodge; that the Lodge convened on the occasion, and sent for Mr. Brant, who came, but refused to have any thing to do with the affair.

The object sir, of this communication is to inform you, and your readers, that (whatever might have been the fate of Mr Morgan), this Lodge never met on any such occasion; neither was there any such proposition ever made to us, nor was the name of Morgan ever mentioned in our Lodge at any of its Meetings. The whole story as relates to us, is entirely false and unfounded.

We request, sir, that you would have the goodness to transmit the names of your correspondents in this affair, as also, that of the Dr. . . . from whom they had their information with as little delay as possible.

We are yours respectfully,

ROBERT KAY, P. M.

SAMUEL POTTS, P. S. W.

JACOB DUSRELER, P. J. W.

Lodge No. 4, Niagara, U. C.

Niagara, U. C. March 3, 1827.

From the New York Commercial Advertiser.

The following remarks were prepared to accompany the letter of Capt. Brandt, published last evening, but were excluded for want of room: As at this distance from the circle in which he moves, his character may not be correctly known. (to quote the Editor of the Quebec Mercury,) it is but justice, since his name has been brought forward, to say, that Mr. Brandt is generally respected; and there need be no hesitation in believing what he says. He is a well educated young man, and was as much esteemed by the Officers of the division of His Majesty's Army, with which he served during the last American war, for his gentlemanly manners in society, as for his courage and humanity in the field. Mr. Brandt sometime ago visited England, and while there surprised the public, and the poet, Thomas Campbell, by a letter, as creditable to his filial feelings as to his literary attainments; in which he successfully vindicated the character of his deceased father, Joseph Brandt, from the aspersions cast upon it, without sufficient enquiry, by Mr. Campbell, in the beautiful, but unfaithful narrative poem of "Gertrude of Wyoming."

Thus, then, every material point of the alleged discoveries of the celebrated Newark Convention, has been successively overthrown. We are told that Morgan was taken to Niagara and butchered, and that Mr. Chapin, of Buffalo, was one of the murderers. But that story proved not to be true: We were told that traces of blood, &c. were found in Fort Niagara. But that is not true. We were told that Captain Brandt was consulted about killing him, or putting him away; and that was not true. We have all along been told, moreover, that there was a conspiracy originally, to get Morgan from Batavia to Canandaigua, on a false accusation of larceny: And now a jury has solemnly declared that that story was likewise untrue. And one of the men convicted at Canandaigua, was convicted by means of perjury. A gentleman in one of the Upper Canada papers, under his own signature, argues very plausibly, from the fact of Morgan's having left that province over head and ears in debt, that he dares not show himself there, and suggests reasons why he has probably gone off to the wildernesses of Ohio; while it is stated in a Jefferson county (N. Y.) paper, that it is believed that Morgan was on board the Lady of the Lake, which was, with every soul on board, lost in December last, on Lake Ontario. Now amidst all these falsehoods, contradictions, and absurdities, what are we to believe?

From the United States Gazette.

We care not to give currency to the gossip relative to "Poor Morgan;" we have only occasionally, referred to the reports respecting him, but as certain of the public are extremely anxious to know all about him, we shall state that this same CAPTAIN Morgan, was a resident of York, U. C.; that owing to his bad habits, he became deeply involved in debt, to avoid the payment of which, he fled by stealth across the lines, and took up his abode in New York state, where he probably met with, if he had not found before, a two-penny pamphlet upon masonry: which he enlarged with a preface, and offered to publish.

The abduction it is probable, was a part of the plan to excite attention to his book—he may be secreted in Canada, to escape detection in the States—there it would not do for him to be dis-

covered, as "imprisonment for debt," says the writer of a letter, "amounts to perpetual imprisonment."

The above hints we derive from the Colonial Advocate, published in York, (U. C.) they are furnished by a gentleman of respectability, who knew Morgan well—and who also knew him capable of any and every deception, to affect his ends.

FOREIGN NEWS.

ENGLAND.

The British parliament assembled on the 8th, and the great topic of interest was the belief that the corn laws would be taken into immediate consideration. The ministers have, however, announced that the subject would not be brought forward until the 18th of February. Mr. Canning is to introduce the question to the Commons, and Lord Liverpool in the House of Lords.—The Duke of Sussex had been dangerously ill, but at the last accounts he was convalescent.—Thomas Moore has a new comedy in rehearsal. George Colman has just finished another. This latter writer is on the point of publishing his memoirs.

FRANCE.

The French chambers have been engaged in a warm discussion about the payment of certain debts due by Charles X. to creditors who had advanced money to him in the earlier stages of the French revolution. It appeared that the claims were well founded, but they were got rid of (for the present) by "the order of the day."—The Austrian ambassador at Paris, (Count Appony) has given orders to his footmen to pay no respect to such of the French dukes as draw their titles from Austrian provinces, or victories gained over the Austrian armies. This is not only absurd and insulting but it is ludicrous. The Austrian court recognized all these titles for twenty or thirty years without a murmur or protest. The chief officers of the army and a great number of peers had resolved not to visit the ambassador again.

GERMANY.

Beethoven, the celebrated composer, is no more. He died of a dropsy in the abdomen, at Vienna.—The town of Biel, in the valley of Conche, (Switzerland) was destroyed by an avalanche, on the 17th Jan. About 50 houses were in ruins and a great many people maimed or killed. Another avalanche fell at the baths of Louesche, which covered up, and filled the empty space formed by the barriers erected for the preservation of the village and baths, so that great fears are entertained that on the first fresh fall of snow, or when the spring thaws commence, a second avalanche tumbling over the first may sweep away the village, and the whole of the bathing establishment.

From the London Courier.

GREECE.

We have received, this morning, the Austrian Observer to the 25th inst. From the extract which we subjoin, it will be seen, that if its statements respecting Greece are at all to be depended upon, the negotiations lately mentioned as about to be opened, by England and Russia, with the Porte, in favour of the Greeks, will not be entered upon too soon, if they are to be conducted in behalf of any thing like a Government:—

VIENNA, Jan. 21.—Accounts from Corfu of the 1st January, say that the greatest anarchy prevails at Napoli di Romania. The several Chiefs who are in that fortress are engaged in continual quarrels, which often end in blood-shed. Those who are the most embittered against each other, are Frimamara, Commodore of the Citadel, and the brothers Griva, from Missolonghi, who command in Fort Patamidi. On the 18th December they fired on each other for several hours. The unfortunate inhabitants sought refuge in the churches; and after the firing had ceased, assembled in the market place. The name of Demetrius Ypsilanti, was heard on all sides; the people demanded him as their Chief. He was fetched from his residence and conducted into the market-place; he, however, did not show much inclination to accept the honour intended him. It was believed, however, that he dissembled, and that the whole affair was a preconcerted plan, founded on the removal of the members of the Government, who are gone to Agina, in order to seize on the reins of Government, a conjecture, which the well known connexion between Ypsilanti and the Grivas, rendered probable.

PARIS, Feb. 3.—A letter from Constantinople, of the 31st December, says: "Extraordinary attention has lately been excited by the burying of a daughter of Mr. Stratford Canning, whose funeral was accompanied by a Greek Bishop, and who was buried in a Greek church, though there are an English chapel and burying ground here. This event has been for some days, the general subject of conversation among the Franks."

PARIS, Jan. 31.—A Morning Journal says, "Lord Cochrane has written from Marseilles to the Greek Government to have ready 20 or 25 of the best Greek vessels supplied with provisions for two months, and ready to sail immediately on his arrival, in order to carry into execution the project which he has formed, and which he will communicate only to Admiral Miaulis. The Hydriots have already chosen the vessels which are to make part of the expedition."

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

AN ALLEGORY.

'Twas the midnight hour when forth I stray'd,
By the banks of yonder hill,
And there all alone was a lovely maid;
By the moonlight she in a lonely shade,
Grieved over a gurgling rill.

The bell tolled one as I saw her rise,
The owl did mournfully rave,
She wiped the descending tears from her eyes,
And she breathed in grief her sorrowful sighs,
And knelt by a new made grave.

Screen'd by a towering rock I stood,
The moonbeam silvered her head,
She raised her eyes in a musing mood,
And her cheek was suffused with crimson blood,
As she wail'd the silent dead.

A snowy veil on her shoulders hung,
And her hair in ringlets fell,
O she touched the harp, and she sweetly sung,
And the music died on her fault'ring tongue,
'Twas the last and farewell knell.

The fairest flowers of May she placed
Along by the green grass tomb,
With the rose and lily the grave she graced,
And she bound a wreath round her own slim waist,
Of the brightest flow'rs in bloom.

Then up she arose, and her hands she join'd,
And wildly floated her hair,
And while she appeared still absorbed in mind,
And her form was bent by the rude rough wind,
To Heaven she breath'd her pray'r.

Such beauty forced me to leave my shade,
Where the wild winds swept the lyre;
O why dost thou weep, said I, fairest maid
Depart from the spot where the dead is laid,
For I fain would thee admire.

Does thy dear lover sleep in the earth,
Or hast thou a sire no more,
Has fate put an end to thy former mirth,
And the grave swallowed up the promised worth,
Of him thy soul could adore.

O no, said she, as she breathed a sigh,
Far greater is my dark woe,
Full many a tear-drop bedews this eye
For the memory of her who late did die
My hope and my joy below.

She sleeps in death and my hopes have flown,
'Tis the maid of Charity.
Mankind headlong hurl'd her down from her throne,
And now I stray in my grief all alone,
The GENIUS of MASONRY.

Milford, Del.

MILFORD BARD.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO ZULEIKA.

O love me not—I cannot bear
That one so bright and pure as thou
Should share the burden of the care
That hangs upon my fading brow.

I cannot ask thee thus to make
Thyself a partner of my woe,
And give thy bosom up to ache
For every agony I show.

Thou mayst go light and tearless on
With these whose love was made to bless—
Whose love will cheer when I am gone
To silence and forgetfulness.

And why should I whom none caress—
Whose life has been one round of pain—
Why should I multiply distress,
And smile on thee—to weep again?

Go, angel image of decay!
I cannot darken o'er thy lot.
Thou mayst be innocent and gay
When I am wretched and forgot.

March 13, 1827.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO—.

Oh! beauty blooms upon thy brow
Thou of the sunny smile;
And bright-eyed Health, to tinge thy cheek,
Hath left her rosy isle.

And Youth, and Hope, and laughing Joy,
Round thee a charm have wove,
That melts and wins young hearts like mine
To the thrilling throbs of love.

And of the smiles that deck thy lip,
For me, oh! is there one?
And of the thoughts that throng thy breast
Givest nought for him thou'st won't

Alas! I fear no, bright-eyed girl,
Thou hast no smiles for me;
Or if thou hast, they are only meant
In jest, or heartless glee.

But the world is cold and sorrowful
And men are false and vain—
Beware, beware, of their hollow vows:
They laugh at the love they gain.

And when the rose hath left thy cheek,
And sorrow turns thee pale,
Thy flatterers, girl, will leave thee then,
To thine own lonely wail.

But list ye — If thou can'st trust
Thy throbbing heart with me,
I'll place it in my bosom's shrine,
And guard it sacredly.

For mine thou hast. And take it, girl,
And with it its fond prayer:
That thy life may be bright and beautiful,
E'en as thyself art fair.

LARA.

From the Glasgow Free Press.

ON A VIEW OF THE SEA.

Ocean! I love to view thy dark blue face,
To hear the rippling on thy shelly shore;
To me, thy form hath greatness, grandeur, grace—
To me, there's more than music in thy roar.
Washed by the waves, like pearls the pebbles shine;
Thy sandy shore is like a jewelled sky;
Why should I wonder thou wert deemed divine,
When Paphia, thy sweet daughter rules on high?

Yet thou art false and fickle; and and though now
Thy billows beat but softly on their bounds,
Anon, convulsed and tossed tempestuous, thou
Wilt foam, furious, batter down thy mounds;
Herein, an emblem of thy sister Earth,
Her monarchs now are firmest, fondest friends,
Anon, Ambition gives Bellona birth;
And war and woe the HOLY TRINITY ends.

When calm, thou seem'st, as Phœbus' flickering gleams,
With glittering brilliance on thy glassy brow,
Like earthly glory, transient as its beams,
That shine as fiercely and as false as thou—
Thy soft smooth wave the sailor's view beguiles,
With sunny surface hiding oft the storm,
Like friends who flatter when fair fortune smiles,
To hate the more when frowns her brow deform.

Thy boisterous billows batter the rude rock,
That, tow'ring proudly, dares thy fiercest storms,
While thunders sound the charge of every shock,
And bann'd lightnings rear their forked forms:
An emblem then thou art of hellish hate—
Of Fortune's direst, deepest, deadliest powers—
Of Virtue, battling with the storms of fate,
And bearing bravely all their chilling showers.

A world of elemental power art thou,
An agitated universe of soul;
What are a million Cæsars to thee now—
Ten million hosts to thy tremendous roll?
A spirit reigns within thee, and his will
Sighs in the breeze and thunders in the blast;
Telling of things invisible, yet still
'Tis formless, viewless, voiceless, dark and vast!

Methinks thy wild waves speak the track of time,
A rapid, rolling, and resistless stream,
Terribly swift, yet solemnly sublime,
No power can reign, no penitence redeem;
Spending, but never spent, man marks in thee
And thy deep billows that no force can lull,
A type of time hid in Eternity,
For ever flowing, yet for ever full!

A young lady, on hearing that a thousand crowns
had been found near Briton race course, with great
simplicity exclaimed—"I dare say they are my
brother's, for he lost a thousand the last time he
was at the races."

LACONICS.

He whose first emotion on the view of an excel-
lent production, is to undervalue it, will never have
one of his own to show.

The hardest trial of the heart is, whether it can
bear a rival's failure without triumph.

Who says *hypocritical*, says all that is despicable
in morals—who says *affected*, says all that is odious
in manners.

The woman of sensibility, who preserves serenity,
and good temper, amidst the insults of a faithless
and brutal husband, wants nothing of an angel but
immortality.

Nothing is such an obstacle to the production of
excellence, as the power of producing what is *pretty*
good with ease and rapidity.

As reasonably expect oaks from a mushroom bed,
as great and durable products from small and hasty
efforts.

Socrates, in the early part of his life, was a sculp-
tor. He once said, "how strange it is that we
take so much pains to fashion an insensible stone
into the likeness of ourselves, and so little pre-
vent ourselves from resembling an insensible
stone."

Knowledge produces mildness of speech; mild-
ness, a good character; a good character, wealth;
wealth, if virtuous actions attend it, happiness.

As a fresh earthen vessel is formed by the potter,
(and education is nothing else) thus, we may say,
are children formed here below to morality.

One said to a covetous fellow, who was a great
talker, Sir, you certainly would be the most worthy
man in the whole city, if the lock which you
have upon your door, was but fixed upon your
mouth.

Let a woman be decked with all the embellish-
ments of art and care of nature—yet if *BOLDNESS*
is to be read in her face, it blots ALL the lines of
beauty.

Ambition is like cholera; if it can move, it makes
men active: if it be stopped, it becomes a dust, and
makes men melancholy.

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.

AN ADDRESS.

Pronounced December 27th, 1826, before King Solomon's Lodge, No. 6, at Gallatin, Tennessee, by L. D. KING, A. M.

One thousand years before the christian era, flourished Solomon, King of Judea. During a long and tumultuous reign, his father, the illustrious David, had been gradually subduing his enemies, and had extended the boundaries of his empire to the utmost limits assigned it by heaven. His vassals and tributaries showered the wealth of the east into his coffers, whilst his warriors filled Jerusalem with the trophies of his victories.

The terror of his name and the renown of his military achievements, overawed his enemies and the surrounding nations, and were a pledge of lasting peace.

The peculiar nature of his government had procured him not only the reputation of the greatest captain of the age, but also that of the profoundest statesman, and his administration, after a few instances of foul and unsuccessful treason, advanced the happiness of his people, and interwove the branches of the olive with the bays of the laurel. Under these auspices he was succeeded by his son Solomon, the wisest and most celebrated prince that ever glittered in gems or swayed an eastern sceptre.

Men in public offices can fill perhaps no station with so much hazard as that of successor to a great military chieftain. Such is the fascination of a warrior's name—such the awe inspired by his daring spirit, so great the enchantment which the glory of arms sheds around him, so deeply intertwined with the human heartstrings in the admiration of valor, that all the fragrance of the statesman's diplomacy—all the garlands wreathed around the poet's brows—all the discursive powers and electric fire of the orator—nay, all the scientific depth and researches of the philosopher, are lost in the blaze of renown, kindled at the cannon's mouth. But notwithstanding the brilliancy of his father's name, and the lustre of his martial glory, Solomon ascended the throne, not indeed to sway a sceptre bathed in blood, nor therefore to tarnish the lustre of his predecessor, but to ennoble and dignify the crown by the transcendent glories of his wisdom and virtue.

That a magnificent temple, containing in its structure whatever was costly in material or exquisite in workmanship, should be erected for the worship of God, where he might record his name, and where his oracles might be uttered, seems to have been an early dispensation of heaven. In point of beauty and harmony of proportion, cost, and splendour of decoration, of imposing grandeur and sublimity, no edifice ever built could compare even remotely with this stupendous monument of regal magnificence.

This amazing profusion of wealth may perhaps induce animadversion. To amass materials for a superstructure so vast, and to keep in pay laborers and artificers amounting to 150,000 for seven years, may perhaps originate a suspicion of despotic and oppressive exaction. God forbid. What can better test the sincerity of a worshipper, than valuable offerings to the God he worships! Natural religion indeed scoffs at the hypocritical mockery of that devotion which costs us nothing. Hence, the altars of paganism ever exhale the odours of African spices, or reek in the blood of consecrated victims. And if national calamities are the inflictions of Heaven, he pours his fiercest wrath upon nations most covetous of wealth, where no temples rise to his honor, and where the incense of devotion is not consecrated by the fragrant perfume of a liberal hand. It is a high minded, public spirit which

elevates one nation above another, whose towns and cities glitter with the spires and domes of their public buildings.

In accordance with God's design, therefore, Solomon commenced and finished this grand work, which has challenged the astonishment and admiration of all succeeding ages. But to attune and harmonize the infinite multitude employed—to embody and reduce to system their united energies, demanded a celestial impartation. Accordingly, God in a vision presented to the choice of the Hebrew monarch all the gifts in the divine bestowment. His selection was such as to receive the benediction of heaven, and to bring light out of darkness, and order out of confusion and chaos. This great luminary, the special favorite of omnipotence, devised the grand scheme of masonry, and laid the foundation of that fair fabric, on which has been erected a moral superstructure that for three thousand years has bid defiance to the dilapidations of time and the devastation of kingdoms and empires.

Such was the origin, such the originator, and such the design of the order, whose badges, symbols and hieroglyphics we this day wear.

And such being the origin and design of this institution, it seems to degrade itself by confuting the calumnies of malice or repelling the shafts of contempt and ridicule.

Here let it be remembered, for we shall attempt to prove the position, that science at this day, with all her brilliant discoveries, is doing no more than laboriously retracing her steps, and with all her researches, she is only filling up the chasms of time, and repairing the ravages of barbarism. The arguments to support this position cannot here be detailed at length, but we will throw a glance at a few of them, and thereby demonstrate additionally the necessity of that beautiful harmonic system denominated speculative masonry.

Let me, however, first premise, that the existence and unity of God, the immortality of the soul, and a state of future rewards and punishments, are the mason's three great lights. In connexion with these was another, that the deity could be propitiated by prayers and sacrifices. Oblations to heaven were indeed coeval with man's fall, as was also the revelation of the great truths just mentioned.

In creating the world, God doubtless designed it as the abode of men, the glory of all terrestrial existences; and in fitting up this vast temple of nature, for the residence of this favorite, infinite wisdom seems to have been sedulous to adapt every thing to his capacity of enjoyment. Heaven, earth and sea conspire to enhance his happiness.

"Ask for what end the heavenly bodies shine,
Earth for whose use: man answers, 'tis for mine,
For me kind nature wakes her genial power,
Suckles each herb and spreads out every flower,
Annual for me, the grape, the rose renew
Their juice nectarous and the balmy dew,
For me, the mine a thousand treasures brings,
For me, health gushes from a thousand springs,
Seas roll to waft me, suns to light me rise,
My footstool earth, my canopy the skies."

Paradise, the garden of God, planted by his own plastic hand, first received our great progenitor. Dignity, glory, and majesty, the very impress of deity, were stamped on his visage, while a scintillation of celestial fire lighted up a pure ethereal flame of intellect within, affiancing man to the immortal spirits who bask in the effulgence of glory which radiates from the throne of God. Astonished to find himself flung into existence, he knew not how, he glanced his eyes around, perused the heavens, beheld yon fiery orb smiling upon the new creation, saw the earth animated with green, and pushing from her bosom each plant and shrub and tree laden with the rich spoils of autumn, or breathing from their odoriferous blossoms, the fragrance of spring. The feathered choirs filled the air with the melody of songs. The monsters of the forest, beasts and coiling serpents cowered before him, and

received their names. In short the elements of the material world, which are now the objects of science and on which natural philosophy is endeavouring to exhaust research, were presented in epitome before him.

Man, in his present degeneracy, with all these objects in view, would be confounded, bewildered, lost; but Adam, so perfect were his faculties, so mighty his intellectual grasp, that with a flash of intuition the whole science of their nature was his own. No laborious induction was needed, no elaborate theory was to be framed; but such was the effulgence of light pouring its lucid rays into his capacious soul, that all the phenomena of mind and matter were comprehended with instantaneous intuition. Such was man originally. Angels hailed him as a congenial order of beings, and beheld with irrepressible curiosity this last grand exertion of omnipotent power, the union of mind and matter, a union equally astonishing, mysterious, and inexplicable; a union which has given rise to all the diversities of human affairs, since the creation laid the foundation and imposed the necessity of theocracy—of the incarnation of deity and of that glorious revelation which God condescended to make of those attributes which have relation to man. But man is not that being now! How meagre his knowledge! how scanty his attainments! how fleetly and evanescent his happiness! how dim and cloudy his perceptions! how much the sport of his passions! how much the dupe of himself.

We have already said that the unity of the Godhead, the immortality of the soul, and the hope of future bliss, were the mason's three great lights. But how were these lights to be kept burning! The answer to this interrogatory, involves the necessity of our order. God is the original source of all knowledge. He revealed to man originally all he knew, and gave him capacity for retaining and transmitting it. And in the earlier ages of the world, before a general deluge swept the human race from the earth, science and the arts flourished with a vigour to be accounted for only on the supposition that the knowledge of them was revealed. Hence it is that their attainments were so far superior to those of modern times. Life to the antediluvian was amazingly prolonged, and the inventions of the present day were familiar then and in far greater perfection. After a lapse of a few hundred years from the creation, we are told that Tubal Cain was the instructor of every artificer in brass and iron, and that Jubal was the father of all such as handle the harp and organ. Here is a regular college with professors of chemistry, mineralogy, mechanics and instrumental music, sciences the most profound in their nature and dependant on the nicest accuracy of mathematical calculation. But a philosopher is not satisfied with the material objects around him. His insatiate thirst for discovery impels him to explore the regions of mind, the metaphysics of intellect. Hence unquestionably their mental philosophy kept pace with their natural, and both triumphantly survived the flood, in the person of Noah and his sons, and were transplanted in Egypt and Assyria, whence they passed into Greece and Rome, and were there spread upon the faithful page to instruct and illuminate succeeding ages.

My learned hearers are well aware that history in its early accounts is fabulous. It seems however incontestible, that Egypt and Phenicia were nurseries of the science for ages after the flood, that both sent colonies into various quarters, that wherever these colonies came, they brought with them arts, science, civil policy, philosophy, and the muses, and diffused their light into surrounding regions. These are facts, but the credulity of historians, by giving credence to the fables of antiquity, would extinguish the light which they afford, and exhibit men as springing at once from barbarism into the elegancies and refine-

ments of civilized life. As well may we imagine that the Osages or Esquimaux will, by some internal cause existent among themselves, suddenly emerge from their present degradation.

Whoever looks into the records of ancient magnificence, of the stupendous works which have now fallen into decay or mouldered into dust; whoever will take the trouble to know what Babylon once was, what Nineveh, what Palmyra, what Tyre, Jerusalem, Athens, Rome once were, cannot repress a painful revulsion of feeling, at the diminutive efforts of the moderns. For

"Who, that from Alpine heights, his laboring eye
Shoots round the wide horizon, to survey
Nilus or Ganges roll their broad tide—

will turn his gaze
To mark the windings of a scanty rill
That murmurs at his feet!"

[Conclusion next week.]

ELECTIONS.

Grand Lodge of Georgia.

Elected in Savannah, March 5, 5827:—T. U. P. Charleton, Grand Master; A. Barber, Deputy Grand Master, for Milledgeville; B. D. Thompson, Deputy Grand Master for Augusta; D. Carney, jr. Senior Grand Warden; N. H. Olmstead, Junior Grand Warden; P. P. Thomasson, Grand Treasurer; L. H. Furth, Grand Secretary; Rev. S. A. Mealy, Grand Chaplain; W. J. Delberghe, Grand Senior Deacon; L. Girodon, Grand Junior Deacon; A. J. Pratt, Grand Marshal; V. T. Matthews, Grand Pursuivant.

Newport Lodge, No 279, Newport, Herkimer co

Elected December, 5827:—H. B. Rounds, W. M.; Sherman Wooster, S. W.; James M. Hebbard, J. W.; William S. Bensley, S. D.; Wise Chittenden, J. D.; John Coffin, Treasurer; Abel Sanford, Secretary; Erastus Tucker Tyler; Parley H. Flint, and Franklin Blanding, Stewards.

Regular communications Wednesday preceding full moon.

SCIENCE AND THE ARTS.

A NEW METHOD OF BLEACHING FLAX.

BY THE REV. J. B. EMMETT.

On account of the great distress which prevails in most of the manufacturing districts, I have been induced to present to the public the following method of bleaching and preparing flax and tow, by a simple, easy, and cheap process, whereby it is reduced to a beautiful degree of whiteness, becomes possessed of a silky lustre, and is made sufficiently fine to be manufactured into the finest goods. The process is as follows: Steep or boil the flax or tow in a weak solution of subcarbonate of potash or soda, in order to extract the colouring matter or resin. I prefer the subcarbonate to the caustic alkali, because, however diluted the latter may be, its powers of corrosion are so great that if it extracts the extraneous matter perfectly, it will almost certainly diminish the strength of fibre; whilst I find that it may be thoroughly extracted by the former, without producing any such effect: this I have proved by experiments. Wash it thoroughly from the alkali.

The bleaching liquor is prepared in the following manner: reduce perfectly fresh burnt charcoal of soft porous wood, such as willow or fir, to a very fine powder; tie it up in a cloth bag of close texture; immerse it in cold soft water, and work it by pressing it with the hands, until such a quantity shall be diffused through the water, that on rinsing a little flax through it, it shall be lightly blackened. Put into it the flax to be bleached, taking care that each parcel shall imbibe it to its middle. When all is put into the liquid, the water on being thoroughly agitated, ought to be clouded by the charcoal. In bleaching six or seven pounds I used but half an ounce. Agitate the liquid, and press the flax under it several times in the day, in order to bring the charcoal in contact with every part. After 24 hours remove it, and wring it well; then put it in a second water, containing rather less charcoal. After the same treatment for twenty-four hours more, examine a small parcel by washing it with soap and hot water; if the colour be good remove it from the char-

coal liquid; if not let it remain until it is white. Two or three days are amply sufficient, if the process be well conducted. It should be spread wet, on the grass, taking care to turn it frequently for a few days. The charcoal greatly disappears and the surface acquires a pearly appearance.

The flax is now to be rinsed in a large quantity of water, then to be washed with soap and hot water till quite clean, the soap must then be washed out by cold water.

Before washing out the charcoal with soap, the lustre of the fibre will be improved by steeping it for 8 or 10 hours in water just soured by sulphuric acid; if this process be continued too long, the fibre will be weakened.

The charcoal is easily washed out, the ultimate fibres are perfectly separated, they are so much finer than silk that I use them in the quadrant, transit, and micrometers; the lustre is as beautiful as silk, and the strength of the fibre is not at all impaired. It takes such colours as I have tried—pink, blue, and yellow, perfectly, and the finest thread may be spun. The process may be performed by individuals in their houses, and may give employment profitably to paupers in the workhouse.

[Philosophical Magazine.]

COUCHING FOR CATARACT.

From the Report of the Ophthalmic Institution, in the Calcutta Gazette.

In the number of blind people restored to sight in this town, there were three boys born blind with cataract; one five years of age, another eight, and another thirteen. So little pain did the operation appear to give them, while they were seated on the floor, during its performance, that they required no person to hold them; my assistance only supported their heads. The patients being so young, I was induced not to disturb the eye much, but merely to open the vortex of the cataract freely, which soon cleared up and let in the light, when they saw well. The acquisition of sight appeared exceedingly to raise the happiness of the oldest boy. The first time he began to perceive objects, and was able to walk without a guide, he proceeded up two pair of stairs to me, and requested me to observe how well he could walk alone. I held a bunch of keys before him, but he could not conceive what they were until I shook them, when he immediately ascertained what they were by the jingling sound. I laid a small square mahogany box before him, but neither did he know what it was, until he felt it, when the sense of touch immediately informed him. I then showed him an infant born of European parents, the sight of which very considerably engaged his attention, and raised in him the curiosity of inspecting it very narrowly. He seemed afraid, however, to touch it, and affirmed that he had not the least idea of what it was. I laid his hand on the child's arm, at which he started back, and expressed a wish to retire. I then drew his hand over the child's face, which he immediately recognized to be the features of a child. He laughed heartily, and appeared very much pleased at his own discovery. He was longer in learning to distinguish colours, than in learning the names of things. White and red he soon distinguished, but yellow, green, and blue, he confounded with black; yet he said these colours contained more white than black. When from the roof of a high building he viewed the river Taptee, he pointed with his hand towards it, and showed by his manner of expression that he felt great pleasure in viewing it: he requested my assistant to look in that direction, apparently for the purpose of enjoying the sight with him, but he had not the least idea of its being a body of water. I showed him many other things, with nearly the same result, and a short time after these experiments were performed, I laid all the same things again before him, when he readily recognized them by the eye. He now follows the occupation of a shepherd.

SUN DIALS.

Sun dials must have been of great antiquity, though the earliest we hear of is that of Ahaz; but this certainly was not the first of its kind, though it is the first on record. Ahaz began his reign about

four hundred years before Alexander, and about twelve years after the foundation of Rome.

Anaximenes, the Milesian, who flourished about four hundred years before Christ, is said by Pliny to have been the first who made a sun dial, the use of which he taught to the Spartans; but others give this honour to Thales, his countryman, who flourished two hundred years before him.

Aristarchus, of Samos, who lived before Archimedes, invented a plain horizontal disk, with a gnomon, to distinguish the hours; and had its rim raised all round, to prevent the shadow from extending too far.

Probably all these were rude and evanescent attempts; for it does not appear that the Romans, who borrowed all their knowledge from the Greeks, knew any thing of a sun dial before that set up by Papyrius Cursor, about four hundred and sixty years after the foundation of Rome; before which time, says Pliny, there was no mention of any account of time, but by the rising and setting of the sun. This dial was erected near the temple of Quirinus, but is allowed to have been very inaccurate. About thirty years after, the consul Marcus Valerius Messala, brought a dial out of Sicily, which he placed on a pillar near the Rostrum, but as it was not made for the latitude of Rome, it did not show the time exactly. About a hundred years after, Martius Phillipus, set up one more exact.

Since those times the science of dialling has been cultivated in most civilized nations; and though we have now many useful works on the subject, yet something more specific, more simple, and more general, is a desideratum in the science of *sciaterics*, or *dialling*.

CHARACTER.

THE LATE DUKE OF YORK.

The deceased Prince, whose kindness of disposition rendered him popular in his life time, and will make his death generally lamented, had been what is termed a free liver. He liked wine—he loved play—and he had other tastes—unfortunately too often indulged in by men of all professions, but of which the cultivation is perhaps less excusable in many other walks of life than those of the Prince, beset from infancy by the seductions of a court—and the soldier, to whom, if his mind be not more than ordinary intellectual and moral force, habits of licentiousness come fatally recommended by those of his reckless associates. We are now excusing the miserable mortality which interposes the prejudices and conventions of artificial life, between that to which Providence has affixed the seal of actual guilt with all its dreadful consequences, and the grave reprehension which in the eye of truth, of virtue, and religion, belongs to it; but in judging, so far as his fellow creatures may presume to judge, the individual man, it is we trust, neither unpardonable nor reasonable to allow for the temptations which befel him, and the greater or less facility of resistance which his place in the world affords.

Besides the Duke of York's attachment to the excesses of the table; to gambling on the turf and elsewhere; and to another class of immoral indulgences, which, without being named, may be sufficiently comprehended; his Royal Highness was weakly—we are bound to add culpably, as well as most unhappily, insensible to the real use of money. Notwithstanding the vast income afforded him by the liberality of the British Nation, he contracted enormous debts, without the means, or even the thought, as it would appear, of discharging them, and involved in distress many hundred families, to whom he is now cut off forever, and might at any time been equally precluded, from offering the smallest reparation. It is notorious how much the Duke of York's disorder was accelerated by the growing pressure of his pecuniary difficulties. So severe, so degrading were the forms in which those embarrassments assailed the illustrious and unfortunate Prince, that neither a house, nor furniture, nor horse, nor tangible property of any kind incidental to the condition of a gentleman, remained towards the close of life in his possession. Yet thus destitute and fallen—owing an enormous debt, of which he

could not pay a shilling—with the resistless grasp of death about him, through what demon was it, that this ill-advised member of the Royal Family commenced the building of a Palace, the construction, decoration, and furnishing of which, were not to be completed for half a million sterling.

"Tu secunda marmora,
"Locas sub ipsum lunas; et sepulcri
"Immemor—struis—domos."

This is a lesson to the prodigal debtor. Let an equivalent lesson be put on record for the gripping but still thriftless money lender—by the solemn and inexorable refusal of Parliament to discharge a mass of debts, which could not have been contracted at all, but for the hideous promptitude with which accommodation in this country, is tendered to the exigencies of even the most desperate fortune.

In the political conduct of the Duke of York, there are but two points which we shall at present stop to remark upon. Extravagance threw his Royal Highness into that needy state, which compelled him to undergo the cruel humiliation of accepting \$10,000 per annum, for driving once a week from London to Windsor, to visit his afflicted parent; and indiscretion, however well-meaning, prompted him to deliver an irrevocable judgment on a much controverted question of state policy, involving the peace of two great kingdoms, and the civil relations of 22,000,000 of men.

We should hardly here have touched upon the painful investigation in which the commons of England were unfortunately engaged 17 years ago, were it not, 1st, that the singular occurrence to which we allude must, in spite of us, live in our history and blot our Parliamentary records; and 2nd, that the result proved strikingly beneficial to the army and to the kingdom at large. "Happy are they," says the proverb, "whom other men's dangers render prudent;" and it is the next degree of happiness to learn experience from our own misfortunes. Since that remarkable epoch, there have been no more complaints—disappointment itself has ceased to clamour, and envy to whisper that promotions have been obtained through a secret and impure interference.

We turn to the more pleasing side of this historical canvass.

The Duke of York, in private society, was warmly and deservedly beloved,—cheerful, affable, open, brave and generous,—a steady and cordial friend—grateful for kindnesses—inviolable in his engagements—placable in his few resentments—humane and compassionate to all whose distresses he had the means of relieving. No man of his high rank since the days of Henry IV. of France has ever conciliated more personal attachments, or retained them longer. No man has provoked less private animosity, or disarmed it sooner.

He was the willing and constant protector of thousands, who had no help to rely upon but that of his Royal Highness. He was easy and unassuming among the higher classes with whom he lived. He was considerate, kind and beneficent towards those over whom his power extended. In dispensing his official patronage, he was no less exempt from vindictive and malignant impulses, than from childish and unfair predilections—and the character of the Duke of York, quite as much as his illustrious rank and station, qualified him to emerge an honest public servant from those corruptions with which ministerial importunity is too prone to surround the head of a great Executive department.

[London Times.]

THE TRAVELLER.

LAKE PEPIN.

The wildness of the scenery is such, that even the voyager who has gazed with delight upon the high bluffs of the Mississippi, is struck with uncommon interest on beholding this spot. There is in it what we meet with on no other point of the far-stretching valley of the Mississippi, a high projecting point, a precipitous crag resting upon a steep bank, whose base is washed by a wide expanse of water, the calmness of which contrasts with the savage features of the landscape; but this spot receives an additional interest from the melancholy

tale which is connected with it, and which casts a deep gloom over its brightest features. Cold and callous must be the heart of the voyager who can contemplate unmoved and uninterested the huge cliffs that enclose this lake, for

"Wild as the accents of lover's farewell,
Are the hearts which they bear, and the tales which they tell."

"There was a time," our guide said, as we passed near the base of the rock, "when this spot, which you now admire for its untenanted beauties, was the scene of one of the most melancholy transactions that has ever occurred among the Indians. There was in the village of Keoxa, in the tribe of Wapashaw, during the time that his father lived and ruled over them, a young Indian female whose name was Winona, which signifies 'the first born.' She had conceived an attachment for a young hunter, who reciprocated it; they had frequently met, and agreed to an union, in which all their hopes centered; but on applying to her family, the hunter was surprised to find himself denied: and his claims superseded by those of a warrior of distinction, who had sued for her. The warrior was a favourite with the nation; he had acquired a name by the services which he had rendered to his village when attacked by the Chippewas; yet, notwithstanding all the ardour with which he pressed his suit, and the countenance which he received from her parents and brothers, Winona persisted in preferring the hunter. To the usual commendations of her friends in favour of the warrior, she replied, that she had made choice of a man, who, being a professed hunter, would spend his life with her, and secure to her comfort and subsistence; while the warrior would be constantly absent, intent upon martial exploits. Winona's expostulations were, however, of no avail, and her parents, having succeeded in driving away her lover, began to use harsh measures in order to compel her to unite with the man of their choice. To all her intreaties, that she should not be forced into an union so repugnant to her feelings, but rather be allowed to live a single life, they turned a deaf ear. Winona had at all times enjoyed a greater share in the affections of her family, and she had been indulged more than is usual with females among Indians. Being a favourite with her brothers, they expressed a wish that her consent to this union should be obtained by persuasive means, rather than that she should be compelled to it against her inclination. With a view to remove some of her objections, they took means to provide for her future maintenance, and presented to the warrior all that in their simple mode of living an Indian might covet. About that time a party was formed to ascend from the village to Lake Pepin, in order to lay in a store of the blue clay which is found upon its banks, and which is used by the Indians as a pigment. Winona and her friends were of the company. It was on the very day that they visited the lake that her brothers offered their presents to the warrior. Encouraged by these, he again addressed her, but with the same ill success. Vexed at what they deemed an unjustifiable obstinacy on her part, her parents remonstrated in strong language, and even used threats to compel her into obedience. 'Well,' said Winona, 'you will drive me to despair! I said I loved him not; I could not live with him; I wished to remain a maiden, but you would not. You say you love me, that you are my father, my brothers, my relations; yet you have driven from me the only man with whom I wish to be united; you have compelled him to withdraw from the village; alone he now ranges through the forest, with no one to assist him, none to spread his blanket, none to build his lodge, none to wait on him; yet was he the man of my choice. Is this your love? But even it appears that this is not enough, you would have me do more; you would have me rejoice in his absence; you wish me to unite with another man, with one whom I do not love, with whom I never can be happy. Since this is your love, let it be so; but soon you will have neither daughter, nor sister, nor relation, to torment with your false professions of affection.' As she uttered these words she withdrew, and her parents, heedless of her complaints, resolved that that very day Winona should be united to the warrior. While all were engaged in busy preparations for the festival, she wound her way slowly to the

top of the hill. When she had reached the summit, she called out with a loud voice to her friends below; she upbraided them for their cruelty to herself and her lover; 'you,' said she, 'were not satisfied with opposing my union with the man whom I had chosen, you endeavoured, by deceitful words, to make me faithless to him; but when you found me resolved upon remaining single, you dared to threaten me; you knew me not, if you thought I could be terrified into obedience; you shall soon see how well I can defeat your designs.' She then commenced to sing her dirge; the light wind which blew at the time wafted the words towards the spot where her friends were; they immediately rushed, some towards the summit of the hill to stop her, others to the foot of the precipice to receive her in their arms, while all, with tears in their eyes, entreated her to desist from her fatal purpose; her father promised that no compulsive measures should be resorted to. But she was resolved, and as she concluded the words of her song, she threw herself from the precipice, and fell a lifeless corpse near her distressed friends! Thus," added our guide, "has this spot acquired a melancholy celebrity; it is still called the Maiden's Rock, and no Indian passes near it without involuntarily casting his eye towards the giddy height, to contemplate the place whence this unfortunate girl fell a victim to the cruelty of her relentless parents."

HISTORICAL.

FATHER AND SON.

Among the cases of suffering by the wreck, in 1686, of the vessel in which the Siamese embassy to Portugal was embarked, few have stronger claims to pity than that of the captain. He was a man of rank, sprung from one of the first families in Portugal; he was rich and honourable, and had long commanded a ship in which he rendered great service to the king his master, and had given many marks of his candour and fidelity. The captain had carried his only son out to India along with him; he was a youth, possessed of every amiable quality; well instructed for his years; gentle, docile, and most fondly attached to his father. The captain watched with the most intense anxiety over his safety: on the wreck of the ship, and during the march to the Cape, he caused him to be carried by his slaves. At length all the slaves having perished, or being so weak that they could not drag themselves along, this poor youth was obliged to trust to his own strength; but he became so reduced and feeble, that having laid him down to rest on a rock, he was unable to rise again. His limbs were stiff and swollen, and he lay stretched at length, unable to bend a joint. The sight struck like a dagger to his father's heart; he tried repeatedly to recover him, and by assisting him to advance a few steps, supposed that the numbness might be removed; but his limbs refused to serve him, he was only dragged along, and those whose aid his father implored, seeing they could do no more, frankly declared, that if they carried him, they must themselves perish.

The unfortunate captain was driven to despair. Lifting his son on his shoulders, he tried to carry him; he could make but a single step, when he fell to the ground with his son, who seemed more distressed with his father's grief, than with his own sufferings. The heroic boy besought him to leave him to die; the sight, he said, of his father's tears and affliction, was infinitely more severe than the bodily pain he endured. Those words, far from inducing the captain to depart, melted him more and more, until he at last resolved to die with his son. The youth, astonished at his father's determination, and satisfied that his persuasions were unavailing, entreated the Portuguese in the most impressive manner, to carry away his father.

Two priests who were of the party, endeavoured to represent to the captain the sinfulness of persisting in his resolution; but the Portuguese were obliged finally to carry him away by force, after having removed his son a little apart. So cruel, however, was the separation, that the captain never recovered it. The violence of his grief was unabating; and he actually died of a broken heart, one or two days after reaching the Cape.

POPULAR TALES.

From the Boston Lyceum, for March 1827.

THE DESERTER.

On a wild and uncultivated spot in the Netherlands, stood a miserable and dilapidated tenement. It was the depth of winter, and there was nothing around it that looked like cultivation, unless the clearing away of a few trees, their black stumps still remaining, might be termed so; the snow lay in heavy masses on the roof, and the scraggy fir-trees bent beneath its weight. All was desolate, and except a small foot-path round the house and the smoke from a chimney, it might have been viewed as a building that even poverty itself thought untenable. Yet within this miserable exterior was one room that bore every mark of comfort. It contained a neat bed, bureau, and carpet; a cheerful fire blazed on the large open hearth, near which was seated in an arm chair, a pale, emaciated woman, apparently in the last stage of a decline, and beside her on a low cricket a young girl, who sat anxiously watching her countenance, and attending to every want. As the wind howled against the little glass window, the only one that the house had ever contained, the woman looked out and said in a low voice, "My poor Philip!"

"I wish," said the girl, caressingly, "he could look in upon us, and see how comfortable—and how happy we are" added she, after a pause.

"Happy!" repeated the woman, "yes I am happy; what mother could be otherwise with such a son! but can I forget that these comforts are purchased at the risk of his life?"

"My dear mother," said Bertha, "you know Philip always said he would be a soldier, and there never was a better time than now to fight, when every body says our cause is a just one, and then when he comes back so brave and beautiful, confess, mother, shall you not be proud of him?"

A glance at her mother's countenance struck dismay to her heart; it said, I never shall see that time! She did indeed droop daily; the filial affection of the son had induced him to enlist as a soldier that he might provide his widowed and sick mother with the comforts of life; but his plan had been as imperfect as the short sighted plans of mortals often are; the very method he had taken to prolong her life was fast undermining it; her nights were restless and her sleep unrefreshing; the horrors of war were always present to her mind, every new fall of snow seemed to her like the winding sheet of her son, and she regularly awoke towards morning with a cold dew upon her forehead. An old and faithful domestic who had long resided with them, with the sagacity of nature rather than art, perceived her life was drawing to a close; little skilled in sensitive reserve, he expressed his opinion to the mother and daughter without disguise, and it was received with calmness by the one, but with the deepest anguish by the other. A few days passed by, and even Bertha became convinced, that if Philip did not return immediately, it would be too late. Impelled by this thought, she hastily wrote him word that his mother's life was fast drawing to a close, and conjured him at all events to hasten home.—"If you come immediately," added she, "you may see her, delay but one hour, and that hour may be her last!"

Bertha waited with inexpressible anxiety after she had dispatched her letter for the arrival of her brother. It was on the eve of the second night that he reached their lonely dwelling. The sound of his approach had struck upon the ear of Bertha, she hastened to meet him and conduct him to his mother, who received him with joyful surprise, and as she folded him to her bosom felt that life had still its value. That night Bertha slept quietly by the side of her mother, and Philip took her place as nurse.

Bertier, the father, was an Englishman; he had been driven by misconduct and misfortune to a foreign country, and with his wife and two small children lived on the scanty pittance he had saved from the wreck of his fortune. In the wild spot he had chosen they excited but little observation. Madame Bertier was still in the first bloom of intellect and vigour; she was wholly ignorant that misconduct had any part in the exile of her husband, and she often unconsciously tortured him by her conso-

lations. "My dear Bertier," she would say when she saw him contending with the bitterness of his thoughts, "there is no calamity that cannot be borne but remorse; you have yet youth and the resources of your own mind; it is unworthy of you to sink under pecuniary misfortunes. Look at me, they have not withered my form or filled my heart with dismay; my spirit is still free to drink at the living fountain of life and joy."

But Madame Bertier's burden was light compared to that of her husband. His mind was unable to contend with the misery he had brought on himself, and he shrunk from personal hardships. He who had slept on beds of down, who had seen the star of knighthood glittering around him, was now an exiled wanderer! The thought was bitterness, and after a few years of gloomy and morose feeling he sunk a victim to consuming remorse.

Madame Bertier wept for her husband till hope and comfort crept in, in spite of herself. The exercise of duty and maternal tenderness invigorated her mind, she devoted herself to the instruction of her children, and though her situation afforded no mechanical aids for education, she contrived to press into her service every object around her, and every resource of her own intellect to enrich their minds and ennoble their hearts. The result was what might be expected: Philip and Bertha inhabited an ideal world, they formed romantic conceptions of their own capacities, and Philip panted for an opportunity of signalizing a spirit which he believed was unconquerable.

It was not till the hand of poverty pressed heavily on them, that Philip began to realize he had something to do, besides hanging over his mother and sister with a sort of idlatry. But he had no profession, no money, no patronage—the army was his only resource, and without consulting his mother he enlisted as a soldier; his bounty and pay had already secured to her a comfortable apartment, when he received his sister's letter.

It would be difficult to describe the agony of their meeting—Madame Bertier yet loved life, her heart still poured forth its tributary streams on all around her, and when she gazed on the manly form and finely marked features of her son, and recollected that for her sake he had enlisted as a soldier and was enduring hardship and suffering; when she felt his powerful arm now raising her languid form, now supporting her against his broad chest, and now with the tenderness of a woman smoothing her pillow, perhaps too much of Bertha's pride mingled with her gratitude. For three days he devoted himself to his mother, listening to her dying precepts, and when she was unable to lie down, supported her in his arms. On the third night, when Bertha's faint breathing proved that she was asleep, Madame Bertier said, in low whispers to her son, "My dear Philip, I must acquit myself of a painful duty before I die, and I feel that my hours are numbered. Since your departure, I have found a letter that I ought sooner to have discovered. Prepare yourself, my child to read it; God save you from misfortunes that bring temptations with them, sometimes too mighty for feeble man to resist; yet if they must come, hold fast your integrity. My child, my child, remember the anguish you have seen your father endure; it was not regret for the luxuries of life to which he had been accustomed, it was remorse. This paper contains the breathings of a wounded spirit. Read it."

Madame Bertier laid her head back upon the pillow, and meekly folded her hands. Philip took the lamp from the hearth and seated himself opposite to his mother. There was something deeply impressive in the scene. Bertha lay in serene and healthful slumber; she had made over all the responsibility to her brother, and, exhausted by daily cares, her repose was deep and unbroken. Philip looked at his mother; her eyes were closed, her lips moved; in his hand he held the last testimony of his father, it was as if one came from the dead and spoke; thoughts of himself, bitter thoughts mingled with his emotions, and he prayed God to enable him to bear calamities too mighty for human strength. At length slowly unfolding the paper he read these words:

"TO ADELAIDE BERTIER,

"You have supported misfortune with heroism, you have felt indignant that I sunk under it, but now comes your task, and yet it cannot be equal to mine,

for you are the injured. Adelaide, when you married me I was a ruined man in fortune, that you knew, but you did not know that I fled from my country to avoid an ignominious exposure. My son may at some future day claim my patrimony. By flight I have saved my name from disgrace,—that at least may be transmitted without reproach. I cannot enter into details, they are too painful. One dying injunction I leave to Philip, that he is never to apply to my family under any embarrassment of circumstances or character—but if he should win himself honours and a name, then let him claim the patrimony of his father."

Documents were enclosed in the letter directing him how to substantiate and prove his claims.

Philip leaned his head on his folded arms, and felt that the proud cold letter of his father was consistent with the spirit he had evinced. But another source of intense agony connected with himself, pressed upon his mind.

The voice of his mother roused him—he knelt by her bedside, but words, if he had any, died upon his lips, he was cold and motionless, and his high and noble forehead, yet unsunned and unmarked by care, was pale and bloodless.

"Speak to me my son," said she, "tell me the time will come, when you may realize your father's injunctions—when with Bertha in your hand you may present yourself as the descendant of a noble house. My boy you have begun the race of honour—press on, and never let it be said that your mother in the indulgence of womanish weakness made you effeminate."

Her strength failed—Philip awoke Bertha, she sprang from the bed, and received her mother's parting blessing, though her eyes had closed. For one long hour the brother and sister watched by the bed-side, in the deep and solitary stillness of the night. The old domestic was called—he too sat gazing upon his mistress. Who has not witnessed in this world of death the last struggles between the soul and body? The long drawn breath, then the still frightful pause, and then another—but the last came, and after the final conflict, she lay as if in peaceful slumber! A few moments were given to deep and awful contemplation, then Philip suddenly arose.

"Thank God," said he, "she is spared from heavier calamity than she has yet endured—Bertha, I must begone."

"Begone!" exclaimed his sister, "why or wherefore? you cannot mean so."

He groaned aloud, he wrung his hands in agony, and striking his forehead, said, "it is for your sake I go."

"And what will become of me?" she exclaimed.

"Heaven only knows—if I stay, misery is certain." Then approaching the bed on which the body lay, he gave a long look, and folding Bertha in his arms, rushed from the house. She heard not his retreating steps, for she lay insensible across the bed of death. When she roused herself, several men stood gazing upon the scene; it was life and death, youth and decay, blending before their time.

"Where is Philip Bertier?" said one of the men, "we are in pursuit of him."

"You cannot find him" replied Bertha wildly, "he has left me."

"Then he has served you as he has his colours," returned the soldier, "and doubly deserves to be shot as a deserter."

A strange thought entered the mind of Bertha. "You cannot find him," said she, "unless I deliver him to you." At this moment an officer entered—evidently of rank, and dressed in the Hanoverian uniform. He stopped and surveyed the scene with emotion. Bertha advanced, her bosom heaving with her project. "I know your errand," said she, "and you shall have your victim on condition that you secure him from insult and conduct him to a place of safety to await his trial."

"It is not customary to submit to conditions on these occasions," said the officer, "but I would not add to your distress—would I could alleviate it."

"Wait then," said Bertha, "at the next turning of the road but one quarter of an hour, and if Philip Bertier does not surrender himself, you may take what measures you please."

It was a wild and almost impracticable purpose that had entered the head of the young girl—she

determined to dress herself in the discarded uniform of her brother, and endeavour to pass herself for him. At any rate, she was certain that she might gain him time for his escape, which would be important. She had been educated a creature of imagination, full of romantic and vivid conceptions, she stayed not to weigh consequences, but hastily putting on the uniform, and commencing with floods of tears her mother's remains to the care of the old domestic, then kissing again and again the clay cold lips, she set out for the place appointed. The gray of the morning was still overshadowing every object as she gazed on all around—one little hillock at the side of the house was marked by the mass of snow that lay upon it. "It is there," thought she, "my mother will rest in the grave with my father." As she pursued her way, she turned more than once to gaze on the spot; every object was desolate, and she felt new agony at the idea of leaving her mother alone. She almost forgot that it is only the living who feel desertion, that neither scorn nor injury strike on the "dull cold ear of death." When she arrived at the place, she was relieved to find the officer alone; incredulous as to her intention of surrendering her brother, he had dispatched the two soldiers in pursuit of him, and remained to wait the issue of her promise. Unfortunately for Bertha's plan, Philip was athletic and commanding, his dark hair and mustachios gave him a warlike expression; she was slight, fair and delicate—but she trusted to the uniform and a large woolen wrapper for the deception, and putting the military cap over her eyes, and muffling the lower part of her face, she advanced with tolerable confidence. The deception appeared to be perfect. The officer received the deserter without a question, and Bertha was satisfied with the success of her project. They were obliged to walk a long way before they reached the wagon that was to convey them to the corps, to which Bertier belonged. Long before they arrived, Bertha's small feet and slender ankles almost refused to support her. The officer appeared to be moved with compassion by the youth, effeminacy, and even the sobs of the young soldier. Bertha wished to inquire what would be her destination—but she was conscious her only security was silence, and with downcast eyes she pursued her way. Once, as she broke through the crusted snow, the officer said, "I am more used to hardship than you are, you are welcome to hold my arm." Bertha made no reply. When they arrived at the village where the wagon was waiting, the rumour had reached there of a deserter's being taken; a few people collected round the inn to gaze on the unfortunate object. The prospect of a violent death seems to give something sublime, even to common characters—and the man who is going to the gallows is much more interesting than any private act of munificence could have made him. The officer, mindful of his promise, fiercely ordered the people to disperse, while he kindly assisted the tottering soldier to ascend the vehicle which stood at the door. Most scrupulously did Major Falkner (for this was the name of the officer) observe the conditions to which he had submitted. It was two days journey to their place of destination. When they arrived, the deserter was conveyed to a good looking house. "I will leave you," said the officer, "no one will enter your room without permission; but if you attempt to escape they have orders to secure you." "Alas!" said Bertha, almost forgetting, in the desolation of her feelings, her assumed character, "why should I wish to escape, I have now no friend but you!" The colour rushed to his face, but hastily turning away, he said, "Military measures require promptness; your trial will take place to-morrow morning. I will, myself, conduct you to the spot."

[Conclusion next week.]

MISCELLANY.

THE GENTLEMAN'S GENTLEMAN.

Mansie Wauch and Nanse his wife deliberated on the way of life in which they should bring up their only son Benjie. They considered all the learned professions, to which Mansie raised insuperable objections. The "gude wife's" ambition rose above the mechanic arts, and Benjie's choice was to be a gentleman. But Mansie resolved to show Nanse

and the Barnie that he was the master, and he proposed some very ignoble callings, in order to bring their pride to the proper point, when he secured his own project of apprenticing Benjie to a barber. There is so much sarcasm and humour in the proposition to make the boy a "gentleman's gentleman," that the reader will be amused with it in Mansie's own words.

"Weel," cried Nanse, half rising to gang ben the house, "I'll sit nae longer to hear ye gabbling nonsense like a magpie. Mak Benjie what ye like; but ye'll mak me greet the een out o' my head."

"Hooley and fairly," said I, "Nanse, sit still like a woman, and hear me out;" so, gieing her a pat on the shouther, she sat her ways down, and I resumed my discourse.

"Ye've heard, gude wife, frae Benjie's ain mouth, that he has made up his mind to follow out the trade o' a gentleman; wha's putten sic outrageous notions in his head, I'm sure I'll no pretend to guess at. Having never myself been aboon daily bread, and constant work—when I could get it—I daurna presume to speak from experience; but this I can say, from having some acquaintances in the line, that of all easy lives, command me to that of a gentleman's gentleman. It's true, he's caa'd a flunkie, which does nae sound quite the thing; but what o' that? what's in a name? pugh! it does nae signify a bawbee—no, nor that pinch o' snuff; for, gif we descend to particulars, we're a' flunkies thegither, except his Majesty on the throne—Then William Pitt is his flunkie—and half o' the House o' Commons are his flunkies, doing what he bids them, right or wrang, and no dauring to disobey orders, no, for the hair in their heads—then the Yearl waits on my lord Deuk—Sir something waits on lord somebody—and his tenant, Mr. so and so, waits on him—and Mr. so and so has his butler—and the butler has his flunkie—and the shoe-black brushes the flunkie's jacket—and sae on. We all hing at aen anither's tails like a rope o' ingans—so ye observe, that ony sic objection, in the sight of a philosopher like our Baillie, wadna weigh a straw's weight.

"Then, consider, for a moment—just consider gude wife, what company a flunkie is every day ta'en up wi', standing behind the chairs, and helping to clean plates and porter; and the manners he canna help learning, if he is in the smallest gleg in the uptak, so that, when out o' livery, it is the toss up o' a bawbee, whether ye find out the difference between the man and the master. He learns, in fact, every thing. He learns French—he learns dancing in all its branches—he learns hoo to gie boots the finishing polish—he learns hoo too to play at cards, as if he had been born and bred a yearl—he learns from pouring the bottles, the names of every wine brewed abroad—he learns hoo to brush a coat, so that, after sax months tear and wear, aye without spectacles wad imagine it had only gotten the finishing stitch the Saturday night afore—and he learns to play on the flute, and the spinet, and the piany, and the fiddle, and the bagpipes, and to sing all manner o' songs. What say ye, gude wife?"

Nanse gied a mournfu' look, as if she was frichted I had grown dementit, and only said, "Tak your ain way, gude man; yes get your ain way for me, I fancy."

SENESINO AND FARINELLI.

When these two highly celebrated singers were in England together (1734,) being engaged at different theatres on the same night, they had not an opportunity of hearing each other, till by one of those sudden revolutions which frequently happen, yet are always unexpected, they were both employed to sing on the same stage. Senesino had the part of a furious tyrant to represent, and Farinello that of an unfortunate hero in chains; but, in the course of the first song, he so softened the obdurate heart of the enraged tyrant, that Senesino, forgetting his stage character, ran to Farinelli, and embraced him in his own.

SPANISH LADIES.

The dress of the Spanish lady, is remarkably elegant, and generally adorns a very perfect shape. Black is the universal color, and the robe is most tastefully worked and vandyked. A mantilla, or veil of black silk or lace, and sometimes white lace,

is thrown over the head, and leaving the face uncovered, falls gracefully over the head and shoulders, and is confined at the waist by the arms of the wearer. They are both expensive and particular in dressing their feet with neatness, and their little shoes fit closely. The large black eye, the dark expressive glance, the soft blood-tinged olive of the glowing complexion, make the unwilling Englishman confess the majesty of Spanish beauty, and he feels that tho' the soft blue eye, and delicate loveliness of his own countrywomen awaken more tender feelings of interest, he would deny or dispute, in vain, the commanding superiority of these dark-eyed and fine-formed damsels.

FEMALE PRESENCE OF MIND.

Count Segur, in his recently published "Memoirs and Recollections," relates the following anecdote of Princess Lubomirska:—"She was once in her sledge, riding under the immense canopy of a sombre forest, when, at the turn of a narrow path, she came unexpectedly within a few steps of a bear rendered furious by hunger. At the approach of the wild animal, the horse made a leap, and overturned the sledge. The bear advanced. The princess' attendant rushed forwards to save her, and placed himself between her and the terrible animal; he attacked it, but his sabre broke. An unequal contest took place, but the bear soon caught the Pole in his paws. Without becoming terrified, the princess instantly took hold of two pistols that had fallen out of the sledge, came behind the terrible animal, discharged two shots into his ear, and stretched him dead at her feet."

THE HUMOURIST.

A counsellor was one day asked by a judge why he was always employed in knavish causes. "Why, my lord," said the counsellor, "I have been so much in the habit of losing good causes, that I think I had better undertake bad ones."

FINE WRITING.—The following advertisement is from an Auburn paper. It is a very good specimen of the "puff direct."

"From long experience Mr. Covert is able to say, that no one can take a gentleman by the nose, and relieve him of a superabundance of bristles, or twirl a mustachio, with more skill and dexterity than himself. Shaving, from a cruel operation, of nothing but groans and contortions of visage, by the light of science has been rendered a pleasant and agreeable pastime. Contemplative gentlemen may indulge in the most pleasing dreams, and awake shaved, powdered and perfumed."

In a recent duel between two Barristers, one of them shot away the skirt of the other's coat. His second, observing the truth of his aim, declared, that had his friend been engaged with a client, he would very probably have hit his pocket.

COL. TARLETON.—The haughty Tarleton, vaunting his feats of gallantry, to the great disparagement of officers of the Continental cavalry, said to a lady at Wilmington, "I have a very earnest desire to see your far famed hero, Col. Washington." "Your wish, Colonel, might have been fully gratified," she promptly replied, "had you ventured to look behind you, after the Battle of Cowpens." It was in that battle that Washington had wounded Tarleton, which gave rise to a still more pointed retort. Conversing with Mrs. Wiley Jones, Colonel Tarleton observed, "You appear to think very highly of Col. Washington, and yet I have been told that he is so ignorant a fellow, that he can hardly write his own name." "It may be the case," she replied, "but no man better than yourself, Colonel, can testify that he knows how to make his mark."

A gentleman lately riding over Salisbury plain, when it rained very hard, set up a gallop, and met with a traveller whose horse was standing still. Somewhat surprised at the sight, he asked the reason of it. "Zounds!" says the other, "who but a fool would ride in all this wet?"

A Frenchman, wishing to take stage for Buffalo, was asked by the driver, if he had any extra baggage. "Extra baggage! What you call dat? I have no baggage but my tree trunks, five dogs, and ven black girl."

ALBANY:

SATURDAY, MARCH 24, 1827.

§ LARA's Sketch shall appear in our next. We solicit a continuance of his correspondence.

§ A correspondent has sent us a long "mysterious" tale. We cannot publish it. We are naturally disposed to be very obliging; but we can't publish the tale in question. Our *whys* and *wherefores* are soon told. Artificial horrors are poor stuff, in their best dress; we have no affection for them in any shape, and particularly when they nauseate us with their insipidity. Our author seems to think that, in order to give a "spirit stirring" character to his composition, nothing is necessary but an ominous title, a mechanical use of sundry bloody and mystical phrases, and a conclusion rounded off with a gallimatia of love and murder. In our opinion, a composition of this nature belongs to the lowest order of the ridiculous; and the publication of it would add nothing either to the writer's reputation or to the reader's information or amusement. Our correspondent displays a bad taste and a weak judgment, in the production of such articles. We should be sorry to consider them a fair specimen of his talents. More anon, to him, if necessary.

"Flattery is a servile and fawning behaviour, attended with servile compliances and obsequiousness, in order to gain a person's favour."

§ A number of extracts, relating to Morgan, will be found in our paper to-day. We are aware that we may be trespassing upon the patience of our readers, in bringing this subject so frequently under their notice; and we would willingly dismiss it, if we felt ourselves authorised to do so. We last week thought that we were nearly or quite through the publication of contradictions of the statements of the Lewiston convention, but we were sadly mistaken—every mail increases our stock. Nothing but a respect for truth and individual reputation could have induced us to pursue this subject as far as we have, and we think that the statements contained in "the letters" are now rendered so glaringly false that we may with safety suspend the publication of some of the remaining invalidating statements. Dr. Terry's letter we did intend to publish this week, but matter of greater interest has crowded it out of our columns—perhaps we shall never publish it. The proceedings of the grand jury of Monroe county, which will be found below, establish beyond the possibility of doubt, that certain members of the Lewiston convention have acted a very dishonourable part, and they will doubtless meet with their reward in the contempt of the community. On Saturday last, his excellency the governor communicated to the house of assembly all the information in his power relating to the abduction of Morgan: we do not learn that he was possessed of any unpublished information.

The Black River Gazette of Saturday last says: "A few days since, Capt. John Brant, of Wellington Square, head of lake Ontario, passed here on his way to Rochester. This visit of Mr. B. to this side of the Niagara, is probably connected with the publications implicating his character, in the supposed destruction of Morgan at Fort Niagara."

The bill authorising a donation of one thousand barrels of flour, for the benefit of the Greeks, passed the senate on Saturday last, but was rejected in the

assembly on Thursday of this week; many of the members were influenced by constitutional qualms, which very few understood. The influence of the constitution appears to be a little *eccentric*; it is very accommodating sometimes.

BOSTON LYCEUM.

The third number of this magazine was received on Saturday last. It is composed of articles of various merits; the greater part of which are remarkably well written. *The Deserter*, the republication of which we this day commence, is a production of superior pretensions. The contents of the present number are—*The Speculator*; *To a Tropic Bird*; *To —*; *An Essay on Modern Education*; *The Dirge of Sappho*; *A Bachelor's Dissipation*; *Christabelle*; *Early Days of Shakspeare*; *Le Depart*; *Adversaria*; *Stanzas*; *The Deserter*; *Loneliness*; *The Pilgrim's Last Winter*. *Table Talk*—View of the House of Representatives; Typographical Association; *Voltaire*. *The Drama*—Federal Street Theatre; Macready and Forrest. *Critical Notices*—Mr. Greenwood's Essay on the Lord's Supper; Comstock's Mineralogy; The Tennessean; Alnwick's Castle; Almacks. The Lyceum is published on the fifteenth of every month, by CHARLES G. GREEN, No. 278, Washington Street, Boston, at four dollars per annum, one half payable in advance.

Among the sentences pronounced upon criminals by the New-York Court of Sessions, on Saturday last, we notice the following:

Augustus Bagley, for cheating F. B. Fitch, by altering the number of a lottery ticket, by which he obtained \$100, was sentenced to the penitentiary, at hard labor for three months. The Court said some pious persons of Brooklyn, had interceded in his behalf. They represented him as having been noted for his piety, and his regular attendance at church and religious meetings. [Here the prisoner, who is about thirty years of age, demure and sleek headed, slunk back into the box.] This character, the Recorder observed, aggravated rather than mitigated his offence.

There has lately been a great "hue and cry after morality" in the city of New-York; and the above sentence is probably a very good commentary upon it. Religion has an excellent influence upon society, and its pure spirit is worthy of every encouragement; but when it is perverted it is a vice of the most deleterious nature. The senseless jargon which is so often libelling theatres has lately been brought into action in New-York, and Madame Hutin, a very pretty French dancer, has been nearly immolated because she had a *tuck* too much in her frock. We learn, however, that the friends of Mr. Augustus Bagley have stretched her garment a full inch.

As bad as this world is, there exists a very nice sensibility on the subject of morality. And among the subjects that are made to run the gantelope, the theatre is not the least conspicuous. Sensibility, when indulged to excess, becomes sickening, and its effects should be deprecated. We are far from wishing evil to the spirit of true piety; but recent, as well as former observation, has convinced us, that to support the hypocritical opposition which generally exists against the drama, would be nothing else than to encourage vice at the expense of social virtue. The reasoning which is generally brought into action against theatres is, for the most part, so shallow that, with minds free from prejudice, it has but little influence. Nothing is more common among anti-theatrical scribblers than a declaration of positive ignorance of the interior appearance and pro-

ceedings of a theatre; and yet they gravely proceed to reason and deduce conclusions from both. Marvellous consistency! for a man to build conclusions upon premises of which he is confessedly totally ignorant! But apart from the morality of theatrical exhibitions, they are beneficial to the worldly interests of a city, and should therefore receive encouragement.

A ship, laden with provisions and clothing, was despatched from New-York to Greece on the 10th instant, under the agency of Mr. J. P. Miller. A Philadelphia paper mentions that the vessel chartered there to convey the provisions and clothing for the relief of the Greeks, is partly loaded, and, unless the weather prevents, will certainly sail on or before to-morrow. The vessel which sailed from New-York is appropriately styled "the SACRED SHIP."

The extent of injustice to which the infatuated supporters of the present excitement are disposed to proceed, is hinted at in the following resolution, passed at Pulteney, in Steuben county.

"Resolved, that we will not hear any Freemason preach, unless said preacher shall refuse to meet with any lodge of Freemasons, and shall openly and boldly declare that the institution of Masonry is a *bad* institution."

Here every minister of the Gospel, who is a mason, is required to say what he knows to be false, or, in other words, to become a *liar*, in order to be considered a worthy follower of the cross! There may be deluded ignoramus enough in Pulteney to support in that vicinity the feverish passions which created this resolution; but it is scarcely possible that a spirit so ignoble and reprehensible, can be countenanced by an intelligent and virtuous people.

CHIT CHAT.

The first Esquimaux woman ever in England was brought by Major Cartwright in 1776. "On being shown the interior of St. Paul's she was so struck with astonishment and awe, that her whole frame trembled, and she leaned for support on the person next her. After a pause of some moments, she exclaimed, did men make this or was it found here?"—*New-York Times*.—We were much amused with the reply of one of Capt. Head's companions on the summit of the Cordilleras, when all around was a surface of snow—"cheerless, wild and inhospitable as the view was, still it was sublime"—he observed to one whose honest heart and thoughts clung to old England—"What a magnificent view, what thing can be more beautiful!" After smiling for some seconds, the Cornish lad replied, "them things, air, that do wear cap and aprons.—*Id.*—*Crime in London*—Within the last eleven years, there have been executed in London alone, 240 persons, 7 of whom were females. The greatest number in any one year was 43, the least number 11.—There is now living in Aurburgh, Vt., the widow of John Babcock, whose age is only 82 years, and she has now living, children, grand children, great grand children, and great great grand children, 427.—Capt. Keppell, in his Journey from India, says he killed a brace of partridges in the *Garden of Eden*—*Quere*, were they not birds of *Paradise*.—Lord Norbury observing an officer dancing one evening with guineas as spur rowlers, remarked, that in addition to his other property, he had got two guineas to boot.—*New Ways and Means*.—A few days since, a young girl near Gloucester, in the prospect of marriage, being unable to find money enough to purchase her wedding clothes, actually submitted to the painful operation of having seven of her front teeth drawn, for which she received five guineas, and afterwards provided the necessary articles!—The widow of Captain Cook, the celebrated circumnavigator, is still living.—*Path-killer*, the oldest and head chief of the Cherokee tribe is dead. His funeral was to be celebrated with much ceremony. Charles Hicks will probably be his successor.—*What next?*—A Paris physician has invented a method of throwing light into the interior of man, so as to better understand any disease which may exist there. He has invented fine print, and read it at a distance of fifteen inches! Audibras, if alive, might no longer say,

—"In man there are no windows
To show what's carried on within doors."

CRITICAL NOTICES.

From the Boston Lyceum.

COMSTOCK'S MINERALOGY. We have hitherto, in the department of mineralogy, had no medium, adapted to the use of novices, between the Manual of Aikin, and the work of professor Cleveland. The former, it is true, contains the essence of what has been written upon this branch of science, but it carries the process of distillation too far, and the view it presents of the study it professes to illustrate, is of that general nature which serves rather to refresh the memory of the adept, than to direct the mind of the tyro from simple truths to a wide and extended range of observation. Professor Cleveland, on the other hand, claiming as he does, the decided approbation of our scientific men for his labour and learning, pursues his researches with patience and perseverance into the minutiae of the subject, and leads the pupil into the midst of all the beauties, and to him inexplicable mysteries of the mineral kingdom, without teaching him the paths which must be followed to attain a knowledge of the interesting curiosities around him.

The merits of Dr. Comstock's work seem to consist in methodical arrangement, in a proper and orderly degree of condensation, in avoiding the use of all scientific terms not absolutely necessary, and in facilitating the progress of the student by a gradual development of the elementary principles. To common readers, this volume is not without attraction from its elucidation of very many particulars connected with the science, which are not generally sufficiently unfolded in the works of this character. The work is moreover handsomely printed and forms a beautiful exception to the slovenly style of typography which, we are sorry to say is too frequently adopted in this country.

THE TENNESSEAN. We would wish to be as courteous as possible to our fair countrywoman, the authoress of the new novel, from our innate conviction of the tenderness due to her sex, as well as from the peculiar regard we have for our personal safety. We shall therefore, in giving utterance to our hasty remarks upon the truly original production before us, strive, if possible, to "keep cool."

The Tennessean is such a book as might be expected from a very loquacious—for aught we know, a very good old lady, probably somewhat addicted to tea-table scandal, fond of using her tongue as well as her pen, and gifted with no inconsiderable portion of that small talk, which we sometimes hear poured down like a shower of hail-stones on a legion of kettle drums, and with as much noise, to use a very uncouth simile—as though it were "grog time among the builders of Babel." The plot of the novel is managed in a stiff and awkward way, for the sake of introducing sketches of American character, in different portions of our country; and though our authoress often discovers an ignorance of manners and customs, unpardonable in one who pretends to give a faithful delineation of them, yet there is here and there a stroke truly Hogartian. We cannot say much of Mrs. Royal's delicacy, for in truth, she seems to have but little regard for it, and is determined never to be accused of squeamishness, or even of an uncommon degree of modesty. Nor has she much idea of writing for the gratification of her readers. Her main object seems to be to talk on paper—and she does talk like a mill-wheel in March, or any other swift-going machine. The best meed of praise we can bestow upon the Tennessean is to say that it consists of 372 closely printed duodecimo pages, very vilely printed at New-Haven.

ALNWICK CASTLE. This little volume is generally recognized as the production of Mr. Halleck, the popular author of "Fanny," against whom the only charge that is brought, is his unfrequent appearance before the public in the poetical garb, which he wears with much grace and little affectation. The first poem in this collection, is full of pretty thoughts, very prettily expressed; but like several of its successors it seems like the playful effusion of a mind in its moments of relaxation,—or in its summer afternoon idleness, rather than the effort of any serious or continued train of thought. "Marco Bozzaris,"—that bold and glowing specimen of Lyric poetry, has been known for a considerable length of time through the medium of the New-York papers. "Connecticut" and "Wyo-

ming" were, we believe, originally published in the United States Literary Gazette. The most beautiful article in the book, is the poem entitled "Burns." It abounds with warm, fanciful, and delicate imagery, and has a vein of tenderness running through every stanza. We might find fault with its versification which is occasionally loose and careless, but as a whole it is certainly sweet and touching, and will be read and remembered with pleasure by all the lovers of the Muse.

ALMACKS. The volumes of fashionable scandal which bear this title, after exciting something of a stir in the higher walks of life in London, have found their way across the Atlantic, and have been republished for the special edification of all who feel an interest in the mysterious and inexplicable. What possible attraction the book can have for the greater part of American readers, we cannot conceive; for without an intimate acquaintance with the names and characters of London fashionables of both sexes, the ranges of stars with which it abounds are as enigmatical as the riddle of Oedipus. So far as we are able to judge from a cursory passage through its pages, we should be inclined to call it a gilded chronicle, where are recorded the annals of folly and vice, in all their multifarious forms, and where profligacy and debauchery are delineated in any and every colour that may conceal their native hideousness and deformity.

From the Rochester Daily Advertiser.

THE MONROE GRAND JURY AND THE LEWISTON CONVENTION.

The Grand Jury of this county closed a laborious session of five days, without attaining to any knowledge warranting an indictment or throwing light upon the affair of Morgan. Some twenty or thirty persons, including members of the Lewiston Convention, were examined upon the matter: but all without avail! Each seemed anxious, but none were able, to unfold the mystery.

This doubtless will surprise many, as we confess it does us. We were not wholly prepared, even by the letters of Brandt, the Chapins, M'Bride, and others, to believe that the Convention were destitute of all authentic information—that what was so confidentially stated, was entirely hearsay, and consequently of no value to the cause of justice. But there is now no reason to doubt:—some members of that Convention, examined under oath, could not satisfy the Jury of a circumstance sufficient to criminate an individual or answer public expectation in any way!—So much for the bloody stories, the awful and tremendous facts, and other awfully-tremendous things, which have gone the rounds for weeks past!—Morgan may possibly be murdered, but the people have yet to learn how, where, and by whom the savage deed was perpetrated.

PRESENTMENT.

To the Honourable the Court of Oyer and Terminer for the County of Monroe.

The Grand Jurors for this Court respectfully present—That, having it in special charge from the Honourable Court, and in discharge of the duty devolving upon them as a body of Grand Inquest, we have given our most serious and industrious investigation to the subject "of the abduction of William Morgan."

Not having any presentment or testimony submitted to the Jury, we have called upon individuals composing a committee in this village, appointed by our citizens to investigate this unhappy affair, and about twenty other witnesses, for such testimony as they might have in their possession, to aid in the discovery and conviction of the individuals who have been engaged in this gross violation and outrage of the natural rights and liberties of a citizen of this state.

The witnesses have generally evidenced a disposition to promote the investigation, and to communicate the facts within their knowledge in relation to this act of violence, but which appear insufficient to the Jury to warrant the finding of bills of indictment against any individual.

Sufficient circumstantial evidence, without direct testimony, has been afforded the Jury to justify the opinion that Morgan was conveyed from Canandaigua through this county, on the ridge road: but to what place of destination, and by whom conveyed, the Jury have not sufficient facts to determine.

We commend and applaud the vigilance of the community in their laudable efforts to discover the fate of this unhappy man, and to preserve the liberties guaranteed by the free constitution of our country to every citizen; and sincerely hope and believe that their perseverance in the investigation of the subject will eventually develop this mysterious transaction, and succeed in vindicating the violated majesty of the laws.

From the Saratoga Sentinel.

The present excitement relative to the disappearance of Morgan, is not altogether dissimilar to that produced in England several years since, on the publication of a pamphlet, entitled "Jachin and Boaz," purporting to have been an exposition of the secrets of masonry. Steps to awaken the curiosity of the public, preparatory to the appearance of the work, had been taken. When it did appear, the author suddenly left the kingdom; and a story was started by the publishers that he had been waylaid by the masons, and murdered. The excitement produced was great, and the book had an astonishing sale, at a guinea per copy. At the expiration of two years, when the public feeling had partially subsided, and the sales of the book had nearly ceased, the author returned, and declared that he had made near half a million by the speculation. The deception thus practised, again aroused the indignation of the public—but not towards masons. It was now vented upon the person of the author; he was openly assaulted and insulted, and forced to leave the kingdom, not to return.

From the Onondaga Journal.

A man lately travelling, at the west, had his curiosity one evening not little excited, by a woman, almost divested of apparel, who sat near the door-way of her cottage, spinning flax with prodigious agility, and allowing her tongue full swing, at sundry of her cold, hungry, and impatient offspring. The man stopped his horse and inquired, "what's the matter?" The woman replied, "I suppose you have heard of Morgan? All the world has certainly heard of him." "But what has Morgan to do with you?" eagerly asked the man—[Here her thread broke, and tangled about her fiers.] "Why, nothing I hope; but he has published a book, you know, which some believe discloses the secret doings of the masons; and I have been taking in flax to spin to procure money to buy a book—if I don't hurry, the store will be shut before I get there!" Hereupon she set her wheel going with its wonted velocity, and the man rode off, leaving the good dame enjoying an uncommon luxury, in anticipation; though it is true, a little of its richness was detracted by the fear of arriving too late at the store.

From the Buffalo Emporium.

We had no time to remark on the letter of William Terry, in last Monday's paper. We should place but little confidence in his statement on any matter, and especially in the present case, if he had not been known as authority for the publications of the "committee." They have given him as their author: he says their statements as coming from him "are utterly false." These discrepancies we leave to the parties to settle among themselves. He closes his letter by saying that "the Committee are in possession of unequivocal testimony, which will eventually make every man of the guilty tremble to the foundation." Now, we have no doubt but this declaration is of a similar character to every thing else which has come from him. We argue thus from the fact that the Committee would not suffer the imputations, which we see every day thrown out against them for withholding the publication of their "unequivocal testimony" if they possessed any. If they knew Morgan has been murdered, and by whom it was done, what claims can they have on the good opinion of the public, if they fail to cause the arrest of the perpetrators and their punishment? Why are they not willing that the guilty should alone suffer—and put a stop to that excitement among their friends which has destroyed the harmony of social intercourse, and which has excited, and continues to excite, the worst passions of the human heart? Surely, this Committee have a fearful account to answer for.

FOREIGN NEWS.

Letter from Europe.—By the arrival at Boston on Monday of the brig Concordia, Capt. Low, Paris papers to the 15th Feb. and London to the 12th are received.—The project for a law relative to the police of the press was still under discussion in the Chamber of Deputies. Its features had been materially softened by the amendments made by the Deputies, and it was supposed that the government would withdraw it.—By private letters also, we learn that the proposition for restraining the liberty of the press, has excited a more general dissatisfaction than any public measure which has been proposed for years. Addresses and remonstrances were presented to the Chambers, not only from editors, printers, and booksellers, but from literary and scientific societies. Two members of one of the latter who acted as a committee, and who held civil offices, were deprived of them by the liberal King, the very day after presenting their remonstrance.—The Boston papers state that the news from Greece continue to be of a more encouraging nature. The Patriot remarks that the government had been reorganized at Egina. Miaulis had arrived there in the Hellas, to receive the orders of the government. In consequence of the success of Karaiskaki in Attica, the whole of Northern Greece, as far as Thermopylae and Volo, had taken up arms, and Redschid Pacha had been obliged to act upon the defensive. Ibrahim Pacha continued inactive. The Bavarian officers at Napoli had organized a Frank corps. At Constantinople a new conspiracy had been discovered, and several of the leaders in it were seized in the night and immediately executed.—In the French Chamber of Deputies, on the 10th, the Minister of the Finances brought forward the annual exposition of the state of the Finances. The expenditures of the year 1826, ordinary and extraordinary, amounted to 933,940,350 francs. The receipts of the year exceeded this amount by 5,116,366 francs. The expenses of the current year are estimated at 915 millions.—M. Ribeaupierre, the Russian Ambassador, arrived at Bucharest Jan. 19, on his way to Constantinople.—The Prince Hatzfeld, Minister Plenipotentiary of the king of Prussia at the Court of Austria, died at Vienna, Feb. 3, after a short illness. He had been condemned to death in 1806, by a military commission, but was pardoned on the intercession of his wife, by Napoleon. [N. Y. Times.]

POETRY.

From the Golden Violet, by Miss L. E. London.

THE EASTERN KING.

He flung back the chaplet, he threw down the wine.
"Young monarch, what sorrow or care can be thine?
There are gems in thy palace, each one like a star
That shines in the bosom of twilight afar;
Thy goblets are mantling in purple and light,
The maidens around thee like morning are bright,
Ten kingdoms bow down at the sound of thy name,
The lands of far countries have heard of thy fame,
The wealth of the earth, and the spoils of the seas,
Are thine; oh, young monarch, what ail'st thou with these?"

"I'm weary, I'm weary. Oh! pleasure is pain
When its spell has been broken again and again.
I am weary of smiles that are bought and are sold,
I am weary of beauty, whose fetters are gold,
I am weary of wealth—what makes it of me
But that which the lowest and basest might be?
I have drain'd the red wine-cup, and what found I there?
A beginning of madness, no ending of care!
I am weary of each, I am weary of all,
Listless my revel, and lonely my hall:
Veil, maidens, veil your warm cheeks of the rose,
Ye are slaves of my sceptre, I reck not of those!"

The monarch rose up with the reddening of morn,
He rose to the music of trumpet and horn:
His banner is spread to the sun and the wind,
In thousands the plain by his warriors is lined.
The foot ranks go first, their bows in their hand,
In multitudes gathering, like waves on the strand;
Behind ride his horsemen, as onward they come,
Each proud steed is covering his bride with foam.
In the midst is the king: there is pride on his brow,
As he looks on the myriads that follow him now;
His eye and his sabre are flashing alike,
Wo, wo for the warrior that dares him to strike!
Thousands and thousands are strewn on the ground,
Ahmed comes back a conqueror, but what hath he found?
The cry of the orphan is loud on his ear,
And his eye hath beheld the young bride's bitter tear,
And the friend of his youth is left dead on the plain,
And the flower of his nobles return not again.
There are crowds that are filling the air with his name:
Do ye marvel the monarch is loathing his name?

Again to the sunshine the banners are spread;
Again rings the earth with the warrior's tread;
And loud on the wings of the morning are borne
The voice of the trumpet, the blast of the horn;
And, eager to gaze on the royal array,
The people in crowds gather forth in its way.
Who would deem they were gazing on death and on doom,
That yon purple and gold strewn'd the way to the tomb?
The canopy glitters; oh, vainest deceit!
There the king's robe of state is his cold winding-sheet,
And he at whose beck waited life, waited death,
He hath not command on a poor mortal's breath.
A whole people trembled when that he but frown'd,
And his smile was the summer of nations around,
Now who is there watched for smile or for frown?
For the head of another is girt with his crown;
And he lieth a heap of powerless clay,
Where the meanest earth-worm at his pleasure may prey.

They bore the monarch on to his tomb,
Black marble suiting such dwelling of gloom:
But on it was graven a lesson sublime,
A voice from the grave appealing to time;
Were not voice from the living or dead alike
On the heart in its foolish pride to strike?

"Millions bow'd down at the foot of my throne:
The strength of the north and the south were my own;
I had treasure's pour'd forth as the waves of the sea;
Success seem'd the slave of my sceptre to be.
And pleasures in crowd at my least bidding came,
Every wish that the will in its wilfulness could frame:
And yet, amid all that fell to my share,
How much was weariness, how much was care!
I number'd years of pain and distress,
And but fourteen days of happiness.
Mortal, nor pleasure, nor wealth, nor power,
Are more than the toys of a passing hour;
Earth's flowers bear the foul taint of earth,
Lassitude, sorrow, theirs by their birth.
One only pleasure will last—to fulfil,
With some shadow of good, the Holy One's will.
The only steadfast hope to us given,
Is the one which looks in its trust to heaven.

From the Boston Lyceum, for March 15, 1827.

STANZAS.

"But as it sometimes chanceth, from the night
Of joy in minds that can no farther go,
As high as we have mounted in delight,
In our dejection do we sink as low."

Wordsworth.

The uprisen sun the mountain-top kissed,
And chased thro' the valley the curling mist;
While swift o'er the glade sped the startled hind,
And the green woods joyously waved to the wind.
The broad yellow light of the growing day,
Like a seraph's wing, on the hill-sides lay;
On the crisp leaves glittered the drops of dew,
That flashed to the sun as he pierced them through;
Like strings of the harp, the breezes wake,
My heart uttered joy;—from bush and from brake,

Glad answer came back;—while the sweet winds still
Joined song with the birds; and the gurgling rill,
With the ceaseless hum of the bees was heard.
Busy music of Nature!—my heart was stirred
With an inward delight;—and I rejoiced,
That Art should be thus by Nature, outviced.

'Twas a moment to turn from things of earth,
And to purer and holier thought give birth;
For loveliness lay in the deep blue sky,
On their soft grey wings light clouds flitted by;
And gladness and innocence seemed to rest
Like spirits of bliss, upon Nature's breast.
But thoughts that were sad passed o'er my mind
Of fortune unfaithful—of fate unkind—
Of pleasures dear-bought,—that presently cloy,—
The falsehood of hope,—the fleetness of joy;
Tho' the scene of enchantment round me lay,
The sense of enjoyment had passed away;
No longer for me was the landscape fair,
The heart that breathed hope—now sunk in despair.

Thus the golden chord of joy, though entwined,
So lightly and easily round the mind,
By a passing thought may be burst in twain,
And we cannot unite the thread again.
There are sounds that charm—there are sights that win,—
But our bliss, or our bane, is the mind within.
A. M. W.

From the New-York Crystal Hunter.

THE COMING OF NIGHT.

"This night, methinks, is but the daylight sick.
"It looks a little paler, 'tis a day,
"Such as the day is, when the sun is hid"

The stealing wave receives the twilight's pearl;
The western clouds are losing Phœbus' kiss;
The purple smoke in vain attempts to curl,
Above the line where Venus smiles in bliss.

Yon noble ship displays her every wing,
And woos the night-wind for its fitful sigh;
Her little top-sail looks a bird-like thing,
Which leaves the earth to commune with the sky.

Where th' horizon trembles cold and blue,
A silver herald whispers of the moon;
While nature draws out perfumes with the dew,
And brings her soft nurse like an angel's boon.

O, beauty-breathing God! if one so frail,
So sinful, at this quiet time can see
A paradise above yon little sail—
A type of glory blessing hill and tree:

How must the good man fill his spotless soul
With all the gushing poets sometimes feign!
How make Thy colours through his mind's eye roll!
How drink the landscape as the sands the rain!

Thou art all mercy, beauty-breathing God!
Or why should I, a sad self-shipwreck'd man—
Know that Thy pearls adorn the dewy sod;
Or thus enjoy the bright lines of Thy plan!

And if a mortal so Thy works can feel,
How shall a spirit bear the beams of Thee,
When the last trump must send through worlds a peal,
And wake pale millions to eternity! C. E. E.

From the U. S. Review, for March, 1827.

THE BRIDE.

The lady sate in sadness—her fair lid
Shrouding her eye's dark beauty, while soft hands
Were wreathing her thick tresses, and amid
The glossy ringlets twining costly bands
Of snowy pearl; but oft a deep-drawn sigh
Heaved the rich robe that folded o'er her breast,
And, when she raised her head, within her eye
Sparkled a tear which would not be repress.
She glanced toward the mirror, and a smile
Crossed her sweet lip.—it was a woman's feeling
Of mingled pride and pleasure, even while
The blight of sorrow o'er her heart was stealing.
Yet, as she gazed, she thought of by-past hours,
When she was wont, within the orange bowers,
To sit beneath the moonlight, and the arm
Of one she loved was folded round her form;
While to his throbbing breast she oft would cling,
And playfully her loosened tresses fling
(Light fetters) o'er his neck, then with bright cheek
Smile when he strove his tenderness to speak,
Another change came o'er her face; she turned
And raised a crystal cup that near her stood;
Upon her cheek a deeper crimson burned,
And to her eye there rushed a fearful flood
Of wild emotion; eagerly she quaffed,
With trembling lip, the strangely-blended draught,
And then, in low and faltering accents, cried,
"Am I not now a gay and happy bride?"

She stood before the altar, her pale brow
Uplifted to the holy cross: the sun
Shed through the painted window a deep glow
Upon her cheek, and he, who thus had won
Her hand without her heart, was at her side;
The holy priest too;—but as less allied
To earth than heaven she stood, when called to speak
The deep response, her voice had grown so weak
She scarce could utter it; her fragile form
Shook with convulsed emotion; but the arm
Of her stern sire supported her—her head
Fell helpless on his breast, and she was wed.

The bridegroom pressed his lip to her pale face;
She shrank from him as loathing his embrace,
Then starting up, with fearful calmness said,
"Father, I promised—have I not obeyed?
But there is yet another vow unpaid—
For I am the betrothed of Death, and, lo!
The bridegroom waits his promised bride e'en now.
Our nuptial torch shall be the glow-worm's light,
Our bridal bed the tomb! Oh! it is sweet
To think that there no grief can throw its blight
O'er young affection! Ay, e'en I can greet
The marriage cup, when drugged with aconite!"
She trembled, would have fallen, but again
Her father's arm upheld her, while her breath
Grew fainter, and her breast heaved as with pain;
Lowly she spoke; "Let not my bridal wreath
Lie on my bier. He deems me faithless—now
Let him bend o'er this cold and stony brow,
And learn how well I loved!"—a fleeting spot
Of crimson stained her cheek and—she was not!

IANTHE.

LACONICS.

BY THE DUKE OF ROCHEFOUCAULT.

It is no great misfortune to oblige ungrateful people, but an insupportable one to be forced to be under an obligation to a scoundrel.

We should not judge of a man's merits by his great qualities, but by the use he makes of them.

Opportunities make us known to ourselves and others. In affairs of importance, we ought less to endeavor to make opportunities, than to use them when they offer. All our qualities both good and bad are under certain, dubious, and at the mercy of opportunity.

The passions are the only orators that always succeed. They are, as it were, nature's art of eloquence, fraught with infallible rules. Simplicity, with the aid of the passions, persuades more than the utmost eloquence without it. So much injustice and self-interest enters into the composition of the passions, that it is very dangerous to obey their dictates; and we ought to be on our guard against them even when they seem the most reasonable. While the heart is still agitated by the remains of a passion, it is more susceptible of a new one, than when entirely at rest.

[No. 9.]

MASONIC RECORD.

Semita certe,
Tranquillus per virtutem patet unica vitæ. [Juv. Sat.]

L. D. KING'S ADDRESS.

[Concluded from page 58.]

These nations, thus highly illuminated, were the seminaries to which the great and inquisitive of all other states resorted. Cadmus, Lycurgus, Solon, and other great luminaries, were residents at these polished courts, and among them Pythagoras holds a distinguished elevation in the records of fame. This great geometrician was the most extraordinary mystagogue of all antiquity. He made a secret even of his geometrical problems, and imposed a probation of five years silence, preparatory to initiation into his sacred mysteries.

In the midst of all this profusion of scientific light, lived Solomon. An assemblage of philosophers, allured thither by the fame of his wisdom, from every quarter of the civilized world, filled his court. In him was concentrated all the knowledge then extant, whether philosophical, theological, ethical or scientific. God, as has been already said, held communion with him, and unveiled to his astonished gaze the exhaustless treasures of hitherto unrevealed wisdom, surrounded deeply in the immensity of the eternal mind; and aided by these celestial endowments, he established the masonic degrees. The immediate object of this great and illustrious oracle, was the introduction of system and harmony into the operations of the mighty multitude which built the temple. Among these were 3000 master masons, the most eminent artists of the age, assembled from Tyre, Egypt and Assyria. And as our grand master was the pupil of heaven and illuminated by the glory which emanates from the throne of God, it were the highest absurdity and would reflect upon his memory the deepest obloquy to imagine him indifferent to the moral culture of the craft. It would indeed contradict his general character and the whole current of tradition. On the contrary, he imparted to them the light of inspiration he had received, and made it perpetual in the lodges. He taught them those great truths which we said were the mason's lights, together with others of equal moment. The temple was completed and the craft dispersed—but they carried with them and preserved sacred and inviolate, those mysteries which had been revealed to them from the lips of their illustrious founder.

These mysteries and these fundamental truths so essential to the happiness of man, have ever been preserved in the bosom of the fraternity.

Hence we may account for the light which glimmers in the pages of ancient writers. It was the lamp of masonry which shed its rays in their paths and lighted their way to the temple of knowledge. And in fact previous to that auspicious era, when like the morning star which announces the approach of light and ushers in the smiling king of day, our brother and patron appeared on the earth, the herald of the sun of righteousness, the prince of peace, all correct knowledge of ethics and theology, founded on the relation which man sustains to his maker, was either recorded in the sacred volumes of the Hebrews, or reposed in that faithful repository for all secrecy, the hearts of the brotherhood. This is not a narrow view of this subject. It will abide the test of any scrutiny. Witness the wretched and contradictory systems of philosophy successively in vogue in the ages subsequent to the building of the temple! What truth did they possess, we claim as having emanated from the lodges—truth, which at length, by the absurd appendages of theory, hypothesis, scepticism and dogma, became too much attenuated to retain any longer its original beauty, or be at last discernable amid the rubbish of conflicting doctrines.

Whoever will throw a retrospect at the history of a few centuries before the christian era, will be

instantaneously struck with the violence and madness of that ambition, which with its dreadful gorgon drenched the earth in blood, desolated the fairest works of God, and wherever nature spread her gushing joys for her peaceful sons, transformed her blooming face into a desert of hissing serpents and howling beasts of prey—of that ambition which, like the polar blasts, or torrid whirlwinds swept over the world, driving the furious car of annihilation over countless hosts of dismayed and prostrate victims, leaving desolation and carnage the dreary monuments of its relentless wrath. Still the lodges, if we may credit the testimony of Cicero, were the asylums of the wretched. Masonry threw open her portals and welcomed to her sacred recesses, all who sought a shelter there.

But amidst surrounding corruptions, when the whole world, not even excepting that nation which received the oracles of the prophets of the most high God, was sunk in utter ignorance, when darkness covered the earth and thick darkness the people, can we imagine that the fraternity escaped contamination? Previous to the appearance of those two bright parallels of masonry, the St. Johns, the fraternity partook largely no doubt of the general infatuation of the times, corrupted by the foul contagion of universal idolatry, the perversion of the noblest powers of intellectual beings to the absurdities of a degraded polytheism. But this transient cloud soon dissipated and left the pure principles of the order, splendid as the sun and firm as the pillars of creation, destined like that glorious luminary to survey the whole habitable earth, and dart its beams wherever it could find a son of sorrow to cheer, or a daughter of grief to gladden.

Holy in principle and practical in application, it considers all mankind as brethren, and like the angel of mercy it extends the gentle hand of beneficence to every sufferer. Its great outlines, its predominant features, are the same as those of christianity, and proclaim to the world, in the language of an illustrious apostle, that though we spoke with the tongues of men and of angels and have not charity, we become as sounding brass and a tinkling cymbal.

In this western hemisphere masonry flourishes in the vigour of vernal bloom, and has enlisted under its banners an imposing and brilliant array of talent, intelligence and character. It however meddles not with the government nor its concerns. It leaves cabal and intrigue to the stormy and boisterous devotees of faction and party spirit. Within our sacred walls the angry voice of politics is never heard. God and our country, liberty and equality, are the patriotic sounds which are echoed there. The very form indeed of our constitutions, our frequent elections, the level on which we meet, and the various franchises of the assembled brotherhood, are a standing memorial of our undeviating democracy. The hint of a republican government may perhaps have been first taken from that most perfect model, a lodge in operation. Masonry is well known to be the terror of all despotic governments, and the Medusa so terrific is the genius of Republicanism. This is the Hydra with its fifty heads, which not even that modern Hercules, the holy alliance, can exterminate. It is this which has drawn upon us the maledictions of every despotic dynasty of the eastern continent where the torch of masonry has been kindled. The hands of the Spanish Monarch, now on the throne, an infuriate and besotted bigot, are yet reeking in the blood of our brethren! And in almost every part of Europe, proscription, confiscation, exile and death have been marshalled for our destruction. We have been proscribed by papal interdiction, hunted by the blood-hounds of the Holy Alliance, and, as far as was in her power, exterminated by the edicts of imperial Russia. But masonry, like the fabulous Phenix springs renaissant from the tomb.

and her arm
Aloft extending, like eternal Jove
When guilt brings down his thunder, calls aloud

On freedom's name,
And bids the patriots of her country hail,
For lo! oppression prostrate in the dust,
And man again is free.

KING SOLOMON'S TEMPLE.

The following particulars relative to king Solomon's Temple, cannot fail to be interesting to all classes of readers, and particularly so to royal arch masons.

This famous fabric was situated on Mount Moriah, near the place where Abraham was about to offer up his son Isaac, and where David met and appeased the destroying Angel. It was begun in the fourth year of the reign of Solomon; the third after the death of David; four hundred and eighty years after the passage of the Red Sea, and on the second day of the month Zif, being the second month of the sacred year, which answers to the 21st of April, in the year of the world 2992, and was carried on with such prodigious speed, that it was finished, in all its parts, in little more than seven years.

By the masonic art, and the wise regulations of Solomon, every part of the building, whether of stone, brick, timber, or metal, was wrought and prepared before they were brought to Jerusalem; so that the only tools made use of in erecting the fabric were wooden instruments prepared for that purpose. The noise of the axe, the hammer, and every other tool of metal, was confined to the forests of Lebanon, where the timber was procured, and to Mount Libanus, and the plains and quarries of Zeredathah, where the stone were raised, squared, marked and numbered; that nothing might be heard among the masons at Jerusalem, but harmony and peace.

In the year of the world 3029, king Solomon died, and was succeeded by his son Rehoboam.

Shortly after this, with Jeroboam, the son of Nebat at their head, ten of the tribes revolted, and established a separate kingdom. Thus divided, the tribes of Israel continued under two distinct governments, two hundred and fifty-four years; when the ten revolted tribes became weak and degenerated, and their country was laid waist, their government overthrown, and extirpated by Salmanezar, the Assyrian king. After a series of changes, Jerusalem was besieged by Nebuchadnezzar, king of Babylon, and after a defence of a year and a half, it was surrendered, and delivered to the officers of Nebuchadnezzar, in the eleventh year of the reign of Zedekiah, king of Judah. The temple was sacked and destroyed, all the holy vessels, together with the two famous brazen pillars, were taken away, and the remnant of the people who escaped the sword, were carried away captives to Babylon; where they remained servants to Nebuchadnezzar, and his successors, till the reign of Cyrus, king of Persia, who, in the first year of his reign, being influenced and directed by the same divine power by which he was invisibly led to the throne of Persia, issued an edict for the liberation of the captive Jews, permission to return to Jerusalem, and rebuild the city, and house of the Lord. The principal people of the tribes of Judah and Benjamin, with the Priests and Levites, immediately departed, and commenced the glorious work; many of the Jews, however, rather than relinquish the possessions they had obtained in Babylon, determined to remain there.

ELECTIONS.

Grand Royal Arch Chapter of Rhode Island.

Elected March 20th, 5827: Asa Bosworth, Grand High Priest; Caleb Drown, Deputy Grand High Priest; Samuel Randall, Grand King; Philip Potter, Grand Scribe; Sylvanus Tingley, Grand Secretary; Jason Williams, Grand Treasurer; Rev. David Pickering, Grand Chaplain; Pardon Sayles, Grand Marshal; William P. R. Benson, Grand Tyler.

Grand Lodge of Mississippi.

Elected, January, 5827:—John A. Quitman, Grand Master; P. A. Vandorn, Dept. G. M.; Tho-

mas P. Falconer, Grand S. W.; R. Bien, G. Jr. W.; Rev. James Pilmore, G. Chaplain; D. S. Walker, G. Orator; James J. Rowan, G. Treasurer; Stuges Sprague, G. Secretary; James Smith, G. Marshal; J. Strotter, G. Sword Bearer; George Newman, G. Pursuivant; John H. Duncan, G. Sen. Deacon; Robert Stewart, G. Jr. Deacon; Joseph Newman, G. Steward and Tyler.

SCIENCE AND THE ARTS.

ARTS AND SCIENCES IN AMERICA.

We have repeatedly called the attention of our readers (says the New-York Daily Advertiser.) to the importance of encouraging scientific works in this country, and have attempted to show the influence which our respectable publications of this sort are calculated to produce in foreign countries. Such remarks have occasionally been suggested to us, by the inadequate support afforded to the American Journal of Science and the Arts, which has been conducted by Professor Silliman, for a number of years, with no less benefit to his country than honour to his talents and persevering industry. It is only through works of this description that the progress of the Arts and Sciences in the United States can be known abroad; and we make the following translation from the Revue Encyclopedique, to show how much we are indebted to such publications as we have, for the high opinion which learned men of other countries entertain of our spirit and genius for the useful branches of learning. The passage we select from a general "View of the Progress of Sciences and Arts in 1826:"—

[Translated from the Revue Encyclopedique.]

While the principles of physics have been applied in Europe with too much boldness, they have been managed with more wisdom in America, and of course there they have proved more useful. The American Philosophical Society of Philadelphia have published the experiments of Mr. Bull, on the quantity of heat evolved by the combustion of different sorts of wood used for fuel in the United States, and the fossil coals of the new continent compared with the Newcastle coal; and the results obtained have been fully confirmed in analogous experiments made by scientific men in Europe. The economic arts, therefore, no longer want fixed data to direct in the use of different species of combustible, and to show what are the most valuable for heating apparatus.

Some new machines planned in that country, can be considered as yet only projected. We cannot tell how far the explosion produced by the combustion of hydrogen, will furnish a moving power more efficient or less expensive than the vapour of water; and the "upward force of fluids," argued upon by Mr. Genet in the United States, still wants the sanction of proof on a large scale, as well as practice.

But what is most to be admired in that country of

vast conceptions, is, that they so promptly accomplish, in regions almost desert, enterprizes which consume so much time among our thick population, and in our limited districts. In the United States, a few years are sufficient to open an interior navigation between distant provinces. Their ships of war already bear a more formidable artillery. While we are deliberating at our leisure, and are less and less eager to undertake new enterprizes, North America is advancing with rapid strides in the career of improvements. The study of nature there is unshackled—every authentic discovery is well received, and turned to use. Geology, now so timid on the European continent, has almost discontinued her researches; but she pursues them in England and the new continent. Thanks to the Geological Society of London, and the numerous explorers scattered over the surface of the United States, the past year has greatly added to our knowledge of the superficial crust of our globe.

SCOURING UNDYED WOOLLENS.

This process, as practised by dyers, is so simple, that any housewife may go through it.

Supposing the article to be scoured is one of the largest sized blankets in a very dirty state. Cut into thin slices half a pound of the best yellow soap, then pour such a quantity of boiling river water on it as will effectually dissolve the soap, and make it the consistence of oil: this is called solution of soap. Enough of this being made to scour what dannels you may have to clean, you then proceed to pour into your scouring tub a sufficient quantity of hot and cold water to cover your goods about two inches—the heat must be such as you can bear your hand in. Having previously put a lump of the best American pearl ashes into your tub, as big as a small walnut, and some solution of soap, about a third of the quantity prepared, put in your goods, and, with your doll, beat them out, until no head or lather rises on the top of the water; you must then take the blanket by one corner, and hang it up, letting the two ends or sides meet when hung down together. Then turn those two ends in, round each other, put a short stick between them, and by these means you can wring it quite tight. If you have more than one to do, you may add a little pearl-ash to the water, and add more hot water, beating them in like manner. This will tend to soften the dirt in them, and prevent any of the ingredients from being lost. The dirty water is now to be thrown away, and a second liquor prepared as the former; but if the blanket is pretty well cleaned of its filth, you need add no pearl-ash in this second liquor; only let the water be hotter than the first, and then proceed as before. The second liquor being spent, put it into the tub with the rest of your dirty goods. A third and finishing liquor is prepared, by adding the remainder of your solution of soap, and a small bit of pearl ash and boiling water; then put your blanket into the liquor, give it a quick beat out in this thin liquor, and immediately wring it very tight; hang it out to dry, and it will be as white as wool can be made.

[Tucker's Family Dye and Scourer.]

MAPLE.

H. A. S. Dearborn, Esq. observes in the New England Farmer, that there are nine species of maple in North America, two of which are equally productive of sugar—the rock, or hard maple of New England, and the black sugar tree of the western states. Dr. Rush states that the maple is not injured by tapping—on the contrary, the oftener it is tapped the more syrup is obtained from it. He estimates that a tree of ordinary size yields in a good season from twenty to thirty gallons of sap, from which are made five or six pounds of sugar. Sap from trees growing on cleared land is richer than that produced by those in a forest. A pound of sugar is sometimes obtained from three gallons of the former. Dr. R. says the rock maple wood ranks next to hickory as fuel, and the charcoal made from it is in high estimation. The wood is much used by turners and cabinet makers—the varieties called bird's-eye and curled are much admired in this country and in Europe. As an ornamental tree and for shade, the rock maple is surpassed by few if any.

The Romans had a species of curled maple which they called the peacock's tail, from its resemblance.

From this were made her most beautiful and expensive tables, some of which were sold for immense sums. When the men reproached their wives for their extravagance, they used to turn the tables upon their husbands, i. e. reproach them for their costly tables. Here is the origin of this common expression. [Hamp. Gazette.]

SILK.

A correspondent in the New England Farmer is of opinion that the United States will become a silk growing country in a few years. The Southern States, says he, will make most in quantity, but New England will turn out silk of the best staple, the most clean and perfect. He thinks the produce of silk alone will make a nation wealthy. He describes the manufacture of silk in Italy. The establishment for winding the cocoons (balls of the silk worm) into thread, twisting, &c. are extensive, and the machinery complex. The finest silk is made by winding together the threads of four cocoons—the coarsest will take the threads of twenty or sixty cocoons. The threads of raw silk thrown together make warp. The following is the Italian method of hatching the eggs of the silk worm:—

"In Italy it is the custom to get the moth to deposit her seeds on small pieces of scarlet cloth, and when the appointed time comes, the women place the pieces within their bosoms. The genial warmth, after a certain number of days, brings the seeds into life."

THE TRAVELLER.

HERCULANEUM AND POMPEII.

Whole stately cities in the dark abrupt
Swallow'd at once, or vile in rubbish laid,
A nest for serpents; from the red abyss
New hills, explosive, thrown; the Lucrine lake
A ready pool; and all to Cumæ's point
The sea recovering his usurp'd domain,
And pour'd triumph o'er the buried dome.

The discovery of Herculanum in 1713, and of Pompeii in 1753, excited the greatest interest throughout Europe. No instances had occurred of large cities, containing so many works of art having been buried for so many centuries, and at last brought to light, with all their temples, statues, paintings, houses, shops, household furniture, and utensils, in such a state of preservation. Pompeii, indeed, has no equal: It lies at the foot of Mount Vesuvius, about 15 miles south-east of Naples, in that rich plain where Hannibal remained for years after the battle of Canæ, and wasted the strength of his army in luxury and ease. It is a walled town, about three or four miles in circumference; and with the exception of some temples, the amphitheatre, theatre, tombs, and a few houses, is all built of brick. During the eruption of Vesuvius, in the year 97 of the Christian era—the greatest on record—the mountain for several days continued sending forth large quantities of ashes and light stones, which fell in showers on the surrounding plain, and buried Pompeii. The covering is, at an average, about twelve feet deep. In some places it is much greater—in others not more than a few feet; but it appears to have been so complete that not a vestige of the city was left. Houses were built above it—vines were planted in the new soil—roads were made—and Pompeii lay forgotten and neglected, till about seventy years ago, when accident brought it to light. It is only astonishing that it had not been discovered sooner; as the covering in some places, is so light, that the roots of the vines have penetrated a considerable way into the buildings below. A great part of it is now excavated, and exhibits a most interesting sight, not only to the antiquarian and curious, but to every man who has read or heard of the Romans. On approaching it from Naples, nothing is seen but a high mound formed of the rubbish collected from the interior of the city. On entering by a narrow passage cut through this mound, the great road which led to Rome, and a long street of tombs continued to the walls of the town, first attract the attention. The street is paved with large stones, with five angles, most of them between two and three feet in diameter. The tombs are all of white marble. Some appear old, some are fresh and white as when the workmen left them, others are only half finished. Most of them have

emblems or figures carved on them, and but few have inscriptions. The principal house in this street belonged to Diomedes. His tomb is opposite to it, with this inscription in Roman capitals, "Diomedes I. sibi et suis" (Erected by Diomedes, for himself and family.) Another near it has a most appropriate device for a tomb—a vessel is represented entering the harbour with the sailors on the yards furling the sails. The voyage of life was over—the frail bark had reached "the safe and quiet harbour of death, at all times ready to receive us from the stormy ocean of human life." Urns, containing the ashes of the dead, are placed in niches, in small square cells, at the back of the monuments. They are all of earthenware, and very small. The house of Diomedes is in a wonderful state of preservation. The paintings on some parts of the ceiling, and the ceiling itself are as fresh and entire as they could have been 1700 years ago. There is a garden at the back of the house, with a wine cellar beneath it. The cellar is in the form of a funnel, about eight feet wide, running round the inside of the garden wall. It contained a great number of wine jars, which are filled with ashes apparently colored with the wine. These jars are of earthenware, about three feet long, and of the width of a chimney can at the middle, narrower at the bottom and mouth, and with two handles at the neck. They were ranged against the wall. In this cellar 17 human skeletons were found; one of them had a key in its hand. Whether they had fled to this place for safety, or to riot in drunkenness, like shipwrecked sailors is uncertain. It is probable however, that most of the inhabitants had time to escape from the city, though many of them, no doubt, were suffocated by the ashes in their flight. Pliny is supposed to have died in this manner. When the eruption was at its height, he sailed from the port of Misenum, on the opposite side of the bay, for the purpose of examining it more narrowly. The inhabitants were fleeing in boats in all directions. He however proceeded with two servants, towards Pompeii, but soon found the sulphur and ashes so insufferable, that he was forced to return. On his way back he was overtaken by a violent shower of ashes and pumice stones, which deprived him of life. His body was found three days after. Not more, perhaps, than twenty-five or thirty skeletons, at most, have been found. It is astonishing that a greater number has not been preserved, there can be no doubt, taking into account the number of sick, aged and infirm persons, that could not make their escape, together with those confined in prison, that a great many must have perished. In one of the prisons a skeleton was found with chains at the hands and feet. The bones of all these victims, on being exposed to the air, it is stated, soon crumbled to dust, which is extremely probable, as none of them are to be seen in the Museum at Naples, where all the relics are preserved. Leaving the street of the tombs, we entered the city by the ancient gate. It is hardly possible to imagine any scene that can excite such interest, or so many melancholy reflections—the silence of death pervades the place. With the exception of a few statues and frescoes, which have been removed, everything is left in its original state. Houses, temples, theatres, wells, mills, ovens, shops—all remain nearly as they were in the time of the ancient Romans. The streets are narrow, with a foot-path on each side, raised about a foot. The houses in general are small, and of one story. In the shops there appears to have been no partition between the door and the window. Many of the shops at Naples have exactly the same appearance. I do not recollect, in any one instance, to have seen a chimney, and believe there are not more than two or three houses that have stairs. The rooms are generally adorned with paintings, representing flowers, birds, or beasts. The peacock and the goat seem to have been favourites. The colours are of a bright red, blue or yellow. On some of the houses and shops the names of the owners are inscribed in red paint on a ground of white, which had been used to efface some previous inscription. A cock and serpent are the common signs for apothecaries. Bakehouses contain small hand-mills for grinding the wheat, jars for the flour, and ovens exactly like those of the present day. Above one of the ovens is a symbol of the same kind with those which are so common on the temple at Nismes, with this in-

scription beneath it:—"Hic habitat felicitas." At the angle where two streets meet there is commonly a well with a trough attached to it, and when the streets are not passable for carts and carriages, there are two large stones placed to prevent their entrance. The tracks of the cart wheels are in some of the streets two or three inches deep. There are but few houses that appear to have been inhabited by the wealthy, and even these are small and incommensurate. There is a large court in the interior, commonly with a fountain in the middle, and the entrance to the rooms from this court, serve both for doors and windows. All the houses are without roofs. In some of them, which have not been cleared out, jars, pots, and other family utensils, are seen just appearing above the ashes, in the same position in which they had been left by the proprietors seventeen centuries ago. The forum, which is of an oblong shape, and of great size, is now completely excavated, and has on all sides public buildings of considerable magnificence. It is needless to describe them, as with the exception of the temples, and those which have inscriptions, the purposes for which they were erected are not known. The last public building discovered in the forum is very extensive. I asked one of the workmen the name of it. The only reply was a shrug of the shoulder, a grimace and a scream, the usual signals which a Neapolitan gives of inability to answer a question. On the question being repeated, he said he could not tell, as those wiser than himself had not been able to agree on a name for it. The amphitheatre is at a considerable distance from the forum. The interior is very noble, the seats are almost entire, and constructed of large stones of a yellowish white. Those allotted to the Prefect and Tribunes have inscriptions on them to that effect. It could contain 35,000 spectators. The view from the upper seats, and the reflection to which it naturally gave rise, are certainly unequalled; on the one side is the beautiful bay, on the other the rich plain, with Vesuvius on the left, and the bold range of high mountains on the right, the spectator looks down on the arena, on the empty seats where so many thousands had assembled in joy and gladness, and on the town now as still and quiet as the ashes of those that had inhabited it. Not more than one fourth of the town is yet excavated. It is extremely probable, however, that most of the principal buildings have been discovered, as these were commonly built in this neighbourhood of the forum. Lupines, wheat, vines and fruit trees, are now growing in great luxuriance only a few feet above the houses.

[Conclusion next week.]

CHARACTER.

MACREADY, THE TRAGEDIAN.

The following instance presents a pleasing specimen of Mr. Macready's courage and humanity: When Mr. Macready was performing at the Birmingham theatre, in August 1823, he had left the house after the Tragedy of Hamlet, in which he had delineated, with his accustomed ability, the philosophic Prince, and was proceeding on foot to his lodgings, when he approached a small cottage in flames, surrounded by a concourse of people, eager to look on, but loth to assist: a cry of distress was heard from within; he instantly threw off his coat and waistcoat, and with the agility of a harlequin, sprang into the parlour window, from whence he soon issued with an infant in his grasp, and was received by the spectating mother in an agony no words can describe. The hat, coat, and waistcoat of the adventurous hero were gone, and he darted through the crowd as he was, towards his lodgings; no one could tell the name of him who had so gallantly ventured his life; and a pecuniary reward of considerable amount was offered to the unknown by a committee of gentlemen. A circumstance occurred which brought him forward against himself; a fellow was apprehended selling a handsome coat, in the sleeve of which was Mr. Macready's name; he was sent for by the police Magistrates, and identified the coat stolen from him at the fire. The papers now lauded his modesty more than his intrepidity, and the thunders of applause that greeted him on his re-appearance at the theatre must have been the

most grateful tribute to a feeling heart. Mr. Macready's goodness did not stop here: his benefit took place shortly after, and it was a complete BUMPER. He received in an anonymous letter a bank-note for ten pounds, as a tribute to his humanity and courage in rescuing the cottager's child from the flames. Mr. Macready instantly called upon the unfortunate couple, who had lost their all in the flames, and presented them with that sum, saying he had been only the mean instrument in the hand of God, in procuring it for them: he also promised to assist the infant as it advanced in years, and we have no doubt but that he will fulfil his word.

VARIETY.

POINT OF HONOUR.—One morning while we were in Paris, our lacquey de place did not appear as usual. Breakfast passed, the carriage drove to the door, still no lacquey, and Colonel Cleveland, in a passion, had sent to engage another, when, panting with exertion, the gentleman appeared. "He was very sorry—he begged ten thousand pardons—he had hoped to have got 'his little affairs over sooner.'" "Your affairs, you scoundrel, what are your affairs to us? Do you think we are to sit waiting here, while you are running after your own affairs?" "Pardonnez-moi, Monsieur," said the lacquey, with a low bow, and laying his hand upon his heart, "but it was an affair of honour!" and the man had actually been fighting a duel with swords, with another lacquey, in consequence of some quarrel while waiting for us at the French Opera, the night before! On inquiry, we found this was by no means extraordinary, and that two shoe-blacks have been known to fight a regular duel, with the punctilios of men of fashion.

[Continental Adventures.

A RUSSIAN AMAZON.—On dismounting at a village near Darkee, my stirrup was held by a fair and handsome looking person, who proved to be a female. Admiration of military life had induced her to deprive herself of her fair tresses, and to wear the dress of a man, preparatory, as she said, to offering her services to the Emperor as a soldier. Hearing I was on the way, she told me that, if she had been a little older she would have accompanied me. I told her that she would be rejected, from her feminine appearance; but she said she would cut off her breasts whenever they were too large for concealment. On taking leave of this little amazon, I gave her an old aiguillette, which she accepted with great delight, and strutted off with it on her shoulder, to the no small amazement of the villagers.

[Keppel's Journey from India to England

A RUSSIAN CARRIAGE.—At four o'clock in the afternoon, my new equipage came to the door, driven by a Kalmuc Tartar. The vehicle was an open four-wheeled carriage, without springs, called an *arba*. It was five feet five inches long, three feet broad, and perhaps three feet deep, resembling a beer-barrel sawed in half. To this wretched conveyance were attached three half-starved ponies abreast. The collars were of wood, and the reins and traces of rope. Over the collar of the centre horse were suspended three bells. Not a moment was lost in packing the baggage; a little straw was placed at the bottom, the mattress was spread on it, and the clothes bags served as pillows. We were no sooner seated, than off we went, full gallop, to the jingling of the bells; our party consisting of the master, a Christian; the valet, a Jew; and the coachman, a worshipper of the Grand Lama. [7b.

MILITARY THEATRICALS.—Marshal Saxe, upon principle, as well as from his natural taste, was always desirous that a spirit of gayety and cheerfulness should prevail in his army; because he said that Frenchmen never fought well but when they were delighted, and that they feared *ennui* much more than being killed. He had always a complete theatrical corps with him, and it was frequently at the representation of an opera or comedy that the orders for engagements were given. Upon such occasions, the principal actresses used to come forward between the play and the farce, and say, 'To-morrow, gentlemen, the theatre will be shut, on account of the battle which the marshal is going to fight; but the day after to-morrow, will be represented "Love in a Camp," and the "Cock of the Village," &c.'

POPULAR TALES.

From the Boston Lyceum, for March, 1827.

THE DESERTER.

[Concluded from page 61.]

Had the officer been deceived by Bertha's project, his conduct would indeed have been ludicrous; but poor Bertha was the only one deceived, and amid the bitterness of her grief she exulted in the thought, that her brother was safe. What a night was this for the timid shrinking girl—not all the high strained enthusiasm of her character could uniformly support her under the prospect before her; with hurried and perturbed steps she walked the room, sometimes knelt and prayed, and then arose with the unfinished petition on her lips, approached the window and gazed on the broad expanse of snow that lay before her. The moon shone bright and clear, all seemed blended into one vast plain—not a breath stirred the branches, every thing was still, dreary and unchanging, like her own sad fate. "O!" exclaimed she, "were I indeed a criminal, how should I support this frightful solitude." At ten the next morning the officer conducted her to the place of trial; the court martial was held in a desolate hall, still bearing evidence of the revels of the evening before. A long table occupied part of the room on which were left standing empty bottles and wine glasses, while the lamps still sent forth an odour that proved they had recently expired. Bertha, with her large coat wrapped round her slight figure, stood before the awful tribunal. "Take off your cap to his honour," said a soldier who was near in a low voice. She raised the military cap from her head, and her long and beautiful hair, with the whole contour of her face, revealed her sex. "What does this mean?" exclaimed the commander. The trembling girl clasped her hands—"I came not," said she "to deceive you, but to sue for mercy for my brother. If there must be punishment, I alone ought to meet it; for it was I that induced him to desert—it was I that wrote that fatal letter." "What letter?" said the commander, I know of no letter—he asked leave of absence on the evening of an important battle; he was refused, and he deserted; now he must stand a court martial." "May she not be permitted to tell her short story?" said Major Falkner, addressing the court. They consented. "My story is indeed a short one," said she. "My mother was rapidly declining. There was only an old domestic and myself with her. She had suffered every hardship of poverty and toil, and all for Philip's and my sake, and now she was going to die without seeing him, though he had sent her all the money he had received. I did not hesitate, I did not think. I wrote to him, and entreated him to hasten back. I told him if he delayed one hour, it might be too late. Here is my letter; I found it in this dress which he had on when it came. O gentlemen, if you had a dying mother, clinging to life only in the hope of once more seeing her son; if her soul was about to take its flight, and yet lingered for a last embrace, would you let any obstacle prevent your flying to her? O think of the separation between life and death, how long and dreary it is! Could you have done otherwise than my brother did in such a trying situation?" She stopped, overpowered by her emotion. A slight conference passed among the officers. "Let him be conducted here," said the commander. The door opened, and Philip was led in, bound and guarded. "My brother!" shrieked the unhappy girl, and threw herself on his bosom. "This will not do," said the commander, "Falkner, conduct her to a place of safety, and see that she is properly protected." "I will protect her with my life if necessary," said the young officer, in a voice only intended for Bertha's ear. From the first moment he had suspected her project, and determined to aid it; he felt that her testimony might be important to Philip, and though faithful to his duty, he had taken judicious measures to arrest him. He would willingly have purchased his life at the price of half his own fortune. New emotions had sprung up in the soldier's heart, and he watched over the helpless sister as if she had been a being of his own creation. It was not difficult to interest his friends for her;—the wife of a brother officer readily offered to take her under her protection, in order that she might remain on the spot and wait the event.

Military laws are sometimes written in blood. It was urged, that if palliatives were admitted, every coward might find them. Philip Bertier had deserted at a time when the life of every soldier was pledged to his country—he was condemned to be shot as a deserter, and ordered back to prison!

The case, with its uncommon circumstances, had excited much interest, and it was fully believed that a pardon might be obtained. It was owing, however, to the indefatigable perseverance of Falkner, that it was at length solicited. He had spoken words of comfort to Bertha, nor was it strange that sounds of a more tender import should mingle with them—nor surprising, that the maiden should listen, and finally promise, that if he was indeed successful, her hand should be his reward. In the meantime the affectionate sister determined to devote every moment to her brother, and gained permission to visit him constantly; but when she applied for admission to his prison, she was told that he had positively refused to see any one. It was in vain she urged the certainty of his seeing her; the guard said he had given his word of honour to let nobody enter, and he would keep it. She wrote, but she received no answer; and, finally, she became convinced, that as his fate was yet uncertain, it was best for him to avoid every thing that would unman him. With agonizing suspense, she awaited the event of the application for a pardon. At length the pardon came. Bertier was released from prison, but doomed to bear the disgrace of a deserter, and dismissed from the army!

Bertha was sitting alone the morning the pardon arrived, indulging in woman's reveries; sometimes her thoughts wandered from her brother to her lover, and she felt that to be united to Falkner, with the approbation of Philip, was all she now desired. "And surely," thought she, "he can desire nothing better for a portionless and orphan sister." Suddenly the door opened, and he stood before her! And was it indeed Philip? so pale, so stern, so fixed! And yet he looked as when they last parted on the night of her mother's death. But that scene had been momentary, and Bertha thought of him only as the companion of her youth. She sought in vain for the animated expression of his dark eye; the mantling glow of his cheek, and his free joyous smile, all had passed away; he stood cold, and abstracted, and looked as if the dark hour of the maniac was on him. "Bertha," said he, to the trembling girl, "I learn that Falkner has procured my pardon."

"He has," said she, her countenance brightening. "And it was by his contrivance that I was first arrested," continued he calmly.

"He only did his duty," she replied, "and he has compensated, by procuring you life and liberty." "Life and liberty!" exclaimed Bertier; "and what are these without honour! The vilest slave that stands shackled before his master, if he have the high born feeling of conscious honour, has that which makes life a blessing. But I," he exclaimed, gnashing his teeth, "I must drag on the miserable remnant of my life disgraced, branded for a coward and deserter. Yet this I could forgive Falkner, for, as you say, he has only done his duty; but Bertha," added he, in a low tone, and approaching her, "what is his recompense?"

"Brother," said she, "why do you look so sternly at me, I have done no evil."

"No evil, girl," he replied, "is it nothing to remain months under the 'protection,' as you term it, of the betrayer of your brother? The spring has come round, and our mother's grave is yet unsodded. I go to visit it once more, and then I will hide myself from the haunts of men; but tell before I go," added he, fiercely, "what is the recompense you have reserved for your protector?"

"Philip," said Bertha, and her eye flashed a fire congenial to his own, "I quail not at your suspicions, they are not natural to you, nor can you cherish them; they are low and base! 'Say but the word, and I will go with you to rocks and caverns—so that you will be my protector, and once more,' added she, bursting into tears, 'my own dear brother.'"

"Alas!" said he, losing some portion of his ferocity, "what can I do with you?" Bertha's hope returned. "Will you not see Major Falkner? he earnestly requests an interview."

"Yes, I will see him," said Philip fiercely. "O not in anger, for my sake not in anger," exclaimed Bertha.

"I will meet him as man meets his fellow man," replied he, "they are too humane to bury their fangs in each other's blood, they only draw it, drop by drop, from the heart," added he, pressing his hands convulsively on his own. "Bertha," said he, after a pause, and speaking more mildly, "It is best we should not meet; but tell me, do you love him?" Bertha shrunk from the enquiry—"This is no time for scruples," said he; "answer me." A glow of indignation passed over her countenance, at the abruptness of the question; but the tenderness of the woman prevailed—and throwing herself into his arms, she exclaimed in a voice hardly articulate, "I do!"

"And what pledge" said Philip, "have you of his faith?" "Is it not pledge enough," replied Bertha warmly, "that he has introduced me to his friends; that his high minded mother has embraced me as a daughter; and that I am now in the house of a woman of the first respectability?" Philip hesitated. "I cannot leave you," said he under any uncertainty about your destiny—this would be a sin that would rouse my mother's ashes from the grave, I will see Falkner. Farewell." Bertha sent immediately for her lover. She represented in pathetic terms the unnatural state of her brother's mind, and extorted from him a solemn promise that no insult or provocation should tempt him to lift his arm against him. When they met however, no provocation was given. Falkner in a manly and dignified manner made known his wishes and solicited Bertier's approbation.

"Bertha is yours," said Philip coldly, "henceforth I claim no kindred with her, and yet," added he, "the time may come, when this nameless, houseless being shall confer more than she can receive."

"That time has already come," said Falkner with enthusiasm, "but will you not receive the pressure of a brother's hand?"

Bertier turned away—"We part," said he "forever! bid Bertha farewell for me, it will be said in kinder language than I can utter."

In the usual circumstances of life, change of character is slow, and almost imperceptible, in its progress; but a total revolution had operated on the mind of Bertier. Educated by his mother with even fastidious refinement, and believing that life unless it was "*sans peur et sans reproche*," was valueless, he had learned his father's disgrace and that he had intrusted to him the redemption of his own name and honours at the agonizing moment when he knew an ignominious death, or a still more ignominious pardon was before him. Life had indeed lost its value, natural affections, social ties, were all crushed at a blow, and he stood forth like a ruin exhibiting the beauty of former proportions and yet sublime in decay. On his release from prison his comrades crowded round him to express their conviction of his bravery; many a friendly hand was extended, but the muscles of his own were rigid and unbending. With folded arms he met their advances, their cordial assurances added new poignancy to his feelings. In the days of his happiness and dignity, he could associate with his coarse and illiterate companions with kind allowance for their ignorance; and though he sacredly preserved the secret treasure of his own emotions, his vivacity and happy tact of character had made him a favourite among his associates. But those that had in benevolence and good humour tolerated, were now compassionating him, they were in fact assuring him that they did not think he was a liar or a coward. It was insupportable. Month after month, year after year, passed away—not a human eye that had known him in the gay and happy days of his boyhood now ever gazed upon him. He had disappeared, and except in the tender and affectionate heart of his sister had passed away like a shadow of the morning. Though Falkner cherished Bertha as the dearest part of himself, there were times when not even the happiness of domestic life, and the expanding graces of her children could banish the anguish of her mind when she thought of her brother. There were likewise the anxieties of war, for Falkner was brave and received rapid promotion; all conspired to repress the natural gaiety of her mind, and to throw that shade of seriousness over the

countenance that is perhaps inseparable from sensibility and thought.

It was the evening before the decisive battle of Waterloo* that an officer in the English uniform marched his regiment into Braine le Comte; the sound of trumpets, drums and fifes, with the voices of the commanders mingled with the thunder, lightning and rain—all was in commotion, the clattering of the horses' hoofs announced the approach of cavalry, and the name of Wellington resounded through the tumult. The English officer ordered his men to their night quarters, but for himself, he reposed not. Long before the sun had risen, the army was in motion. The storm had passed away but the weather was still gloomy and unsettled—the drums and trumpets of Wellington's army called every soldier to his post on the heights of Mount St. Jean. The clouds began to disperse and discovered the rich fields of Rye that lay below, and were soon to be trodden under foot, and deluged with human blood. Already the sun had shed its broad rays on mountain and valley, and was reflected from the scarlet uniforms and glittering bayonets of the English. At ten the first cannon ball was heard and the scene of horror began. Many a mother still weeps at the name of Waterloo. The enthusiasm that animated Germany is well known. One old man sent his three sons to the army. When admonished to keep one for the staff of his old age, he replied, "Had I like Jacob twelve sons they should all go forth to fight, for freedom and their country. Long did the fury of war continue, the earth trembled with the thunder of the cannon. It was not till the sun in the Heavens began to decline, that Buonaparte perceived his own was setting! Yet still he rested his hope upon his Imperial guards; he had held in reserve fifteen thousand men for a decisive attack. He represented to them that now was the moment of victory.—"On, he cried, on to Brussels."—"Vive l'Empereur," sounded from ten thousand tongues! with impetuous valour they pressed forward, trampling under feet the weary and exhausted soldiers who had stood the brunt of a three days' battle. It was now that the young officer who had entered Braine le Comte the evening before, was seen with his sword in hand in every post of danger. "God and honour," he exclaimed, as, terrible in battle and foaming like the war-horse, he scattered death and destruction around. A new spirit seemed to invigorate the army, the soldiers formed into a line, and stemmed the rush of the French with their bosoms, and their bayonets. All was blood and death. At length the French gave way. Cavalry and Infantry blended promiscuously. The victory was won, and Germany saved!

The brave young soldier remained on the field of battle, he had no heart to pursue the flying enemy, and he arrested many an uplifted weapon as the wounded Frenchmen cried for quarter. "For God's sake give me a drink of water," exclaimed a German officer who had fallen at the first onset of the Imperial Guards, and lay gasping and bleeding to death. The English officer placed the pitcher to his parched lips, raised him up, staunch and bound his wounds, procured assistance and conveyed him from the field of battle. The surgeon who inspected his wounds, declared that none of them were fatal, though the loss of blood without timely assistance would have soon exhausted life. When the wounded officer had a little revived, he requested to be conveyed immediately to Brussels, where his wife was waiting for him, and intreated his preserver to accompany him. The officer declined, "my affairs," said he, "are pressing, I must away, but give this ring to your wife as a pledge that I will see you both again."

After the battle which decided the fate of Napoleon, the names of the English officers who had signalized themselves were recorded for new honours. None of them had escaped the eagle eye of Wellington, and among the first stood "Philip Bertier, the deserter," the same officer who had assisted the wounded man, and whom he recognized at once to be Falkner, though he was not recognised in turn. Time and the hardships of war had changed his complexion—and even the expression of his countenance was altered. When he quitted his siter for the last time (as he thought,) it was in the madness

of despair; but reflection, a feeling of conscious worth, and above all, good principles, brought him to a more rational view of past events, and he began to realize that there was yet something to be done. He enlisted in the English army; reckless of life, he was always first to risk his own, to ransom others. His bravery attracted the attention of Wellington—promotion followed after promotion, and Bertier felt that the time was come when he might claim on British ground the patrimony that belonged to himself and his sister; yet still he shrunk back, "I will not sue for it," said he, "it shall be offered me," and he still pursued his military career.

It was after the battle of Waterloo, that he presented the credentials left to him by his father, and it was with no small degree of surprise that he found himself not only allied to a noble house, but learned that his father had concealed his real name, and assumed that of Bertier. Joyfully he took the unsullied brightness of a name that had long emblazoned the British annals. The battle of Waterloo had, even in his own mind, obliterated the memory of his wrongs and his disgrace.

It may be imagined with what emotion Bertha recognized in the ring that the preserver of her husband had sent her, the wedding ring of her mother! She felt the fullest conviction that he would redeem his pledge. Soon the time arrived, and when the brother and sister once more embraced, their union was unclouded.

THE HUMOURIST.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MAG'S ATTEMPT AT "HIGH LIFE."

Margaretta Rushbrook was certainly a very extraordinary looking girl. To see her once was to remember her forever. At least I could never banish from my memory the impression that her looks made upon me. On the first glance, the stranger was struck with a huge square mass of flesh from her feet to her shoulders, on which was placed a head that physiognomists might behold with wonderment. A ponderous chin, which seemed to have been stretched for the especial purpose of concealing a monstrously voluptuous bosom, contrasted finely with an exquisitely small nose, that was snugly seated in the centre of an expanded face, and just beneath a pair of little cunning grey eyes, that twinkled like a couple of glowworms on a red cabbage leaf. A vast profusion of curls were scattered round her head—some were gracefully dangled behind her ears—others were majestically reared on the very top of her head, and seemed to be viewing with contempt the presumption of a stray curl, that seemed endeavoring to find the extremity of her lengthened chin. Smiles of the most poetical import, would doubtless have sported with peculiar gracefulness on her lips, were it not that her under one curled, or rather lapped, over on the ponderous member alluded to. An admirer of a ruby lip would have fallen in raptures could he have beheld its voluptuous swell, blooming in all the beauty of fleshy exuberance!

But Margaretta was beautiful,—so at least her imagination taught her to believe; and she determined to visit the gay metropolis of New-York, that she might learn its fashions, and give a finishing touch to her natural beauty. A six months' residence there, had indeed, made a sensible alteration in her conduct, for she rapidly learned the affected airs of gaiety, and the coquetish toss of the head, when a beau presumed to address her. The giggle and the he! he! he! she got almost to perfection; and no female of her acquaintance could excel her in giving certain ominous hints to the gentlemen, of the existence of such things as theatres, balls, Castle Gardens, &c.; for when they appeared not to comprehend—dull souls! she would wonder with great naïveté, "what ailed the folks—she never saw such a stingy set of fellows in her life!"

The day at length arrived when she left New-York, possessed, as she averred, of the hearts of some half dozen youths; and she soon entered her native village, proud mistress of fashionable smiles, starts, nods, winks, and he! he! he's. Her sudden and dashing appearance created much wonderment among the simple villagers, who could hardly be

persuaded to believe that "fat, long chinned Mag," as she was rustically called, could be transformed into the thing she was.

Tim Slochenhausen, her rustic lover, who was the wit of the village, was the first to call on her. In former days, when they used to play tag, it was glorious sport for Tim to chase Margaretta into a corner, or behind a door, and then, seizing hold of her chin, draw her face to his, and give her a hearty smack. How often had they played billy button together! and sung, "Come, Philanders," "Oats, Pease, Beans and Barley, O!" and "I'm a roving Bachelor!" The recollection of these precious sports passed rapidly through the memory of the swain, as he rapped at the door.

Tim was somewhat surprised to find himself formally ushered into the "parlour," and was desired to set down, and wait a few minutes, "as Margaretta was not yet ready to see company." Margaretta!—How strange that sounded!—he had never heard her called so before—it was always "Mag," plain unsophisticated "Mag;" and by way of variety, sometimes, "jolly, fat Mag." Tim's heart misgave him as his eye rested on a tremendous Bolivar, which was sprawling on the table before the looking-glass; and wondered, and wondered, in the innocence of his heart, till his mouth was stretched almost wide enough to receive the object of his astonishment. Laces, ribbons, &c. of the newest fashion, and half bound novels, were so placed as attract notice; and Tim's eyes were beginning to look big, when Margaretta Rushbrook entered.

After the manner of certain city ladies, she intended to give effect to her *entree*; and assuming a stateliness of manner, she marched in. She approached Tim with a sweeping bow, and a knowing smirk, which was intended for immense condescension, and reaching out her forefinger, she inquired with a careless air, "Ah! Mr. Slochenhausen, how d'ye do?" Mister Slochenhausen!—Tim stared with his mouth wide open: Mag Rushbrook to call him Mister Slochenhausen! He could hardly credit his senses: a tremendous "whew" burst from his lungs like a torrent, accompanied by his favorite exclamation, which he never used but on especial occasions, "by golly, and Davy Rachel, but that's a good one!"

Margaretta was too well acquainted with rustic manners to notice this sally; and taking a chair, she placed herself in one of her elegant attitudes, and looked with ineffable dignity on her rural lover. It was some time before Tim recovered from his confusion; at length venturing to look at his former playmate at tag, he was lost in a transport of rustic admiration. What a metamorphose was here! It was no longer plain Mag, with her check frock and white ruff, but Miss Margaretta Rushbrook, from New-York, tricked out in the extreme of fashion, the essence of politeness, and the queen of beauty!

Sometime elapsed ere Tim could muster courage to ask her how she was pleased with her visit to the metropolis, when—whizz!—the flood-gate of her speech was open, and such a torrent of words and unintelligible jargon, never before greeted the astonished ears of Mister Slochenhausen! Theatres, balls, Brooklyn, Broadway, Castle Garden, bears, ships, flounces and the Battery, streamed from her tongue in rapid succession, accompanied by a paraphernalia of nods, winks, giggles, he! he! he's! to the utter destruction of her former mock-dignity.

Tim, during one of her pauses, was about collecting sufficient wind to give another "whew!" but she skilfully manœuvred to check the gathering tornado, by suddenly setting in motion the "paddle of her speech." Like one of those machines, denominated a steam-boat, she spluttered through an ocean of words, paddle, paddle, paddle, till she came to a conclusion, by exclaiming, with upturned eyes, "What a *romantic* place is New-York!"

What mighty wonders had she achieved while there! She had read the *Ivanhose*, in ten volumes; the *Deuce of Warsaw*, in six; the *Vittle of Wakefield*, in four. She had enslaved the hearts of no less than a dozen dashing youths, whom she won at parties, by recommending and setting the example, of drinking nothing but brandy sling. One of them was so far gone as to present her, on the day of her departure, the ace of hearts, on the back of which was a profile, or something very ominous of one.

* On the 17th of June, 1815.

Margaretta received it with infinite marks of condescension, called it her dear *miniller*, and wore it faithfully next her heart. She now drew it forth to the gaze of wonder-stricken Tim, who, after viewing it attentively for a few moments, started from his seat, and seizing his hat, with a variety of contending emotions, of which amazement was the most predominant, rushed rather unceremoniously from her presence.

Margaretta seemed in no way surprised or offended; but very complacently turned up her nose at her lover, as she beheld him striding down the street, lustily exclaiming to himself, "She's a rip-staver, so help me Davy Rachel!" LARA.

ALBANY:

SATURDAY, MARCH 31, 1827.

TO CORRESPONDENTS. We are ever happy to hear from our friend G.

We thank the MILFORD BARD for his well filled sheet.

The remarks of M. upon A. A. P.'s strictures on novel reading, shall appear in our next.

A friend has sent us a number of articles, of which he is the author, but which have heretofore been published in other journals. It would be an act of injustice towards our brethren of the type, and consequently of little credit to ourselves, to give them a place in our columns, as *original* articles. We cannot say that we admire the practice of thriffling-dealing with which our friend appears to be so well acquainted.

REDHEIFER REDIVIVUS, AND DITS.—Those that are wont to stare with amazement at the anomaly of passing events, have no prospect of a holyday, for the present. The genius of the age appears to be guided by a speculating propensity, which is sadly at variance with honest and sober consistency; and unless some straight forward feeling come speedily into fashion, and exercise an influence over the formation of events still in the matrix of time, it is impossible to conceive any notion of the extent to which the makers of, and searchers after, mysteries, may proceed in the mazes of natural and moral philosophy. Old customs are done away; old paths are strewn with thorns, or become obsolete; and all things, whether in politics, morality, or mechanics, are re-moulded in a newfangled manner, to accommodate the whims and interests of the day's Judases. Patriotism begins and ends in rhetoric; piety seldom ventures beyond the precincts of an exhortation; and law and justice are defined by sending the innocent with post haste to perdition, without the help of either witness, judge, or jury. But "there is a time for all things," said the wisest of men; and so all things must come to pass.

Among the events with which the curious portion of the world have been recently amused, the discovery of perpetual motion occupies a tolerably conspicuous station. A Mr. Greensbury Baxter, of the city of New-York, lately exhibited this long sought for secret in the shape of a pump and a water wheel. The water wheel kept the pump in motion, by turning upon its axis; and the pump kept the water wheel in motion, by filling certain buckets with the aqueous fluid, which was deposited in an aqueduct at the lower periphery of the wheel, and the buckets consequently mounted empty on the ascending circumference. This was considered a mighty ingenious piece of mechanism and for a number of days was thought to be next of kin to the philosopher's stone. Indeed, it appears that it did possess the transmuting power to a considerable extent. The "stock" sold remarkably well; in a short time the price of a share increased from a

trifling sum to a thousand dollars; and the city of New-York was every day becoming prouder of Mr. Baxter, when a jealous and meddlesome wight offered him fifty dollars for privilege to examine his invention. This put the "ingenious" young man in the dumps, and he was for backing out; but he was out voted at a meeting of the shareholders, or directors, and the fifty dollar gentleman had leave to peep behind the curtain on certain conditions. The objections of Mr. Baxter were so unsatisfactory in nature that the directors began to suspect that his honesty was not of the best kind; and they determined to satisfy themselves immediately. Accordingly they proceeded, *en masse*, to the premises and demanded admission. Mr. B. pretended to go for the key, but soon returned without it; saying that his boy had it, and that he had gone from home. Then he went in pursuit of the boy and forgot to come back again. The directors waited very patiently until half past ten at night, when, in default of Mr. Baxter and the key, they determined to get in without the help of either. So, the door was forced open, and there stood the machine in *dishabille*. On a little further inspection a cavity was discovered beneath the floor, supplied with seats for two men, and the apparatus necessary, with their help, to keep the wheel in motion. Then followed the falling of stock, and the lengthening of faces. The gulled mortals and the mob, which curiosity had brought to the spot, became very public spirited in the twinkling of an eye; and search being set on foot, the gentleman inventor was found also in *dishabille*, in a bye corner of his house, and delivered over to the safe keeping of the police; by them to be dealt with according to law in such case made and provided.

If a man were seriously to commence an inquiry into the nature of human nature, he would probably say, that, as at present displayed, it appears to be a fermented gallimaufry of undefinable *some-things*. Adventurers are continually springing up, and those who are most absurd and impudent, receive the most encouragement. There is a good deal of drollery in these huntings after the philosopher's stone, perpetual motion, and a few other very desirable objects. We recollect an eccentric being who used to catch toads and hang them up in his chimney and smoke them to death, for the purpose of enchanting a hazle rod with the flesh. He was a confirmed money digger, spent his whole life hunting for buried treasure, lived a beggar, and died not worth a groat.

MR. OWEN. Every one that is acquainted with the news of the day has heard of Robert Owen, and his singular metaphysical notions; but every one may not have heard that the good folk of New Harmony have got each other by the ears, and are quarrelling almost as bad as the Killkenny cats. Letters received at Philadelphia state this to be the case; but whether these letters are of a piece with certain other letters, we cannot say: to be candid, we don't place much faith in letter writers. If it is true, as is stated, that Mr. Owen has thrown up his community system in disgust, it may convince certain visionaries and enthusiasts, that the time for the millenium is not yet come, and that the essence of the soul is still undiscovered.

It is a little singular that men cannot learn to be governed by plain common sense, which is so easily understood, instead of blindly following whims and fancies. Mr. Owen imagined that all men would

be happy if they were atheists; surely the idea must have been formed in the wildest moments of an infidel's musings, at which time common sense is usually kicked out of doors. The Shakers, perhaps, present the most perfect view of the community system; and they are bound together by the most disgusting superstition. With them the exercise of the mind is almost totally forbidden: if permitted at all, it is upon the commonest business topics: the truth or falsehood of their creed must never be investigated, by the common members of the community. It is evident that a liberal method of reasoning would destroy the obligations which keep them together, and bring them again under the influence of the propensities common to human nature. Reason may answer as a governing principle for a few; but the passions of the many must be smothered with awe for an invisible incomprehensible power.

Since the above was put in type, we have received the New-Harmony Gazette, of the 7th inst. It does not say any thing about a row: the story is probably a fabrication.

We have received the first number of the *White Banner, Masonic Telegraph, and Mechanics' Magazine*, published at Pawtucket. R. I. and edited by W. H. Sturtevant Esq. The Providence Literary Cadet says that Mr. Sturtevant "is a gentleman, who, to talents of a happy order, unites the attributes of an accomplished education; and whose writings are distinguished by a classical purity, a vividness of thought, and an acute pungency. We wish him every success, and shall be pleased to hear he is patronised as liberally as he certainly deserves. The citizens of Pawtucket in supporting two newspaper publications, will do themselves much credit, and derive material benefit from the world of letters."

SPECULATION. We have received one or two numbers of a paper, recently commenced at Rochester, with a view to make money by flattering the prejudices of the enemies of masonry. We have marked the editor out as a great hypocrite. He fills his sheet with the most disgraceful calumnies against masonry, and at the same time says in his editorial remarks that he is not opposed to the order. This is a species of very shallow double dealing, and is easily seen through. He talks about masonry in connexion with the Morgan affair, and says that the "masonic part of the community" will "universally discourage a publication" like his. Now why should masonry be everlastingly connected with Morgan? and if this editor's motives are good, what right has he to say the masonic fraternity will oppose his endeavours? The truth is, he is probably a particular friend of Miller's, and he has trumped up a parcel of insinuations to attract notice. He need not trouble himself with the anticipation of much opposition from masons; for we are sure they will not molest him. Contempt is all he has to fear; and as his conscience is probably very accommodating, he may make money by libelling masonry. This paper is vilely printed, with old type upon coarse paper.

NEWS AND TABLE TALK.

Mr. Macready made a donation of \$60 to the British charitable society of Boston, before he left that city.—The Boston Greek fund amounts to \$5000. This looks well.—Mr. Everett during the last session of Congress made some effort towards procuring old documents, &c. from England to elucidate the history of the United States. This is good and worthy of

his talents. When he gets beyond literature and metaphysics, he swamps directly.—A line of packets is established between England and Annapolis, Maryland. The first one recently arrived there.—The Maryland and Ohio rail road bill is before the legislature of Pennsylvania. Several amendments have been proposed and amended.—The general tariff system which comprehends a wise and discriminating duty on all staple articles, at the same time, such as woollens, cottons, linens, salt, iron, sugar, tea and coffee, is much liked in Pennsylvania.

A writer in the London Press says, that the British Ministers are "splendid, not powerful." They have more talent and tact than soundness and usefulness. They do not want knowledge but they want nerve.—Lord Cliffton stated in Parliament, that a great change had been brought about in Ireland at the general election. The orange power had greatly fallen. In Waterford in one short week, the Catholics had crushed the influence of the most opulent families in Ireland. Will not their brethren in this country sympathize with that victory? Most certainly they will.—Colonel Fabvier is now Governor of Acropolis.—A dramatic procession is intended to be given on the next anniversary of the birth of Shakspeare. Great preparations are making at Stratford upon Avon. Shakspeare was born 23d April, 1564.—The object of Russia in provoking the late hostilities with Persia, was to open a *visita* to Hindostan, and by that means check the British empire in that important quarter.—The subject of the corn laws sets the two political parties in England at loose ends.—The Duke of York's stud sold at Tattersal's for 8000 guineas. His debts are estimated at 800,000 pounds sterling, nearly a million and a half of dollars.—The practice of sweeping chimneys by climbing boys is rapidly going into disuse in England. Several societies are forming for that purpose. It is to be hoped they may be more successful than the Intemperance societies.—The London ministerial papers, and particularly the Courier, endeavour to throw ridicule over the "maiden" speech of Mr. Stuart, the new member of the House of Commons from Waterford, Ireland. The cause of it was plain. Mr. Stuart spoke of Ireland and Irishmen with much feeling and eloquence; hence the attempt to put him down.—The English ministry have brought forward a plan of erecting mills to supply the navy with flour. This has arisen from the adulteration of contracted flour. Last year 6000 sacks were thrown back upon the contractors.—The English papers are giving versions of the "last words and dying speeches" of the Duke of York.—An American performer, named Hackett, is just arrived in London from New-York. He is represented as possessing considerable talent as an actor, and as being quite unrivalled as a mimic. His imitations are said never to be caricatures but always fine portraits.—*Sun*.—It is stated by a French traveller, recently returned from Spain, that in the month of September last, the police of Madrid posted up an order respecting the theatres, of a part of which the following is a liberal translation: "Every individual who allows himself either to applaud or to hiss during the performance, or to make signs to any body in the boxes (even if it should be to his sister,) shall be condemned, for the first offence to serve six years as a private soldier; and in case of a renewal of the crime, to be sent to the galleys for ten years!"—The Paris Greek Committee have recently communicated to the friends of the Hellenist cause, a statement of their pecuniary affairs. From this document it appears that the receipts of 1825 and half of 1826 amount to 1,472,504 francs, and the expenses to 1,217,955 francs. The receipts of the last quarter of 1826 amount to 969,725 francs, of which the sum of 281,125 francs came from abroad. The disbursements of 1825 and half of 1826 amount to 1,217,955 francs.—A London paper says "since the adoption of Mr. Huskisson's free trade doctrines in the Silk Trade, these manufactures have declined fifty per cent in value and the consumption increased fourfold. We must be very cautious however how we adopt general principles from solitary facts in a particular trade.—It is expected in England that in a short time silk manufactures will be exported. This is the opinion of the ultras in the free trade notions.—A monument is to be erected to the Duke of York in St. Paul's Cathedral.—Intimations are thrown out that Mr. Canning's sickness was merely a political indisposition to postpone the discussion of the Corn Laws until the votes could be arranged in both houses. This is the same ruse by which players get sick all of a sudden when they happen to quarrel with a manager.—Money is beginning to increase in London. It is attributed to the peace of Europe having been preserved by the measures of England in Portugal. The value of annuities increase.—A memorial has been sent from Leeds to Parliament against the free exportation of machinery. There were 500 signatures. This affects the United States.—Moliere's *Tartuffe* sold by thousands in Paris. A small edition has been published that sells at twenty-five centimes.—The Spaniards expect much from the account of the insurrection of Paaz in Colombia. They are undeceived before this time.—A

wine merchant in London was fined £50 (nearly \$250) for libelling a baronet by writing him in a private letter, "You may be a baronet but you are a disgrace to your rank. I am sure you are not a gentleman." The baronet had complained of short measure in some wines. The fine was reduced because the wine merchant had offered an apology previous to the indictment.—The Wakefield case is before the Court of King's Bench in a *certiorari*, on the ground that an impartial trial could not be had in the county, where the case was laid, in consequence of popular excitement.—Sir Francis Burdett intended to bring the Catholic question before the House of Commons on the 22d February last. A great effort is expected to be made. Irishmen will look upon the result with deep interest. Sanguine expectations are entertained of its success since the death of the Duke of York. The neutrals will assist the emancipation.—The great rage in London has been the Mining Companies in South America. They are somewhat subsided now. But much remains.—There is every reason to believe that the Portuguese rebels have been supplied with money and means from secret associations in Italy, France, and perhaps Austria. Facts are leaking out on this point. Secret meetings had been held in Italy and every underhand method adopted by the minions of arbitrary power to crush the Portuguese Constitution.—Mr. Peel, one of the English ministers has employed Mr. Hammond to assist him in the consolidation of the English criminal law. This is confined to the statutes and does not touch on the common law.—The dividends of the United Gas Company which supplies several cities of the British Empire amount to four per cent. From Cork, Davenport and Plymouth alone they receive a revenue of £8000.—The great contest in the British Parliament will be on the Corn Laws, in which the three paramount interests of the country will come in collision—the manufacturing, agricultural and commercial interests.—The Austrian Court refuses to receive the new made nobility of Napoleon, because their titles are taken from the names of cities and places in the dominions of Austria.

The following paragraph contains one of the oddest notions we have ever met with. Patriotism may safely proceed to a great extent, but to hang for the credit of the state, it appears to us, would be stretching the matter. A man's gallantry must be questionable, if he will go so far as to hang one of the fair sex out of pure love to the state.

At the recent trial of Sarah Howland, for murder, at Newport, while the counsel were employed in packing a jury, a man was asked if he had formed any opinion relative to the case about to be laid before him, and replied, "That he believed with Elisha R. Potter, it was time somebody was hung for the credit of the State!"

MORGAN.

From the New-York Enquirer.

In the Statesman of last evening, we read the following paragraph. It is almost unnecessary for us to add, that there is not the slightest possible foundation for any such story. It has one merit, however, that as the lie appears in *Miller's* paper, and as he was the origin of all this mystery and massacre, it throws an air of absurdity over the whole thing and convinces us, of what we have long guessed, that it was a *humbug*, begot by falsehood on the body of avarice:

"Did you, Major Noah, have any thing to do with the 'taking off' of Morgan? Speak! 'let us not burst in ignorance.'"
The Batavia Advocate (*Miller's* paper) states that "Mr. David E. Evans left Batavia a day or two after the outrage, and on reaching New-York, called on M. M. Noah, and recounted to him the transactions at the west; and that Mr. Noah, raising both his hands, involuntarily exclaimed, 'My God! I told them not to do it!'"

From the same.

MORGAN.—We yesterday expressed a belief that the Morgan affair was a *humbug*. But it was one of a deep and dangerous character. It has thrown the western portion of the state into great agitation, and by its effects on ignorant and prejudiced people has laid the foundations of animosities and enmities not easily to be appeased nor speedily to be terminated. Of the original abduction of Morgan there can be no doubt, because it has been established in a court of justice, and the offenders are now expiating their transgression in a jail. But from all we have read, it is our settled impression, that Morgan subsequently absconded, with the intention of converting his absence into a source of pecuniary profit. His mysterious concealment caused a wide and deep excitement in the country. Connected as it was with certain masonic improprieties, it was artfully ascribed to masonic influence. On the strength of that excitement, a wretched and lying volume of antiquated trash was sent out into the world by Miller, (though the name of Morgan is on the title page,) with the hope of making money. For our own parts, we believe that Morgan was hired to

conceal himself. He appears, from all statements, to have been a vagabondish character, and very likely to lend himself to any such infamous project. As to his being murdered, there is not a shadow of evidence to justify the belief. Grand Juries have investigated, committees have examined, individuals have explored, public meetings have resolved, newspapers have scribbled, &c. &c.; but all in vain. Not a jot of creditable testimony has been submitted to the public. The grossest falsehoods have been circulated, the most extravagant conjectures, the vilest insinuations, have been voted by more than one public meeting. Every mail brings us the detection of one falsehood and the assertion of another. It would seem that the Morgan mint, for coining misrepresentations, is inexhaustible. At one moment he is murdered, and his mangled body is found amongst the rocks of Niagara. The next he is alive in Canada. A third report makes him a sufferer aboard some shipwrecked vessel. But these are only a tithe of the multifarious stories that have been engendered and dispersed over the country. The Rochester Telegraph says, "it is notorious that Morgan was kidnapped and conveyed forcibly and secretly from Canandaigua to Fort Niagara, passing through the hands of at least twenty individuals. It is known that this outrage was concerted at a meeting of more than eighty persons assembled for the purpose; and yet, not a syllable can be elicited (query, *elicited*) from any of them relative to the transaction!" Are all these things "notorious"? Then there can be no difficulty in unravelling the whole mystery. Upwards of a hundred persons cognizant and participant in a gross outrage, and yet, nothing can be discovered! How came the Telegraph to know any thing about the matter? To whom is it "notorious"? Fudge! In the present state of violent excitement in the western counties it is no wonder that the most absurd stories are propagated. But who is the inventor of these stories? How do they find their way into the newspapers? Why do not editors of journals, when any such story is brought them, trace it to its source? The fact is, they lend themselves to the delusion and make their presses the instruments for keeping up the alarm. The people are not so much to be blamed. It is honourable to their feelings that they should be strongly excited upon a question of personal freedom. Their leaders, however, are utterly without excuse. Some of these hot-headed demagogues have got up strings of resolutions of the most inexcusable character. At Parma they have charged the murder of Morgan, by solemn vote, upon the Freemasons as a body, under the authority of the Grand Chapter. They abuse, by formal decree, the judges, the sheriff, and the governor. They praise no one but themselves. At Manchester and Phelps similar meetings have been held. All this is very ridiculous, but it is at the same time very dangerous. These ignorant meddlers ought to be put down. If they are much longer tolerated in their wild and turbulent career, the whole frame of society in the west will be dislocated. From the Committee in the House of Assembly something intelligible and satisfactory may be expected.

PROCLAMATION

By De Witt Clinton, Governor of the state of New-York.
Whereas the measures adopted for the discovery of William Morgan, after his unlawful abduction from Canandaigua, in September last, have not been attended with success; and whereas many of the good citizens of this state are under an impression, from the lapse of time and other circumstances that he is murdered: Now therefore, to the end that, if living, he may be restored to his family, and if murdered, that the perpetrators may be brought to condign punishment, I have thought fit to issue this proclamation promising a reward of ONE THOUSAND DOLLARS for the discovery of the said William Morgan if alive, and if murdered, a reward of TWO THOUSAND DOLLARS for the discovery of the offender or offenders, to be paid on conviction and on the certificate of the Attorney General, or officer prosecuting on the part of the state, that the person or persons claiming the said last-mentioned reward, is or are justly entitled to the same under this proclamation. And I further promise a free pardon, so far as I am authorised under the constitution of this state, to any accomplice or co-operator who shall make a full discovery of the offender or offenders. And I enjoin it upon all officers and ministers of justice, and all other persons, to be vigilant and active in bringing to justice the perpetrators of a crime so abhorrent to humanity and so derogatory from the ascendancy of law and good order.

In witness whereof, I have hereunto set my hand, and the privy seal, at the city of Albany this 19th day of March, Anno Domini, 1827. DE WITT CLINTON.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

THE TIME TO WEEP.

There is a time to laugh,
When Joy may raise his billows like the deep,
And twine with wreaths of flowers the cup we quaff,—
But O, when is the season not to weep?

Is it when vernal suns
Unfold the silken flower, and satin leaf?
Or when the hoar frost nips the fading ones,
That frailer beings may refrain from grief?

Is it when health and bloom
Are painted on the smiling cheek of youth?
Or when disease is training for the tomb
The heart which cherishes its bitter truth?

Look not upon the brow
That shews no furrow from the plow of years;
There is a bend of peace upon it now,—
But Oh! futurity is full of tears!

The prattling child at play
May charm itself and dry its tears awhile;
But could its vision reach beyond to-day,
And read its sorrows, think you it would smile?

Destruction has its home,
And mirth is destined to some favourite spot,
Disease and all his brothers do not roam;
But where—O wretchedness!—where art thou not?

Thou hast thy dark abode
In the lone desert—in the prison's cell,—
And in the gayest scene, where ever flowed
The tide of wine and music, thou dost dwell.

Thou art where friends are torn
And held asunder by reluctant space,
And meeting friends,—O, do they never mourn
When memory paints thine image on the face?

Thy inmates of the breast,—
All other passions are but weak and brief;—
Joy, Hope, Pride, Love, and Hatred have a rest,
But thou art constant as our breath, O Grief!

Then let the trifler laugh,
And Joy lift his glad billows like the deep,
And twine with wreaths of flowers the cup we quaff;
It is far better for the wise to weep.

March 27, 1826.

G.

DIRGE OF M'DONOUGH.

He sleeps in the cradle of freedom and glory,
And the wings of the eagle o'ershadow his grave;
His deeds are renowned on the pages of story,
Co-equal with fame, and the fate of the brave.

While the surge of Champlain in its wild murmur roaring,
Shall continue to sparkle and foam in the sun,
So long shall his fame, still exalted, be soaring,
And brighten, still brighter as ages shall run.

At his shrine shall the hero bow down in devotion,
When the tempests of war in destruction shall rave;
When the cannon of carnage shall wake the deep ocean,
And the flag of America's triumph shall wave.

From his ashes shall rise like a new-born creation,
The heirs of true valor and virtue alone;
The heroes that shine in the lists of a nation,
Like M'Donough in peace and in war ever shone.

He sleeps on the cold and comfortless pillow,
Where silence and darkness their vigils long hold;
On the trident of Neptune, beneath the dark billow,
His name is inscribed in bright letters of gold.

In the hearts of his countrymen long, long shall linger,
The memory of him who hath fought for their fame;
The Poet shall lead to the harp the soft finger,
And Delaware boast of his generous name.

He is gone to the land of the saints and the sages,
The land of the good, and the blest, and the brave;
His fame is inscribed on Eternity's pages,
And day brightly dawns on the gloom of the grave.

MILFORD, Del.

MILFORD BARD.

THE MOTHER'S SOLACE.

The tomb of my child with flowers I'll strew,
With the lily pale and the violet blue;
And the whispering breeze, in murmurings mild,
Shall the requiem sound of my darling child.
I know that the day of her life is o'er,
And her sweet lips will prattle no more—

I know that her eyes are sealed in death,
And the spoiler has filched her fleeting breath—
I know that her spirit hath soared above,
To the trackless realms of light and love.

Yet, by the light of the morning day,
To the verdant mound of my child I hie;
And scatter fresh flowers o'er the grave
As the sunbeams fall on the western wave.
When the flowrets of summer fade away,
And winter appears in dark array;
Though the roses and violets cease to blow,
Her tomb is dressed in a garb of snow—
Pure as the form that moulders within,
Whose season of life was unsoiled by sin.

I often steal, by the moon's pale light,
To gaze awhile on the lovely sight;
And softly kneel on my lov'd one's shrine,
And pray to the Author of love divine,
Who, ere he bled on Calvary,
Said, suffer the babes to come to me
Sleep on my child—thy mother's tear
Will bathe thy tomb while she lingers here;
And when the hour of life is o'er,
We meet—we meet, to part no more.

THE VISIONARY.

BY HORACE SMITH.

Oh! do not with cold sneers enthrall,
Nor circumscribe with rules pendant,
Those flights of soul that worldlings call
Wild, visionary and romantic:—
For yearnings after hidden things,
Imaginative aspirations,
And dim, fantastic shadowings
Of superhuman revelations—

And communings with nature, till
The mind is lost in dreams seraphic—
Though they unfit it to fulfil
The sordid drudgeries of traffic,
The soul from all debasement clear
Of vice's dross, or earthly leaven,
And if they tempt it from its sphere,
At least solicit it to heaven.

Happy! who can the fence o'er vault
By which this scene of care is bounded;
And when he feels his courage halt,
His mind perplexed, his spirit wounded,
Can conjure up a world more fair,
By intellectual necromancy,
Luxuriate in Elysiums rare,
And taste the Paradise of Fancy!

NIGHT.

BY KEALD.

'Tis dark abroad. The majesty of night
Bows down superbly from her utmost height.
Stretches her starless plumes across the world,
And all the banners of the wind are furled.
How heavily we breathe amid such gloom!
As if we slumber'd in creation's tomb.
It is the noon of that tremendous hour,
When life is helpless, and the dead have power.
When solitudes are peopled—when the sky
Is swept by shady wings, that, sailing by,
Proclaim their watch is set; when hidden rills
Are chirping on their course; and all the hills
Are bright with armour: when the starry vests
And glittering plumes, and fiery twinkling crests
Of moon-light sentinels, are sparkling round;
And all the air is one rich, floating sound.
When countless voices in the day unheard,
Are piping from their haunts; and every bird
That loves the leafy wood, and blooming bower,
And echoing cave, is singing to her flower.
When watery tunes are richest—and the call
Of wandering streamlets, as they part and fall
In foaming melody, is all around—
Like fairy harps beneath enchanted ground.
Sweet, drowsy, distant music! like the breath
Of airy flutes that blew before an infant's death.
It is that hour of quiet ecstasy,
When every rustling wind that passes by
The sleeping leaf, makes busiest minstrelsy;
When, all at once! amid the quivering shade,
Millions of diamond sparklers are betrayed!
When dry leaves rustle, and the whistling song
Of keen tuned grass, comes piercingly along;
When windy pipes are heard—and many a lute
Is touched amid the skies, and then is mute;
When even the foliage on the glittering steep,
Of feathery bloom—is whispering in its sleep.
It is that hour when listening ones will weep,
And know not why—when we would gladly sleep
Our last,—last sleep; and feel no touch of fear
—Unconscious where we are, or what is near;
'Till we are startled by a falling tear,
That unexpected gathered in our eye,
While we were panting for yon blessed sky;
That hour of gratitude—of whispering prayer,
When we can hear a worship in the air;
When we are lifted from the earth, and feel
Light, fanning wings around us faintly wheel,
And o'er our lids and brow a blessing steal;
And then—as if our sins were all forgiven—
And all our tears were wiped and we in heaven!

LACONICS.

BY THE DUKE OF ROCHEFOUCAULT.

Most men, like plants, have secret properties,
which chance discovers:

It is with some good qualities as with the senses;
they are incomprehensible and inconceivable to
such as are deprived of them.

Quarrels would never last long, if the fault was
on one side only.

Railery is more insupportable than wrong; be-
cause we have a right to resent injuries; but it is
ridiculous to be angry at a jest.

Repentance is not so much remorse for what we
have done, as the fear of consequences.

How can we expect that another should keep
our secrets, when it is more than we can do our-
selves?

The excessive pleasure we feel in talking of our-
selves, ought to make us apprehensive that it gives
but little to our auditors.

Perfect valor consists in doing without witnesses
all we should be capable of doing before the whole
world.

No man can answer for his courage who has never
been in danger.

The reason why lovers are never weary of one
another is, that they are always talking of them-
selves.

It is a common fault to be never satisfied with
our fortune, nor dissatisfied with our understand-
ing.

Interest speaks all languages, and acts all parts,
even that of disinterestedness itself. Interest puts
in motion all the virtues and vices.

Hypocrisy is the homage which vice pays to
virtue.

MORAL MAXIMS OF EPICHRMUS.

Be sober in thought! be slow in belief! These
are the sinews of wisdom.—A man without merit,
shall live without envy; but who would wish to es-
cape on these terms.—Live so as to hold yourself
prepared either for a long life or a short one.

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitz. [Juv. Sat.]

From the (Batavia) Masonic Intelligencer.

THE FIVE SENSES.

INTRODUCTION.

The inductive method of philosophizing applied to the philosophy of the mind, has rendered it a science of the utmost importance to human happiness. It has not only revealed the sources of knowledge, but also the foundation of all our hopes and fears; and given an energy to the thinking principle which no difficulties can extinguish, and desires which nothing short of immortality can satisfy. Seated as on a pyramid of light, the soul traces its own dark wanderings from the cradle to the grave; and triumphing over corruption and the worm, beholds itself ascending with renovated powers, nearer and nearer, not only to the intelligences of the spirits of Heaven, but also even to the throne of its omniscient God.

The adaptation of Man to his present state is truly wonderful. He is not only capable of locomotion and self-preservation, but by a thousand organs of receiving the most delightful sensations, which no modifications of mere matter could produce. The palate not only discriminates between wholesome and unwholesome food, but imparts the delicious flavour of the luscious grape. The olfactory organs warn us of the pestilential vapour, and delight us with the flavour of the rose:—by the ear, we not only flee the hissing viper, but enjoy the soothing strains of the nightingale, or the still more soothing voice of consolation: and the eye, whilst it points out the rugged path of life, the foaming cataract, or the yawning gulph, reveals also the smile of friendship or the tear of sympathy. Thus the author of our existence has formed us not only to live, but also to enjoy life; and stupid must that mind be, that sees not the hand of God in this.

The essential organ of all sensation, is the brain, with its appendages, particularly the nerves which issue from it to certain organs, which are more strictly termed the organs of sense: as it is there the external causes of sensation arrive and come as it were in contact with the sensorial substance. Each organ has objects peculiar to itself, depending on some difference in the sensorial substance or on the mode of its diffusion and exposure in the different organs, from which this striking diversity of their relative sensibilities proceed. Of the nature of the connexion between the great sensorial organ and the sentient mind, we never shall be able to understand more than is involved in this simple fact, that a certain affection of the nervous system immediately precedes a certain affection of the mind. We are also ignorant of the manner in which the extremity of the nerve is affected, and how this affection is conveyed to the brain so as to produce a sensation.

In defining our sensations to be "those mental affections which are immediately successive to certain organic affections produced by the action of external things," the existence of external things is taken for granted; since our idea of a flower being as much a state of our percipient mind as our feelings of joy or sorrow, yet by the constitution of our nature we cannot but believe that the mountain or rose is external, whilst we are conscious that our joy or sorrow is dependant on our own continued existence only; and this belief exists with as much force in the minds of those who reason against an external world, as in those who reason for it. This reference to an external cause, however, does not attend every feeling of our mind, but is confined to a certain number of that long succession of feelings which form "the varied consciousness of our life"—and the feelings to which this reference is made are distinguished by the name of *perceptions*. It is

a law of our nature, (observes Dr. Reed,) that we perceive no object unless some impression is made on the organ of sense, either by the immediate application of the object, or by some *medium* passing between the object and the organ. The real object of sense, then, is not the *distant* object but that which acts immediately on the organs—the *light* itself, and not the distant sun—the undulations of air within the ear, and not the distant thunder.

"For as old Memnon's image, long renowned
By fabling Ninus, to the quivering touch
Of Titan's ray, with each repulsive string
Consenting, sounded through the warbling air
Unbidden strains:—even so did nature's hand,
To certain species of external things,
Attune the finer organs of the mind.
So the glad impulse of congenial powers,
Or of sweet sound, or fair proportion'd form,
The grace of motion, or the bloom of light,
Thrills through Imagination's tender frame,
From nerve to nerve. All naked and alive,
They catch the spreading ray: till now the soul
At length discloses every tuneful spring.
To that harmonious movement from without
Responsive."

The study of the human mind is so complicated as to render it necessary to proceed analytically from the simplest principles to those that are more complex; and since the *senses* are the channels through which we become acquainted not only with the things around us necessary to sustain life, but also with the boundless and varied prospects of nature, the glorious sun in its daily course, and the stars scattered through infinite space, which lead us irresistibly to reflections intimately connected with our improvement and happiness:—it becomes us as intelligent beings to contemplate with no ordinary attention these organs which link together in harmonious union the imperishable soul of man with the universe.

SMELL.

Philosophy informs us that all animal and vegetable bodies, while exposed to the air, are continually exhaling effluvia of vast subtility. Their volatile particles are scattered in the air, and by their union form new chemical concretes. This effluvia being inhaled along with air into the nostrils, produce the sensations of smell. A curious expansion of the olfactory nerves in the nostril and its continuous cavities constitute the *organ* of smell.

When the particles of odour affect the nerves of smell, a certain state of mind is produced which varies with the odoriferous body. The *mere existence* of this state is all the information the mind could have received from this feeling *originally*, if no sensations of a different class had previously been excited; for suppose a person destitute of the sense of smell were suddenly endowed with it, and a rose or honeysuckle were presented to that organ, he could not possibly conceive the least *similarity* between the rose and the sensation. And finding himself affected in a manner he never before experienced, he could not assign a cause, though sensible he was not the cause of it himself; neither could he ascribe it to any quality of body, or give it a place, any more than to sorrow or joy, nor conceive it as existing, except when smelled. But with our present information, like written signs, it conveys much knowledge without mental effort; we immediately refer the change to a rose, honeysuckle, or any other body the presence of which has been attended with this particular sensation. It is therefore necessary to have previously handled the rose or honeysuckle, or other bodies, which excited when present, analogous sensations. "If then we had been endowed with the sense of smell alone, the sensations of this class had been simple feelings of pleasure or pain, which we could as little have ascribed to an external cause, as any of our spontaneous feelings of sadness or joy, which are equally lasting or equally transient." This sensation might suggest the necessity of some cause or antecedent for this change, but not necessarily a corporeal cause, any more than in "other modifications of our being, as for instance when without thinking on surround-

ing objects we contemplate the Divinity who formed them, himself the purest of spiritual existences."

TASTE.

It is probable that every substance which affects the taste is in some measure soluble in the saliva; for without some peculiar affinity, the tongue, palate and fauces could not be so readily affected. In considering the phenomena presented by the organ of taste, we must carefully distinguish the sensation of *taste* from that of *touch*, which arises from the application of the tangible sapient body to that organ. The application of sapient bodies to the tongue immediately produces a *change*, or affection of the sensorial organs, and is attended by a change in the sentient mind.

Memory is unable to point out the period when we were not, in some measure, impressed with a belief of the existence of an external world. The maternal embrace and endearing appellations prompted by an affection "stronger than death," in all probability, first touched a sympathetic and responding cord in our little bosoms, which the name of *mother* alone is capable, even in mature life, of awakening. It is therefore necessary to separate, as much as possible, the feelings which the organic affections excite at *present*, from those that we may suppose them to have excited *originally*. In testing fruit, for instance, the sensation is immediately referred to a peach or an apple as its antecedent, because we have frequently found the same sensation to be produced by the same substance, and not as spontaneous feelings originating in the independent constitution of the soul. Yet on examination we find that this external reference is *posterior* to the simple sensations, and that previous experience suggests this reference; as when we see the blasted oak, we immediately suppose it to be the effect of the thunderbolt, an inference we could not have drawn if we had been unacquainted with lightning; or when we see the shadow of the moon reflected on the bosom of the placid lake, we immediately cast our eyes to that firmament where she shines, a token of *divine* care and goodness. From the simple sensations, therefore, of taste, we could never have become acquainted with the properties of external matter—of bodies possessed of the qualities of extension and resistance.

How materially the sister organs of taste and smell add to our pleasure it is surely unnecessary to mention, except to remind us that God who clothes "the lily of the field," and who has covered our world with a profusion of beautiful plants and flowers, in whose fair forms our minds delight, and with whose fragrance so exhilarating, our thanks should ascend to our common Parent, who in his creation has remembered not only our wants, but our comforts.

When the scattered family occasionally assemble round the parental board, to partake of the social meal, and to converse upon the joys and sorrows experienced since their last meeting; they feel a pleasure in the repast, independent of the mere relief from hunger or pain, a pleasure amounting to ecstasy, when intuitive emotions of piety arise in their bosoms to HIM who has been their shepherd in all their wanderings.

HEARING.

The same remarks may be applied to the phenomena of hearing, which were applied to those of tasting and smelling. "They are classed by us as sensations, in consequence of a previous belief of external bodies, whose motions have given origin to similar feelings. Our mind begins to exist in a certain state, and we call that state a sound, without supposing it to be produced by any external object. It begins to exist in a different state, and we say we *hear* the sound of a *flute*, referring the feeling immediately to some external cause. But there can be no doubt, that in making this reference in the one case and not in the other, we are influenced by *experience* alone."

Sounds, like odours, admit of an immense variety of modifications. The ear, it is said, is capable of distinguishing four or five hundred variations of tone in sound, and in all probability as many variations in strength; and calculating by combinations, we form upwards of twenty thousand different simple sounds, all of which are varied again by the unequal undulations of elastic air. Hence we may conceive variations, *ad infinitum*, in the same tone as modified by the position, structure and substance of the sonorous bodies, a hundred musical instruments may all sound the same tone and yet the ear will perceive something distinctive of each, and though assembled worlds should sound the same note no two would be exactly similar.

It is this sense that places us at the head of the animal creation, for by verbal language we are raised to a state "but little lower than the angels." It is pleasant to listen to the wild notes of the thrush, to the spirit stirring trumpet, or the organ's solemn tones, but the human voice can communicate pleasures infinitely superior. To be able to tell one's wants or sorrows to a brother, and to gladden the heart of a fellow being by telling him of the happiness we experience—to give instruction to the ignorant, advice to the transgressor, encouragement to the timid, and consolation to the afflicted; and "when the heart which we love is agitated by anticipated woe, to have it in our power by a few simple sounds to convert anguish itself into rapture, are surely no slight advantages, and yet even these are inconsiderable, compared with the benefit it affords to man as an intellectual being;" and the same instrument which enables the savage to communicate his schemes of rapine and blood to his sullen comrades, has made our hearts respond to the Poet's song, or transported us on imagination to worlds floating in ether, whose rays have never greeted the surface of our world.

By written language the soul is enabled to fix the result of her meditations, and transmit to posterity thoughts and discoveries more imperishable than adamant; by which means we can peruse the achievements of our ancestors—converse with the great and good of every age—nay, to quench our mental thirst in the holy stream which arose in the garden of Eden, has accumulated in every age, and pursues its course to those cloudless regions to which the calm eye of faith is directed, amidst the agonies of expiring nature.

[To be continued.]

From the Worcester (Mass.) *Aegis*.

At the annual communication of the Grand Lodge of Massachusetts, an account of the doings of the Institutions of Masonry, under the jurisdiction of the Grand Lodge of this state was generally made, and the present condition and disposition of their funds of the grand lodge, lucidly set forth by M. W. John Abbot, Grand Master. It appears from the statement made by the Grand Master that the amount of disposable funds belonging to the Lodge, is now \$2082.41. Unlooked for occasions of expense have from time to time diminished the funds to a considerable extent: these have been the fitting up of a new hall, the former one having been burnt, furnishing the Lodge with necessary furniture, and the expenses occasioned by the laying the corner stone of the Bunker Hill Monument. The funds are now however, in a prosperous and rapidly increasing state.

The Grand Charity fund established in 1811, promises the most important and beneficial results. This fund began with an appropriation of \$1000 from the ordinary resources of the Grand Lodge, and from the fortunate and successful management of it, it has now become enlarged to the round sum of fifteen thousand six hundred and sixty-four dollars and twenty cents; and notwithstanding its apparently rapid increase, there has not been a single denial of bestowment for charitable purposes, when application has been made. It extends relief alike to all, when found worthy of it, in all districts of the jurisdiction of the Grand Lodge.

In addition to this fund, there are small disposable funds for the relief of distress, in the hands and within the control of every Lodge in the Commonwealth. The condition and situation of applicants for charity being known and well understood by the officers as well as members of the different

Lodges, the funds are distributed in a manner both equitable and judicious. And where the funds of an individual Lodge fail of ability to meet proposed and needed relief, the officers, by certifying the same to the officers of the Grand Lodge, can procure the same from the Grand Charity fund. It is a subject of congratulation with every member of the fraternity that so much positive good is resulting from the charitable distribution of the funds of the parent Institution, as well as from the efforts of individual Lodges. There is perhaps no Institution so liberal of its wealth for the amelioration of human suffering as the Masonic. Its benevolence is active, and honest distress is every where the object of its philanthropic efforts.

ELECTIONS.

Batavia Chapter, Batavia, Genesee county.

Batavia Chapter, No. 122, was installed by Companion Daniel White, High Priest of the Western Star Chapter at Le Roy, who officiated by virtue of a dispensation granted by the Grand High Priest of the Grand Royal Arch Chapter of this state, on Thursday, the 15th day of March, A. L. 5827, at which time the following officers were chosen:

Rev. Companion Lucius Smith, High Priest; Companions William Seaver, jr., King; Henry Brown, Scribe; Jonas S. Billings, Captain of the Host; David H. Peck, Principal Sojourner; Eden Foster, Royal Arch Captain; Ebenezer Mix, Treasurer; Frederick Follett, Secretary; E. Mix, Master 3d veil; Philo W. Stocking, Master 2d veil; Benjamin F. Towner, Master 1st veil; R. Smith, Hiram King, Stewards; Kelsey Stone, Tyler.

William Seaver, jr., Henry Brown, and Jonas S. Billings, were elected committee of charity.

SCIENCE AND THE ARTS.

FLOATING ISLANDS.

The following (says the New-York Times,) is a notice of one of the most singular and interesting curiosities of our country. The facts adduced by the writer, for whose critical accuracy we can vouch from personal acquaintance, appear amply sufficient to establish the fact that the island rises and falls with the alternations of flood and drought.

From *Silliman's Journal of Science and Arts*.

NEWBURYPORT, Oct. 31, 1826.

To the Editor.

DEAR SIR—If the following remarks will answer any valuable purpose, they are at your service for insertion in your Journal of Sciences.

AMOS PETTINGALL.

That a few floating reeds, upon a pond, should collect together, and adhere with sufficient compactness to sustain small pieces of earth and decayed shrubs and plants, and thereby exhibit small clumps

of vegetables moving on the water, is not surprising; but that islands of any magnitude should be found in this vagrant state, has ever been considered a subject of considerable curiosity. Passing over the mythological fiction of the floating Delos, as founded upon unquestionable evidence, and the island of Chemmsi, with those called the Cyanean, reported as floating by the less doubtful testimony of Herodotus; the first of which history gives a minute and circumstantial account, are those in Lake Vadimon, near Rome, (now called Lago-de-Bassanello,) described by Pliny Major and Seneca. Pliny the Younger, in the 20th Letter of his 8th Book, gives a very interesting description of the same, in which he mentions the circumstance of sheep, which, while grazing, imperceptibly fell upon some of these islands, lying on the borders of the lake, and were carried off by the wind and borne to the opposite shore. It is also asserted by Boethius, that in Loch Lomond there were floating islands, upon which cattle graze. A few small ones, of the same description, are said to exist in a lake in the province of Honduras, in America. These, the only instances which I can readily collect, serve to show that it is a subject of rare curiosity.

The island which I am about to describe, is situated nearly one mile south of the market house in Newburyport, about two stones cast from what is called Oldtown meeting-house, in a pond in the rear of the adjoining burying ground. Its length averages about 104 feet, and its breadth 120, containing nearly half an acre. Its surface is thickly studded with dog-wood, although not a bush of it is found beyond the limits of the island, as though it were an enemy to the water that surrounds it. There are upon it six large trees, two of which measure in girth, three feet and upwards, besides several clusters of willow trees of small growth. These rise and fall with the island. The pond is usually dry during the summer months, and at these seasons the island has been found so low that you would descend perceptibly in passing to it from the dry bed of the pond. I visited it yesterday, and found it elevated about eighteen inches above the level of the pond's bottom, owing to the rains that have recently fallen.

The customary rise of the pond, in the fall and spring, is about eight feet, although it has been known to rise twelve. The island preserves the same elevation above the surface of the water, in the different periods of its rise. I have been told to-day, by a man of unequivocal veracity, that he has forced a pole, ten feet in length, down through the centre of the island, and with this, as far as he could extend it with his arm, has been unable to meet with a solid and permanent bottom. He also informed me, that when the pond was very high, these large trees, standing upon the margin of the island, overhang the water with considerable obliquity, owing, probably, to the roots being brought to a great degree of tension, and preventing the exterior part of the island from rising with the centre. It is not entirely detached from the bed of the pond, but seems to be a kind of stratum peeled off from the solid parts below. In passing across its surface, the island is considerably agitated, and presents a waving appearance like the sea; you are toiling continually to ascend, as though it were a surface of flexible ice. It seems once to have been a subject of much notoriety, but appears to have escaped the notice and knowledge of many of our modern townsmen. I was unacquainted with it myself until yesterday, though I have skated frequently round it. This may lead some to think that this statement is an exaggeration, but it is not so. The real fact is not to be discovered by one observation; they should be repeated by different seasons of the year, when the pond is dry and when it is full, for it may be visited by a thousand different persons, at as many different times, and no remarkable phenomena appear. I have mentioned to a number, considerably older than myself, that I yesterday visited one of the greatest curiosities in New England, and when told what it was, they have replied with a smile, "I have always known the floating island in the meeting-house pond."

METHOD OF SEASONING MAHOGANY.

The importance of this method of seasoning mahogany in a few hours, which in general has not

been done in less than a year, is very great; in the first place, a considerable part of the capital which is invested in wood lying to season many months may be saved; in the second place, as none of the small stuff from two to six inches thick is ever seasoned, according to the usual course of trade, all articles made of such wood, such as chairs, ballustrades, &c. must necessarily be excessively subject to warp, which is prevented by adopting this expeditious mode of seasoning.

Having provided a steam tight wooden box capable of holding conveniently such pieces of mahogany as are fit for chairs, &c. a pipe from a boiler is adapted to it, by means of which, after the mahogany has been put in, the box is filled with steam, the temperature of which is about equal to that of boiling water.

The time required for 1 1/2-inch wood is about two hours, and pieces of this thickness will become sufficiently dry to work after being placed in a warm room or work-shop 24 hours. The wood by this treatment is somewhat improved in its general colour, and the blemishes which are technically called green veins, are entirely removed. It is also obvious, that the eggs or larvæ of insects which may be contained in the wood will be destroyed by the heat.

[*Mechanic's Magazine.*]

THE TRAVELLER.

HERCULANEUM AND POMPEII.

[Concluded from page 67.]

Herculaneum was destroyed, not like Pompeii, by ashes, but by lava and pumice stones. Little, however, is to be seen there, as the modern town of Portici is built immediately above it; and after any excavation had been completed, it was found necessary to fill up the cavities. It lies about fifty feet below ground. By torch light we examined the theatre, which is almost the only part of the town left open. Great numbers of pillars were lying on the ground, others were half overturned, and some broken through the middle—all imbedded in lava. The most valuable and best preserved remains of antiquity were found here, and are now to be seen in the Museum at Naples. They consist of statues, paintings, instruments of art, MSS. kitchen utensils, &c. Great numbers of MSS. are piled up in one of the rooms of the Museum: they resemble pieces of charcoal, about a foot long, and four or five inches in diameter. I saw part of one of them unrolled—a work of Philodemus. The Greek (the greater part are in Greek) was well written and pretty legible, but they are so fragile, and so like cobwebs, that it is probable no complete work can ever be obtained from them. Different rooms in the museum are quite filled with objects of art and household utensils found at Herculaneum and Pompeii. A great number of musical instruments, balances, weights and measures, pans, glass phials, mirrors of polished steel, lamps innumerable, door hinges, locks, ropes, bread, wheat, beans, and many other articles, too numerous to mention, are exhibited to view. Most of the household utensils are very elegant, made of brass, and plated in the inside. One room is set apart for paintings, statues, and articles of curious workmanship, not fit for the light. They show that the men, and particularly the women, had very different notions of modesty and delicacy to those of the present day. In all the collection, I saw only two small knives and not one fork. Are we to infer from this, that these masters of the world, with their greasy togas, and unacquainted with the use of linnen, were equally barbarous in their mode of eating, and fed themselves without the aid of knives and forks? It is not at all unlikely. Cæsar and Cicero would not have been thought men of refined manners in modern times. Perhaps it may be asserted without contradiction, that the English of the present day are the most cleanly and civilized of all the nations of the world who have left any traces behind them. There is a curious wine cup in the shape of a boy, kept at Portici, which the keeper shows only to men. It is not probable, however, that the ancients were so scrupulous. It has surprised some, that so many works should have been found at Herculaneum, which was destroyed by fire, and but few at Pompeii. It may, however, be easily accounted for. The covering of

the latter place, was not sufficient to keep out the external air. That of the former was chiefly composed of lava, and so thick and hard that nothing could penetrate it. In no part of Italy does nature appear to have been so active in destroying the works of man, and changing the surface of the ground as in this delightful spot. There can be no doubt that within these two thousand years, hills and lakes have been destroyed and others formed. We know of one hill which has been created in modern times (Monte Nuovo); and the Lucrine Lake, which formed such an excellent harbour in the time of Cæsar, is now reduced to a shallow pool. The large lake of Agnano is not mentioned by any ancient writer; and Astroni, a mountain close to it, has evidently been half destroyed by a volcano. The top of the mountain has sunk, and the interior is now filled with water and wood. There is a continual commotion below the surface of the earth, which, on occasion of a thunder storm or hurricane, excites in the minds of the inhabitants the most serious apprehensions. Mount Vesuvius itself has evidently been torn asunder by some tremendous convulsion of nature, and may one day be converted, like Astroni, into a retreat for fowls and wild boars. The lake of Avernus, so often mentioned by the ancients, has evidently been formed in the bosom of a volcanic mountain. Hence the sulphureous and putrid vapours which ascended from it, and prevented wild fowl from frequenting it, obtained the name of Avernus. This is now no longer the case. Water fowl frequent it, as well as the other lakes in the neighbourhood. Monte Nuovo, or the New Mountain, about four hundred feet high, suddenly appeared in the middle of the Lucrine Lake during the eruptions which occurred in 1538. The Grotto del Cane, so celebrated for its effect on dogs, probably emits the same deadly vapour which formerly issued from Avernus. All these places are to the west of Naples, and close to the Bay of Baïæ, about eight miles from the city—

"Nullus in orbe sinus Baïæ prælacet amœnis."

This famous watering place, so celebrated and frequented by the ancient Romans is now a dreary wilderness. With the exception of Pozzuoli on one side of the bay, and a small village on the other, there is scarcely a house to be seen. Baïæ itself consists of only a few houses; but the remains of temples, theatres, and palaces, prove how populous it must have been during the reigns of the Emperors. The shore is covered with their ruins. Close to the promontory of Misenum, so fatal to the trumpeter of Æneas, is a small lake which communicates with the sea, and is pointed out as the Styx of the ancients. The boy who accompanied us as guide, said with great gravity, that a man of the name of Charon had formerly ferried many thousand over it to the Elysian fields. On seeing a boat drawn up on the shore, I enquired if that was Charon's boat. He replied—"Non, Signor, lungo tempo fa che è morto" (No, sir, he died long ago.) Where Cumæ stood, nothing now is to be seen but vines and trees growing on the ruins of the houses. A beautiful walnut tree adorns the arena of the amphitheatre, and shrubs and plants cover the space so often occupied by wondering spectators. The besom of destruction has passed over the place. A few solitary houses, inhabited by ignorant, superstitious, and half-naked peasants, are scattered along the shore, but like the glimmerings of light which render darkness visible, they only call to mind the varied and animated scene which this delightful retreat must have exhibited when peopled by the masters of the world.

"An almost total desolation sits,
A dreary stillness, saddening o'er the coast
Where, when soft sons and tepid winters rose,
Rejoicing clouds inhaled the balmy peace
Where catted hill to hill reflected blaze."

THE CENSOR.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MR. EDITOR—In your paper No. 2, page 28th, I observed, under the title of "Original Essays," the article Novels and Romances, signed A. A. P. I know not if there is much originality in the author's manner of treating the subject, but surely there is much more severity than it merits. He condescends to allow that there are a few good novels,

but even these few it would be dangerous to select, so they must be condemned with the many. If your correspondent means to exclude all works of fiction, he will make a large inroad on the literary world, and it would be hard in that case, to induce young people to improve their minds by what he calls "wholesome and practical information," or indeed, information of any kind that is to be gained by reading. I confess that I am no "aspiring youth, animated by the impulses of honourable ambition, to great exertion and high and laudable endeavours to acquire a name and a distinction," &c., but I have had some hand in the education of youth, and have always found a considerable point gained when they could be induced to become fond of reading. Being a parent, and a pretty anxious one, I have endeavoured to study the characters and propensities of young people, and have always observed that those who read a good novel with most avidity, are the first to betake themselves to the more solid readings, and to investigation and improvement of every kind. I certainly was not a novel reader in my youth, and forty or fifty years ago there was hardly a book of that description that was worth perusal, or which had not a pernicious tendency, (the works of Smollett and Fielding not excepted.) But how very different is the case now—authors of the first rate abilities, whose characters stand high in the religious and moral world, have not disdained to use their pens in this way for the delight and improvement of their companions in the journey of life. Posterity will also look back to them with gratitude and admiration. How many hours that sorrow has made heavy have been cheered and enlivened by them. There are times when the mind, weakened by grief or sickness, is glad to escape for a few hours from the gloom that surrounds it, into an ideal world of pleasing and improving fiction, from which it returns refreshed, to the duties and cares of life; and even in the sunshine of prosperity where is the harm of strewing our path with a few additional flowers the moderate enjoyment of which neither unfits us for this, nor the life to come. The great Parent of the universe has been pleased to bestow upon some of his children the talents which enable them to communicate pleasure and instruction to their fellows: our gratitude is due to Him, for this, and may blessings be upon the head of those who have not "hid their talent in a napkin." But I must have done and not frighten you by the length of this first attempt to appear in your paper. Let your correspondent A. A. P. be assured that the more of his attention he withdraws from the angry controversies of the day, and devotes to honest and soothing fiction, the better will he like himself and enjoy this life. Yours &c. &c. M.

ANECDOTES.

Dr. South, visiting a gentleman one morning, was asked to stay to dinner, which invitation he accepted; the gentleman stepped into the next room and told his wife, and desired she should provide something extraordinary. Hereupon she began to murmur and scold, and made a thousand words; till at length, her husband, provoked at her behaviour, protested, that if it was not for the stranger in the next room, he would kick her out of doors. Upon which the doctor, who had heard all that passed, stepped out crying, "I beg, sir, you will make no stranger of me."

It is said that king George III. after the close of the American revolutionary war, ordered a thanksgiving to be kept through his United Kingdom. A noble Scotch Divine in the presence of his Majesty, inquired, "For what are we to give thanks? that your Majesty has lost thirteen of his best provinces?" The king answered, No! "Is it then (the Divine added) that your majesty has lost one hundred thousand lives of your subjects in the contest?" No, no! said the king. "Is it then that we have expended and lost a hundred millions of money, and for the defeat and tarnishing of your majesty's arms?" No such thing! said the king, pleasantly. "What then, is the object of the thanksgiving?" "Oh, give thanks that it is no worse."

POPULAR TALES.

From the London Literary Magnet.

THE TOUCHY LADY.

One of the most unhappy persons whom it has been my fortune to encounter, is a pretty woman of thirty, or thereabouts, healthy, wealthy and of good repute, with a fine house, a fine family, and an excellent husband. A solitary calamity renders all these blessings of no avail: the gentlewoman is touchy. This affliction has given color to her whole life. Her biography has a certain martial dignity, like the history of a nation: she dates from battle to battle, and passes her days in an interminable civil war.

The first person who, long before she could speak, had the misfortune to offend the young lady, was her nurse; then, in quick succession, four nursery maids, who were turned away, poor things! because Miss Anne could not abide them; then her brother Harry, by being born, and diminishing her importance; then three governesses; then two writing masters; and then one music mistress; then a whole school. On leaving school, affronts multiplied of course; and she has been in a constant miff with the servants, tradespeople, relations, and friends, ever since; so that although really pretty, (at least she would be so if it were not for a standing frown and a certain watchful, defying look in her eyes,) decidedly clever and accomplished, and particularly charitable, as far as giving money goes, (your ill tempered woman has often that redeeming grace,) she is known only by her one absorbing quality of touchiness, and is dreaded and hated accordingly, by every one who has the honor of her acquaintance.

Paying her a visit is one of the most formidable things that can be imagined, one of the trials, which, in a small way, demand the greatest resolution. It is so difficult to find what to say. You must make up your mind to the affair as you do when going into a shower bath. Differing from her is obviously pulling the string; and agreeing with her too often or too pointedly is nearly as bad; she then suspects you of suspecting her infirmity, of which she has herself a glimmering consciousness, and treats you with a sharp touch of it accordingly. But what is there that she will not suspect? Admire the colours on a new carpet, and she thinks you are looking at some invisible hole; praise the pattern of a morning cap, and she accuses you of thinking it too gay. She has an ingenuity of perverseness, which brings all subjects nearly to a level. The mention of her neighbors is evidently taboo, since it is twenty to one but she is in a state of affront with nine-tenths of them; her own family are also taboo for the same reason. Books are particularly unsafe. She stands vibrating on the pinnacle where two fears meet, ready to be suspected of blue stockingism on the one hand, or of ignorance and frivolity on the other, just as the work you may chance to name happens to be recondite or popular; nay, sometimes the same production shall excite both feelings. "Have you read *Hajji Baba*?" said I to her one day last winter. "*Hajji Baba*, the Persian." "Really Ma'am, I am no Orientalist." "*Hajji Baba*, the clever Persian tale?" continued I, determined not to be daunted. "I believe, Miss M." rejoined she, "that you think I have nothing better to do than to read novels." And so she snipsnaps to the end of the visit. Even the Scotch novels, which she does own to reading, are no resource in her desperate case. There we are shipwrecked on the rocks of taste. A difference there is fatal. She takes to those delicious books as personal property, and spreads over them the prickly shield of her husband and children; is huffy if you prefer *Guy Mannering* to the *Antiquary*, and quite jealous if you presume to praise *Jeanie Deans*; thus cutting off his Majesty's lieges from the most approved topic of discussion among civilized people, a neutral ground as open and various as the weather, and far more delightful. But what did I say? The very weather is with her no prudent word. She pretends to skill in that science of guesses, commonly called weather wisdom, and a fog, or a shower, or a thunder storm, or the blessed sun himself, may have been rash enough to contradict her bodements, and put her out of humor for the day.

Her own name has all her life long been a fertile source of misery to this unfortunate lady. Her maiden name was Smythe, Anne Smythe. Now Smythe, although perfectly genteel and unexceptionable to look at, a pattern appellation on paper, was, in speaking, no way distinguished from the thousands of common Smith, who cumber the world. She never heard that "word of fear," especially when introduced to a new acquaintance, without looking as if she longed to spell it. Anne was had enough; people had housemaids of that name, as if to make a confusion; and her grandmama insisted on omitting the final *e*, in which important vowel was seated all it could boast of elegance and dignity; and once a brother of fifteen, the identical brother Harry, an Etonian, a pickle, one of that order of clever boys who seem born for the torment of their relatives, "foredoomed their sister's soul to cross," actually went so far as to call her Nancy! She did not box his ears, although how near her tingling finger ends approached to that consummation it is not my business to tell. Having suffered so much from the perplexity of her equivocal maiden name, she thought herself most lucky in pitching on the thoroughly well looking and well sounding appellation of Morley, for the rest of her life. Mrs. Morley, nothing could be better. For once there was a word that did not affront her. The first alloy to this satisfaction was her perceiving on the bridal cards, Mr. and Mrs. B. Morley, and hearing that close to their future residence lived a rich bachelor uncle, till whose death that fearful diminution of her consequence, the Mrs. B., must be endured. Mrs. B! The brow began to wrinkle—but it was the night before the wedding, the uncle had made some compensation for the crime of being born thirty years before his nephew, in the shape of a superb set of emeralds, and by a fortunate mistake, she had taken it into her head that B., in the present case, stood for Basil, so that the loss of dignity being compensated by an increase of elegance, she bore the shock pretty well. It was not till the next morning, during the ceremony, that the full extent of her misery burst upon her, and she found that B. stood not for Basil, but for Benjamin. Then the veil fell off; then the full horror of her situation, the affront of being a Mr. Benjamin, stared her full in the face; and certainly, but for the accident of her being struck dumb by indignation, she never would have married a man so ignobly christened. Her fate has been even worse than appeared probable; for her husband, an exceedingly popular and convivial person, was known all over his own country by the familiar diminutive of his ill omened appellation; so that she found herself not merely a Mrs. Benjamin, but a Mrs. Ben., the wife of a Ben. Morley, jun. Esq. the future mother of a Ben. Morley the third. Oh, the Miss Smith, the Ann, even the Nancy, shrank into nothing when compared with that short word.

Neither is she altogether free from misfortunes on her side of the house. There is a terrible *mesalliance* in her own family. Her favorite aunt, the widow of an officer with five portionless children, became, one fair morning, the wife of a rich mercer in Cheapside, thus, at a stroke, gaining comfort and losing caste. The manner in which this affected poor Mrs. Ben. Morley is inconceivable. She talked of the unhappy connexion, as aunts are wont to talk when nieces get paired at Gretna Green; wrote a formal renunciation of the culprit, and has considered herself insulted ever since if any one mentions a silk gown in her presence. Another affliction, brought on by her own family, in the production of a farce by her brother Harry, (born for her plague) at Covent Garden theatre. The farce was damned, as the author (a clever young Templar) declares most deservedly. He bore the catastrophe with great heroism; and celebrated its downfall by venting sundry good puns, and drinking an extra bottle of claret; leaving Anne, sister Anne, the pleasant employment of fuming over his discomfiture, a task which she performed *con amore*. Actors, manager, audience and author, seventeen newspapers and three magazines had the misfortune to displease her on this occasion; in short, the whole town. Theatres and news papers, critics and the drama, have been banished from her conversation ever since. She would as lieve talk of a silk mercer.

Next to her visitors, her correspondents are to

be pitied; they had need look to their P's and Q's, their spelling and their stationary. If you write a note to her, be sure that the paper is the best double post, hot pressed, and gilt edged; that your pen is in good order; that your "dear Madams" have a proper mixture of regard and respect; and that your foldings and sealings are unexceptionable. She is of a sort to faint at the absence of an envelope, and to die of a wafer. Note, above all, that your address be perfect; that your *to* be not forgotten; that the offending *Benjamin* be omitted; and that the style and title of her mansion, Shawford Manor House, be set forth in full glory. And when this is achieved, make up your mind to her taking some inexplicable affront after all. Thrice fortunate would he be who could not put twenty words together without affronting her. Besides, she is great at a scornful reply, and shall keep up a quarrelling correspondence with any lady in Great Britain. Her letters are like challenges; and but for the protection of the petticoat, she would have fought fifty duels and have been either killed or quieted long ago.

If her husband had been of her temper, she would have brought him into twenty scrapes; but he is as unlike her as possible; a good humored, rattling creature, with a perpetual festivity of temper, and a propensity to motion and laughter, and all sorts of merry mischief, like a schoolboy in the holidays, which felicitous personage he resembles bodily, in his round, ruddy, handsome face, his dancing black eyes, curling hair, and light active figure, the youngest man that ever saw forty. His pursuits have the same happy juvenility. In the summer he fishes and plays cricket; in the winter he hunts and courses; and what with grouse and partridges, pheasants and woodcocks, wood pigeons and flappers, he contrives pretty tolerably to shoot all the year round. Moreover, he attends revels, races, asizes, and quarter sessions; drives stage coaches, patronizes plays, is steward to concerts, goes to every dance within forty miles, and talks of standing for the county; so that he has no time to quarrel with his wife, or for her, and affronts her twenty times an hour simply by giving her her own way.

To the popularity of this universal favourite, for the restless sociability of his temper is invaluable in a dull country neighbourhood, his wife certainly owes the toleration which bids fair to render her incorrigible. She is fast approaching to the melancholy condition of a privileged person, one put out of the pale of civilized society. People have left off peeing angry with her, and begin to shrug up their shoulders and say it is her way, a species of placability which only provokes her the more. For my part, I have too great a desire to obtain her good opinion to think of treating her in so shabby a manner; and as it is morally certain that we shall never be friends whilst we visit, I intend to try the effect of non-intercourse and to break with her outright. If she reads this article, which is very likely, for she is addicted to new publications, and thinks herself injured if a book is put into her hands with the leaves cut—if she reads only half a page she will inevitably have done with me for ever. If not, there can hardly be any lack of a sufficient quarrel in her company; and then, when we have ceased to speak or to curtesy, and fairly sent each other to Coventry, there can be no reason why we should not be on as civil terms as if the one lived at Calcutta and the other at New-York.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

ON THE PASSIONS.

NO. V. OF LOVE.

'Tis'd with vain joys, and false alarms,
With mental and corporeal strife,
Snatch me, my Stella, to thy arms,
And screen me from the ills of life.

[Dr. Johnson.

Love is very properly considered the strongest of all the passions of the human mind. It often holds a predominant power over the faculties, and will not be controlled either by the judgment, will or reason. When it grasps the reins of government in its own hands, it frequently levels all distinctions originating from birth, character or fortune, and breaks down, with the strength of a Hercules,

and the ready invention of an Archimedes, every thing which attempts to oppose it. The character of Queen Elizabeth, of England, will justify this observation, and corroborate the fact, in a very striking manner, if the reader will give himself the trouble of perusing the works of the great Hume. Several of the passions are necessary to the preservation of the human frame; but love is designed for a far nobler purpose. It was for this purpose that the ETERNAL REASON deeply rooted it in the human breast, and made it subservient to the perpetuity of the human race; which had it been otherwise would have, in all probability become extinct. Though love is considered the strongest passion, yet it is not so precipitate in its progress as some others: for we seldom find that persons fall in love desperately all at once, or in a moment; but generally by a slow and gradual acquaintance with each other. Some persons are only fascinated with external beauty, which makes its effect suddenly; but where those superior charms of the mind are taken into consideration, the silken chain is gradually and irresistibly fastened about the heart. Personal beauty appears to me to be entirely dependent on fancy; for a certain great writer observes that beauty begins precisely where demonstration leaves off; but that beauty, or brilliancy of the mental faculties, captivates all who have the power or capacity to enjoy. A beautiful woman is charming, but a polished mind is far more prepossessing.

Love is a passion which by no means should be trifled with. It is a passion productive of most serious consequences to the happiness and peace of individuals, when it is disappointed in its aim by prejudice, rank, or by the tyrannical jurisdiction of parents. When fate wills the unhappy lover to be disappointed in obtaining the object of his love, he frequently becomes the miserable slave of melancholy, and broods over his sorrows with perpetual vigilance, until his faculties become deranged, or grief, the most deadly of all passions, puts a painful period to his existence. Some men are in the habit of making love for the insignificant purpose of feeding their insatiable vanity, and with the view of shewing to the world their ill-begotten influence with the fair, whom nature teaches us to reverence and protect. This is certainly one of the most ungentlemanly principles that ever harbored in the breast of man; and is, in my opinion, an act of the greatest mental cruelty that could possibly be inflicted on the female sex. Their poisoned weapon, instead of being the feathered arrow of Cupid, is the painful one of flattery. It were better, were it not such as Ovid tells us Cupid shot Daphne with prodigious hatred. They attack the innocent, unconscious female on that side of her mind which is least guarded by the sacred oracles of discretion and prudence, and in an unlucky moment they infuse their principles which spring from self-love, and gain the affections of Heaven's highest order of architecture. Hence we often behold men triumph over the downfall of females, whose only fault was love, and whose only weakness innocence. There are females, on the contrary, who play the fashionable game of coquetry, and inflict equal pain upon men; whose only fault was honor, and whose only weakness love. These characters are too common, and may be seen every day among us. They are both disgusting, and reflect equal disgrace upon the source from whence they spring. Love is a pure and an unsullied passion. It admits of no ambiguities, obliquities or sly insinuation; but is felt in the heart like a flame of fire which kindles even in the eyes, and burns upon the altar of honorable sentiment and undiminished radiance. Love is the noblest of the passions; for it is the foundation on which Christ stands, and the principle ingredient of his Holy Law. It was first felt in Paradise, and from thence transmitted down to posterity through an immense chain of animated existence; and now exists the same in the breast of man, unaltered and unadulterated. But the flatterers of vanity, have many forms which they represent in the character of pure love; and one of which, at the present day, is called *sentiment*. This word has been more abused than any other in the English tongue. A sentimental lover, at the present day, is a far different character from what the term would seem to indicate, and what it once *did* imply in the days of ingenuous simplicity. True sentiment, in my

opinion, is united with *principle*, and depend upon each other as geometry and arithmetic. The reader need not suppose that I intend giving a mathematical demonstration of love, and sentimental love, for my object is only to draw the difference in a plain, unostentatious manner; and shew the purity of the one, and the insignificance of the other. A man, actuated by the pure principle of love, adores the object of his passion for the good qualities she possesses; but the sentimental lover (I mean at the present day) bestows his praises with profuse prodigality upon the charms of her mind, and the angelic features of her person; but at the same moment the great loadstone, or centre of attraction to which his mental eye gravitates, is that golden beauty which lies concealed in her guardian's coffers. This is the stimulus by which his warm passion is excited, which he swears with stentorian lungs, is paramount to every other consideration, save the elegant refinement of his beloved female. When his fair angel tells him that it is her wealth which he admires, he swears that he wishes she had been a pastoral maid, with no fortune but her crook, that he might spend his days in a rural cot, beneath the canopy of some venerable oak, with the beautiful maid of his heart, happy in the Arcadian scenes of retirement. It has been laid down as a maxim, that the man who swears, will lie; and in the majority of instances I have no doubt of its confirmation. Now, when a man marries a woman from the pure principle of love, the union bids fair to be a happy one; but when pecuniary considerations preponderate, his unhappy wife is soon convinced of "the error of her ways;" and soon finds that so far from being the idol and angel of her husband's heart, she is entirely stripped of her divine attributes, and descends, to her mortification, in the eyes of her money-loving husband, to the state of a mere ordinary woman. The honey moon scarcely commences before it is past, and the gloom of midnight spreads itself over her enraptured mind. He has laid his great thumb upon the one adorable object, and it is a mere matter of moonshine to him what becomes of the secondary article, his wife, whether she be swept away by the yellow fever, or fall down stairs and break her angel neck. She who was before marriage, more than a woman, is now less than one, and affords conversation for all the tea-table chatters in the town, and adjacent country. I have observed many cases of this kind, and I touch upon the subject for the particular edification of those young ladies who have money to dispose of in the way of marriage. The man who loves a female solely for her cash, cannot possess the thing called *principle*; and therefore it is no wonder that such unfortunate wives should often feel the cruel tyranny of their husbands, if they may be called such. When a man takes himself a wife, through pure love, he is delighted with her company, and is more pleased with her society than that of any other woman; but when he is tied by the golden chain, his wife is a burthen to him, and he is delighted more with the society of any other person than that of his wife; which is the reason that so many men are fond of lounging in taverns, gambling houses, and brothels, much to the mortifying disgrace of their prudent companions at home. These are domestic facts, and call loudly for reformation. But this reformation can never take place, until women know in whom they place confidence, and in whom the flame of love is kindled. Love should never be trifled with and matrimony should never be made a *matter of money*. MILFORD BARD.

MISCELLANY.

From the London Monthly Magazine.

DOGS.

Half a century ago no house was thought to be half furnished that had not more than one dog in it. At length the frequency of the horrible and incurable disorder occasioned by the bite of these animals, blew up the dog mania for that time. It is now reviving again, but it is hoped the public press will pour out eloquence or argument enough to render dog keeping as ridiculous to individuals, as it is offensive and dangerous to the community.

Who has not seen instances where cruelty is shown to all the animated works of the Almighty except

half a dozen pugs, and twice as many kittens and cross parrots! Betty and John are inferior beings to Tabby and Pompey! Fowls are boiled for the dog, and fish fried for the cat, by gentle-folks who never think of giving a morsel to relieve the poor.

The following description of a doggerly is an extract from the Invisible Spy.

A maid is setting in a low chair, with a large tray before her, filled with a great number of combs, with one of which she is smoothing and setting in order the hair of a spaniel she is nursing upon her lap.

Sir Simon and Lady Lovedog come in, and seeing the comb she is using, snatch it from her hand, and strike it in her face.

Lady Lovedog.—Monster! how dare you touch Hector with that comb?

Maid.—Indeed, my lady, they were all here; I did not know there was any difference.

Lady Lovedog.—You nasty hussy; you must have heard that each of my dear dogs has a set of combs to himself, marked with his name. Can't you read, oaf?

Maid.—“Indeed, Ma'am, I did not see it.”

Lady Lovedog.—“Take that, impudent slave! and that! and that! see if it will clear your sight, and make you remember another time.” These sharp words were accompanied by smart blows, first on one shoulder and then on the other: when turning to the dogs who were crying and yelping her ladyship thus addressed them: “Dear, good natured darlings! you hate to see me angry, don't ye, though it be in your own cause! Come here poor Psyche, where is Cupid? Prince, what makes you so dull this morning? you don't frisk and caper as you used to do; I suppose your bed was not half made, any more than Pompey's.”

Pretty boys, you look as if you had slept rough all night. Here is my poor Bully too, not so much as the tufts on the tip of his tail combed out! Beauty, why do you bark, love? I can see by your eyes you have something to tell me if you did but know how; well, to be sure, you have all been cruelly used these two days, since, your own maid went away. Come, Beauty, give me a kiss. Oh! oh! your mouth is all dirty. Why I declare that good for nothing hussy has neither washed your face nor cleaned your teeth yet.”

Maid.—“Indeed, Ma'am, I washed every one of them; your Ladyship may see the towel is all wet.”

Lady L.—“The towel! why you vile creature—you dirty wretch! have you actually washed all their sweet faces on the same towel? Get out of my sight, you toad—or I shall break your neck down the stairs; or what will be worse, my own heart with rage, at your behaviour.” I said you must be an excellent friend to human beings, if you are so fond of beasts. “Indeed,” she replied, “I love this dog better than all the human beings in the world.”

Reader dost thou imagine this a caricature? I tell you nay. I myself, knew a lady of fortune, near Uxbridge a few years ago, who kept half a dozen of lapdogs. A cloth was laid, and a table set with plates for the little darlings. And the little mistress carved with great ceremony, and helped them to legs and wings of chicken, with particular civility. They acted this farce for some years, when one of the favorites was suddenly seized with hydrophobia and bit his mistress severely, of which disease she died.

A GIGANTIC PIE! The Christmas pie made by Mrs. Tagg, of the King's Arms Inn, Ecclestone, contained a goose, a turkey, a hare, a brace of pheasants, a brace of partridges, a couple of rabbits, a couple of pigeons, and two tongues! The article was prepared after Dr. Kitchener's best style, not a single bone to interrupt the process of mastication. This matchless pie was two yards long, nearly a yard wide, and about two feet in depth.

MONTROSE'S CHAPLAIN. It is reported of one of the Chaplains to the famous Montrose, that being condemned in Scotland to die, for attending his master in some of his glorious exploits; and being upon the ladder, and ordered to set out a psalm, expecting a reprieve, he named the one hundred and nineteenth psalm, (with which the officers attending the execution complied, the Scotch presbyterians being great psalm singers,) and it was well for him he did so; for they had sung it three parts through before the reprieve came. Any other psalm would have hanged him.

ALBANY:

SATURDAY, APRIL 7, 1827.

MORALITY, GAMBLING, &c. It is a source of gratification to us to view the many attempts which are making to suppress some of the vices which are every day leading the unwary into paths of interminable ruin. The system pursued by the "black legs" calls loudly for the interference of the legislature. Almost every steamboat and canal boat, is infested with these villains; and there is no way of suppressing the evil except by a direct interference of the highest authorities. We notice with much pleasure, in the legislative proceedings, an amendment to the bill in relation to the government of the canals, prohibiting cock fighting, billiard playing, card playing, or any other gambling on board canal boats, under a penalty of five dollars. Mr. Piggott, the mover, said he believed there was a set of gamblers, or black legs, who frequented steam and canal boats, from New-York to Buffalo, for the sole purpose of enticing and leading the unwary to their ruin, and he thought it as important to protect the morals of the public in cases of this kind, as it was with regard to lotteries. The amendment was adopted. The bill restricting the sale of lottery tickets, has been returned to the legislature, with objections, by the Governor: His excellency appears to be fearful of impeaching the plighted faith of the state. One of the most intelligent and respectable Grand Juries ever assembled in New-Jersey, made the following presentment at a recent session. We publish it, says the *Fredonian*, not less in justice to the considerate watchfulness and faithful guardianship of the Jury, than for the purpose of exciting inquiry as to the means, if there be any, of preventing and repressing this greatest scourge and desolation in our land.

MIDDLESEX COUNTY, ss.—The Grand Inquest for the state of New-Jersey, for the body of the County of Middlesex, present as a grievance, the intemperate use of Spirituous Liquors, which has increased to an extent, that, if not counteracted and checked, threatens to destroy the peace, the moral habits, and the religion of the people of this country. Of the breaches of the Peace which have come before the Jury, all have been produced by intemperance of the parties. And higher crimes that have been committed in this state, as far as the Jury are informed, have almost without exception been committed by those who had first degraded themselves by drunkenness and the excessive use of Spirituous Liquor. With this knowledge the Jury consider it their duty to Society, to present to the Court, the greatest nuisance, and the general source of all crimes and offences against the laws, which all good citizens and friends of this otherwise favoured country, are bound to repress and prevent.

By order of the Grand Jury,
JAMES PARKER, Foreman.

A writer in the Vermont Patriot states that not long since a reverend clergyman in that state being apprehensive that the accumulated weight of snow upon the roof of his barn might do some damage to his real estate,—to the treasures which he had laid up on earth, and being tenacious of his earthly inheritance, was resolved to prevent it by seasonably shoveling it off. He therefore ascended it, having first, for fear the snow might all slide off at once, and himself with it, fastened to his waist one end of a rope, and given the other to his wife. He went to work, but fearing still for his safety, "my dear," says he, "tie the rope around your waist," no sooner had she done this, than off went the snow

poor minister and all, and up went his wife. Thus on one side of the barn the astounded and confounded clergyman hung, and on the other side hung his wife, high and dry! At that moment however, a gentleman, luckily passing by, delivered them from their perilous situation.

REPORT ON THE MORGAN CASE. Mr. Granger, from the select committee to whom were referred the petitions in relation to the Morgan affair, reported to the assembly, on Wednesday last. The report is a mere epitome of the old *on dits*, and consequently contains no positive illustration of the subject on which it treats. But it is an "official document:" it must be paragraphed, and respected: and as some of its conjectures accord with the popular prejudice—perhaps, *wish*—they will, by many, be taken for granted, as *facts*. The Lewiston gentlemen, however, are probably disappointed in their expectations. The committee complain of the paucity of legal testimony; and insinuate that promises have been made but not fulfilled. They refuse to create a special tribunal for the purpose of investigating the Morgan affair, on the ground that "while it would be doubtful in principle and dangerous in precedent, it would not materially add to the powers vested in our existing courts." They entertain very delicate notions in relation to our liberal institutions, and deprecate the evils to be apprehended from confounding the innocent with the guilty. They consider it the duty of every citizen, and particularly of those to whom is delegated the power of acting for the general weal, "to protect our people in the enjoyment of life, liberty, and the pursuit of happiness;" in order to do which they submit the following resolutions to the consideration of the house.

"Whereas it appears that one William Morgan, of this state, was in the month of September last, forcibly and unlawfully taken from the village of Canandaigua, in the county of Ontario, since which period all attempts to discover the fate of said Morgan, have proved unavailing: Therefore—

"Resolved, if the honorable the Senate concur herein, That the person administering the government of this state be requested to issue his proclamation, offering a reward of five thousand dollars, for the discovery of the said William Morgan, if living; and a like sum of five thousand dollars for the murderer or murderers of said Morgan, if dead, to be paid on conviction.

"Resolved, if the honorable the Senate concur herein, That a joint committee of the two houses be appointed, consisting of five members, two to be taken from the Senate, and three from the Assembly, whose duty it shall be to visit the several counties of Ontario, Monroe, Livingston, Genesee, Erie, Niagara and Orleans, or such of them as they shall think proper, with full power to send for persons and papers, to inquire into the facts and circumstances connected with the abduction, detention and disposition of the said William Morgan, and to report their proceedings to the next legislature; that such other and further proceedings may be adopted as the nature of the case and the liberty and safety of our citizens may require."

There is one feature in the report which we are compelled to consider extra-legislative, and that is the defence of Dr. Terry's reputation. If the legislature of New-York think proper to enter into a defence of private character, it would be no hard matter to procure subjects more worthy than Dr. Terry. Is it not a circumstance unique in character, for the highest tribunal in the state voluntarily to enter into a vindication of a man who has declared himself capable of pursuing the purposes of malignity, even to the bed of death?

PIERRE C. VAN WYCK, Esq. died in the city of New-York on Wednesday last. His decease has created much sensation throughout the city. On the day of his death the court of sessions adjourned without transacting any business, and a meeting of the members of the bar was held the day subsequent, to pay a tribute to his memory.

The New-York Times says, "Mr. Van Wyck has been, from earliest manhood, a resident of this city—for much of the time, either an administrator or practitioner of the law; has been warmly interested in city and state politics, without the imputation of sinister conduct or motives. As a public man, he always showed firmness, constancy, and intelligence. He had a brilliant genius, was a good scholar, a sound lawyer, an able debater, a ready and often an eloquent writer; candid in forming his opinions, and fearless in expressing them; warm in his political attachments, liberal and frank in his intercourse with the world, and unalterably faithful in his friendships."

The April number of *The Casket; or, Flowers of Literature, Wit, and Sentiment*, is just published. It is filled with the usual quantity of useful and entertaining matter, and embellished with a View of Lake Erie, at Buffalo; a spirited engraving of the Elm Tree at Kensington, under which Penn's Treaty was formed; four numbers of the School of Flora, and a Ballad, called "I've Been Roaming," set to Music. The Casket is a meritorious publication and is deserving of the public patronage. It is published by Atkinson and Alexander, Philadelphia, at \$2 50 per annum, payable in advance.

✂ The assertion in yesterday's National Observer, in relation to the editor of this paper and the Albany Argus, is totally false, and too pitiful to receive a particular notice.

CHIT CHAT.

The editor of the Bedford, Pa. Gazette, in speaking of a profitable farm, says, that the owner keeps eleven cows, one yoke of oxen, but no horse.—The population of Washington City is estimated at 19,677.—*Rascally Postmaster*.—A postmaster at Wisby, in Gothland, having died lately, there were found among his effects above 600 letters, some containing money, partly from Sweden, partly from foreign countries, and some were put in by persons in Wisby itself, to be sent abroad. Some of these letters have been lying there ever since 1793, and a very considerable number since 1804.—Mr. Parmentier, proprietor of the Horticultural Garden at Brooklyn, presented at our office some monthly strawberry vines raised at his place, in full bearing. He states they are easily cultivated, and if protected from the weather, will afford fruit every month. N. Y. G.—By late information from the Indians, it is apprehended that the Agent will meet with but little difficulty in negotiating for the balance of the land to which Georgia may be entitled, beyond the limits of the New Treaty.—*From the National Advocate*.—On the 20th March, a Carolinian editor sagely remarked, that that the weather was very Murch-like. This would be much the same as Joab saying of his brother, that Absalom was very Absalom-like. If a thing is not like itself, pray what is it like.—Serious apprehensions are entertained that the weather in some parts of South Carolina forebodes no good to the fruit.—The Automaton chess player is now exhibiting at Baltimore.—The Mallard or Wild Drake is very numerous in South Carolina during the winter. Charleston market for three months is never without them. They leave Carolina about the middle of March and return in November. In this respect they resemble the eastern pilgrims. The following is the mode of catching the mallard in the south. In the lakes where the fowl resorts, the most favorite haunt is carefully observed—then in the most sequestered part of this haunt a ditch is cut and covered over, forming a kind of tunnel, into which, by various stratagems, a man, aided by a well-trained dog, decoys the fowl; when he gets the ducks fairly within the tunnel, he covers its mouth with a net, and takes the ducks out at his leisure.—An Old Bachelor in Ohio, by way of a set off against Gen. McClure's proposition to tax Bachelors, instead of dogs, proposes as follows—hear him: "Let every

one who is tired of conjugal felicity, pay a certain tax to the state for a divorce, according to his ability; and it will not only supercede the necessity of taxing dogs, but there will be no need of taxes of any kind. And if government will give the exclusive privilege of unmarried to those who wish to be unmarried in the United States, I will pledge myself to pay off the National Debt in five years."—The newspapers in several sections of the country are still harping upon the Beauchamp case, and giving extracts of its horrors. The public mind should not be used to such descriptions. It is a matter of history that Schiller's Robbers increased the banditti in Germany. Will it be surprising if the recent publications produce other Beauchamps and Mrs. Beauchamps in the south or west?—There are now living at Horse Neck, about thirty miles from New-York, two geese, both of the age of eighty-two years, one of which is now setting. They have both laid regularly for eighty-one years.—A Mr. Mendoza, from London, proposes to teach the citizens of Charleston, S. C. the art of self-defence, or in other words, the art of knocking a man down scientifically. A few lessons in his peculiar mode are sufficient to initiate a pupil into the mysteries of this disgraceful science.

FOREIGN NEWS.

The ship *Herald*, Graham, which has arrived at Baltimore, left Liverpool the 21st of February. It furnishes but few items in addition to those already received.

England.—There was a report in the House of Lords, on the afternoon of the 19th, that despatches had reached town stating the death of the Duke of Cumberland. It was feared that the report was actually correct.

The health of Lord Liverpool was yet in a doubtful state. Bulletins on the subject were issued almost every hour.

Holland.—Accounts from Batavia to the 20th Sept. mentioned several actions to have been fought with advantage to the Dutch; but nothing decisive had occurred.

Austria.—From Frankfort, February 10th, we learn, it was reported that the question relative to the free navigation of the Rhine, was shortly to be discussed.

The Emperor of Austria is said to have demanded from the Pope a free passage for his troops through the Papal dominions, "in case of any manifestations of revolutionary movements in the kingdom of Naples."

Turkey.—Letters from Odessa to the 29th Jan. state, that large reinforcements of troops had been ordered off from Constantinople to the Morea.

It is said under date of Constantinople, 12th Jan. that—"The Government had just discovered a new conspiracy, by means of an intercepted correspondence between the malcontents here and the Janissaries on the Asiatic side. The heads of it were seized during the night, and immediately beheaded, with the exception of a few, who contrived to escape. Meanwhile, the system of reform goes on, not only here, but throughout all the provinces, with the exception of Natolia. A great number of Pachas have been displaced, from which the best results are anticipated. The Pacha of Damascus has been dismissed; Veli Pacha has been banished to Broussa; and Aboloubut Pacha has received charge of the Pachalics of Damascus and Orousa. His severity is well known, and he will do every thing in his power to consolidate the new system."

Spain.—A Portuguese courier arrived at Madrid on the 8th. The contents of his despatches were not officially known, but it was reported that he had brought a declaration of war by Portugal, grounded on the reception afforded by the Government, to the refugees who had left Beira, and the facilities which it had afforded them to effect their re-entrance into the province of Tras-os-Montes.

The news had caused the greatest sensation at Madrid; Several Spanish Officers on furlough, are said to have set out, with secret permission from the Government, to serve in the Royalist troops in Portugal; they will find there many of their countrymen.

M. de Lima, the Portuguese Envoy was preparing to quit Madrid, because he had not been able to obtain, from the Spanish Cabinet, the recognition of the Constitutional Government of Portugal.

General Sarsfield, Commander-in-Chief of the Corps of Observation, has removed his headquarters from Talavera de Reina to Caceres, a point very near to the frontiers.

Ten regiments of Provincial Militia had received orders to hold themselves in readiness to set out for the army. There was a great eagerness among Royalist Volunteers, to enroll themselves in the brigade intended for the army of Observation.

France.—There was a very stormy debate on the project concerning Juries in the Chamber of Deputies on the 14th, but it ended in nothing. The *ultras*, as usual, were outrageous.

Russia.—No details of the advance of the Russian armies into Persia are mentioned; but only the main fact of great successes, and the probability of that country being occupied by a Russian force for a lengthened period.

Portsmouth, Sunday, Feb. 18.—This morning a fire broke out on board his majesty's frigate *Diamond*, lying in ordinary up Portchester Lake, which burnt her down to the water's edge. It was with great difficulty that fourteen persons, men, women, and children, escaped, not having time to save a single thing.

MORGAN, &c.

The following advertisement, offering a reward of one hundred dollars for the discovery of the incendiary who set fire to the printing office of David C. Miller, in September last, was issued about a month since. The gentlemen whose names are attached to it are of the first standing in society and members of the masonic fraternity. It has not, as yet, produced the desired effect; and as the secret probably rests with Miller, it is doubtful whether the "incendiary" will ever be discovered.

\$100 REWARD.

WHEREAS, it is alleged that the Printing Office of David C. Miller, in this village, was set on fire in the month of September now last past, supposed to be the work of some incendiary. And whereas, no reward has hitherto been offered for the apprehension and conviction of the said incendiary. And whereas, a regard for public justice, individual security and violated law require, that the offender or offenders be brought to condign punishment. Now therefore, in order to effect so desirable an object, the undersigned have thought proper to offer a reward of ONE HUNDRED DOLLARS, to be paid on the conviction of said offender. Dated at Batavia, Genesee county, N. Y., this 7th day of March, 1827.

From the *Schoharie Republican*, of March 23.

A GENERAL KNOCK-DOWN.—On Sunday evening last, a fellow by the name of Williams, who is either crazy or very ugly, and who has been confined in the goal of this county, for some time, for abusing his wife and family, took it into his head to release his fellow prisoners, not only from their "durance vile," but to rid them of the world—and the world of them by knocking their brains out.

The prisoners, three in number, besides Williams, were sitting round the stove, talking about what-not: the moon, green cheese, and the currency; pigs, politics, and poultry, and such-like things as they were acquainted with; while Mr. Williams was pacing the room, with a huge billet of wood in his hand, musing on his hard fate, and the various "ills to which" mankind are "heir to," and himself in particular, when all at once a thought struck him,—and at the same instant, he struck one of the prisoners with his cudgel, and brought him to the floor;—instantly another was brought down in the same manner, and the club was raised over the head of the third, but he having got a hint of what was going on, did not wait to receive the blow, but instantly seizing Williams brought him to the floor, where, with some little assistance from the one who was last knocked down, but who was not very badly hurt, he held him, not in a very easy position, until the Sheriff, hearing the noise, came up and put Williams in a room by himself. If the fellow is really crazy, as is thought by some, he ought to be sent to the Mad-House, where, perhaps, he might receive some benefit:—But if he is not, (and we doubt it some) he ought to be hanged, before he attempts any more lives.

One of the reasons assigned by him for attempting the lives of his fellow prisoners was, that they were Free-Masons, and

as the Free-Masons had lately killed Capt. Morgan, he thought it no more than right that he should kill them. We are not able to say, whether the prisoners are masons or not. Be that as it may, they have been worse handled than were the masons at the west, who were convicted of kidnapping Morgan.

From the *Greensburg Republican*.

WILLIAM MORGAN.—We have understood from such authority as we believe is fully entitled to credit, that William Morgan, respecting whom so much has been published in the newspapers, and of whose death we had such various and contradictory accounts, was, very recently, employed as a sub-contractor on the Pennsylvania Canal, about four miles below Logan's Ferry, and between that place and Deer Creek; and where, not many days since, he was in good health, quietly prosecuting his business. This information is derived from a gentleman of unquestionable integrity, who has a considerable contract on the canal, by whom Morgan was employed, and who was well acquainted with him in the state of New-York.

[This man is a singular instance of *ugiguity*—no king can be more so. He was thrown over Niagara Falls, after having his throat cut; he was lost in a vessel on Lake Ontario; he has been engaged in a Chancery suit in this city; he is the keeper of a grocery in Canada; he has taken a sail up the St. Lawrence; he is a canal contractor in Pennsylvania; and in short, more occupations and localities have been assigned to the man than ever fell to mortal lot before. It is much to be hoped that he will come forward and clear up the mystery.]

N. Y. Times.

THE GLEANER.

From late *Foreign Journals*.

The following note was found among the papers of the late Lord Erskine:

To General Washington.

SIR—I have taken the liberty to introduce your august and immortal name in a short sentence, which is to be found in the book I send to you.

I have a large acquaintance among the most valuable and exalted classes of men, but you are the only human being, for whom I ever felt an awful reverence.

I sincerely pray to God to grant a long and serene evening to a life so gloriously devoted to the universal happiness of the world.

T. ERSKINE.

BENEFIT OF CLERGY. As the meaning of the term may perhaps, not be generally known to our readers, we give the following definition from a correspondent:—Felony, which comprehends almost numberless species of crimes, is subdivided into two classes—with or without benefit of clergy. Benefit of clergy, at present signifies an exemption from capital punishment, in all felonies where the Legislature has not taken away that benefit by express words. The origin of this principle, which is very little understood, is as follows:—At the time the Catholic religion was the established one in this country, the clergy claimed an exemption from punishment for all secular offences, and the Legislature was so far duped by them as to grant them that privilege: therefore, whenever a priest was convicted of a crime, for which another man would suffer death, he was discharged without punishment, on proving himself to be an ecclesiastic. The clergy did not fail to avail themselves of this advantage; and, if any credit is to be given to historians, were guilty of all kinds of enormities and depredations. This induced the Parliaments, at various times, to subject them to capital punishments for particular offences, by taking away from those guilty of offences, the benefit of clergy. In those dark superstitious times, every person who could read, was presumed, in law, to be a priest in orders; and till the reign of Anne, a man who was not possessed of that qualification, was liable to be hanged for an offence which one possessed of it would only be burnt in the hand for; but since that time, laymen are allowed the benefit of clergy, and are entitled to claim it as often as they have occasion, and are exempted from the punishment of burning in the hand by the statute 1, Edward VI which extends the same privilege to Peers of the Realm, whom it also exempts from capital punishment for the crimes of house-breaking, highway robbery, horse-stealing, and robbing of churches. Felony, without benefit of clergy, are capital offences, of which Sir William Blackstone, in his time, enumerated one hundred, and since his death upwards of fifty have been added to the catalogue. We trust that in the alterations in our criminal code about to be proposed by Mr. Peel, these circumstances will receive their due share of that gentleman's attentive consideration. *London paper.*

THE ORIGIN OF CONFINING JURORS FROM MEAT AND DRINK.—The Gothic nations were famous of old, in Europe, for the quantities of food and drink which they consumed. The ancient Germans, and their Saxon descendants in England, were remarkable for their hearty meals. Gluttony and drunkenness were so very common, that these vices were not thought disgraceful; and Tacitus represents the former as capable of being as easily overcome by strong drink as by arms. Intemperance was so general and habitual, that no one was thought to be fit for serious business after dinner; and under this persuasion it was enacted in the laws, that Judges should hear and determine causes, fasting, and not after dinner. An Italian author in his "Antiquities," plainly affirms, that this regulation was framed for the purpose of avoiding the unsound decrees consequent upon intoxication; and Dr. Gilbert Stuart very patiently and ingeniously observes, in his "Historical Dissertation concerning the Antiquity of the British Constitution," p. 238, that from this propensity of the older Britons, to indulge excessively in eating and drinking, has proceeded the restriction upon jurors and jurymen, to refrain from meat and drink; and to be even held in custody, until they had agreed upon their verdict.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

THE POET'S EYE.

That eye looks not on earth with earthly look:
There is too much of hope upon the brow
Among earth's thousand miseries, to brook
Her sordid inspiration,—or to bow
To all her worms, who glitter round him now;
But like some newly landed child of those
Bright worlds whose children mourn not, nor list how
Another world may shake itself with woes,
Fearless, frownless, smileless, he wonders as he goes.

He looks on the broad earth and at his ken
Her rocks and deserts are a paradise:
Then gloom comes on him, and he looks again,
And makes her gardens deserts.—Wars which rise
And sever realms from realms,—and agonise
The hearts of millions, and divide asunder
Nations of friends,—however mean the prize
They contend for, need but the living thunder
Of his aerial eye to fill the world with wonder.

He sees amid the opening charms of Spring
The breath of future desolation hid,
And winds his bosom up with pains to bring
A host of guests whom Nature never bid;
Or when stern storms of winter long have chid
The groaning mountains, and the shrieking trees,
And banished vital warmth, his eye can rid
His breast of melancholy, for he sees
The zephyr of the spring disguised in every breeze.

His world, his seasons, and his county—all
Dwell in the spacious circle of his mind;
They are not terrestrial things, which change and fall,
Nor seen by earthly eye; but like the wind—
Invisible ubiquity, they bind
His earthliness to thing of heavenly height;
His matter into spirit undefined,
Friend and consociate with the sons of light,—
The spirit of the storm,—the ocean,—and the night.

April 3, 1827.

G.

THE KAISER'S FEAST.

BY MRS. HEMANS.

Louis, emperor of Germany, having put his brother, the
Palegrave Rudolphus, under the ban of the empire (in the
twelfth century), that unfortunate prince fled to England, where
he died in neglect and poverty. "After his decease, his
mother Matilda privately invited his children to return to Ger-
many, and by her mediation, during a season of festivity, when
Louis kept wassail in the castle of Heidelberg, the family of
his brother presented themselves before him in the garb of sup-
pliants, imploring pity and forgiveness. To this appeal the
victor softened."—See *Miss Benger's Memoirs of the Queen
of Bohemia*, vol. 1.

The Kaiser feasted in his hall,
The red wine mantled high;
Banners were trembling on the wall
To the peals of minstrelsy:
And many a gleam and sparkle came
From the armour hung around,
As it caught the glance of the torch's flame,
Or the hearth with pine-boughs crown'd.

Why fell there silence on the chord
Beneath the harper's hand?
And suddenly from that rich board,
Why rose the wassail-band?
The strings were hush'd—the knights made way
For the queenly Mother's tread,
As up the hall, in dark array,
Two fair-hair'd boys she led.

She led them even to the Kaiser's place,
And still before him stood;
Till with strange wonder, o'er his face
Flush'd the proud warrior-blood:
And "Speak, my mother! speak!" he cried,
"Wherefore this mourning vest?
And the clinging children by thy side,
In weeds of sadness drest?"

"Well may a mourner's vest be mine,
And thine, my son, my son!
Look on the features of thy line
In each fair little one!
Though grief awhile within their eyes
Hath lamed the dancing glee,
Yet there thine own quick spirit lies—
Thy brother's children see!"

"And where is he, thy brother, where?
He, in thy home that grew,
And smiling with his sunny hair,
Even to greet thee flew!
Now would his arms thy neck outwing,

His fond lips press thy brow!
My son! oh! call these orphans thine—
Thou hast no brother now!

"What! from their gentle eyes doth nought
Speak of thy childhood's hours,
And smite thee with a tender thought
Of thy dead father's towers?
Kind was thy boyish heart and true,
When rear'd together there,
Through the old woods like fawns ye flew—
Where is thy brother—where?"

"Well didst thou love him then, and he
Still at thy side was seen!
How is it that such things can be,
As though they ne'er had been?
Evil was this world's breath, which came
Between the good and brave!
Now must the tears of grief and shame
Be offer'd to the grave!"

"And let them, let them there be pour'd!
Though all unfelt below,
Thine own wrung heart, to love restored,
Shall soften as they flow.
Oh! Death is mighty to make peace,
Now bid his work be done!
So many an inward strife shall cease—
Take, take these babes, my son!"

His eye was dimm'd—the strong man shook
With feelings long suppress'd;
Up in his arms the boys he took,
And strain'd them to his breast.
And a shout from all in the royal hall
Burst forth to hail the sight!
And eyes were wet, midst the brave that met
At the Kaiser's feast that night.

From the *New-York Crystal Hunter*.

THE PARGIOT'S FAREWELL TO HIS NATIVE LAND.

Farewell to thee, land of my birth—
Farewell to thee, Parga, for ever!
Though the renegade scorn at thy worth,
Shall I cease to forget thee? Oh, never!

For thou wert the land of the brave;
A temple for Liberty's home;
To the warrior, a glorious grave—
To the holy, a sanctified tomb.

Though the loud song of glory no more
Shall sound on the thundering gale:
Nor the hymn to the God we adore
Breathe soft o'er the hill and the dale:

Though the deeds of our fathers may die,
Where their ashes lie scattered around;
And the shriek, and the murdering cry
Be heard, where their virtues were found:

Thy name shall be blazon'd afar,
A beacon on History's scroll;
To the valiant, a glittering star;
To the tyrant, a word to controul.

I will not forget thee, my land!
These sighs must my constancy tell;
These tears which I cannot command—
Farewell to thee, Parga, farewell!

C. E. E.

IN THE DUST I'M DOOM'D TO SLEEP.

BY BOWRING.

In the dust I'm doom'd to sleep,
But shall not sleep for ever;
Faint may for a moment weep,
Christian courage—never.
Years in rapid course shall roll,
By Time's chariot driven,
And my re-awaken'd soul
Wing its way to heaven.

What tho' o'er my mortal tomb,
Clouds and mists be blending!
Sweetest hopes shall chase the gloom,
Hopes to heaven ascending.
These shall be my stay, my trust,
Ever bright and vernal:—
Life shall blossom out of dust,
Life and joy eternal.

From the *English Amulet*.

WARNINGS.

Beauty—remember that change and decay
Will pursue in your path as night follows day:
Pride—bear in mind that your form is of clay,
And will rot with the meanest that stands in your way:
Wealth—that you are like the rainbow's bright ray,
Unsubstantial as clouds, and more fleeting than they:
Rank—let your name be as high as it may,
That the mandate "be dust," even you must obey:
Power—what things are your life and your sway,
Which a breath can destroy and a murmur betray!

Happiness—know that you shine like the light
Of the wandering gleam that leads us at night:
Pleasure—though painted all lovely and bright,
That your visits are fatal and rapid your flight:
Friendship—though dear to the sense and the sight,
That thou art but a flower which the wintry winds blight!

Love—that thy name, if we read it aright,
Is passion, more fearful because of its might:
Hope—'tis in y^e a their attractions unite,
But you lure us to leave us when most you invite.

L. A. H.

From *Songs of a Summer Night*.

THE POET'S SONG.

Alas for me! a cloud has hung
O'er all mine early days;
And if perchance a light has flung
Across my path its rays,
I've wished that it had never been—
For, like a flame at midnight seen,
I have but found, when it hath passed,
A deeper darkness round me cast.

Alas for me! false hearts I've found,
Where I had deemed them true,
And stricken hopes lie all around
Where'er I turn my view.
There have been some that I have loved,
And whose returning love I've proved
Far above sounding words;—but they
Are dead, and gone, and past away.

Alas for me!—I cannot think
Of happy moments fled;
Or sigh to look o'er that dread brink
Where sleep the countless dead;
My joys have been by sorrows crush'd;
My heart's best sounds have all been hush'd;
Its strings are strained, and so my grave
Will welcome be—in earth or wave.

Alas for me!—'tis pity too,
As youth is still mine own,
That I should think as now I do,
And know what I have known:
But still I to this earth must cling,
While brooks and trees and blossoms spring;
And while the sky, the rocks and sea,
Are such sweet, silent friends to me.

A MISER.

That yellow wretch, that looks as he were stain'd,
With watching his own gold; every one knows him
Enough to loathe him. Not a friend has he,
Nor kindred, nor familiar; not a slave,
Not a lean serving wench: nothing o'er entered
But his spare self within his jealous doors,
Except a wand'ring rat; and that, they say,
Was famine-struck and died there

AMERICAN MASONIC RECORD, AND ALBANY SATURDAY MAGAZINE.

Vol. I.]

ALBANY, SATURDAY, APRIL 14, 1827.

[No. 11.]

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

ODE,

FOR A GRAND ELECT, PERFECT, AND SUBLIME MASON.

No solar beam nor lunar ray
Illumed the dark, the narrow way,
That led me to the door;
I proved myself a Knight,* and then
The sacred vault I entered,
By mystic numbers four.

'Twas there impressed with holy awe,
A gold engraven plate I saw
With dazzling splendour shine.
To us the "Grand Elect" alone
Its secret characters are known,
Ineffable—divine.

This precious treasure long concealed,
Was by three worthy Knights revealed,
Where erst a temple stood:
Its ancient ruins they explored,
And found the grand mysterious word
Made known before the flood.

Fulfilled was then the promise made,
And Beauty's pillar soon displayed
The treasure they had found.

Their ardent zeal, fidelity—
Their dangerous toil and constancy,
Were with due honours crowned.

Honours like these we all shall prove
Who, joined in peace and social love
Perfection's work pursue.
May the sublime grand architect
By his unerring hand direct
The honored chosen few.

May all who Friendship's feast partake,
The good pursue, the bad forsake;
And may each rite and sign,
A happy lasting influence shed;
The quadrant crowned, the oil, the bread,
The golden ring, the wine.

Long as I live this ring I'll wear,
Symbol of an alliance dear
To every brother's heart;
And bless the sacred tie that binds
In virtue's chain, for virtue joins
What death can never part.

*A Knight of the Ninth Arch.

MASONIC CORRESPONDENCE.

ADDRESS

Of the MASTER, WARDENS and BRETHREN of
KING DAVID'S LODGE, to GEORGE WASHINGTON,
President of the United States of America.

SIR—We, the Master, Wardens and Brethren of
King David's Lodge, in Newport, Rhode Island,
joyfully embrace this opportunity, to greet you as a
Brother, and to hail you welcome to Rhode-Island.

We exult in the thought, that as masonry has
always been patronized by the wise, the good, and
the great, so hath it stood, and ever will stand, as
its fixtures are on the immutable pillars of faith,
hope and charity.

With unspeakable pleasure, we gratulate you as
filling the Presidential Chair, with the applause of
a numerous and enlightened people; whilst, at the
same time, we felicitate ourselves in the honour
done the brotherhood, by your many exemplary
virtues, and emanations of goodness proceeding
from a heart worthy of possessing the ancient mys-
teries of our craft, being persuaded that the wisdom
and grace, with which Heaven has endowed you,
will ever square all your thoughts, words and
actions by the eternal laws of honour, equity and
truth; so as to promote the advancement of all
good works, your own happiness, and that of man-
kind. Permit us then, illustrious Brother, cordially
to salute you, with three times three, and to add our
fervent supplications, that the Sovereign Architect
of the Universe may always encompass you with his
holy protection.

MOSES SEIXAS, Master, } Committee.
HENRY SHERBURNE, }
By order, WILLIAM LITTLEFIELD, Sec'y.
Newport, August 17, 1790.

THE ANSWER.

To the MASTER, WARDENS and BRETHREN of
KING DAVID'S LODGE in Newport, Rhode
Island.

GENTLEMEN—I receive the welcome which you
give me to Rhode Island with pleasure; and I ac-
knowledge my obligations for the flattering expres-
sions of regard contained in your Address, with
grateful sincerity. Being persuaded that a just
application of the principles on which the masonic
fraternity is founded, must be promotive of private
virtue and public prosperity, I shall always be happy
to advance the interest of the society, and to be
considered by them as a deserving Brother. My
best wishes, Gentlemen, are offered for your indi-
vidual happiness.

G. WASHINGTON.

ADDRESS

Of the GRAND LODGE of ANCIENT YORK MASONS,
in Pennsylvania, to GEORGE WASHINGTON, Pre-
sident of the United States of America.

SIR and BROTHER—The ancient York Masons
of the jurisdiction of Pennsylvania, for the first
time assembled, in general communication to cele-
brate the feast of St. John the Evangelist, since
your election to the chair of government in the
United States, beg leave to approach you, with
congratulations from the East, and in the pride of
fraternal affection, to hail you as the great master
builder (under the Supreme Architect) by whose
labours the temple of liberty hath been reared in the
west; exhibiting to the nations of the earth a model
of beauty, order, and harmony, worthy of their imi-
tation and praise.

Your knowledge of the origin and objects of our
institution—its tendency to promote the social affec-
tions and harmonize the hearts, give us a sure
pledge that this tribute of our veneration, this effu-
sion of our love will not be ungrateful to you; nor
will Heaven reject our prayer that you may be long
continued to adorn the bright list of master work-
men which our fraternity produces in the terrestrial
Lodge; and that you may be late removed to
that celestial Lodge, where love and harmony
reign transcendent and divine; where the Great
Architect more immediately presides; and where
Cherubim and Seraphim, wafting our congrat-
ulations from earth to heaven, shall hail you
Brother!

By order and in behalf of the Grand Lodge of
Pennsylvania, in general communication assem-
bled in ample form.

J. B. SMITH, G. M.

Attest, P. LE BARBIER DU PLESSIS, G. Sec.

THE ANSWER.

To the ANCIENT YORK MASONS of the jurisdiction
of Pennsylvania.

GENTLEMEN and BROTHERS—I receive your
kind congratulations with the purest sensations of
fraternal affection; and from a heart deeply im-
pressed with your generous wishes for my present
and future happiness, I beg you to accept my
thanks.

At the same time I request you will be assured of
my best wishes and earnest prayers for your happi-
ness while you remain in this terrestrial mansion;
and that we may hereafter meet as brethren in the
eternal temple of the Supreme Architect.

G. WASHINGTON.

ADDRESS

Of the GRAND LODGE of FREE and ACCEPTED
MASONS, for the Commonwealth of Massachusetts,
to their honoured and illustrious Brother GEORGE
WASHINGTON.

SIR—Whilst the historian is describing the career
of your glory, and the inhabitants of an extensive
empire are made happy in your unexampled exertions—
whilst some celebrate the Hero, so distin-
guished in liberating United America, and others
the Patriot who presides over her Councils,—a band

of brothers, having always joined the acclamations
of their countrymen, now testify their respect for
those milder virtues which have ever graced the
Man.

Taught by the precepts of our society that all its
members stand upon a level, we venture to assume
this station, and to approach you with that freedom,
which diminishes our diffidence, without lessening
our respect. Desirous to enlarge the boundaries of
social happiness, and to vindicate the ceremonies of
their institution, this Grand Lodge have published
a "Book of Constitutions," and a copy for your ac-
ceptance accompanies this) which by discovering
the principles that actuate, will speak the eulogy of
the society; though they fervently wish the con-
duct of its members may prove its higher commen-
dation.

Convinced of his attachment to its cause, and
readiness to encourage its benevolent designs, they
have taken the liberty to dedicate this work to one,
the qualities of whose heart, and the actions of
whose life, have contributed to improve personal
virtue, and extend throughout the world the most
endearing cordialities; and they humbly hope he
will pardon this freedom, and accept the tribute of
their esteem and homage.

May the Supreme Architect of the universe pro-
tect and bless you, give you length of days, and in-
crease of felicity in this world, and then receive
you to the harmonious and exalted Society in heaven.

JOHN CUTLER, Grand Master.

JOSIAH BARTLETT, } Grand Wardens.
MUNGO MACKAY, }

THE ANSWER.

To the GRAND LODGE of FREE and ACCEPTED
MASONS for the Commonwealth of MASSACHU-
SETTS.

GENTLEMEN—Flattering as it may be to the hu-
man mind, and truly honourable as it is, to receive
from our fellow-citizens testimonies of approbation
for exertions to promote the public welfare, it is not
less pleasing to know, that the milder virtues of the
heart are highly respected by a society whose lib-
eral principles are founded in the immutable laws of
truth and justice.

To enlarge the sphere of social happiness is wor-
thy the benevolent design of a masonic institution.
And it is most fervently to be wished, that the con-
duct of every member of the fraternity, as well as
those publications that discover the principles which
actuate them, may tend to convince mankind that
the grand object of masonry is to promote the hap-
piness of the human race.

While I beg your acceptance of my thanks for
the "Book of Constitutions" which you have sent
me, and for the honour you have done me in the
dedication, permit me to assure you, that I feel all
those emotions of gratitude which your affectionate
address, and cordial wishes, are calculated to in-
spire. And I sincerely pray that the Great Archi-
tect of the universe may bless you here, and receive
you hereafter in his Immortal Temple.

G. WASHINGTON.

From the (Batavia) Masonic Intelligencer.

THE FIVE SENSES.

(Continued.)

TOUCH OR FEELING.

The analysis of this organ, is much more difficult
than those we have examined. Its phenomena are
so various and varied as to render it a task of ex-
treme delicacy, to separate what is adventitious from
what is original to the suggestions of this sense. In
point of time, the sensations of touch are first expe-
rienced; months before the light of day had beamed
on the helpless infant, or it had been greeted by a
maternal smile, this sensation frequently agitated
its little frame; and its heart first heaved with sor-
row, when, after a severe struggle for prolonged

existence, it felt the chilling vicissitudes of that atmosphere destined to convey its moans and sorrows to the ears ever attentive to its cries.

Whether the nerves which are ascribed to this organ are all similar in their structure and uses, is doubtful; however, we find them spread, like the fibres of a leaf, over the whole surface of the body, with ramifications so minute that no part exists, however small, that is not endowed with sensibility; some parts, however, possess this quality in a higher degree than others; as the hand which enables man to perform wonders—to give all but substance to the landscape—all but breath to the marble—and to convey assurances to the heart of a worthy brother which he could not barter for the mines of Golconda. Neither the simple sensations of touch, nor those of heat and cold can be referred to an external cause prior to experience, any more than the mere animal feeling in the embryo. It is the common opinion, that from touch, we derive our knowledge of the properties of matter; all the properties of which may be reduced to extension and resistance, the rest being modifications of these. Professor Brown thinks "that by the organ of touch only, we could never be sensible of existence, nor even of extension, since it is from experience we ascertain the vicinity of the physical points of our own tactual surface when impressed." Suppose a being possessed of this, and every other sense, but unacquainted with matter, should be gently touched by a small body of any form, its temperature being equal to that of the body to which applied, would the sensation suggest the idea of extension or form? By no means—no more than the smell of a rose, or the sound of a flute; though undoubtedly the sensation would be varied by the amount of pressure, as the ear by the varied tones of a musical instrument. Nay, further—if we now try this experiment on ourselves, we will find that it will give us no notion of extension, even when nearly every sensation is associated with the qualities of matter.

SCIENCE AND THE ARTS.

PROCESS OF OBTAINING GOLD DUST IN COLOMBIA.

The works consist of a shed, under the cover of which a dozen labourers can work. In the middle a circular hole is opened, about six feet deep and ten feet in diameter; the women occupied in grinding the pyrites are ranged about this excavation or reservoir, each one having before her a stone of porphyry, elevated about two feet above the ground, and inclined towards the reservoir. The muller which they use is a piece of pyrites containing quartz. The minerals to be ground, consisting of pieces of py-

rites of the size of an egg, are placed near them: they put one of the pieces on the most elevated part of their stone, and reduce it to a small size by blows of the muller; afterwards they grind it with the muller; adding a little water to facilitate the process: the ground pyrites run, under the form of a liquid paste into the reservoir. When, by the continued labour of the negresses, the reservoir becomes filled with ground pyrites, a current of water is permitted to flow into it for a week, during which the whole mass is frequently stirred up. The pyrites being thus separated from all earthly matter, they proceed next to the process of washing them.

The washing is carried on in a wooden bowl called a "boteja," having the form of a very flat cone, the base of which is from 15 to 19 inches in diameter, and the depth from 3 to 4 inches.

Some of the negresses manage this washing process with considerable dexterity. They put about 20 lbs. of the ground pyrites into the boteja, and then plunge it into the water, whilst standing in the puddle or reservoir, with the water half way up their legs; after having diluted the pyrites with their hands, they give to the boteja a very rapid circular movement, taking care, from time to time, to increase its inclination, in order to facilitate the separation of the substance suspended in the water. After having continued this motion for some minutes, they pour the water out of the boteja, and holding it with one hand at an inclination of 45 degrees, they take out with the other a large portion of the pyrites, which are spread on the inclined surface formed by the position of the boteja; they operate on the residue in the manner above described, until there remains in the boteja a very small quantity of pyrites, very rich in gold; then they redouble their attention, and conclude by obtaining the gold almost pure, which they deposit in the "cacho;" this is a bullock's horn made in the form of a shell. When they have in this manner collected a certain quantity of gold, they again wash it in the boteja; after which they dry it in a little iron stove, called "secadera."

After this operation, the pyrites, which have been successively separated, are washed a second and a third time, and they constantly furnish gold. After three washings, the remaining pyrites are placed in heaps, and being partially decomposed by exposure to the atmosphere during eight or ten months, are again ground as new minerals, when they yield a quantity of gold almost equal to that obtained by their first treatment; the residue is again thrown together in heaps and washed, and thus the pyrites are successively operated on, until they entirely disappear in repeated washings. The negresses of Marmato, in order to express that the pyrites constantly yield gold, say that "the marmaja" gives gold until it disappears in the water.

The water flowing from these works in its course deposits pyrites finely pulverized, which are washed by the labourers called "massamorroes," who still obtain gold from them also.

Colombian Company's Report, App.

HORTICULTURAL ITEMS.

From Loudon's Gardener's Magazine.

THE COMPRESSION OF TIMBER, by passing plank between rollers, has lately been made the subject of a patent. The chief object is its preservation from dry rot, by expelling moisture and closing the interstices.

[The natural sap of timber abounds in vegetable extract, which, like yeast, causes fermentation and ultimate decay. When this is expelled, by heat, or saturation in water, and then drying, compression, charring, or a complete coat of paint, will prevent decay, by exhausting moisture. Painting timber which retains the natural sap, accelerates rather than retards, putrefaction.]

GERMINATION OF SEEDS. The presence of oxygen gas being the principal requisite for germination, and chlorine the most powerful agent for developing this gas, it has been found that healthy seeds, steeped in the chloric fluid, are accelerated in their germination; and that others that appeared to have lost their faculty of germination, have recovered it by the same process.—Humboldt.

GRAFTING. M. Louis Noisette has published the description of 137 modes of grafting. Most of

them are the invention of the late Professor Thouin, and described by him in the *Musee Francaise* as well as exemplified in the *Jardin des Plantes*.

ADVANTAGES OF PRUNING FRUIT TREES IN SUMMER. The removal of shoots and leaves at this season, according to M. Hempel, removes also a number of caterpillars and eggs of insects, consequently the birds devour a greater portion of what remains.—*Ann. Pomolog., l'Allen, 1824.* We may add, that wounds heal more quickly in the summer season, and that the cherry is apt to exude gum, when pruned at any other season of the year.—*Loudon.*

[Leaves elaborate the juices, and prepare the food for the plant. Too great a defoliation, therefore retards the growth of the plant, may sometimes induce disease and death.]

POWER OF VEGETATIVE LIFE. A branch of the *Coty delon coccinea* was presented to Professor Gazzari in Jan. 1824. Although it had been separated from the mother branch more than sixteen months, during which time it had been wrapped up in a paper, and set aside by accident in a dark, dry place, yet it was full of vegetation, affording a strong illustration of the vital power of some plants.

VARIETY.

THE PRESS IN CHILE. The early history of the press in Chile is somewhat curious, as will be seen by the following fact. The first printer's press arrived at Valparaiso on the 21st of November, 1811. It was sent from New-York, and cost six hundred and fifty dollars. The Carreras paid for it eight thousand in Chile. In January following, the press was put in motion, and the first paper issued which ever appeared in the country, was called *The Aurora of Chile*. It was conducted by Johnson, Garrison and Berbridge, all citizens of the United States, who went out with the press from New-York. The editor was Henriques Camilla. The *Aurora* continued about two years, during which time Iressari, a native of Mexico, published a weekly paper.

When the royalists retook the country the press expired; but after the battle of Chacabuco, it was revived, and a paper called *The Gazette of Chile* was set up, and was continued under that name till the battle of Maypu. It then took the name of *The Ministerial Gazette*, and for a most frivolous pretext it was put under the controul of the Secretary of State, Iressari. Then followed *The Argus of Chile*, and two papers of little significance, *The Fairy* and *The Sun*. Since that time many other papers have successively risen up and expired, and there are now several published in the country, containing intelligence and free political discussions.

[N. A. Review.]

AN EPITAPH. One of them, (the Sociables) died the other day, of mere weariness, and his epitaph was engraven upon his tomb:—

"Here lies a man that never rested before. He mourned at five hundred and thirty burials. He rejoiced at the birth of two thousand six hundred and four score children. The pensions on which he congratulated his friends at various times, amounted to two millions six hundred thousand livres per annum. The ground he trudged on foot, in town, to nine thousand six hundred furlongs; the walks he took in the country, to thirty-six. His conversation was amusing. He had a constant stock of three hundred and sixty-five stories. He was over and above the master from his youth, of a hundred and eighteen apothegms, extracted from the ancients, whenever he thought fit to shine. He died in the 60th year of his age. Now passenger, I conclude, for when could I tell thee all that he did and all that he saw." [Persian Letters, p. 175.]

CONSCIENCE. A certain Jesuit preached in Arzzo against the unchaste women, "One amongst you, especially," said he to his female auditory, distinguishes herself by her dissolute course of life; the consciousness of shame often amends sinners, and therefore I will here name this woman publicly. But no! christian charity forbids, she might through this become too much scandalized. I will however, do something to point her out; so that through

shame, she may arrive at conversion. I will throw my cap at her. She whom I hit is the sinner." The preacher no sooner took his cap in his hand, but all the ladies stooped as low as possible. Good heavens!" exclaimed the priest, "have then all these women a bad conscience."

ADOPTION. There is a singular system in France relative to the adoption of children. A family who has none, adopts as their own a fine child belonging to a friend, or more generally to some poor person: (for the laws of population in the poor differ from those in the rich) the adoption is regularly enregistered by the civil authorities, and the child becomes heir-at-law to the property of its new parents, and cannot be disinherited by any subsequent caprice of the parties; they are bound to support it suitable to their rank, and to do every thing due to their offspring.

SPANISH PIETY. In Spain plays are performed for the benefit of the virgins and saints, and balls are given for the deliverance of souls from purgatory. On an occasion of the above kind, a play-bill was exhibited, couched in the following terms: "To the Empress of Heaven, mother of the eternal world, the leading star of all Spain, the consolation, faithful sentinel and bulwark of all Spaniards, the most holy Mary. For her benefit, and for the increase of her worship, the comedians of Seville will perform a very pleasant comedy, entitled *El Legatorio*."

THE HAPPY UNION. The gods wearied with the perpetual cries of wedded mortals, loudly complaining that they were unfortunately matched, sent, at length, a messenger to earth, with authority to divorce all those who were desirous of being unmarried. On the messenger's return to heaven, it appeared, from his report, that only a single couple in the world were perfectly satisfied with each other. This amiable and peaceful pair had never quarrelled; if the wife was out of temper, and suffered her tongue to use violent expressions, the husband entirely disregarded what she said; and, if he committed any improper or indelicate actions, his dear wife never once noticed them. The cause of this singular instance of connubial harmony puzzled all the celestials, who learned with astonishment that the wife was *blind*, and the husband *deaf*!

THE AMULET.

GENIUS AND TALENT.

A man may possess talent without possessing a spark of genius. Talent is the power of exertion and acquisition, and of applying acquisition in a judicious and effective manner. Talent is cool-headed; genius is hot-headed—talent may be cold-hearted; genius can never be other than warm-hearted; talent is generally prudent; genius is often imprudent; talent moves steadily and regularly forward; genius springs on impetuously, and lags indolently, by turns; talent forns just and rational speculations; the speculations of genius are often wild and fantastic chimeras. The feeling of talent is judgment; the judgment of genius is feeling. Genius is proud and confident; talent is humble and unpretending. Talent constructed the lyre, while genius stood by and gave directions how the work should be done; genius struck celestial melody from its chords; talent imitated the sounds, but soul and fire, and enthusiasm, were not in the strain. Talent chiseled the form of the Belvidere Apollo; genius endowed that form with its godlike majesty, its unrivalled grace, and its haughty bearing. Genius designed, and talent executed the mighty plans of Napoleon. Talent is strong, but genius is both beautiful and strong. Talent influences our reason; genius influences both our reason and our feelings. The mind in which both are united, makes the nearest approach to perfection—since the coolness of talent corrects the impetuosity of genius, and the conceptions of genius dignify the operations of talent. Genius without talent is a wild, and beautiful, and erratic meteor; talent without genius is a steady light, which lasts long, but never throws a flood of radiance upon earth or sky. Genius is generally in the extreme; talent is always in the mean. Talent is more earthly; genius more heavenly.

THE TRAVELLER.

THE RUINS OF BABYLON.

From Captain Keppel's Personal Narrative.

The total circumference has been found to be two thousand, two hundred and eighty-six feet, which gives to the ruins a much greater extent of base than the original building. The surplus is very great, when one considers the quantity that must have been removed by the Macedon soldiers, and how much, in the course of ages, must have been taken by the workmen employed in digging for bricks. The elevation of the mound is irregular: to the west it is one hundred and ninety-eight feet high. On the top is that which looked like a castle in the distance; it is a solid mass of kiln-burnt bricks, thirty-seven feet high, and twenty-eight broad. The bricks, which are of an excellent description, are laid in with a fine and scarcely perceptible cement. At regular intervals, some bricks are omitted so as to leave square apertures through the mass; these may possibly have been intended to procure a free current of air, that should prevent the admission of damp into the brick work. The summit of the mass is much broken, and the fractures are so made as to carry conviction that violence has been used to reduce it to this state.

Distant from the pile of bricks just described, and lower down on the north face of the large mound, is another mass exactly similar. Pieces of marble, stones, and broken bricks, lie scattered over the ruin. The most curious of the fragments are several mis-shapen masses of brick work quite black, except in a few places where regular layers of kiln-burnt bricks are discernable: these have certainly been subjected to some fierce heat, as they are completely molten—a strong presumption that fire was used in the destruction of the tower; which, in parts, resembles what the scripture prophesied it should become, "a burnt mountain."

Travellers who have visited this spot, have been struck with the curious appearance of these fragments, and, having only seen the black surface, have altogether rejected the idea of their being bricks. In the denunciation respecting Babylon, fire is particularly mentioned as an agent against it. To this Jeremiah evidently alludes, when he says that it should be "as when God overthrew Sodom and Gomorrah," on which cities it is said, "the Lord rained brimstone and fire." Again, "I will kindle a fire in his cities, and it shall devour all round about him;" and in another place, "her high gates shall be burned with fire, and the people shall labour in vain, and the folk in the fire, and they shall be weary."

Taking into calculation the brick mass on the top of the large mound, the ruins are two hundred and thirty-five feet high, which gives nearly half the height of the tower in its perfect state. Rich thought he could trace four stages, or stories of this building; and the united observations of our party induce the same conviction.

Wild beasts appeared to be as numerous here as at Mujillebe. Mr. Lamb gave up his examination, from seeing an animal crouched in one of the square apertures. I saw another in a similar situation, and the large foot-print of a lion was so fresh, that the beast must have stolen away on our approach. From the summit we had a view of the vast heaps which constitute all that now remains of ancient Babylon; a more complete picture of desolation could not be imagined. The eye wandered over a barren desert, in which ruins were nearly the only indication that it had ever been inhabited. It was impossible to behold this scene, and not to be reminded how exactly the prediction of Isaiah and Jeremiah have been fulfilled, even in the appearance Babylon was doomed to present: that "she should never be inhabited;" that "the Arabian should not pitch his tent there;" that she would "become heaps;" that her cities should be "a desolation, a dry land, and a wilderness!"

TURKISH SUPPER.

From Buckingham's Travels in Mesopotamia.

We repaired to the house of a miserable old Mollah, at Ortah, who was blind from mere age, and joined there a party of about fifty persons at

supper. The dishes were prepared and served in the Turkish rather than in the Arab style. The party were distributed around four large salvers, or metal tables on the ground, with thin tough cakes of bread, like white-brown packing paper, placed in folds around the edges of them. One dish was then placed in the centre, and after time being allowed to take just two hasty mouthfuls of it, this was removed, and replaced by new ones. These were again followed in quick succession by various others to the number of at least sixty, and all different kinds. Among these, the first was a strange mixture of sour milk and herbs, with melted butter and honey. Soon after, a lamb stuffed with rice, and stewed whole, was savagely torn in pieces by the large and butcher-like hands of one of the servants in waiting. Others then liberally kneaded the fat of it with their hands, and seemed to have as high a gratification in mangling the flesh as they had in eating it. We had then a dish of pistachio nuts and raisins, stewed together, with preparations of apricots, and many other excellent things; but all were borne off with such dexterity, that one could barely taste of the greater portions; though from their numbers, it must have been a fastidious stomach indeed, that could not have relished any. Beards are so general at Ortah, that there were only two of our whole party who were shaved, and these were both young men. Turkish was the only language spoken; and except the Hindoo Dervish, our camel driver Mohammed, and myself, the features of the company were more or less Turkish also. The distinguished marks of these are a full round face, a wide mouth, a straight nose, thick eye-brows, a full beard curling down the sides in long locks, and a remarkably thick neck, which is often deeply furrowed behind, in cross lines, like that of a young bull. The sons and relatives of the master of the house stood to wait on us during the meal, and when we had finished, they sat down with their blind parent to the fragments of the feast, after which, there was still enough left to feed a host of hungry dependants, waiting for their portion in the court below.

THE MORALIST.

THE RESURRECTION.

The following beautiful and descriptive extract, is taken from Sermons published under the title of the Scotch Preacher:

"Twice had the sun gone down upon the earth, and as yet all was quiet at the sepulchre; Death held his sceptre over the Son of God; still and silent the hours passed on; the guards stood by their post, the rays of the midnight moon gleamed upon their helmets, and on their spears; the enemies of Christ exulted in their success; the hearts of his friends were sunk in despondence and in sorrow; the spirits of glory waited in anxious suspense to behold the event, and wondered at the depth of the ways of God. At length the morning star, arising in the east, announced the approach of light: the third day began to dawn upon the world, when on a sudden the earth trembled to its centre, and the powers of heaven were shaken; an angel of God descended, the guards shrunk back from the terror of his presence and fell prostrate upon the ground; his countenance was like lightning, and his raiment was as white as snow; he rolled away the stone from the door of the sepulchre, and sat upon it. But who is this that cometh from the tomb, with dyed garments from the bed of death? He that is glorious in his appearance, walketh in the greatness of his strength! It is your Lord. He has trodden the wine press alone; he hath stained his raiment with blood; but now as the first born from the womb of nature, he meets the morning of his resurrection. He arises a conqueror from the grave; he brings salvation to the sons of men. Never did the returning sun usher in a day so glorious! It was the jubilee of the universe. The morning stars sang together, and all the sons of God shouted aloud for joy; the Father of Mercies looked down from his throne in the heavens; with complacency he saw his work that it was good. Then did the desert rejoice; the face of nature was gladdened before him, when the blessings of the Eternal descended as the dew of heaven for the refreshing of the nation."

POPULAR TALES.

THE WAY TO RISE.

Abridged from a late publication, entitled Head-Pieces and Tail-Pieces. By a Travelling Artist.

About sixty years ago (for this history is silent as to the exact date), there dwelt in the town of Greenelm, situated on the west coast of Scotland, a certain merchant named Duncan Menzies, its most distinguished inhabitant. He was a trader in extensive business, having the entire ownership of two coasting vessels, besides a large share in a three-masted West-Indiaman, that was seen regularly once a year sweeping up the river, laden with the produce of another zone, and putting to shame with her white lofty sails, as she drew in towards the quay, the humbler craft, whose uncouth-looking hulls and sooty canvass crowded the port. Mr. Menzies, or Mingus, as it was pronounced, was not only the richest merchant, but at the time we take up our tale had attained the highest civil dignity in the place, viz. that of baillie or chief magistrate; he was also an elder in the kirk,—an office, as it is managed in Scotland, of no small ecclesiastical dignity; and withal held the military rank of captain in the Greenelm militia. These honours, however, were not all of the baillie's seeking, they rather devolved upon him as a necessary concomitant of his rising fortune, and he submitted to their infliction accordingly. We do not mean to say that he was not proud of all and each of them; but there were some points attending them,—and more particularly the time those different duties deducted from what was formerly devoted to his peculiar affairs,—which, to use his own expression, were *fashious*. Even at the proudest of his official moments, too, there was a feeling of awkwardness he could not overcome, which damped the satisfaction he might be expected to feel. It was, for instance, with something amounting almost to shame that he made his way through the crowd of urchins assembled at the door to see the baillie issue forth in his regimentals when the militia were on duty; and on such occasions it was observed that he frequently reached the rendezvous in a more profuse perspiration than either the weather or distance accounted for. Neither was he at perfect ease, when, in the magisterial character, he was marshalled to church on the Sabbath, by two halberdiers dressed in red coats, the council following at a respectful distance, and the procession brought up by the town-crier. Even when standing at the plate in his capacity of elder, there was something annoying in being stuck up for the gaze of the public when every other Christian was allowed to pass quietly on, and in being constrained for half an hour together, with the polite humility esteemed decorous in a servant of the poor, to bob his head to every dull tinkle which the halfpence made as they descended into the pewter basin. But the counting-house was his proper element; there he found himself at home; and with his short thick pen firmly compressed between his lips, his squat figure in a well-worn coat, or short coat, of a snuff colour, and a ruler in his left hand, which it was his custom to retain even after leaving the desk, he felt himself a man of more consequence, and actually commanded more respect, than when surrounded by the pomp and circumstances of official dignity. There was at that time only one quay in Greenelm, which ran out from the side of the wharf or breast a considerable distance into the sea, and forming a curve towards the end, confined the shipping in a pretty secure and commodious basin. At the entrance of the quay, and only separated from it by the breadth of the street, stood the baillie's house, a large three-storied tenement, about two-thirds of which were devoted to business, and the remainder to domestic purposes. It was distinguished from the rest of the houses in the street by its greater height, and by a huge beam which projected from the highest window of the warehouse somewhat in the form of a gallows; from this beam depended a thick rope, which, to the eye of an inlander, must have added to the sinister appearance of the machine; but in the iron clicks at the end, and the blocks at the upper part, a denizen of the coast might recognise that sort of tackle by which heavy goods are hoisted into the warehouse. The affairs of the counting-

house were managed, under the master's superintendence, by a youth whose name was Watt Lee, a distant relation of the late Mrs. Menzies, (for the baillie was now a widower,) and who was permitted to look forward to a share in the concern. The domestic economy was under the sole direction of an only daughter, misnomered May, for her name should have been April. She was a fair-haired, blue-eyed, clear-complexioned Scottish lassie, as gay as the lark singing in the morning sun, and as sweet and modest and graceful as the primrose of the spring. She was the light of her father's eye and the pride of his heart; and so complete was her dominion over his affections, that, in the common phrase, she could have turned the old man round her finger. Her power over the baillie was often a source of great comfort to Watt Lee, who, although clever and steady in the main, was apt to take "camsteerie fits," as his master termed them. In fact, he was somewhat self-willed on all occasions; but, except in the said fits, contrived to gain his end by artful manoeuvres rather than open rebellion,—so much so indeed, as frequently to appear to give in with willingness into schemes which he had himself suggested. The firmness of the youth's character, at length, in some measure, got the mastery over the milkier soul of his master, and except on great occasions, when the wrath of the latter was raised to a pitch which the clerk did not think prudent to tempt further. May was rather the mediator between two rival powers, than a pleader for mercy in favour of the weaker party. Her mediation very seldom failed of its effect, for she was as powerful with Watt Lee as with her father. Whether it was gratitude for her kind offices which had ripened into a warmer attachment, or

Accident, blind contact, or the strong
Necessity of love,

I know not; but Watt did love his cousin (twenty times removed) with a vehemence proportioned to the turbulent strength of his character. The baillie was not perfectly satisfied with the evident partiality of the young people. Watt, to be sure, was come of gentle kin, and was a shrewd, active fellow, and by this time well nigh indispensable in the business; but his whole income amounted to no more than fifty pounds per annum, and even that, together with his future prospects, depended on the baillie himself. The father, too, was proud of his daughter, and thought, perhaps with good reason, that she might aspire to a much higher match: she was the admiration of all the young men of the town, who toasted her health in huge bumpers of rum toddy, after the fashion of Greenelm; and even the strangers, he observed, whom business already brought from far and near to this rising port, threw "sheep's eyes" at her as she tripped along. More than one of his mercantile correspondents too—good men and warm—who had experienced his hospitality, remembered in their letters the sweetness of the May-flower, as they gallantly termed her, and inquired warmly after her health. No positive declaration, however, had as yet been made by any of her admirers, and the baillie left the affair to chance or destiny. Watt Lee was not discouraged either by his own poverty or the baillie's sour looks; he was secure of May's affection, and he was determined to marry her. Of this he did not make any secret, but, with an impudence peculiar to himself, took every opportunity of insinuating his purpose to his employer. This produced much dissension between them; but at length answered the knave's purpose completely; the wrath of the baillie became less bitter every time, and at length the dose was repeated so frequently, that it ceased to be offensive, and by degrees, imperceptible to himself, he came to look on Watt Lee as his future son-in-law. Matters were in this position when the West Indian argosy arrived, and for a while drove all thoughts of his daughter's marriage out of the baillie's head. Even Watt Lee was so completely engrossed by the multiplicity of business which this event produced, that he saw very little of May till after the discharge of the vessel. At length the bustle was over, and things subsided into their usual state; the ship was laid up in the dock to undergo some repairs; the cargo was shipped off by coasters to other ports, or hoisted into the warehouse; and the counting-house assumed

its accustomed appearance of quiet industry. It might almost have been forgotten that such an event had occurred, so totally were all vestiges of its effects removed or concealed, but for one troublesome memento, which now began to give Watt no little uneasiness. In addition to her usual freightage of rum, coffee and sugar, the good ship had been charged with a West Indian planter, returning to his native country, to breathe the cooler air of the Scottish coast for the brief space it might be his fate to breathe at all. He had gone out to push his fortune when very young, and, from the meaneast offices undertaken by Europeans, had risen to be the possessor of a very considerable plantation, with a sufficient complement of the black cattle used in that quarter of the world for its cultivation.

[This planter becomes a rival, and his riches secure the baillie, who, however, finds great difficulty in deciding how to get rid of the contumacious Watt; when Mr. Snellcrake (the rival) suggests a quarrel and his dismissal.]

It was an act, however, easier talked of than executed; the baillie tried it over and over again in his mind, but the difficulty was to manage it so as to have some colour of justice on his side; without this it could not be thought of,—the whole town would cry shame on him. It at last occurred to him, that it would be a very easy matter for him to push some of the disputes, that were of almost daily occurrence between him and his self-willed clerk, just a step or two beyond the point at which they had hitherto terminated. "His blood will then be up," said he; "and, if I am no mista'en in Watt, he'll give me cause enough to pack him about his business,—and may be a ruler if no a ban at the tail o' him." Whether it happened that May got some intimation of the line of action determined on by the confederates, and gave her lover the hint, or whether the honest baillie went too inartificially about it, we cannot very well say; but the next morning, when his employer walked into the counting-house with a stately step and sour visage, and sat himself down on the opposite side of the desk to watch for cause of offence, he found the usually rampant Watt in a temper so perfectly angelic, that no Christian man could have said a cross-grained word to him. In vain he tried to start some subject on which they might have the good fortune to differ; Watt was of his patron's opinion in every thing. He even ordered him to make an entry which he knew to be wrong, in the books; but Watt, without so much as arguing the matter, although on these points he was particularly ticklish, obeyed without a murmur; and when the baillie affected to discover the error, took the whole matter on himself, blaming his own precipitation, and erasing the entry with much apparent contrition. In short, the enemy was fairly baffled, and Watt maintained his stool in triumph.

[A plan for sending him to the West Indies succeeds no better; and the planter, desperate with disappointment, has his rival way-laid by a press-gang, from whose clutches he makes a most gallant and well-told escape to the shore, the house, and his mistress.]

May was sitting alone in the parlour, when her lover stalked into the room hatless and shoeless, like an apparition of the drowned; his face pale and cold with fatigue, and his sandy locks hanging over his brow like a pound of tallow candles. "In His name, Watt Lee, what has come over you?" cried his terrified mistress; but Watt without answering sat down beside her, all dripping as he was, and putting back his hair with his blue fingers, that he might see and hear distinctly, turned himself on the chair so as to front May, and fixed his watery eyes on her face. "May," said he, at length, "do you remember that your father wanted to turn me out of the business, after a long and faithful service, and that I endured daily the torments of the damned in keeping my tongue between my teeth, when he came on with his blethers just to try the fortitude of my patience—and all for love of you, May?" "To be sure I do, Watt Lee," said May; "but what has that to do—" "And do you remember," interrupted Watt, "that I was nearly shipped off to the West Indies, as innocent of all thoughts or desires thereto as a bale of Onaburghs; and that to escape, I was fain to lay eighteen hours on my back without turning, and to swallow clants of such stuff as it makes my soul sick

but to think of—and all for love of you, May?" "To be sure I do, dear Watt; yet, you know, the doctor said you were all the better, body and spirit, for the screed of castor-oil you got from him, and of doctrine from the minister—but, for goodness sake and mine, what has that to do—" "Then know now," cried Watt, impatiently, "that my life and liberty have been attacked! single handed I fought for three hours against sixteen murderers, set on me by your father and your new wooer—and when they found they could not kill me so easily, they bound me hand and foot, and carried me out into the roads, and put me on board a ship bound for Africa, and from which I escaped by little short of a miracle, swimming all the way below the water till I gained the shore—and all for love of you, May!" Almost screaming with surprise and horror, May heard this dreadful narrative, which it would have been impossible for her to believe but for the irrefragable evidence before her in Watt's person, dripping with the very water through which he had swam, and bruised with the very blows he had suffered. Her eyes filled with tears, and regardless of the damage her dress might sustain by the contact, she threw herself into his arms. "O what shall we do?" cried she; "that hateful old villain will murder you before my eyes—I almost wish you had gone to—" "Hush, hush!" interrupted Watt, "I'll tell you what we shall do—you shall run away with me!" "A likely story, indeed!" said May, raising her head coquettishly from Watt's shoulder. "I know the baillie," continued her lover; "when all is over, and cannot be helped, he will rather be glad, honest man, to have got over the fash he has between me and old Sneldrake—at any rate I cannot stay here to be turned out of doors, transported, poisoned, stabbed, and drowned—I am off to-night." "To-night?" "Ay, to-night," said Watt, in his most peremptory tone; and then lowering his voice and taking May by the hand, added softly, and looking fondly in her face, "will you go with me, May?" May still said, "A likely story!" but in a less decided tone. "I have a plan," said Watt, not seeming to doubt of her consent, "by which we shall have the start a whole night, difficult as it is now-a-days to get sight or speech of you. I will contrive to be locked into the warehouse to-night, where you can easily join me by the door which communicates with the dwelling-house, and which is never locked. You shall then, for want of a better mode of egress, just make the venture you did when you were a lassie,—descend into the street, from the upper window, by the crane—only I will take care to fasten a chair to the clicks, and tie you well on. As for myself, I can slide down the rope after you, as I have often done.

[Unfortunately this plan is overheard by the West Indian, who, to disappoint them, resolves to watch himself, but grows somewhat sleepy.]

In this predicament, afraid to rest on the damp ground for fear of rheumatism, and determined not to quit the rope by which the hopes of his love and hate seemed to be suspended, he was fain to carry a stave from the shed, and fastening it by the middle to the iron click of the important rope, to rest his weary limbs by sitting on it astride, while he embraced the hempen comforter with his arms. It was in this singular and most unaccommodating posture that he was pointed out by Watt Lee to his trembling mistress. We do not presume to follow the thoughts of the worthy gentleman while he sat taking his rest in so unusual a fashion; but it is probable that they may have been somewhat disturbed by certain associations connected with the article he hugged so closely in its union with the projecting beam above, otherwise the swinging motion he was obliged to undergo, from the rope having already reached its utmost length, and his short legs, being, in consequence, almost entirely raised from the ground, would assuredly have set him fast asleep. As it was, he could not properly be said to be either asleep or awake, his thinking faculties remaining in that cloudy state which is the twilight of the mind sometimes experienced in the heavy doze we endure rather than enjoy after too much sleep, or when disease or care prevents the approach of sound sleep at all. Great was the consternation of the intended fugitives at seeing so unexpected a difficulty in their way. Watt's first

thought was to drop a bag of his own cotton on the officious West Indian; but fearing that this might do rather worse than stun him, he abandoned the idea. His next scheme was to slide rapidly down on his shoulders and gag him; but a single cry, he remembered, would bring up the custom-house patrol from the quay. The hour, in the mean time, was stealing away, and May stood weeping and wringing her hands beside him. At length his determination was taken. Holding strongly by the rope where it was fastened to the windlass, that no diminution of security might be felt below, he caused May to undo the fastening, and remove the end altogether from the roller, thus making the block, or large pulley at the end of the projecting beam, the only supporter. Then fastening a thick piece of wood to the liberated end of the rope, on the plan adopted by his enemy below, he fixed himself resolutely astride on this apparently precarious seat, which would have been really dangerous to one less accustomed to such seats, and by dint of persuasion, assisted in no small degree by main strength, seated May on his knees, and commenced their descent. As one end of the rope descended, the other of consequence rose, but the whole was managed so quietly, and Watt continued to hold so firmly by the end to which Sneldrake was appended, allowing it softly and gradually to slide through his hands, that the West Indian was far up in the air, before, in the confused state of his intellects, he became conscious that he had taken his departure from the earth. When he at length, however, perceived his actual situation, rising into the air, heaven only knew how or wherefore, the horror of the miserable man was indescribable, and the hollow groan which at first issued as if from the pit of his stomach, and then rising gradually, keeping pace with his ascent, into a desperate shout, expressive, at the same instant, of astonishment, dismay, expostulation, and furious resentment, was so loud and woful, that all idea of the ludicrous, which such an exhibition was otherwise well calculated to inspire, must have been forgotten during its continuance. Even Watt Lee himself was in some sort astounded by the dismal noise; and a "Lord preserve us!" was devoutly mingled with the execrations in the name of an opposite power, which his fear of its raising the house prematurely against him elicited. There was no time to lose, however; and he made the rope spin through his fingers so rapidly, that in an instant the two parties met mid-way, and the eyes of the upward bound, who still held on like grim death, glared on those of his enemy with a look of rage, so absurdly mingled with deprecation, that Watt, alarmed as he was, could hardly forbear from laughing outright. After losing hold of the ascending rope, their descent, from the great superiority of weight on their side, was incessantly rapid; but Watt broke the shock with his feet, and in a moment they stood in safety on the ground. The first step of the adventurous cavalier was to fasten the end of the rope to the iron railing, so that Sneldrake might remain suspended in the air till relieved by his friends, whom his terrible cries would no doubt speedily bring to his assistance; and which would serve also the purpose of engaging their attention till the lovers should get clear off; for it was not reasonable to suppose that Sneldrake would enter into the cause of his elevation before he had safely descended. They then left him to his fate; and well it was for them that no further delay occurred, for they were no sooner out of sight, than not only the baillie and his family, but every soul in the street, who was not deaf or bedridden, crowded to the spot. The first emotions excited in the spectators were horror and commiseration; for it seemed to them that some unfortunate man was really suspended in the usual fashion, videlicet, by the neck, on a gallows as high as that of Haman; but speedily the truth appeared. When in a few minutes a lighted candle was held from the warehouse, exhibiting, with its yellow light struggling amidst the faint moonbeams, the rueful countenance of the West Indian peeping through the handkerchief which covered his hat, and was tied under his chin in the style of an old washerwoman, a shout rose from the crowd that might have awakened the inhabitants at the most distant part of the town. As for the baillie, he felt by far too much ashamed of the figure cut by

his son-in-law elect to enjoy the laugh at his expense; and in fact it seemed to him, as he stood there in so near a relation to the aerial voyager, that a part of the ridicule must attach to himself and family; an idea which made the worthy magistrate, who dreaded the public gaze even on honourable occasions, sweat with very vexation. Sneldrake, by the assistance of the standers-by, was now on his descent, but this, perhaps on purpose, was managed so clumsily, that the swinging of the rope transferred the sickness of his heart to his stomach, which instantaneously discharged its vengeance on the heads of the jesters. The baillie could stand no more; he returned into his house, packed every soul to their beds, and locking the door, betook himself in disgust and mortification to his own dormitory. In two hours after this adventure, Mr. Sneldrake took French leave of Greenelm and its inhabitants. The next day the fugitives returned man and wife, and were received by the baillie as kindly as if every thing had taken place with his own concurrence.

MISCELLANY.

INNOCENT MISTAKES.

There is a delicious breadth of absurdity in the following story, which is told too with an appropriate and commendable simplicity. The Facetiæ of Hierocles contains nothing more rich.

The painter Vernet relates, that somebody had once employed him to paint a landscape, with a cave, and St. Jerome in it. He accordingly painted the landscape, with St. Jerome in the entrance. But when he delivered the picture, the purchaser, who understood nothing of a perspective, said, "The landscape and the cave are well made, but St. Jerome is not in the cave." "I understand you, sir," replied Vernet, "I will alter it." He then took the painting, and made the shade darker, so that the Saint seemed to sit further in. The gentleman took the painting, and it again appeared to him that the Saint was not in the cave. Vernet then wiped out the figure, and gave it to the gentleman, who seemed perfectly satisfied. Whenever he saw strangers, to whom he showed the picture, he said, "Here you see a picture, by Vernet, with St. Jerome in his cave." "But we do not see the Saint," replied the visitor. "Excuse me, gentlemen," answered the owner, "he is there—for I have seen him standing at the entrance, and afterwards further back—and therefore I am quite sure that he is in it."

Old Astley, piqued himself extremely on suffering no imposition of any kind to be practised on the public in his Theatre. Having ordered a drop-scene to be painted representing a temple, he was, on examining the performance, scandalized by observing that his artist had shortened the pillars in the back ground—in fact, that every pillar was so much the shorter as it was farther removed from the eye of the spectator. Having called the painter to account for this, in his judgment, strange irregularity, and being assured that the rules of perspective required it, he indignantly replied, "Don't talk to me, Sir, of the rules of perspective; I know nothing of the rules of perspective; but I know the foot rule, and I know by it that these pillars are not all of a length, as pillars in temples, or what is the same thing, churches always are; and I won't have the public imposed on or defrauded of full measure of their pillars. They pay their money at the door to see pillars in my drop-scene, and they shall have good measure for their money, or, my name is not Astley. Make them all of a size, Sir, as I bid you, or I will find some one else that will." The painter did as he was commanded, and all the pillars were painted of such equal measure, that the public had no reason to complain of any deception; it was the most candid of all drop-scenes—there was no delusion in it. Another time, the same worthy seeing the trombone-player in the orchestra doing nothing but patting the music desk with his forefinger, while the rest of his brethren were scraping and blowing away as if their lives and souls depended on it, he asked him angrily, "Pray, Sir, what is the meaning of this neglect—why are not you doing your duty like the rest of the band?" "Sir," said the man, "there is a pause for my instrument, and I am counting the bars." "Counting the bars!" roared Ast-

ley; why, I don't pay you to come and sit here, counting bars—I pay you to play to the public; and if you don't play on this instant, I'll discharge you to-morrow morning. The public shan't be imposed on in my house. They don't pay at the door to see musicians counting bars, but to hear them playing notes."

ALBANY:

SATURDAY, APRIL 14, 1827.

✂ A. C. NIVEN, Esq. of Bloomingburgh, Sullivan county, and OTIS F. BURLINGAME, of Portage, Allegany county, are agents for the American Masonic Record, and Albany Saturday Magazine.

✂ A. E. MILLER, Esq. in Broad-street, near the post-office, in Charleston, South-Carolina, will act as agent for the American Masonic Record, and Albany Saturday Magazine, in that city and vicinity.

✂ New subscribers can be supplied with the "American Masonic Record, and Albany Saturday Magazine," from No. 1 of the present volume. Unless other directions are received with orders for the work, subscriptions hereafter received will commence with the first number.

✂ MASONIC CORRESPONDENCE. The reader is referred to our masonic department for some interesting correspondence, illustrative of the opinions entertained by the illustrious WASHINGTON, upon the subject of freemasonry. We have been led to the publication of this correspondence at the present time by the assertion, which has been repeatedly renewed in the proceedings of the Morgan meetings, that the great and good WASHINGTON, was the foe of masonry. Every one who is acquainted with the career of that eminent man, knows that any such assertion is false, impudent, and stupid, in the extreme; and we marvel that Americans are so ignorant of the character they should venerate, as to countenance such palpable slander upon its virtues. A candid perusal of the matter referred to, will remove the doubts of the impartial: those who rest their belief upon their prejudices "will be of the same opinion still."

"And for a mantle large and broad,
He wrapt him in Religion."

We do not know that the world is worse now than it was in past ages. Human nature is probably very much the same in every age and every country, and its acts must therefore be similar at every period. Hence, when, as we are sometimes wont to do, we throw our attention at hazard upon the world, and meet with some unique proceeding, we are apt to consider it the necessary consequence of existence, and in a manner independent of design. There are many acts whose origin we are very little disposed to place to the credit of the volition of their immediate progenitors; at least when we look upon the outward, and consider it a fair representation of the inward man. But a truce with trifling. There have been many attempts at religious speculation made in the city of New-York, recently. With the morals of that city we pretend not to have any thing to do. Even if we were disposed to constitute ourselves censors, we need not travel for subjects. Our object at present is merely to make our readers acquainted with certain ludicrous, if not impious doings. It appears there has been a very signal moral awakening among a few orthodox printers and gentlemen of the sacred profession. And it also appears, that

many of those who are so exceedingly sick at heart with the degeneracy of the present age, have an itching for the world's goods. Some of them issued the prospectus of a daily paper, which was to enter upon a crusade against lotteries and theatres. The fever proved contagious. As a specimen of its effects we quote the following from the Advocate: "Two Gentlemen, strangers in town, went to the first Church they saw open. After prayers &c. this mighty man [the clergyman] commenced what he called a sermon, and which was followed up with an exhortation in the following strain:—'Brethren, there is nothing wanted in this wicked city so much as a moral Newspaper—brethren, there is not a Newspaper published in the whole city that has a moral tendency, but on the contrary, they, for the most part, are injurious to every reader into whose hands they may fall.' In the midst of these effusions, he perceived one of those gentlemen smile, (and who could have resisted it!) when he immediately made a full stop, put his arms akimbo, remained in that position for thirty seconds, then pointed to the gentlemen, and spoke the following beautiful sentence: 'Gentlemen, if you can enlighten us with your wisdom, we shall be happy to hear you!' Of course they took no notice of such an address, but listened to his liberal discourse for another half hour, during which time he took especial care to inform his congregation that he intended to publish a newspaper, which was so much wanted,—treating only on religious and moral subjects, and concluded by saying he hoped every one of his congregation would subscribe, and pay three dollars in advance!"

The resolutions in relation to the Morgan affair, which were published in our last, have been rejected in the assembly, by a vote, on the first, of 76 to 26, and on the second, 74 to 23. This result we believe was expected, and wished for, by a majority of the community; and we have no doubt it will be acquiesced in by all those whose aims are peace and justice. That the discontented spirits who live by fanning the embers of discord will cavil at it, there can be no doubt; and that it will be charged to the account of "masonic influence," is not impossible. We have already had such specimens of the "untiring zeal" of the "sentinels on the watch-towers of freedom," that we doubt not their willingness and capacity to dabble in any thing that is villanous, when interest prompts them.

The debate on the resolutions was unusually interesting; and it affords us great pleasure to say, that though the outrage was, as it should be, spoken of in the severest terms; yet, in no instance did any speaker impeach the masonic fraternity. Its high character was in some instances the subject of eulogium.

We publish the following article not because we consider the bickering of the National Observer a matter of any moment where the character of the paper is known, but because there may be some among the honest, who, not being informed upon the subject, may think the quibbling remarks in that journal upon the Governor's proclamation entitled to some consideration. The editor of the Observer pretends to be a "counsellor and attorney at law," and any error which he may commit in relation to the form of a proclamation must consequently be wilful. For ourselves, we shall never again, probably, notice his morbose effusions; we have al-

ways considered him as an object more worthy of our pity than our resentment, and we compassionate him upon the absence of that faculty, the possession of which would render him a meritorious citizen.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

In the National Observer, there are some pettifoggings and insidious cavils on the Governor's proclamation in the case of Morgan. There is no doubt but that the galled jade winces, and that nothing can be more disagreeable to the agitators than a decisive measure, which must quiet the storm by which they intend to acquire money and power.

The Governor, in his proclamation, promises, so far as he is authorised, a free and full pardon, to any accomplice in the murder of Morgan, who will make a full discovery. In Great Britain, the Executive can pardon before as well as after conviction.—In this state the governor can only pardon after conviction. The accomplice who reveals what he knows, must plead guilty to an indictment for murder, before he can be pardoned. And the Governor by stating that he would pardon to the full extent of his power, evidently intended to avoid intimidating accomplices from coming forward: As the proclamation and constitution now stand, pardon must follow conviction; and as the informer can never be executed without conviction, he is perfectly safe under the proclamation.

In a full discovery of an accomplice there can be nothing equivocal. An accomplice is a man concerned in the murder. All he is required to communicate is, what he knows of the transaction, in order to entitle himself to the benefit of a pardon.

What must be the head of the man who makes such pitiful objections, so totally devoid of truth and reason; and what the heart of the fellow who would pervert the plainest meaning in order to spread mischief in the community? TRUTH.

Gen. M'Clure supped with the Bachelor Club on Tuesday evening, at the City Coffee House, New-York. The Advocate says, about fifty gentlemen sat down, and passed a sociable evening. Toasts were drank, many good jokes passed round the festive board, and wine, song, and sentiment gave life to the whole. General M'Clure, accompanied by the Bachelor Club, visited Chatham Theatre on Thursday evening.

The National Advocate of Wednesday contains the following anecdote:—"A gentleman who has been attending the Court during the week told us the following saying of Jacob Barker, which occurred at the close of his last libel case:—On the verdict of guilty being brought out against him, Jacob is stated to have said:—'If I were indicted for murdering Morgan, I do believe a jury would find me guilty.'"

RELIGION AND POLITICS.—Thomas Morgan, Esq. of Washington, Pennsylvania, has issued a prospectus for publishing a paper at that place, to be called "The Herald of the Cross, and Democratic Eagle."

CHIT CHAT.

Hiram W. Lindsey, a convict, recently effected his escape from the western penitentiary, near Pittsburgh, (Penn.) by converting a pewter spoon into a key, with which he unlocked his prison doors, and then walked off, leaving his key, and the following note to the keepers:—"Hiram W. Lindsey's compliments to the first and second keepers of the Penitentiary,

informs them that he has proceeded to Washington city, in order to obtain a patent for an old Yankee trick."—The mail is carried in a day from Harpersfield, through Milfordville, Laurensville, Noblesville and Pittsfield, Otsego county, to New Berlin, by a man on foot. The distance is fifty-four miles; and the carrier, whose name is Packard, performs the route westward on Wednesday, and eastward on Thursday of each week—which makes one hundred and eight miles in forty-eight hours.—A late English paper mentions the arrival at Leith of the brig Betsey, from Dronthem, with a cargo of boards. This is said to be the indenticle vessel, then a yacht, that brought over King William to England 137 years ago. The timber of this vessel is the Greek larch, or as it is called in Mayence, where it was planted more than two centuries since, and where some fine forests of it are now growing. *Hackmatack.* It is the most durable timber ever made use of in the construction of vessels.—A few days since, a great quantity of logs had been collected on the Saco river a little above Salmon Falls, and being pressed into a compact mass, threw the water back to a considerable height. Two men went out upon the raft to loosen it, and remove the obstruction; and while there the pressure of the water suddenly burst it through, and the men were swept away among the mass, crushed and carried over the falls. One of them had once nearly gained a foothold upon a rock, when he was struck by a log and carried away. Both of them have left families. Another man narrowly escaped with his life. He was exerting himself to rescue the others, when his leg got entangled with a rope attached to a floating log; and he was able to free himself only by holding fast by a tree, until the rope broke.—Three vessels, lying at Kiddell's wharf, in Charleston, S. C. were robbed on the night of the 29th ult. Several rogues entered the cabins, and removed such articles as they could find, without waking the officers, who were asleep. They took the captain's clothes, about eighty dollars, &c. from the *Aurora*, and the captain's clothes from the *Globe*.—*Deaths in New-York and Philadelphia.*—The population of New-York, in 1826, was about 175,000; of Philadelphia (city and country) probably 155,000. The comparative mortality in the two places, the last year, was about equal, being, in New-York 4,973, and in Philadelphia 4,151. Of consumption, the destroying angel of our country, arising from inattention to clothing and exposure in sudden and severe changes of weather, in New-York 820, and in Philadelphia 537. In New-York, the number of foreigners, transient, and irregular of every description, is probably more than double the proportion in Philadelphia. And the number of these dying in the hospitals, prisons, and almshouses of the two cities, ought not to effect the natural salubrity of the climate. In Philadelphia, the deaths in the almshouse were 347; in New-York, the number not at hand. In Philadelphia, in 1824, the deaths were 4,399; of consumption 576; small pox 824; and in the almshouse 590. In New-York the same year, whole number 4,341; of consumption 736; small pox 394. Of the 324 who died of the small pox, in Philadelphia, all but one took it the natural way—and probably not one had been vaccinated. What strange neglect and waste of human life! No year of war ever produced half the mortality in the two cities. Of measles (considered of little moment in the country) in 1824 there were 102 deaths in Philadelphia, and 100 in New-York.—The Philadelphia papers are beginning to discuss the subject of lotteries. One of the Philadelphia papers says that the act of Assembly against the sale in that state of lottery tickets, in lotteries duly authorised by their sister states is an unwarrantable evasion of the private rights and free agencies of citizens.—On Friday last the University of Pennsylvania let adrift upon the world one hundred and thirty men, doctors of medicine.—It is said the political concerns of St. Domingo are assuming a favourable aspect.—The U. States Gazette in remarking upon our Lottery law as it was rejected by the Governor, says, "there is always much danger in legislating under the influence of extraneous excitement."—The canal is nearly clear of ice through the whole line. Navigation, it is expected, will commence soon. The damage done to the banks from the spring freshets has been light, and the necessary repairs are rapidly progressing under the direction of the superintendents.—*Ceremony.*—It is remarked by some writer that "excess of ceremony shows want of good breeding." This is true. There is nothing so troublesome as overdone politeness: it is worse than an overdone beef steak. A truly well bred man makes every person about him feel at ease: he does not throw civilities about him with a shovel, nor toss compliments in a bundle as he would hay with a pitchfork. There is no evil under the sun more intolerable than ultra politeness.—An old bachelor of excentric habits, who resides near Uverstone, keeps upwards of seventy cats, which he attends with great regularity. In this harmonious company, preferring it to that of a wife or children, his happiness seems to exist—their horrible caterwauling, is by him esteemed as a "concord of

sweet sounds."—One hundred and ten dollars were collected on Monday week, in the Methodist chapel at Ithaca, for the benefit of the Greeks.—Two rattlesnakes were killed on Friday, in one of the public streets in Boston, measuring four feet six inches each; one four and the other eight years old. Supposed to have escaped from a collection which had been exhibited. We think that these snake pedlars should be made to exercise a little more care.—Indictments have been found against a Mr. Mather and a Mr. Downer, of Orleans county, for conspiracy in the Morgan affair.—The stalls of the new market in Rochester, have been rented for one year at \$389.—*Swindling.*—The New York Enquirer intimates that it is a practice among a set of desperate speculators to defraud the ignorant portion of the community in the following manner; to walk through the upper wards of the city and in the vicinity of markets—to enter simultaneously into hotels, taverns and porter houses, and then give out, as the current news of the day, that such and such banks have failed, and after the news is well afloat, to buy up the bills at a great discount and get par for them at the counter of the solvent bank, and then walk off with hands in pocket and a smile on the countenance.

FOREIGN NEWS.

The packet ship York, arrived at New-York on Tuesday, from Liverpool, bringing London papers of the 24th Feb. and Liverpool of the 25th.

England.—A London paper of the 23d says: "It is reported that the ministers are willing to adopt some suggestions to relieve the distress of the ship owners, and that various expedients are to be submitted to them. The most prominent, is the withdrawing of part of the duty on timber from North America, and a discriminating duty on corn imported into England, in favour of the flag of this country. The ship owners want also a renewed assurance that the ministers will not relax relative to the intercourse between the West Indies with North America."

The debate on the Corn Laws had been postponed to the 1st of March. It is said that Lord Liverpool will never again be able to attend to public business, and Mr. Canning is spoken of as his successor.

The Catholic question had been postponed to the 5th March.

A London paper of February 21st, says, we understand that reports have reached town, through the North West Company, that Captain Franklin had accomplished the object of his over-land expedition, and had fallen in with, and embarked on board his majesty's ship Blossom, which had been sent for the purpose of meeting him in Behring's Straits. It is added that some of the party who were with him, had retraced their steps by their original route.

Greece.—The Augsburg Gazette contains a letter which mentions that Capt. Hastings, commanding the Perseverance, steamboat, had destroyed two Turkish schooners, attacked Chios, cannonaded and ruined the fort of Teschesme on the seaside, and burned forty small Turkish vessels, that were in the port.

Portugal.—Letters from Madrid of the most recent date, which we received this moment, 3 o'clock, inform us that the Portuguese insurgents, closely pursued by the troops of the Regency, were beaten on the 5th, at the bridges of Prado and Barca, and left in the hands of their enemies a great number of prisoners and several cannon.

Spain.—A letter from Barcelona of the 10th, says, that in the preceding night a dreadful storm had desolated the whole country; above 40 vessels perished in the port, and the damage is incalculable. Above 100 persons lost their lives.

Greece.—The editor of the Boston Daily Advertiser has received Smyrna papers to the 26th January. Col. Fabvier is very hard pressed in the citadel of Athens. He made two sorties, in which he lost 20 Philhellenists one of them a most valuable officer. Col. Borbaqui is making efforts to relieve Fabvier, but it is apprehended that he will be too ill seconded to do any thing of consequence. The Greeks were in expectation of Lord Cochrane's arrival, but we fear that they are counting without their host. The frigate Hellas was at Eghna. It is said that there are no troops in Greece ready for service but the Albanians, and they are ready to go to any side which pays highest wages. A new factory of false

money had been established at Tira. Col. Raybaud was recovering from his wounds. Ibrahim was at Navarin; and military operations were generally suspended, except at Athens.

THE GLEANER.

From late Foreign Journals.

PAINTING ON GLASS. The Count de Noe, a peer of France, and a great lover of the arts, professes, not to have discovered the ancient method of painting on glass, but to have invented a new method of equal value. Four pictures painted by him on glass have been lately inserted in the windows of the chapel at Luxembourg, and elsewhere; and are spoken of in terms of great praise by the Parisian critic. In conjunction with the Count de Chabrol, the prefect of the Seine, the Count de Noe has established a special school for painting on glass, under the direction of some of the most skilful French painters.

UNIVERSITIES IN GERMANY. Germany, which contains thirty-six millions of inhabitants, has twenty-two universities, of which the following is a list, in chronological order:—

	No. of Prof.	Stud.	Found.
Prague	55	1449	1348
Vienna	77	1686	1365
Heidelberg	55	626	1368
Wurzburg	31	660	1403
Leipzig	81	1384	1409
Bostock	34	201	1419
Freiburg (in Baden)	35	556	1450
Greisswalde	30	227	1456
Basle	24	214	1460
Tubingen	44	827	1477
Marburg	38	304	1527
Konigsburg	23	303	1544
Seea	51	432	1558
Giessen	39	371	1607
Kiel	26	238	1665
Halle	64	1119	1694
Breslau	49	710	1702
Göttingen	89	1545	1734
Erlangen	34	498	1743
Berlin	86	1245	1810
Bonn	42	525	1818
Munich	—	1342	1826

FRENCH CLERGY. The gifts made to the clergy of France between 1802 and 1822, are 384 houses, 1077 pieces of ground, 309 hectares of land, and 28 libraries, besides which there have been restored to them, 56 churches, 37 chapels and abbeys, 3 convents, and 174 parsonage-houses. From this statement it is concluded, that one inhabitant out of 6,000 bequeaths the whole or a part of his property to the clergy. The revenue of the Church, previous to the Revolution, is estimated at seventy or eighty millions. The legacies of the above twenty years have restored to them two, and the annual grant by the budget is forty millions: so that the actual revenue of the clergy may be estimated at forty-two millions. [French Journal.]

THE JEWS. In a late German publication we find the following notice concerning this remarkable people:

We find the Jewish Nation scattered over all parts of the world. No where do they form an independent people, and in no country, indeed, have they a fixed residence, if we except some villages in Russia and Arabia, where they live in distinct communities.

The number of the Jews is not decreased much since the time of David and Solomon. Their population was then four millions. At the present day they amount to about three million two hundred thousand souls, who are distributed in the following manner:

In Bavaria	53,402
Saxony	1,800
Hanover	6,000
Wurtemberg	9,068
Baden	16,990
Electorate of Hesse	5,170
Grand Duchy of Hesse	14,965
Rest of the Allied German States	18,248
Frankfort on the Main	5,200
Lubeck	400
Hamburg	8,000
Austrian States	453,545
Prussia	134,960
Russia	426,908
Poland	232,000
Great Britain	12,000
Low Countries	80,000
France	60,000
Sweden	450
Denmark	6,000
Switzerland	1,970
Italy	36,960
Ionian Islands	7,000
Caracow	700
Turkey	321,000
Asia	138,000
Africa (of which 300,000 in the Empire of Morocco)	504,000
America	5,700
West Indies	50

There are no longer any Jews in Spain or Portugal; there never have been any in Norway; Sweden did not admit them till lately; in the Austrian States they enjoy some rights; in England, though they participate in all the rights of Dissenters, they have never prospered; in Russia they are tolerated, but under strict surveillance; in the States of the German confederacy, in France, in the Netherlands, and in Prussia, the Jews enjoy all the rights of citizens, without however being eligible to places of public trust.

POETRY.

LOVE.

BY FITZ GREEN HALLECK.

"The imperial votress passed on
In maiden meditation, fancy free."
"Shall I never see a bachelor of threescore again?"
When the tree of Love is budding first,
Ere yet its leaves are green,
Ere yet, by shower and sunbeam nurst
Its infant life has been;
The wild bee's slightest touch might wring
The buds from off the tree,
As the gentle dip of the swallow's wing
Breaks the bubbles on the sea
But when its open leaves have found
A home in the free air,
Pluck them, and there remains a wound
That ever rankles there.
The blight of hope and happiness
Is felt when fond ones part,
And the bitter tear that follows, is
The life-blood of the heart.
When the flame of love is kindled first,
'Tis the fire-fly's light at even,
'Tis dim as the wandering stars that burst
In the blue of the summer heaven.
A breath can bid it burn no more—
Or if, at times, its beams
Come on the memory, they pass o'er
Like shadows in our dreams.
But when that flame has blazed into
A being and a power,
And smiled in scorn upon the dew
That fell in its first warm hour,
'Tis the flame that curls round the martyr's head,
Whose task is to destroy;
'Tis the lamp on the altars of the dead,
Whose light is not of joy!
Then crash, even in their hour of birth,
The infant buds of Love,
And tread his growing fire to earth,
Ere 'tis dark in clouds above;
Cherish no more a cypress tree
To shade thy future years,
Nor nurse a heart-flame that may be
Quenched only with thy tears.

SPRING.

BY J. G. PERCIVAL.

Again the infant flowers of Spring
Call thee to sport on thy rainbow wing—
Spirit of Beauty! the air is bright
With the boundless flow of thy mellow light;
The woods are ready to bud and bloom,
And are weaving for Summer their quiet gloom;
The tufted brook reflects, as it flows,
The tips of the half-unopened rose,
And the early bird, as he carols free,
Sings to his little love and thee.
See how the clouds, as they fleetly pass,
Throw their shadowy veil on the dark'ning grass;
And the pattering showers and stealing dews;
With their starry gems and skyey hues,
From the oozy meadow, that drinks the tide;
To the sheltered vale on the mountain side,
Wake to a new and fresher birth
The tenderest tribes of teeming earth,
And scatter with light and dallying play
Their earliest flowers on the Zephyr's way.
He comes from the mountain's piny steep,
For the long boughs bend with a silent sweep;
And his rapid steps have hurried o'er
The grassy hills to the pebbly shore;
And now, on the breast of the lonely lake,
The waves in silvery glances break,
Like a short and quickly rolling sea,
When the gale first feels its liberty,
And the flakes of foam, like coursers, run,
Rejoicing beneath the vertical sun,
He has crossed the lake, and the forest heaves
To the sway of his wings, its billowy leaves,
And the downy tufts of the meadow fly
In snowy clouds as he passes by,
And softly beneath his noiseless tread
The odorous spring-grass bends its head;
And now he reaches the woven bower,
Where he meets his own beloved flower,
And gladly his wearied limbs repose
In the shade of the newly opening rose.

THE QUEEN OF PRUSSIA'S TOMB.

BY MRS. HEMANS.

"Courage was cast about her like a dress
Of solemn comeliness;
A gathered maid and an untroubled face
Did give her dangers grace."
It stands where northern willows weep
A temple fair and lone;
Soft shadows o'er its marble sweep;
From cypress branches thrown;
While silently around it spread,
Thou feel'st the presence of the dead.

And what within is richly shrined?—

A sculptured woman's form,
Lovely in perfect rest reclined,
As one beyond the storm;
Yet not of death, but slumber, lies
The solemn sweetness on those eyes.
The folded hands, the calm pure face,
The mantles quiet flow,
The gentle, yet majestic grace,
Throned on the matron brow:
These, in that scene of tender gloom,
With a still glory robe the tomb.

There stands an eagle, at the feet
Of the fair image wrought—
A kingly emblem—nor unmeet
To wake yet deeper thought:
She, whose high heart finds rest below,
Was royal in her birth and wo.

There are pale garlands hung above
Of dying scent and hue;
She was a mother—in her love
How sorrowfully true!
Oh! hallowed long be every leaf,
The record of her children's grief!

She saw their birthright's warrior-crown
Of olden glory spoiled—
The standard of their sires bore down—
The shield's bright blazon soiled:
She met the tempest meekly brave,
Then turned, o'erwearied, to the grave.

She slumbered; but it came—it came,
Her land's redeeming hour,
With the glad shout and signal-flame,
Sent on from tower to tower:
Fast through the land a spirit moved—
'Twas her's, the lofty and the loved.

Then was her name a word that rung
To rouse bold hearts from sleep;
Her memory, as a banner flung
Forth by the Baltic deep;
Her grief, a bitter vial poured
To sanctify the Avenger's sword.

And the proud eagle spread again
Its pinion to the sun;
And the strong land shook off its chain—
So was the triumph won!
But wo for earth! where Sorrow's tone
Still blends with Victory's—she was gone!

"LOVE'S TOURNEY."

Ah! me what a sight the lists display!
Fierce has the tourney been to-day;
Shivered lances and blades are seen
Strewing the ground where the fray has been.
Many a knight lays stark and dead,
Some slain with a single blow;
Many a knight hath hung his head,
Ashamed at his overthrow.
For one alone hath conquered all,
And he woundless kneels for his coronal.

But the heralds have blown a blast again,
And a stalwart knight pricks over the plain;
He stands in the lists, and his armour bright
Reflects the form of the victor knight.
He laughs with disdain when the foe he sees,
And looks at the throng with glee;
While his plume starts up and fronts the breeze,
All sure of the victory.

"Who is he?—who is he?" is heard apart;
'Tis the haughty Knight of the Marble heart.

And who is he that hath fought so well,
And done such deeds for a world to tell?
Alas, he looks like a child, and his eyes
Are hoodwinked too; from his shoulders rise
Two feathery wings, and his tilting spear
Is an arrow small and light;
He a weapon finds in the starting tear,
And a smile is his brand of might.

Aha! by the heart-shaped shield we know
Sir Cupid, the Knight of the Bended Bow.
They rein back their steeds, and both prepare
To splinter a lance for the honours there:
But he of the Marble Heart surveys
The care of his foe with a scornful gaze;
For Sir Cupid hath gemmed with two beaming eyes
The centre of his shield,
And resting his feathered spear defies
His champion to the field.
Fair cheeks are flushed, and brows are bent
As the knights prepare for the tournament.

The trumpets clang, and the sound is heard
Of the furious rush and the cheering word;
But the scornful knight in wild surprise
Is dazzled and mad with the beaming eyes.
Through his vizor they flash, from his horse he reels,
For the shaft lance strikes him through;
And the Marble Heart despairing feels
What the champion boy can do.
On a bed of shields he is borne away,
And Sir Cupid is lord of the fierce tourney.

Men dare not, bad as they are, appear open enemies to virtue; when therefore they persecute virtue, they pretend to think it counterfeit, or else lay some crime to its charge.

LACONICS.

BY THE DUKE OF ROCHEFOUCAULT.

We may say of agreeableness as distinct from beauty, that it is a symmetry whose rules are unknown, it is a secret conformity of the features to one another, and to the complexion and air of a person.

One reason why we meet with so few people who are reasonable and agreeable in conversation is, that there is scarce any person who does not think more of what he has to say, than of answering what is said to him. Even those who have the most address and politeness, think they do enough if they only seem to be attentive; at the same time that one might perceive in their eyes and their mind a distraction as to what is addressed to them, and an impatience to return to what they themselves were saying; not reflecting, that to be thus studious of pleasing themselves, is but a poor way to please or convince others; and that to hear patiently and answer precisely, are the great perfections of conversation.

The desire of being pitied or admired, is commonly the true reason of our confidence.

If we took as much pains to be what we ought, as to disguise what we are, we might appear like ourselves without being at the trouble of any disguise at all.

A man who does not find ease in himself, seeks for it in vain elsewhere.

We love those who endeavour to imitate us, much better than those who strive to equal us; for imitation is a sign of esteem, but competition of envy.

We always love those who admire us; but we do not always love those whom we admire.

We take less pains to be happy, than to appear so. Happiness is in the taste, not in the thing; and we are made happy by possessing what we ourselves love, not what others think lovely.

Self-love is the greatest of flatterers.

Self-love, well or ill conducted, constitutes virtue or vice.

It is more difficult to conceal the sensations we have, than to feign those we have not.

Men are oftener treacherous through weakness than design.

ALBANY, SATURDAY, APRIL 21, 1827.

[No. 12.]

MASONIC RECORD.

—Semita certe,
Tranquillus per virtutem patet unica vita. [Juv. Sat]

From the *Dixonia Masonic Intelligencer*.

THE FIVE SENSES.

TOUCH OR FEELING.

[Concluded.]

"The feeling of resistance is to be ascribed to our muscular frames, which forms a distinct organ of sense. If I move my arm without resistance, I am conscious of a certain feeling; when its motion is impeded, a different feeling is produced. It is this feeling of resistance to our progressive efforts, which forms what we call our idea of solidity or hardness." The pleasure arising from muscular action, is manifested by the whole animated creation. The infant supported by "the arms of love," is incapable of remaining at rest for a moment. Its little hands are in continual motion, and every muscle in its frame is a source of pleasing sensations, which soothe its sinless soul, and incline it to slumber; nay, more—it is thus unconsciously laying the foundation of that knowledge, which in after life, will be attributed to its tuition. The boy, after confinement, exhibits by his excentric motions, an excess of delight, and in the play or race, every fibre thrills with pleasure. The man appreciates the comfortable feelings produced by moderate exercise, altho' by his firm step he declares that the levities of youth have been succeeded by more serious thoughts—the trials of life, and scenes beyond the grave—even the trembling limits of age, supported by a staff, forgetful of infirmity, will follow and imitate the elastic bounds of the child, which has become the bosom companion of the last days of his pilgrimage; and in this sensation the winged and the finny tribes participate. The following lines of Cowper, are alike characteristic of his observation of, and sympathy for the brute creation:—

"The bounding fawn that darts across the glade
When none pursues, through mere delight of heart
And spirits buoyant with excess of glee:
The horse as wanton and almost as fleet,
That skims the spacious meadow at full speed,
Then stops and snorts and throwing high his heels,
Starts to the voluntary race again.

"Time involves in its very essence the notions of length and divisibility, the elements of extension." This is readily perceived by a simple experiment: move your fingers over a smooth surface, your eyes being closed, with different degrees of rapidity, and you will consider the distance proportioned to the time, until you detect your error by opening your eyes. But I must proceed to consider

VISION.

Divine skill is apparent in the construction of the eye; and he who can examine its formation and understand its use, yet retain one atheistic doubt in his bosom, must be incapable of philosophising, and destitute of those emotions alike due to its contriver and consoling to man. It is not my intention to explain the structure of the eye minutely, that being the province of the anatomist. Every person knows its external form and appearance, and that the name of pupil is given to that dark circular spot in its centre. On the back part of the eye, internally, a delicate expansion of the optic nerve forms the retina; and the space between the pupil and the retina is occupied by the aqueous, crystalline and vitreous humours. When light reflected from an object falls within the field of vision, the rays enter the pupil, are refracted in passing through the different humours of the eye, and a miniature picture of the external object is formed on the retina in an inverted position. A sensation is immediately produced, accompanied by perception. The pupil possesses a contractile and an expansive power, by which it adapts its diameter to the quantity of incident light; thus when viewing a dark object from which few rays are reflected, it enlarges—but

when a bright object is presented, it contracts instinctively so as to produce distinct vision, and prevent paralysis. The eye is also provided with a number of minute muscles, which move it in every direction in perfect unison with the will. The apparatus for converging the rays of light bears the stamp of omniscience. It is a sublime contrivance, in imitation of which man has invented instruments which enable him to inspect the heavenly bodies—to discover myriads of insects in the purest elements, and give distinct vision to the eye dim with age. What a boundless source of information would be opened to the philosopher, if he could know the mental changes produced by vision in the mind of an infant; but, alas, they are more transient than the fleeting moment hastening to mingle with the eternity that is past. Yet we have observed the babe show a total ignorance of the distance and magnitude, and perhaps also of the form of his plaything, when presented by her ever desirous of affording it delight; and the same phenomena have appeared in those who, having spent their youth in darkness until relieved by a surgical operation; to them the forms of those who had previously been recognized by their voices, appeared indistinct, and every object, however distant, to be in contact with the eye. This proves that the organ of vision is as limited as any other organ, although, when assisted by the other senses, it appears to belong more to the imperishable glories of heaven than mortality. Let it be remembered, that when the eye views the rose, the human countenance, or the landscapes, that these are not the objects of vision, but the light, with its rainbow colours reflected from them to the eye of the observer; so that should all the matter in the universe be annihilated, except what forms the visual organ, yet light still pass with all its present variety of direction, the same pictures would be formed on the retina, of the same colours, and produce the same sensations, as at present.

Our knowledge of the distance, size and form of external objects is acquired by our other senses. This has been admitted since the time of Berkeley. But still it has been contended, even by those who admitted this, that we acquire our knowledge of the visible figure of bodies, or superficial extension, by sight alone. Brown has refuted this opinion, and proved conclusively that "the foundation of our visual judgments is the principle of association by which the notions derived from touch or the muscular organs are suggested by the visual feelings which co-existed with the sensations of touch," my limits forbid illustration.

Fellow Crafts, permit me to direct your attention to the works of Professors Reed, Stewart, and Brown, on this subject, to which we are deeply indebted for every thing that is valuable in these hasty and imperfect remarks on the five senses, and for many hours of intellectual enjoyment.

To conclude: "In looking back on the senses we have been considering, what a boundless field do we seem already to have been endeavouring to traverse? And how admirable would the mind have been, even though it had been capable of no other office than that of representing, in the union of all its sensations, as in a living mirror of the universe, the splendid conceptions of the great Being who formed it; or rather of creating anew in itself, that very universe which it represents and admires?"

MASONIC CEREMONIES.

From the *Georgetown (South Carolina) Gazette*, April 2.

The court of common pleas and general sessions convened here yesterday. His Honour Judge Richardson, presides. After opening, and impanneling a Jury, adjourned till 9 o'clock to-day, in order to afford an opportunity to the Masonic Brethren of the Bar to join in the ceremony of consecrating the Masonic Hall.

Agreeably to previous arrangements, the Masonic Hall, in this town was yesterday consecrated,

according to ancient usage, by M. W. Benjamin F. Hunt, Grand Master, and other officers of the Grand Lodge of South Carolina, who had politely accepted the invitation to that effect, tendered to them by Winyaw Lodge. The ceremonies, on this occasion, were of the most imposing order. After the Consecration service was concluded, a Procession was formed by the Grand Marshal, consisting of Winyaw Lodge, Georgetown Chapter, Lafayette Encampment, and the Officers of the Grand Lodge, which, accompanied by a band of music, marched through the principal streets to the Episcopal church.

The decorations worn by the Brethren, and particularly the costume of the Knight Templars, were very beautiful. At the Church, the service was opened by an appropriate and solemn Address to the Throne of Mercy, by the Rev. Br. H. Frazier, who officiated on the occasion as Grand Chaplain. After music, by a select choir of amateurs, an Oration was delivered by the M. E. High Priest of the Chapter, John L. Wilson, which, for the clearness of its sentiments, the glowing eloquence in which they were conveyed, cannot be too highly commended.

The festivities of the day were closed by a splendid ball, given in the Hall, which was decorated in the most beautiful manner, by Companion J. M. Puche, and attended by the beauty and fashion of the town.

From the *(Clairborne) Alabama Whig*.

On Wednesday last, the ceremony of laying the Corner Stone of the new Masonic Building, whose dimensions are to be sixty by thirty-five feet, and two stories high, for the accommodation of the Blue Lodge, the Royal Arch Chapter, Council of Select Masters, Lodge of Perfection, Princes of the East and West, Knights of the Rose Cross, &c. &c., was performed in this place, with its usual symbolic representations, by a convocation of the Grand Lodge of this State. The Grand Lodge was opened at an early hour—a procession was formed at the Lodge Room, over the market, and proceeded to the spot where the Building is to be erected. As this was the first ceremony of laying the Corner Stone in due Masonic form, as we believe, in this State, it had attracted a large concourse of spectators. The seats previously prepared, for that purpose, were already occupied by the fashion of the surrounding country.

The ceremonies were introduced by an Ode sung by the Brethren; after which the Rev. and venerable Joel Rivers addressed the Throne of Grace, in his peculiar impressive and solemn manner. The Corner Stone, on which were appropriate engravings, was laid in its destined place by the Master Builder, Mr. William Caldwell, and having been tried by the R. W. Deputy Grand Master, James Dellett, Esq. and pronounced to be true and trusty, the Grand Treasurer pro tem. J. H. Draughan, Esq. deposited a great variety of coins, papers, &c. Then followed the ceremony of pouring out the corn, wine and oil. The Brethren then marched in procession to the Court House, where an appropriate Oration was pronounced by brother James G. Davis, Esq. After which the procession was again formed, and proceeded to the Clairborne Hotel, where the brethren sat down to an elegant Dinner, prepared by the proprietor, brother Leonard Moore, which we believe has not been excelled in this part of the country.

The Brethren returned to the Lodge room at an early hour, and the proceedings of the day were closed in good order, harmony and friendship.

We presume it will not be unacceptable to our distant Brethren to be informed that six years have scarcely elapsed since a Charter was granted, establishing a Master's Lodge in this place; and at this time, we believe, there are but two places in the United States where Degrees as high in Masonry can be conferred as in the town of Clairborne,

which was incorporated in a wilderness six years ago.

Our Masonic Edifice is to be erected on the common, fronting the principal (Monroe) street, on the bank of the Alabama. For the ground appropriated for the purpose, we are indebted to the liberality of the Corporation.

ELECTIONS.

Temple Encampment No. 2, Albany.

At a regular meeting of Temple Encampment of Knights Templars, and the appendant orders, holden in this city on Good Friday, the 13th inst. the following Sir Knights were elected officers for the ensuing year:—

Sir Jonathan Eights, Most Eminent Grand Commander; Sir Gerrit W. Ryckman, Generalissimo; Sir John Orton Cole, Captain General; Sir Lewis C. Beck, Prelate; Sir William Voorhees, Treasurer; Sir Edmund B. Child, Recorder; Sir Christian H. Shear, Senior Warden; Sir John I. Goewey, Junior Warden; Sir Simcon Rowell, Warder; Sir William L. Perce, Standard Bearer; Sir John V. N. Yates, Sword Bearer.

Union Royal Arch Chapter, Charleston, S. C.

M. E. Rufus Southworth, High Priest; E. James S. Burgess, King; E. William Lance, Scribe; Companions Jacob Lankester, Captain of the Host, Horatio Gates Street, Principal Sojourner; John Klink, Royal Arch Captain; Frederick Van Derlippe, Claus Von Allworden, and Peter Mason, Masters of Vails; William Waller, Treasurer; Edward Sebring, Secretary; John Roche, Sentinel.

Regular communications fourth Tuesday in each month, at Companion Seyles, in the city of Charleston.

EXPULSION.

At a regular meeting of Almond Union Lodge, No. 425, held in the town of Almond, county of Allegany and state of New York, on the 18th day of March, 1827, it was

Resolved unanimously, That JAS. R. MOREHOUSE, be and is hereby expelled from this Lodge, and from all Masonic communication, for gross and unmasonic conduct. By order of the Lodge, JOS. COREY, Secretary.

P. S. Editors of Newspapers willing to promote the cause of justice, and guard community against the impositions of a villain, will have the goodness to publish this notice. It has recently been ascertained that Morehouse was connected with a company of counterfeiters in the state of Pennsylvania, and on being apprehended escaped from the authority and fled. About two years ago he came to the town of Almond and established himself as a practical tailor, and by his close application to business and apparent honesty introduced himself into favour with such as became acquainted with him; and after a residence of more than a year, he applied to the Lodge for the benefits of Masonry and received the first degree. But shortly after, the craft became suspicious that all was not right from his conduct; consequently he never received any of the higher degrees.

The crime which he committed and for which he absconded from Almond on the night of the 9th instant, is by statute punished with imprisonment in the state prison during life, and is of such a nature that modesty would blush at the very name. He was known in Almond by the name of James R. Morehouse, but in other places has called his name James Morehouse, James H. Morehouse, and James Roberts. His right name, from the best information, is James H. Morehouse.

He was last heard of at Rushville, near Canandaigua, and will doubtless flee to Canada or the western states. His age is between twenty-five and thirty, and he is of rather thin visage; about five feet eight or ten inches high, slim built, brown hair, beard rather thin, and not so dark as his hair, and his eyes between blue and grey.

SCIENCE AND THE ARTS.

GEOLOGICAL.

REMAINS OF THE DELUGE IN OHIO.

The following is an extract from an article in a recent number of Silliman's Journal of Science. It is from the pen of Caleb Atwater, Esq. of Ohio:

These are so numerous in this state, that it will not be expected that I should do more in this article than mention a few of them, and the places where they are found. If one tree furnished Mr. Schoolcraft matter for an interesting and valuable memoir, how shall I condense my remarks, so as even to refer to the great number of similar facts existing in Ohio? In the vicinity of the Ohio river, in the counties of Washington, Meigs, Gallia and Lawrence, and on the waters of the Muskingum, in Muskingum and Perry counties, I have carefully examined not a few of the fossil trees, there existing.

Among them I noticed the following, viz.—Black oak, black walnut, sycamore or button wood, white birch, sugar maple, (acer saccharum;) the date tree or bread fruit tree, cocoa nut bearing palm, the bamboo, the dog wood, and I have in my possession the perfect impression of the cassia and tea leaf! Of ferns I have beautiful impressions, of the leaves, and of the bread fruit tree, flowers, fully expanded, fresh and entire! I have specimens so perfect and faithful to nature, as to dispel all doubts as to what they once were.

The larger trees are found mostly in sand stone, although the bark of the date tree, much flattened, I ought to say perfectly so, is found in shale, covering coal. I am aware that a mere catalogue of fossil trees, shrubs and plants, is not very interesting—that the geologist wishes to know among many particulars, in what formation they would exist, and the exact spot where they are to be found. I am in possession of all the particulars. Every stratum from the surface downwards, has been carefully measured, in some places to the depth of 400 feet, and I have correct diagrams.* The date is a large tree, not very tall, and having numerous and wide spread, long branches.

Nine miles west of Zanesville, lying on the brink of Jonathan's creek, and near the road leading to Somers, Lancaster, and Circleville, is the body of a bread fruit tree, now turned to sandstone, as M. Broignart found the tropical plants imbedded in France, mentioned in a former number of this Journal. It contains a considerable quantity of mica in its composition. The cassia was found in such sandstone in the Zanesville canal. The bamboo is mostly impressed upon iron stone, at Zanesville, especially the roots, and the trunks and leaves, are found in the micaceous sandstone. The iron stone is sometimes apparently made of bamboo leaves, the leaves of fern, and bamboo roots. It happens frequently that the trunks of small trees and plants are flattened by pressure, and the bark of them partially turned into fossil coal. Thus the shale oftener contains a bark, now become fossil coal, and a stratum of shale in succession, for several inches in thickness.

Before I leave Zanesville, I wish to make a passing remark or two, on the subject of finding the fossil remains of tropical plants here. The date, the bamboo, the cocoa nut bearing palm, the cassia, the tea plant, &c. are found at this day only in tropical regions, or in a climate where there is very little frost. At Zanesville, so severe is the winter at present, that the mercury sinks several degrees below zero.

Two questions naturally present themselves to the mind—has our climate become colder than formerly? or have the tropical plants changed their nature? It is known that several tropical plants have by degrees been removed, farther and farther to the north, and at length become naturalized to a northern climate. I refer particularly to the palmaria christi. But where is the plant which has been driven from our latitude to Cuba? I know of none. Has the climate of the world generally become colder then? I say generally, for some countries probably have. Some writers suppose that the climate of England has changed in this manner. We have good evidence that during eighteen hundred years past, the climate of Rome and Palestine has undergone a great change, as the writings of Horace, Virgil, and others of the Augustan age, clearly evince:

"Vides, ut alta stet nive candidum
"Soracte: nec jam sustineant onus
"Sylvæ laborantes; geluque
"Flumina, constiterint acuto?
"Dissolve frigus, ligna super foco
"Large reponens."

What a picture of the winter which prevailed at Rome in the Augustan age! Such a picture would now best suit the meridian of Quebec. In other passages of the same author, we learn that the snow was so deep near Rome, that the deer pushed it aside by their breasts, as they were pursued by the dogs. Who now sees the roofs of houses at Rome, or even in Paris, ready to break down with snow? In David's time there was snow in Palestine, and allusions to frost, snow, and hail are frequent in the Psalms and in the writings of the prophets. The

have not leisure to copy these now, and I may want them in a single work at some future day.

inhabitants of Palestine are no longer in the habit of attacking lions in their dens "on a snowy day," for no such days now exist in that country. But Italy and Germany and indeed all Europe, are no more what they were in the days of David, of Horace and Virgil. Those vast forests, which formerly generated so much moisture, cold weather, snow, hail and rain, are swept away by the hand of man, and the climate is meliorated. But no such cause has operated here, and the fact being ascertained, that tropical plants and animals once existed all over the world, clearly proves that tropical climate was once equally extensive.

The supposition that these tropical plants were transported northward by the ocean, unfortunately for such an opinion, is disproved by the fact, that some of these trees or rather roots and part of their trunks stand upright,† evidently on the spot where they grew, and others with every root entire, lie to appearance exactly where they fell when turned up by the roots. Again, if floated from tropical regions, how happens it that their flowers were uninjured? These show all their original beauty and form; they are fully expanded, and could not have been transported from any considerable distance. Scarcely a day could have intervened between the period they were in full bloom, and that in which, by that catastrophe which long since overwhelmed our globe, they were "embalmed" in the spot where they are now found.

† These are found in coal beds, although not near Zanesville. If hereafter I find leisure to describe our coal beds, they will be noticed.

ANTHRACITE.

This valuable mineral, which has but lately attracted notice, or been in any degree appreciated, is found in various parts of our country, and may be esteemed one of its richest resources. It is said to be a very singular feature in its natural history, that it is "in the greatest quantity in sections of the coal regions which are most accessible by water."

The fact that there are always impressions of plants in beds of coal, countenances the belief that it is of vegetable origin. The manner and process of its change, from verdant, ligneous, organized substances, to a stony, metallic looking mass, presents a subject of curious inquiry to the observation of philosophers. One hypothesis which seems plausible is, that at some distant era land or sea floods have overwhelmed the surface where vegetation was flourishing, leaving as they subsided deep coverings of earthy matters; some of the vegetable principles beneath were slowly decomposed; new combinations took their place; and time, operating with these secret chemical agents, producing the different kinds of coal, which geologists divide into three classes, the lignite, the bituminous, and the anthracite.

The oldest anthracite, which, from having been longer undergoing the influences of these operations, is reduced more nearly to its ultimate principles, carbon and water. The next in age contains bitumen in addition to its ultimate principles; while the lignite, which is the most recent, contains bitumen and acetic acid.

Mr. J. Pierce, one of the most intelligent contributors to the American Journal of Science, has given in the No. for March an account of the anthracite region of Pennsylvania. It is a district uninviting to the settler, being in most parts impracticable for agriculture; but it contains inexhaustible treasures in its anthracite and bituminous coals, salt, iron, and other minerals. It is an extensive tract spread over an average width of 150 miles, crossed by the Blue Ridge, the Alleghany, and numerous minor bluffs. Mr. P. states, that "in no part of the world can anthracite be more valuable in the arts or for economical purposes than in Pennsylvania. To agriculture it will be a material auxiliary; wherever calcareous valleys are intersected by canals or navigable streams, lime, so valuable as a manure, and in the arts, can be calcined at a low rate by the aid of anthracite." As it contains no sulphur or other injurious ingredients, it is peculiarly advantageous in the manufacture of iron. Wrought iron of every description is more malleable and tough "when fabricated with anthracite, than with bituminous coal," and iron castings are stronger when the melt-

ing is done with this, than with any other fuel. "For breweries, distilleries, and the raising of steam, it is preferable, the heat being more manageable and steady, and the boilers less liable to corrosion by sulphuric acid, while no bad effects are produced by smoke or bitumen." In no part of the district described by Mr. P., "does the anthracite occur in such inexhaustible beds as in the vicinity of a village called Mauch Chunk, on the Lehigh, 35 miles from Easton, and 108 from Philadelphia." It is obtained from the flat summit of a mountain which rises 1500 feet above the level of the ocean. Wherever they have penetrated, at various altitudes, coal has been found at the same distance from the surface, and "it is not improbable that it forms the nucleus of the mountain which rises with a steep acclivity." The coal is easily detached, and from this bed was sent to Philadelphia in 1825, 750,000 bushels, and it is expected that 1,000,000 will be forwarded in the coming year (1826). Mr. P. anticipates the most important benefits to the countries on the Atlantic, from the unparalleled abundance of this material, which, already cheap, will be yet less expensive, when the railways, canals, &c. now under survey, are completed, reducing the cost of transportation. Among many advantages enumerated, he suggests the warming of houses by flues arranged for the purpose in the construction of buildings, dispensing with fire-places, and large open chimneys, as no risk can arise from fire, and no obstruction from soot, or annoyance from smoke. The western part of Pennsylvania is as abundantly supplied with bituminous coal, as the eastern is with anthracite. It is in the greatest plenty near Pittsburgh, and furnishes that junior Birmingham with an ample supply for its numerous manufactures. Bituminous coal is found also in Tioga county in this state, and when the contemplated canal is completed, which is designed to connect the Susquehanna and Seneca Lake, interchanges may be easily effected, of anthracite, bituminous coal, salt, and gypsum, highly valuable both to Pennsylvania and New-York.

ORIGINAL ESSAYS.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

ON THE PASSIONS.

NO. VI. OF FLATTERY.

A little learning is a dangerous thing;
Drink deep, or taste not the Pierian spring:
There shallow draughts intoxicate the brain,
And drinking largely sobers us again.

[Pope.]

There are some of the passions of the human mind which will desert us in old age, but the love of flattery frequently will pursue and keep pace to the utmost verge of the grave. Flattery is a delicious poison, of which the great generally drink the larger portion. It imperceptibly persuades them that their vices are only lesser degrees of virtue and self-love, the predominant feature of the mind, holding powerful control over the heart, persuades the infatuated individual to receive that incense which he does not merit, and which is only due to exalted virtue. This wheedling of the senses brings the individual upon a level with the flatterer; inasmuch as it mocks at the understanding, and renders, in his eyes, those qualities perfect which he does not at all possess. A certain philosopher being asked what were the most formidable characters to men, he said—"Among savages, it is the slanderer; and in domestic life, the flatterer." The flatterer is certainly a compound, or medley of many vices. In speaking what he is conscious is not true, he renders himself a liar; when he speaks contrary to his sentiments, he is deceitful; when he praises the vices of another, he is wicked; and he is an enemy to mankind in inciting them to pursue those paths which reason declaims against and judgment condemns. Man is, we all know, a compound of vice and virtue; but it is the business of flattery to represent him as a perfect animal devoid of blemish. Were we to trace the annals of mankind, from the age of Cecrops, about fifteen centuries before Christ, down to the present, we should not find one single individual void of offence toward God or man. The greatest, most polished, and most celebrated of their ancients, had the foibles, and also

their virtues; and there is no person, under the canopy of Heaven so pure as to be spotless: neither is there one so vile as not to possess some virtue. Homer has been accused of vanity, Alexander of the most unprincipled madness, Hannibal of perfidy, Pompey of egregious pride, Cæsar of unbounded ambition, Vespasian of the love of lucre, Trajan of violence, Nero of cruelty and tyranny, and Mark Anthony of luxury and pleasure. Thus we see that all those great and powerful men were stained with vice, which very probably was heightened by the insatiable love of flattery.

Flattery may be compared to the serpent which winds itself smoothly along through a bed of flowers, and is coiled by your side ere you are aware of the circumstance. It can wind itself into the affections by a thousand minute obliquities and sly insinuations, which fasten so firmly on the heart that judgment is unable to untie the knot. It unites with itself that peculiar suavity of manners and language, which is absolutely irresistible; and the appearance of truth, so completely veils the face of hypocrisy, that judgment and reason are not considered necessary to decide on the case. Testimonies of this kind might be extracted from almost every history of mind and manners.

Josephus informs us that after the death of Mark Anthony, who was the competitor of Augustus, Herod, the friend of Anthony, and king of the Jews, presented himself to Augustus in a complaisant manner, and placed his crown at his feet. This did not have the desired effect; but when he addressed him in one of his eloquent harangues, Augustus was unable to resist his influence, and not only presented his crown back to him, but introduced him to all his dearest friends. Herod might not have intended to flatter him, but it is evident by his ingenuousness that Augustus was flattered.

The faculty called memory, is said to be actually seated in the brain; and it would appear that the greatest portion of flattery lies in the tongue, as language is the sweetest vehicle in which it is conveyed. Demosthenes is said to have been an universal talker, which caused the Athenian assembly to give him a pension that he might be enabled to talk less. When a student became a disciple of Pythagoras, his greatest gratification was to keep silent five years, which evidently was intended to teach him the proper use of his tongue, which is a superior knowledge.

The reader will please to pardon my digressions, as the subject naturally leads me to them. Flattery has a bad tendency, as it is invariably the key which unlocks the door of familiarity, and the key of familiarity, we all know, unlocks the door of contempt. To keep familiarity at a distance is wise policy in the mind, as it breaks in on the commerce of friendship, and like gold, when superabundant, it becomes of no value. Friendship is a valuable article, and is rarely to be found; but familiarity may be had in any quantity and from almost any source. When there is an absence of familiarity, friendship stands upon its firmest base; as it is the result of esteem which flows in a direct line from merit, unpolluted by flattery; but as men are subject to instability of character, and spotted with the foibles of ignorance and caprice, familiarity invariably makes it its business to seek out those dark shades in the picture of human nature, and laugh at their deformity, which otherwise would have remained unobserved. Sympathy is said by an elegant French writer, to form friendship, complaisance to nourish it, and integrity of heart to preserve it; but familiarity, when in excess, surmounts the impregnable ramparts of discretion, and rends asunder, with a smile, the adamant chain of vowed fidelity. He who imagines familiarity to be the soul of friendship, is egregiously deceived; even as much so as the son of Dionysius, the Tyrant was, when he imagined he had so many friends around his table, but which his test proved to be entirely false. There is no more similitude between familiarity and friendship than there is between flattery and truth. It is evident, to every man possessing common sense, that every man who eats, drinks and is merry with us, will not bear the severe test which real friendship often requires; which proves that they are nothing but air-bubble flatterers, possessing a large share of familiarity; they are like insects continually robbing a succession of flowers.

And again, he who is delighted with familiarity is not much skilled in the science of friendship; and being so fond of our familiarity, he little cares about that balm of life. Familiarity is said, by a great writer, to open the door to love, but to shut it against friendship. Therefore, if we desire our friendship to become lasting, and to be proof against the combined powers of flattery and deceit, we must preserve that dignity which was prevalent in the character of the patriarchs; and which will entirely repel the insidious advances of familiarity. The parasite or sycophant is a dangerous character to society, as he gives the varnish of virtue to vice, and introduces familiarity, which generates contempt, and consequently dissolves the bond of union which should be considered sacred; and which is the key-stone of all moral obligations, by which men are joined together. The parasite is the same in the moral world, that the skeptic is in the religious, in point of doing injury. The parasite is a dangerous character to his own mind; inasmuch as he stifles those sublime faculties or rather principles of reason and judgment, by that volubility of nonsensical and bombastic praise betowed upon him who, perhaps, only credits the book of ignorance with it. False representations, false words, and false show, are the ensigns of a depraved understanding, and the trumpets of folly which flourish over the premature tomb of reason. In fine, let no person presume to speak contrary to his sentiments, because, in doing so, he commits a depredation on conscience; the frequent depredation of which will undermine truth, honor and justice, and render the man odious to his fellow creatures, and criminal in the sight of his God.

MILFORD BARD.

VARIETY.

CURIOUS EXHIBITION. On entering the Moëna, we were witnesses to rather a curious exhibition. I should first mention that the Persians are in the habit of sleeping on the flat roofs of their houses, during the summer months. Day was just breaking when we arrived. As the houses of the poor classes are generally not more than eight feet high, we had a full view of nearly the whole population in bed: many were asleep; some few had awoken; others were getting out of bed, to make their morning toilettes. The scene was highly entertaining, and brought to mind the story of *Le Diable Boiteux*, unroofing the houses for the gratification of Don Cleofas.

[Keppel's Journey.]

MODE OF DISPERSING LOCUSTS. We traversed the grand steppe or desert of Astrakhan for two days. On the evening of the 1st of August, we arrived at a Russian village, which was surrounded by a considerable tract of well cultivated land. While changing horses, I witnessed what was to me a very curious sight; a vast flight of locusts, extending fifteen miles, suddenly made their appearance from the east, and came in a huge phalanx to attack the crops. In an instant every villager was on the road to his own field. Some took dogs, others were on horseback, and others ran shouting and clapping their hands all the way, the inhabitants finding from experience that the locusts very much dislike noise. My fellow traveller told me, that in the colony of Karass, when the locusts came in sight, not only all the inhabitants, but the military turn out, and endeavour to drive them off by drums and fifes, and a perpetual discharge of musketry. The enemy, thus repulsed, make a speedy retreat, and commit their depredations on the land of those who are less on the alert to resist them.

[Ib.]

When Rousseau once retired to a village, he had to learn to endure its conversation; for this purpose he was compelled to invent an expedient to get rid of his uneasy sensations. "Alone," says Rousseau, "I have never known ennui, even when perfectly unoccupied; my imagination, filling the void was sufficient to busy me. It is only the inactive chit-chat of the room, when every one is seated face to face, and only moving their tongues, which I never could support. There to be a fixture, nailed with one hand on the other, to settle the state of the weather, or watch the flies about one, or what is worse, to be bandying compliments, this to me is not bearable."

D'Israeli.

POPULAR TALES.

THE PRECIPICE.

BY THE AUTHOR OF "GILBERT EARLE."

—Here's the place:—stand still. How fearful
And dizzy 'tis to cast one's eyes below. [Shakespeare.]

The following Norwegian tale will show the spirit of vivacity and energy that animates the *Friendship's Offering* for 1827. To comprehend the story aright, we must suppose ourselves introduced to a company of goatherds, who, on a dreary winter's night, relate their adventures among the mountains to one another. Having told their tales, an elderly hunter, who had sat in silence during the narrations, thus introduces himself to our notice:

"My young friends," said he, "you have been telling us some very marvellous adventures; but as I am an old hunter, and, therefore, am fond of the spirit which leads you into them, I will not strive to sift the grain from the chaff, the exact facts, from the colours in which you have dressed them. But I will give you, in my turn, an account of an accident which, you all know by report, did actually happen to me, as the limp in my gait can testify to this day.

"It was about twenty years ago that I was one day out hunting as usual. I had got sight of a chamois, and was advancing upon him, when, having almost got within shot, I sprang across a chasm a few yards wide, upon a ledge of snow opposite. The outer part of this was, alas! only of snow; it was frozen hard; but as I came upon it with considerable force, I felt it giving way beneath me. The man who says he never felt fear, never was in a situation such as this. The agony of terror, and what agony is greater? rushed throughout my frame. My first impulse was to spring forward, to reach the firm ground. But the very effort I made to save myself, accelerated my fate; the mass broke short off, and I fell!

"I have since been to view the spot, and standing in safety on its brink, my nerves have shivered, as I have looked down the awful precipice. How I escaped being dashed into as many atoms as there are pebbles at its base, it is impossible to divine. The height is upwards of seventy feet: there was no projecting rock, no jutting tree, to break my fall. Perhaps the snow, which fell along with me in vast quantities, and which crumbled as it fell, served to protect me. When I perceived my footing yield, the earth as it were sank from under me, I felt the common hyperbole, that my heart sprang to my throat, almost cease to be one. One gasp of mortal agony, as it burst from my lungs, gave me sensation of choking, which the phrase I have mentioned strives to express. The feelings of my mind may be all summed in the exclamation which I believe escaped me—'Oh, God!—I'm gone!' My next thought was one momentary appeal to that God's mercy—and then I thought no more.

"When I recovered my senses, day was beginning to close, and I lay enveloped in snow. My hunting spear was beside me, broken; and, stretched upon my bosom, lay my faithful dog, spread out, as it were, to protect me from the cold, and breathing upon my face, as if to communicate his life to bring back mine. Poor fellow," the old man continued, and the tear glistened in his eye as he spoke,—"poor fellow, he is dead, long since, and his son," stooping and fondling the dog at his feet, "is old now; but, if I had but one crust of bread, and one cup of water in the world, old Thor should share them with me for his father's sake."

The dog looked up, as though he understood his master's meaning: for he smiled in his face with that expression of thankful fondness which the countenance of his race alone shares with that of the human species.

"I felt," continued the hunter, "I felt numbed and stiffened, and in considerable pain, all over, so much so, that I could not distinguish any one particular hurt as being more severe than the rest. I endeavoured to rise, and that soon showed to me where my chief injury lay. I fell back again instantly; my thigh was broken. In addition to this, two fingers of my right hand, and one of my left, were broken also, and I was bruised in almost every part. But I was alive! As I looked up to the

pinnacle from which I had fallen, I could scarcely believe that to be possible.

"The spot where I lay, was in a narrow cleft between two cliffs, which diverged from each other as they advanced, leaving a sort of triangular platform open between them and a third. A torrent threw itself, like a wild horse's mane, from the rock above me; but, in the numberless eddies which whirled in the hollow, it was dispersed into air before it reached the place, distant through its depth, where I lay.

"Night now began to thicken fast; the faster on account of the deep den in which I was. The wind blew as though all the quarters of the heavens sent forth their blasts at once, and they all met and battled there. I had escaped one dreadful death, and now I began to fear another more dreadful still, because more slow, and more felt. I feared that I should die through cold, and hunger, and untended hurts. The cold, too, I now felt more severely; for, shortly after I had given up, in despair, all attempts to extricate myself from my situation, my dog, after whining and yelping piteously for some time, went off. As he turned the corner of the rock, which hid him from my sight, I felt as if my last hold of life had gone from me; as though the friend of my bosom had left me to die. 'He, too, abandons me!' I exclaimed; and, I blush to confess it, I burst into tears. Being forsaken by that which I thought faithful, cut me to the heart. Who, indeed, could bear that?

"The world now seemed to have closed upon my sight forever; my wife, my children, my dear home; I should see them no more! I figured to myself all the delights and charities of that home, and I felt how bitter it is to be torn from life while life is yet strong; all its ties firmly knit; all its affections glowing. As darkness settled around, I thought of my wife anxiously listening for my step, or rather for the well known step of Thor preceding me; and the bright fire gleaming upon smiling children's faces, the fairest ornament and the dearest comfort of a fireside; and the rosy lips held up for a father's kiss; and the little hands clinging round the knees, to attract a father's notice; and the mother's glad, some smile of welcome to me, and unchiding reproof to them. Such was the picture I drew mentally; such was the group which I knew was awaiting me. I looked around me, and the contrast of the reality upon me in all its horrors. The wind raged and howled through the darkness, and in the lull, the spray of the torrent bedewed my face, and froze there. I was encompassed by awful precipices, here and there visible only by being covered with snow. Snow, also, was the bed on which I lay, the bed on which I was to die. And to die! oh, God! to die thus! Alone; through pain and famine; through cold and the exhaustion of suffering nature! The terrors of tempest and of night were the precursors of the terrors of death. From hence I never was to stir more; this was to be my end!

"We often forge ourselves causes of unhappiness, and allow slight things to mar our quiet. But he who has undergone, not what I underwent that night—for who has done so? but, circumstances of peril and despair, in kind, if not in degree, like unto these, he, only, can know to what extent our nature can suffer.

"I lay, in pain of body and anguish, for a space of time which, from these causes, seemed endless. At length hope dawned upon me. Along the top of the cliff to which I had leaped, and from which I had fell, passed, as I knew, a path which led from the village in which I lived, to another about two leagues off. This had not appeared to me as a chance of escape; for by night, it was but very rarely traversed, and morning I never expected to see again. On a sudden, however, I saw a light gliding along this path, as though borne by some one; and I conjectured it to be, as in fact it was, the lantern of a villager returning homewards. 'I shall be saved yet!' was the idea which thrilled through my heart, and I shouted with the whole strength of my voice, to realize the hope which had arisen. At that moment, a furious gust of wind swept through the chasm, and hurled back my cry against me, like the smoke of Cain's rejected sacrifice. I could feel that my voice did not ascend twenty feet above my head. The light glided onwards. Again I shouted

with that desperate strength which none but the despairing own. The light did not stop; no answering shout gladdened my ears; the light disappeared!

"The agony of that moment, who can conceive? The drowning man, as he struggles his last effort, and feels the water closing round him; the criminal, as he mounts the scaffold, and sees his last hope melt from his grasp—such persons may have experienced what I felt then, and such persons only.

"My despair now became fixed and total. I felt that my last hour was come; I endeavoured to turn my thought from this world, and fix them on the next. But the effort was dreadful. As I strove to prepare myself for death, the hope of life would flash across me again, and interpose between me and my prayer. If a sound caught my ear, I raised my head to listen; if the variation of a shadow passed over the surface of a rock, I strained my sight to look; but the sound would cease, and the sight would pass away—and I sank again, upon the snow; and again I prepared myself to die.

"At length, (to my dying day I shall recollect that moment) at length, a gust of wind brought to me a sound which I thought I recognized; I raised myself with an anxiety which almost choked me; I listened, all was still, the wind rose and made me doubtful whether I heard it a second time or not, a third, all doubt was over! It was the honest voice of faithful Thor, coming at speed, and barking as he came, to show, doubtless, the path to the spot in which I lay. Again his deep-mouthed bay sounded loud and distinct, as it approached the top of the precipice. There he paused, and continued barking, till, at length, several lights flashed upon the path along which he had come, and advanced rapidly towards him. A halloo came upon the wind, I strove to answer it as loudly as I could. This time it mattered little whether my voice reached the summit or not; for, as soon as the lights seemed at the spot where the dog stood, he dashed down the cliff, clinging to the irregular surface as he came, now holding by a stone, now sliding down with the rolling earth and snow, till he sprang into my bosom; and almost smothering me with his caresses, made the echoes of the cliffs ring again with his loud and ceaseless barking.

"My companions now perceived where I was. They made a circuit of some little extent, and descended to me by a less precipitous, but still a difficult path. My young friends, unless you have experienced the transition from despair to safety, from abandonment to kind friendship, from death to life, you can form to yourself no idea of the flood of feelings, both rapturous and gentle, which then poured upon my soul. The chosen of my heart was now no widow! my children were now not fatherless! I was restored to life, to the world, to hope, to happiness, and I owed it all to the loyalty and love of a poor hound! When your hand is next raised to strike your beast in anger, pause—and think upon the service which old Thor rendered to his master. That master was a kind one."

From Fairy Legends and Traditions of the South of Ireland.

THE SPIRIT HORSE.

The history of Morty Sullivan ought to be a warning to all young men to stay at home, and to live decently and soberly if they can, and not to go roving about the world. Morty, when he had just turned of fourteen, ran away from his father and mother, who were a mighty respectable old couple, and many and many a tear they shed on his account. It is said they both died heart-broken for his loss: all they ever learned about him was that he went on board of a ship bound to America.

Thirty years after the old couple had been laid peacefully in their graves, there came a stranger to Beerhaven inquiring after them—it was their son Morty; and, to speak the truth of him, his heart did seem full of sorrow, when he heard that his parents were dead and gone;—but what else could he expect to hear? Repentance generally comes when it is too late.

Morty Sullivan, however, as an atonement for his sins, was recommended to perform a pilgrimage to the blessed chapel of St. Gobnate, which is in a wild place called Ballyvourney.

This he readily undertook; and willing to lose no time, commenced his journey the same afternoon. Morty had not proceeded many miles before the evening came on: there was no moon, and the starlight was obscured by a thick fog, which ascended from the valleys. His way was through a mountainous country, with many cross-paths and by-ways, so that it was difficult for a stranger like Morty to travel without a guide. He was anxious to reach his destination, and exerted himself to do so; but the fog grew thicker and thicker, and at last he became doubtful if the track he was in led to Saint Gobnate's chapel. Seeing therefore a light which he imagined not to be far off, he went towards it, and when he thought himself close to it the light suddenly seemed at a great distance, twinkling dimly through the fog. Though Morty felt some surprise at this, he was not disheartened, for he thought that it was a light which the blessed Saint Gobnate had sent to guide his feet through the mountains to her chapel.

Thus did he travel for many a mile, continually, as he believed, approaching the light, which would suddenly start off to a great distance. At length he came so close as to perceive that the light came from a fire; seated beside which he plainly saw an old woman:—then, indeed, his faith was a little shaken, and much did he wonder that both the fire and the old woman should travel before him, so many weary miles, and over such uneven roads.

"In the pious names of Saint Gobnate, and of her preceptor Saint Abban," said Morty, "how can that burning fire move on so fast before me, and who can that old woman be sitting beside the moving fire?"

These words had no sooner passed Morty's lips than he found himself, without taking another step, close to this wonderful fire, beside which the old woman was sitting munching her supper. With every wag of the old woman's jaw her eyes would roll fiercely upon Morty, as if she was angry at being disturbed; and he saw with more astonishment than ever that her eyes were neither black, nor blue, nor gray, nor hazel, like the human eye, but of a wild red colour, like the eye of a ferret. If before he wondered at the fire, much greater was his wonder at the old woman's appearance; and stout-hearted as he was, he could not but look upon her with fear—judging, and judging rightly, that it was for no good purpose her supping in so unfrequented a place, and at so late an hour, for it was near midnight. She said not one word, but munched and munched away, while Morty looked at her in silence.—"What's your name?" at last demanded the old hag, a sulphureous puff coming out of her mouth, her nostrils distending, and her eyes growing redder than ever, when she had finished her question.

Plucking up all his courage, "Morty Sullivan," replied he, "at your service;" meaning the latter words only in civility.

"Ubbubbo!" said the old woman, "we'll soon see that;" and the red fire of her eyes turned into a pale green colour. Bold and fearless as Morty was, yet much did he tremble at hearing this dreadful exclamation; he would have fallen down on his knees and prayed to Saint Gobnate, or any other saint, for he was not particular; but he was so petrified with horror, that he could not move in the slightest way, much less go down on his knees.

"Take hold of my hand, Morty," said the old woman: "I'll give you a horse to ride that will soon carry you to your journey's end." So saying, she led the way, the fire going before them;—it is beyond mortal knowledge to say how, but on it went, shooting out bright tongues of flame, and flickering fiercely.

Presently they came to a natural cavern in the side of the mountain, and the old hag called aloud in a most discordant voice for her horse! In a moment a jet-black steed started from its gloomy stable, the rocky floor of which rung with a sepulchral echo to the clanging hoofs.

"Mount, Morty, mount!" cried she, seizing him with supernatural strength, and forcing him upon the back of the horse. Morty finding human power of no avail, muttered, "O that I had spurs!" and tried to grasp the horse's mane; but he caught at a shadow, which nevertheless bore him up and bounded forward with him, now springing down a

fearful precipice, now clearing the rugged bed of a torrent, and rushing like the dark midnight storm through the mountains.

The following morning Morty Sullivan was discovered by some pilgrims (who came that way after taking their rounds at Gourgane Barra) lying on the flat of his back, under a steep cliff, down which he had been flung by the Phooka. Morty was severely bruised by the fall, and he is said to have sworn on the spot, by the hand of O'Sullivan (and that is no small oath), never again to take a full quart bottle of whiskey with him on a pilgrimage.

MISCELLANY.

"HIGHWAYS AND BYE WAYS."

We are all on a journey. The world through which we are passing is in some respects like a turnpike—all along which Vice and Folly have erected toll-gates, for the accommodation of those who choose to call in as they go—and there are very few of all the host of travellers who do not stop at some or another of them—and consequently pay more or less to the toll gatherers. Pay more or less, I say, because there is a great variety, as well in the amount as in the kind of toll exacted at the different stopping places.

Pride and Fashion take heavy tolls of the purse—many a man has become a beggar by paying at their gates—the ordinary fees they charge are heavy, and the road that way is none of the best.

Pleasure offers a very smooth, delightful road in the outset, she tempts the traveller with many fair promises, and wins thousands—but she taxes without mercy—like an artful robber, she allures till she gets her victim in her power, and then strips him of health and money—and turns him off, a miserable object, into the worst and most rugged road of life.

Intemperance plays the part of a sturdy villain. He's the very worst toll-gatherer on the road—for he not only gets from his customers their money and their health, but he robs them of their brains. The men you meet in the road, ragged and ruined in fame and fortune are his visitors.

And so I might go on enumerating many others who gather toll of the unwary.

Accidents sometimes happen, it is true, along the road, but those who do not get through at least tolerably well, you may be sure have been stopping by the way at some of these places. The plain common sense men, who travel straight forward, get through the journey without much difficulty.

This being the state of things—it becomes every one, in the outset, if he intends to make a comfortable journey, to take care what kind of company he gets in with. We are apt to do a good deal as our companions do—stop where they stop—and pay toll where they pay. Ten chances to one, then, but our choice in this particular decides our fate.

Having paid due regard to a prudent choice of companions, the next important thing is closely to observe how others manage—to mark the good or ill that is produced by every course of life—see how those who do well, manage, and trace the course of all evil to its origin in conduct. Thus you will make yourself master of the information most necessary to regulate your own conduct. There is no difficulty in working things right if you know how—by these means you learn.

Be careful of your habits. These make the man. And they require long and careful culture, ere they grow to be a second nature—good habits I speak of—bad ones are more easily acquired—they are spontaneous weeds, that flourish rapidly and rankly without culture.

These ideas are thrown loosely together, but they may be worth a thought. I send them to the printers, who will print them when they have a little room to spare.

REVOLUTIONARY ANECDOTE.

From the Pawtucket White Banner and Masonic Telegraph.

At the battle of York Town, whilst the aids of the American Chief were issuing his orders along the line, a man was discovered a short distance from

it, who presented rather a grotesque appearance, being dressed in the coarse common cloth worn at that time by the lower orders in the back country, with an otter cap, the shape of which very much resembled the steeple of a meeting-house, and a broad leather apron. His equipments consisted of a small wood-chuck's skin, sowed together in the form of a bag, and partly filled with buck shot, an ox horn filled with powder, and an old rusty gun, which measured about seven feet, eight inches, from the muzzle to the end of the breech, and which had probably lain in the smoke ever since the landing of the pilgrims. One of the aids passing him in the course of his rounds, inquired of him, to what regiment he belonged. "I belong to no regiment," said the fellow, after he had fired his 'long carbine.' A few moments after, the officer rode by again; but seeing the fellow very busy, and sweating with exertion, he once more inquired to what regiment he belonged—"to no regiment," was the answer, the speaker at the same time levelling his piece at a "red coat" who was preparing to fire, but who dropped dead before he had half raised his gun. "To what company do you belong?"—"to no company—"to what battallion do you belong?"—"to no battallion—"then where the devil do you belong, or who are you fighting for?"—"dang ye," said the fellow, "I don't belong any where, I am fighting on my own hook!"

A REVERIE.

Night was veiling with its dusky mantle the varied face of nature—the bright objects of day were now gloomy and indistinct—I sat before a fire which threw a fitful gleam upon the opposite wall—contemplation had chosen this time as peculiarly her own—the thoughts of years that are gone, crowded upon my mind—I was again in the walks of youth—youth! season of comparative innocence—when the angel of hope covers the mind with her golden wings—when the tear of grief seldom dims the laughing eye—when "sorrow may endure for a night," but when the morning sun will bring with him the light of consolation and rekindle the glow of joy. Where is the man who can look back upon thy days of peace, without a pensive feeling? If there be such a man, I envy him not—he has little sensibility. What has become of those, whose youthful hands we pressed with youthful ardour—around whose necks our arm was fondly thrown—whose mirth, whose pains we shared, whose wrongs we were ever ready to avenge—in whom we confided—for the influence of the dark spirit of suspicion was then unfelt? Some of them have been gathered to the mansions of death, in the spring of their days, while they "dreamed" of "many a morrow gay"—some upon whose devoted heads the storms of misfortune have pitilessly pelted, have sought far from their homes a foreign grave—some have quaffed the cup which smiling pleasure afforded—they are now treading with hasty footsteps the broad road whose end is ruin—some have been "marked" by "melancholy for her own," and move through life "in helpless, hopeless, brokenness of heart." Some are far away—tossed on the stormy ocean, or pursuing fortune in other climes, exposed to death from the roaring wave, or inhaling the pestilential breeze. Of how few can it be said—their path has always been prosperous? Those may be considered as fortunate, and should be contented who can say, we float along the stream of time—it is now gentle and calm—now rough and turbulent—its banks are often adorned with gay and beautiful landscapes—though our prospects are sometimes bounded by dark and barren rocks—as we advance we are still greeted with smiling spots of verdure, but long tracts of cheerless sterility too frequently meet our gaze. Happy is he whose bosom is swayed, and whose actions are directed by the expectation of heaven, of an illimitable felicity.

CHOICE OF STAIRCASES. A Spanish priest, delivering a sermon on the Temptation in the wilderness, said, when the devil took Jesus to the pinnacle of the Temple, and bade him cast himself down, he replied, "Thank you, my friend, I have a better staircase to go down by." Being told after the service that he had made our Saviour call the devil his friend, he took it so much to heart that he died.

ALBANY:

SATURDAY, APRIL 21, 1827.

JOHN A. BRYAN, esq. postmaster in Ellicottville, Cattaraugus county, will act as agent for the American Masonic Record, and Albany Saturday Magazine.

New subscribers can be furnished with the American Masonic Record from No. 1, of the present volume. Unless directions are sent with orders hereafter received, the back Nos. will be forwarded.

We decline publishing the article signed M. Religion is among the subjects excluded from our columns; and we cannot consent to be a medium through which our correspondents may interfere with another's notions of futurity. We beg our correspondent to bear in mind that metaphysical disputes and speculation are dull, and for the most part incomprehensible, to a majority of readers. A man cannot be in much worse business, now-a-days, than prosing upon the passions and affections. M. has seen something of the world; cannot he combine incident with sentiment? Satire alone, unless lively and severe, is very apt to be insipid.

WAVERLY NOVELS. It will be seen by an extract in another column what Sir Walter Scott has at length avowed himself the "total and undivided author" of the Waverly novels. This declaration will, we doubt not, be universally received with satisfaction and pleasure; for though the pretensions of many other persons have been strenuously supported, a claim from any other source than Sir Walter Scott would have been received with coldness and distrust. The New-York Statesman, speaking of Sir Walter's declaration, says,—"A measure of good fortune much larger than has fallen to the enjoyment of any other writer, has become the portion of Sir Walter. It has been the melancholy history of genius, in every age and country, that its powers have been underrated, or unrewarded, or both, during the lives of its possessors; and that the aggravations of disappointment have been augmented in exact ratio with the increased splendour of the illuminations they have sought to obscure. But the works of Sir Walter acquired the fulness of their fame while yet unacknowledged. They were placed, at once, in the very highest rank of the department of literature to which they belong; and their author was decreed to have become entitled to divide the Supremacy of the world of Fiction (for the present age, at least) with him who was previously, though in a different form of composition, emphatically its Master. But the great achiever (if we may so speak) was yet unknown. Though the freshest and the greenest of laurels were prepared, no claimant presented himself until now; when, throwing aside the shroud in which his features were enveloped, he takes possession of immortality as of an appointed inheritance. Its value is enhanced because it has been awarded without deduction or drawback, of any kind from any cause. It is unanimous and enthusiastic; and, earned while its object is yet in the prime of his years, he has ample time of realizing its high and proud gratifications. Nor have the rewards of Sir Walter been confined to distinction alone. The pecuniary returns of his labours, (less ethereal, perhaps, than fame, but thrice more substantial) have corresponded in value. Whatever poets may dream about pastoral simplici-

ty, and however much they may despise the cold calculations of gain, it is not to be denied that golden returns are great stimulants to exertion, and that a *quantum suff.* of golden oil is necessary to prevent even the lamp of genius from expiring."

Mrs. ROYAL. This lady is certainly the most indefatigable literary being of which our country has the honor to boast. She is as volatile as ether; without being subject to evaporation. One day, with all the spirit and sanguinity of a Junius, she is writing down the Boston Lyceum; the next, she is holding a *tete-a-tete* with the President; and the third, she loads down the mail with familiar epistles to her truly loving and beloved friends of the editorial profession. The gallant governor of Arrarat says she is the Mrs. Walter Scott of America; the National Advocate insists that she is Madame de Stael, *secundus*; and the lady herself is perfectly satisfied that her's is

One of the few, th' immortal names,
That were not born to die.

For ourselves, as her husband was a soldier and we are not of a fighting propensity; and moreover, as she has intimated that she expects a particularly lofty puff from us, on the score of ancient friendship; we have determined to pronounce her infinitely superior to Mrs. HALE and the authoress of Redwood. We have but one fault to find with Mrs. Royall, and that is, she don't write any poetry. If this article should be so fortunate as to arrest the attention of her divinityship, we would most respectfully urge upon her very particular consideration the notion of manufacturing a mistress for Childe Harold. If she will but write a Childe Haroldess we will engage to puff all that she has written, or may write, "sky high—sky high," as John Randolph says.

BOSTON LYCEUM. Last evening we received the Boston Lyceum for the 15th of the present month. Of course we have not had much time to peruse it. We noticed one article defending Lord Byron's character from aspersions cast upon it by an illiberal writer in the 4th number of the North American Review. We are not the indiscriminate admirers of Lord Byron's private life; but the outlines of his character were so noble, and his sentiments so heavenly, that, to damn him for the accidents of his life, appears to be little less than sacrilege. We may however be on the wrong side of the question.

Contents of the Lyceum:—The Last Supper; Dreamings; Byron and the North American Review; The Monitory Relick; Thersites and Eudora; The Grey Nun; A Husband's Honour; The Mistletoe at the Tomb of Washington; An Introduction to a Great Man; Early Days of Shakspeare; Leisure Hours, No. I. Table Talk—Gallery of Portraits—Harding. Critical Notices—Northwood; Father Clement; America; Byron's Poems; The Odd Volume. The Drama—Federal Street Theatre. The Boston Lyceum is published on the fifteenth of every month by TRUE & GREEN, Merchants' Hall, Boston, at four dollars per annum, one half payable in advance.

We have received a letter from a gentleman of the first respectability, resident in Rensselaerville, enabling us and requesting us to contradict the sentimental tale hatched up by a canting hypocrite in this city respecting the suicide Murdock. The tale is simply this: a man by the name of Mur-

dock, living in Rensselaerville, some years since, became embarrassed in his circumstances, and so great was the effect of his troubles upon him, that he put a period to his existence by cutting his throat. This truth has been twisted and garnished by a fellow in this city, and the murder of Murdock charged upon the masonic fraternity. We now declare that Murdock committed suicide, and pronounce any and every assertion and insinuation to the contrary, wilfully and deliberately false, and consider it as originating in the basest purposes of interest and malignity. We shall not spend our time in commenting upon the doings of a creature whose editorial meanness and baseness are unequalled in the annals of the press. If any of our readers feel interested in the case of Murdock, by calling upon us they can be referred to persons of the most undoubted veracity, for a verification of our statements.

LITERARY PRIZES. The Editor and publishers of *The Memorial*, offer the following Premiums for contributions to their Christmas and New-Year's Offering for the ensuing year—viz: For the best original Poem, a prize of *Sixty Dollars*; for the second ditto, a prize of *Forty Dollars*; for the best original Prose tale, a prize of *Sixty Dollars*; for the second ditto, a prize of *Forty Dollars*. Communications must be addressed "To the Editor of the Memorial, care of Messrs. True & Green, Boston, Mass." on or before the 15th of May.

The Token, a Christmas and New-Year's Gift for 1827. Mr. S. G. Goodrich, in connexion with other booksellers, proposes to publish a volume corresponding in character to the popular works which appear annually in London, under the titles of "Souvenir," "Amulet," "Forget Me Not," &c. It is to consist wholly of original pieces, of a lively character, in prose and verse, extending to from one to twenty pages each. It is particularly desired that it may embrace interesting sketches and tales, illustrative of American history, scenery, and manners. The work will be entitled "*The Token, a Christmas and New-Year's Gift, for 1827.*" As the publishers are anxious to have it take a high rank among works of this sort, they particularly invite the contributions of persons of taste. A premium of one hundred dollars, or a medal of that value, will be given for the best original Tale, and the same for the Poem; the awards to be made by gentlemen, whose names will be hereafter published. The work will appear simultaneously at Boston, New-York, and Philadelphia. Communications for it to be addressed to Mr. Goodrich, Boston, before the first of June next, or, if more convenient, to W. B. Gilley, New-York, or H. Huntington, jr. Hartford. [N. Y. Mirror.]

From the Boston Lyceum, for April 15.

CRITICAL NOTICES.

NORTHWOOD. This is, we believe, Mrs. Hale's first effort in the department of novel-writing, and judging from the justness of outline, and truth of colouring with which she brings before us the manners and customs of our native New England, we venture to predict for her the attainment of a enviable celebrity and a deserved popularity. We have had the pleasure of numbering Mrs. Hale among the contributors to our pages, and there are few who have not read with pleasure her sweet and heartfelt effusions over the signature of "Cornelia"—that we do not therefore feel under any restraint in speaking freely of her recent publication, for it cannot be denied that it has faults, though none that are glaring, and deficiencies,—but they are such as

the authoress can easily and readily supply. There are also in this novel many beauties of an unusual kind,—not merely sufficient to redeem it from tameness, insipidity or insignificance,—but beauties which at once attract the eye, and elicit our warmest approbation. We have seen elsewhere, more boldness in the development of intellectual capacity, more vividness in descriptive scenery, and more actual skill and power exerted in laying open the inmost recesses of the human heart; but we have not often seen more propriety and carefulness in constantly preserving for the individuals of the tale, the same fashioning of mind and tendency of disposition with which they are first introduced to us—nor more regard to the cause of morality in unfolding the better feelings of our nature, and the milder traits of character. We do not feel that feverish excitement in reading Mrs. Hale's book, which precludes the possibility of laying it down till the perusal of it is entirely accomplished, but it has the better quality of affording increased delight and satisfaction when taken up for the second or even the third time. It needs a little more vivacity and sprightliness to give it a rapid circulation, and occasionally more conciseness in the narrative,—but we cannot but congratulate the authoress on her success, and with hearty good will welcome her appearance in the amusing path of literature which she has now entered.

FATHER CLEMENT. This work hardly enough of incident to entitle it to the character of a story, but yet sufficient to gain it some readers among those who must be lured into the paths of instruction by the wiles of fiction. The fashionable and prevalent disregard for serious or religious reading has compelled our most zealous writers to resort to the fascinating shape of a tale, for the sake of a more general diffusion of wholesome truths. The necessity of trepanning readers into goodness may be a subject of deep regret, but the evil is surely lessened by those who, in the production of religious stories, show their disposition to fight against error at all times, and with all weapons.

This volume is little less than a controversy on the errors of the Catholic and the Protestant churches, maintained by the personages of the tale who are of different persuasions, yet still maintaining a perfect appearance of harmony and good will in their conversations. The characters are represented as possessing amiable dispositions,—are disposed to respect each others' difference of opinion, and appear more anxious for the elucidation of truth than for the advancement of their individual dogmas. The principal aim of the author is to show the operation of the Bible upon intelligent and ingenious minds, and this is delightfully evinced in these interesting pages, which are written in a style generally easy and pleasing, and sometimes in bold and glowing language. The errors of both Catholicism and Protestantism are exposed with much impartiality, and the interest that is excited in the perusal of the book arises principally from the new and striking light in which many of those errors are placed.

THE ODD VOLUME. This is a collection of tales, legends, and translations, all of which are highly interesting and amusing, and with the exception of the last in the volume, calculated to afford much entertainment. The single story to which we allude, is entitled—"Beware of what you say before Children," and is a most horrible and improbable—for the honour of human nature, we hope an impossible relation of the evil consequences of gratifying a child's curiosity. If we have counted rightly, nine of the characters in this short narrative, are made the victims to hideous deaths,—the barbarous torture inflicted by an aggravated mob upon one wretched old woman, are detailed with an appalling and almost disgusting distinctness. The other tales are told with feeling and vivacity, and with a skill that displays much acquaintance with the passions and emotions of the heart. "The legends of Number Nip," and "The Widow's Nuptials," contain perhaps, the best sketches in the volume, and will be read with that degree of satisfaction and interest, which are the best proofs of the author's power.

The Grand Jury of Dublin has found bills of indictment against Mr. Sheil the Catholic barister, for seditious language.

From late London papers.

THE GREAT UNKNOWN SELF-ACKNOWLEDGED.

The mystery which has so long existed with regard to the author of those extraordinary productions, the "Waverly Novels," is now finally dispelled, and the general opinion confirmed, by the unequivocal declaration of the "Great Unknown" himself, which was made at the Theatrical Dinner at Edinburgh, on Friday last. We extract from the report given in the Edinburgh Courant, the speech of Sir Walter Scott.

Lord Meadowbank, as a testimony of the feelings with which he rose, begged to propose a health, which he was sure, in an assembly of Scotsmen, would be received, not with an ordinary feeling of delight, but with rapture and enthusiasm. He would give the health of Sir Walter Scott, which was drank with enthusiastic cheering.

Sir Walter Scott certainly did not think that, in coming here to-day, he would have the task of acknowledging, before three hundred gentlemen, a secret which, considering that it was communicated to no more than twenty persons, was remarkably well kept. He was now before the bar of his country, and might be understood to be on trial before Lord Meadowbank as an offender; yet he was sure that every impartial jury would bring in a verdict of Not Proven. He did not think it necessary to enter into the reasons of his long silence. Perhaps he might have acted from caprice—he had now to say, however, that the merits of these works, if they had any, and their faults, were entirely imputable to himself.—(Long and loud cheers.) He was afraid to think on what he had done—"Look on't I dare not." He had thus far unbosomed himself, and he knew that it would be reported to the public. He meant, when he said that he was the author, that he was the total and undivided author. With the exception of quotations, there was not a single word that was not derived from himself, or suggested in the course of his reading. The wand was now broken and the rod buried. They will allow him further to say, with Prospero, "your breath has filled my sail," and to crave one single toast in the capacity of the author of these novels; and he would dedicate a bumper to the health of one who has represented some of those characters, of which he had endeavoured to give the skeleton, with a degree of liveliness which rendered him grateful. He would propose the health of his friend Bailie Nicol Jarvie.—(Loud applause)—and he was sure that when the author of Waverly and Rob Roy drinks to Nicol Jarvie, it would be received with that degree of applause to which that gentleman has always been accustomed, and that they would take care that on the present occasion it should be prodigious!—(Long and vehement applause.)

Mr. Mackay (who here spoke with great good humour in the character of Bailie Nicol Jarvie)—My conscience! My worthy father the Deacon could not have believed that his son could have had sic a compliment paid to him by the Great Unknown.

Sir W. Scott—Not unknown now, Mr. Bailie. Mr. Mackay said, he had been long identified with the Bailie, and he was vain of the cognomen which he had now worn for eight years, and he questioned if any of his brethren in the Council had given such universal satisfaction.—(Loud laughter and applause) Before I sit down, I beg leave to propose the health of the Lord Provost and Magistrates of Edinburgh.—(Loud cheers.) Air "Twas within a mile of Edinburgh." [Traveller.

MR. BROUGHAM AND MR. RAIKES. We are informed that a curious rencontre took place yesterday at Brookes' Club House, between Mr. Raikes and Mr. Brougham. The former gentleman considering himself insulted by the remarks which the honourable and learned member made, on a recent trial in the Court of King's Bench, in which an action was brought against *The Age*, Sunday newspaper, accosted Mr. Brougham, yesterday, in terms, the object of which could not be misunderstood. Mr. Brougham, as we understand, declining to avail himself of the privilege of his professional character, immediately caused a message to be conveyed to Mr. Raikes, through Sir Robert Wilson. Mr. Raikes at once accepted it; but, in the mean while, intelligence of the intended meeting was

rumoured about, and last night Mr. Brougham was placed under arrest; Bishop, the officer, took him into custody. His bail, we are told, were Sir Robert Wilson and Lord Sefton. Mr. Raikes is out of the way; and there the matter rests for the present.

[London Courier, March 12.

MORGAN, &c.

At a Convocation of Richmond Royal Arch Chapter, held on the 12th of March, 1827, the following resolutions were unanimously adopted:

Resolved, That, having observed in silence as regards this Chapter, the illiberal attempts to implicate and stigmatize the whole fraternity in the outrage committed by some misguided individuals, in the abduction of William Morgan, we deem it but respectful to our fellow-citizens, in the present excited state of the public mind, to declare, and we now do, as a Chapter, solemnly declare, in the presence of Him who governs all things, that the said Morgan was not known, as a man or a mason, to this body, until after the unfortunate and lamentable affair had taken place; and that since then, several of our members have done their utmost to discover the perpetrators of this flagrant outrage against the constitution and laws of our country.

Resolved, That we view with contempt, any measures taken by bigotted and designing persons, to fix on us, individually, or as a Chapter, the base and slanderous charge of having known of, or having countenanced the unhappy transaction.

Resolved, That these proceedings be signed by the officers of the Chapter, and published.

JOHN BROWNELL, H. P.
N. ALLEN, K.
S. NICHOLS, 2d, S.

L. CHURCH, Sec'y.

From the New-York Times.

The mania, (for it deserves that name,) with which some of our fellow citizens are affected by the disappearance of Morgan, is carried to a length which evinces popular frenzy, rather than any more creditable excitement. Let every nook and corner of the state be ransacked until he or his murderers (if such there be) are forth coming, but do not proscribe a whole class of the community for the alledge and unproved sins of a few. We do not pretend to express a confident belief that the man is an impostor and is now amongst us, but be that as it may, we must subscribe in other respects to the following remarks of the Philadelphia United States Gazette.

At the recent elections in the western part of the state of New-York, the line of demarkation between parties was not drawn by any reference to old party names, it was *mason* or *no mason*. The ticket which had upon it the name of a single mason was opposed entirely, and the opposition party headed theirs "*Morgan Ticket*"—and to this molten image, without the attraction of golden, they fell down and worshipped. After enumerating the town officers elected in Lockport, the editor of the "*Observatory*" of that town says, "In this town the masons were wholly excluded, and in some instances for no other reason than because they were *masons*."

In other places it was the same. In Royaltown, John Garney is re-elected supervisor. In that town the whole ticket nominated at the late *Morgan* meeting was elected. The contest was as close, and more anxiety is said to have been manifested for the opposing candidates, than is generally exhibited at the annual state elections. Masons were wholly excluded.

Now the worthless scoundrel Morgan, and the still more worthless wretch Miller, must enjoy this excitement in an eminent degree; and though the chance of securing the \$5000, proffered by the legislative committee is lost to them, yet the sale of their pirated book, and other villainous means of gain, will probably be as profitable to them.

These, however, are common wretches, individual sharpers—but what are we to say of *men*, republicans, who, for the sake of securing office to themselves or their friends, will thus prostitute their elective privileges, and proscribe a whole class of the community?

From Noah's New-York Enquirer.

As a specimen of the extent to which the excitement on this subject is carried, we may quote from the Buffalo Emporium the following passage:—"We learn that the *Morgan ticket*, for town officers, in Hamburg, failed throughout. The people were not prepared to turn out faithful public servants to satisfy some who wanted their places, and who proposed to mount into them on the Morgan hobby." In our own minds, we have not the slightest doubt that the whole business is, and has been, a mere speculation of designing knaves. Their artifices have wrought upon the weak-minded and credulous part of the community, and the whole state is suffering in its character as well as in its peace. We do not recollect any instance of equal aberration of public judgment, unless it be the case of *Elizabeth Canning*, in the middle of the last century. She, too, was supposed to be "forcibly abducted" and murdered. The putative criminals were tried, but the whole transaction was discovered to be a *humbug*, got up by avarice and falsehood. And the Morgan affair, we are sure of it, will come to a similar result.

From the same.

We are absolutely nauseated with the trash which has been disseminated in all parts of the State on this *humbug*. It is refreshing, therefore, to turn the sensible, manly and salutary speech of Mr. Bucklin, in the Assembly, on the resolution offering an additional reward of \$5,000 for the discovery of Morgan or "his murderers." In the face of the popular excitements he has dared to tell the Legislature the truth, and he rebukes such a resolution, as having a direct tendency to increase and perpetuate that excitement. The inexpediency of legislating on such a question (if it could have been previously doubted) is made strikingly manifest in his speech. We are sorry that we cannot print it at length.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

O COME TO THE BOWER.

O come to the bower, 'tis the wonted hour
Of the whispered vow and the clinging kiss;
There comes on the evening breeze a power
Which thou canst raise to the purest bliss.
'Tis the hour of love, and the sky above
Is the spangled wing of a Spirit of light,
Who spreads it forth like the cherishing dove,
To cheer and protect the sweets of night.
Then come to the bower, 'tis the wonted hour
Of the whispered vow, and the clinging kiss,
There comes on the balmy breeze a power
Which thou canst raise to the purest bliss.

THE GREEK'S ADDRESS

TO HIS FALLEN COUNTRY.

Composed for a Greek Air brought by Lord Byron to England from Greece.

"Having said this, the poor man shed tears; asking us if the time would ever arrive when Greece might be delivered from the Mahometan tyranny; and adding, 'if we had but a leader, we should flock together by thousands, and soon put an end to Turkish dominion.'"—*Clarke's Travels.*

Oh! when shall Greece, fair, fallen land,
Rekindle Freedom's meteor brand;
And every Grecian slave be free,
Who sighs in hard captivity?

Gone are her altars of pure gold;
Deep lie in dust her gods of old;
Dark, noisome weeds her temples fill;
And every note of praise is still.

Wild and unpruned the tendril grows;
No more Ilyseus' streamlet flows;
The lute has hush'd its soothing sound—
And nought but light winds whisper round.

Yet, it is hop'd for prospect far,
When Greece shall see her conquering star;
When every altar's fire shall flame
A sacrifice to freedom's name!

Shrunk is the rose on yonder bank,
And clos'd those pores the dew which drank;
But there's a spring again must sigh,
Again must waft its fragrance high.

Cheer, cheer thee then my native land!
Again shall wave each freeborn hand;
Again shall Minerva's standard rise,*
Where now the flaming crescent flies.

Then shalt thou, Greece, renowned land!
Rekindle Freedom's meteor brand,
And every Grecian slave be free,
Who sighs in hard captivity.

CHARLES.

* Riga, who perished in the attempt to revolutionize Greece.

From the United States Literary Gazette, for April.

SPRING IN TOWN.

The country ever has a lagging Spring,
Waiting for May to call its violets forth,
And June its roses. Showers and sunshine bring
Slowly the deepening verdure o'er the earth,
To put their foliage out the woods are slack,
And one by one the singing birds come back.

Within the city's bounds the time of flowers
Come earlier. Let a mild and sunny day,
Such as full often, for a few bright hours,
Breathes thro' the sky of March the airs of May,
Shine on our roofs, and chase the wintry gloom—
And, lo, our borders glow with sudden bloom.

For the wide sidewalks of Broadway are then,
Gorgeous as are the rivulet's banks in June,
That, overhung with blossoms, through its glen,
Slides soft away beneath the sunny noon;
And they that search the untrodden wood for flowers
Meet in its depths no lovelier ones than ours.

For here are eyes that shame the violet,
Or the dark drop that on the pansy lies;
And foreheads white as when in clusters set,
The anemones by forest fountains rise;
And the spring-beauty boasts no tenderer streak
Than the soft red on many a youthful cheek.

And thick about those lovely temples lie
Locks that the lucky Vignardonne has curled—
Thrice happy man! whose trade it is to buy
And braid and braid those love-nets of the world!
Who curls of every glossy color keepst,
And sellest, it is said, the blackest cheapest!

And well thou mayst; for Italy's brown maids
Send the dark-locks with which their brows are drest;
And Tuscan lassies from their jetty braids
Crop half, to buy a ribbon for the rest;
But the fresh Norman girls their ringlets spare,
And the Dutch damsel keeps her flaxen hair.

Then henceforth let no maid or matron grieve
To see her locks of an unlovely hue,

Frowzy or thin; for Vignardonne shall give
Such piles of curls as nature never knew:
Eve, with her veil, of tresses, at the sight
Had blushed outdone, and owned herself a fright.

Soft voices and light laughter wake the street
Like notes of wood-birds, and where'er the eye
Threads the long way, plumes wave, and twinkling feet
Fall light, as hastes that crowd of beauty by;
The ostrich, hurrying o'er the desert space,
Scarce bore those tossing plumes with fleetest pace,

No swimming Juno gait, of languor born,
Is theirs, but a light step of freest grace,
Light as Camilla's o'er the unbent corn.—
A step that speaks the spirit of the place,
Since Quiet, meek old dame, was driven away
To Singing and the shores of Tappan bay.

Ye that dash by in chariots, who will care
For steeds and footmen now? Ye cannot show
Fair face and dazzling dress and graceful air,
And last edition of the shape? Ah no,
These sights are for the earth and open sky,
And your loud wheels unheeded rattle by.

CORMAC AND MARY.

"She is not dead—she has no grave—
She lives beneath Lough Corrib's water;
And in the murmur of each wave
Methinks I catch the songs I taught her."

Thus many an evening on the shore
Sat Cormac raving wild and lowly;
Still idly muttering o'er and o'er,
"She lives, detain'd by spells unholy."

"Death claims her not, too fair for earth,
Her spirit lives—alien of heaven;
Nor will it know a second birth
When sinful mortals are forgiven!"

"Cold is this rock—the wind comes chill,
And mists the gloomy waters cover;
But oh! her soul is colder still—
To lose her God—to leave her lover!"

The lake was in profound repose,
Yet one white wave came gently curling,
And as it reached the shore, arose
Dim figures—banners gay unfurling.

Onward they move, an airy crowd;
Through each thin form a moonlight ray shone;
While spear and helm, in pageant proud,
Appear in liquid undulation.

Bright barbed steeds curvetting tread
Their trackless way with antic capers;
And certain clouds hang over head,
Festoon'd by rainbow-colour'd vapours.

And when a breath of air would stir
That drapery of Heaven's own wreathing,
Light wings of prismy zephyr
Just moved and sparkled to the breathing.

Nor wanting was the choral song,
Swelling in silvery chimes of sweetness;
To sound of which this subtle throng
Advanced in playful grace and fleetness.

With music's strain, all came and went
Upon poor Cormac's doubting vision;
Now rising in wild merriment,
Now softly fading in derision.

"Christ, save her soul," he boldly cried;
And when that blessed name was spoken,
Fierce yells and headish shrieks replied,
And vanished all,—the spell was broken.

And now on Corib's lonely shore,
Freed by his word from power of fairy,
To life, to love, restored once more,
Young Cormac welcomes back his Mary.

The following lines, by the Scottish Wilton, will be perused
with interest by the lovers of brilliant poetry

ADDRESS TO THE WILD DEER.

Magnificent creature! so stately and bright!
In the pride of thy spirit pursuing thy flight;
For what hath the child of the desert to dread,
Wafting up his own mountains that far beaming head;
Or borne like a whirlwind far down on the vale?—
Hail! King of the wild and the beautiful!—hail!
Hail! Idol divine!—whom nature hath borne
O'er a hundred hill-tops since the mist of the morn,
Whom the pilgrim lone wand'ring on mountain and moor
As the vision glides by him may blameless adore:
For the joy of the happy, the strength of the tree
Are spread in a garment of glory o'er thee.

Up! up to yon cliff! like a king to his throne!
O'er the black silent forest glad lofty and lone—
A throne which the eagle is glad to resign
Unto footsteps so fleet and so fearless as thine.
There the bright heather springs up in love of thy breast,
Lo! the clouds in the depths of the sky are at rest.
And the race of the wild winds is o'er on the hill!
In the hush of the mountains, ye antlers lie still—
Though your branches now toss in the storm of delight,
Like the arms of the pine on yon sheltering height,
One moment—then bright Apparition—delay!
Then melt o'er the crags, like the sun from the day,
Alone on the weather-gleam, scorning the earth,
The wild spirit hung in majestic mirth:

In dalliance with danger, he bounded in bliss,
O'er the fathomless gloom of each moaning abyss;
O'er the grim rocks careering with prosperous motion,
Like a ship by herself, in full sail o'er the ocean!
Then proudly he turn'd ere he sank to the dell,
And shook from his forehead a haughty farewell,
While his horns in a crescent of radiance shone,
Like a flag burning bright when the vessel is gone.

From his eyrie the eagle hath soar'd with a scream,
And I wake on the edge of the cliff from my dream;
—Where now is the light of thy far-beaming brow?
Fleet son of the wildness! where art thou now?
—Again o'er yon crag thou return'st to my sight,
Like the horns of the moon from the cloud of the night!
Serene on thy travel—as soul in a dream—
Thou needest no bridge o'er the rush of the stream.
With thy presence the pine-groves are filled as with light,
And the caves as thou passest one moment are bright.
Through the arch of the rainbow that lies on the rock
Mid the mist stealing up from the cataract's shock,
Thou fling'st thy bold beauty, exulting and free,
O'er a pit of grim blackness, that roars like the sea.

B.

His voyage is o'er!—As if struck by a spell
He motionless stands in the bush of the dell,
There softly and slowly sinks down on his breast,
In the midst of his pastime enamour'd of rest.
A stream in a clear pool that endeth its race—
A dancing ray chain'd to one sunshiny place—
A cloud by the winds to calm solitude driven—
A hurricane dead in the silence of heaven!

There is no virtue that adds so noble a charm to
the finest traits of beauty, as that which exerts it-
self in watching over the tranquility of an aged
parent. There are no tears that give so noble a
lustre to the cheek of innocence, as the tears of fil-
ial sorrow.
Julian's Letters.

He that has not a mastery over his inclinations,
he that knows not how to resist the importunity
of present pleasure or pain for the sake of what
reason tells him is fit to be done, wants the true
principle of virtue and industry, and is in danger
of never being good for any thing.
Locke.

No house is so narrow but that a liberal mind will
add to its dimensions.
Petrarch.

It has often been observed that a person of aban-
doned character is always ready to pull down to
his own dirty level, those whose virtues are above
his imitation, and the daily beauties of whose lives
make him more detestable.

MASONIC CEREMONIES.

From the National Intelligencer.

Ceremony of laying the Corner Stone of the new Church of the First Presbyterian Congregation of the City of Washington, located near the City Hall.

On Tuesday, the 10th inst. in compliance with the particularly request of the committee on the part of the Church, and according to arrangements previously made, the *Foundation Stone* of a new Edifice, intended for the use of the First Presbyterian Congregation, was laid in this city by the Fraternity of Free Masons.

The following is an account of the ceremonies on that occasion:

At four o'clock P. M. a procession was formed at the Rev. Mr. Baker's Church, according to the usual order.

The procession marched down Fourteenth street to F. street, where it halted to receive the Rev. Clergy, members of the Church, Building Committee, and Citizens, who had assembled at the Rev. Dr. Laurie's Church; all parties having taken their proper stations, the procession moved on to Pennsylvania Avenue, along the Avenue to 4 1-2 street, and up that street to the site of the Edifice, where it halted—the ranks were opened to the right and left, and the Grand Master and Grand Officers passed through the line to the Stone: the Fraternity, Rev. Clergy, members of the Church, and Building Committee, also passed, and formed in the area of the building.

Silence having been proclaimed by the Grand Marshal, and repeated by the Grand Deacons, attendant on the Grand Master, and each of the Assistant Marshals—

Brother the Rev. WILLIAM HAWLEY, the Grand Chaplain, rose and addressed the throne of Grace in a fervent and eloquent prayer; after which solemn music was played by the Band: and

Brother JOHN N. MOULDER, M. W. Grand Master, delivered the following address:

"Brothers and Fellow Citizens:

"Human institutions, in all societies where civilization exists, borrow their excellencies either from moral virtue, or the analogies between the principles those institutions inculcate, and the received religion of the country.

"In this new world, where political freedom has lent its Promethian fire to the cause of general toleration, and the human heart is lit up with the desire of universal love, faith, and fellowship, more is due to the influence of revealed religion, than in those unsettled States, where peculiar ties form the code of morals and the rule of reason.

"The dedication of a Temple, even in the mythology of ancient times, was an earnest of devotion to the guardian divinity of an imagined being; and if the obligations of a Pagan worship could have had any influence on the mind, much more should it possess in the cultivated intellects of Christians, who here give a solemn pledge of faith in the being, honor to the name, and promise of devotion to that living and true God, who is heard in every breeze, 'who rides upon the whirlwind and directs the storm.'

"As David did with the shields of gold, and the spoils from the King of Zobah, that he dedicated to the Lord, so do we with this new Tabernacle; not aiding by the insignia of secrets that tie up from mankind the knowledge of living virtues, or by the mystic rites of exclusive Masonry, that set apart to itself doctrines to be concealed from human view, since they are open to the virtuous pursuit of all; but assisting as Masons, and brothers of the human race, carrying only in the emblems of our order, the outward marks of honourable brotherhood, and

in our creed, that philanthropy and virtue which declares us Christian brothers of all mankind.

"The pomp of decoration, the memorials which time for ages has assigned—are indeed but the mere glitterings of a noble craft; and when the circumstance of show, the revelation of secrets, and the momenta of our fraternity shall stand confessed on that great day, when

*"The gorgeous palaces, the solemn temples,
The whole globe itself,—yea, all who it inhabit,
Shall dissolve;"*

Masonry shall reveal its true secret—Truth—and stand imperishable.

"Glorious then is the duty of raising our banners in honor this day of a living God, and of adding our humble homage to the cause of a Holy and universal Trinity.

"May this intended edifice, then, proclaim in itself, and the disciples of true faith—"that root of Jesse which shall stand for an ensign to the People"—For

"I say unto you that in this place is one greater than the Temple."

The foundation Stone was then laid, with the ancient solemn ceremonies of the Craft—and pronounced by the Grand Master to be *"well formed, true, and trusty."*

Playell's Hymn was then played by the Band.

A leaden box was then produced, and deposited in the Stone, containing—

The Holy Bible, and a Parchment, on which is inscribed the following:

"The First Church of the 'First Presbyterian Congregation of Washington City,' was erected on square No. 636, A. D. 1812. The location of that building having been found injudicious, it was determined at a meeting of the Congregation, held 20th November, 1826, to remove to a more eligible situation.

"This Corner Stone of their new Edifice was laid with the usual ceremonies, the 10th day of April, A. D. 1827, A. L. 5827, by John N. Moulder, M. W. G. M. of the Grand Lodge of Free Masons, of the District of Columbia.

Building
Committee.

"Thus saith the Lord, Behold I lay in Zion for a Foundation a Stone, a precious Corner Stone, a sure Foundation."—Is. xxviii 16.

The Stone having been placed in its bed, the Cornucopia, and the vessels containing the wine and oil, were by their bearers delivered, the Cornucopia to the Deputy Grand Master, and the wine and oil to the Wardens; who, in successive order, handed them to the Grand Master, by whom their contents were poured upon the Stone, saying, "May the all bounteous Author of all good, bless the members of this Church, and the inhabitants of this City, with all the necessities, comforts, and conveniences of life, and grant to us all, in needed supply, the *Corn of nourishment, the Wine of refreshment, and the Oil of joy*"—to which the Brethren responded.

The Grand Master then struck the Stone three times with his mallet—and the honours of Masonry were given. Music sounded a flourish and the Grand Master said—

"We have now laid this Foundation Stone—may the Grand Architect of the Universe, of his kind Providence enable the Church to carry on and finish

this work—protect the workmen against accident, and assist in its completion. May he afford to it, and to this City in general, his guardianship and protection, and may he keep it from misfortune, decay, and ruin, until time shall be no more."

The working tools were then committed to the Master Builder by the Grand Master, accompanied by the following remarks:

"To you, Master Builder, I entrust these tools: may you use them as becomes the Craft; superadding to industry, the Christian duty of faithfulness; and to faithfulness, skill: so that in whatever Order this building may be reared—whether in the Corinthian, Ionic, or Doric, it may emblematically unite in harmony the strict duties of social life, to add their graces to the more perishable beauties of proportion and architecture."

To which he replied, as follows:

"Most Worshipful Sir: Distrusting at all times my skill and abilities, I accept, with great diffidence, the trust which has been confided to me, of erecting the building, the corner stone of which you have just now laid, with such imposing ceremonies, and under such promising aspects.

"Relying on the aid and support, which I hope to merit and receive from the enlightened and liberal gentlemen who have been appointed by the good People for whose use this edifice is intended as their delegates and representatives in superintending its erection, I enter upon the discharge of my professional duties with cheerfulness and confidence; trusting that in their progress, I shall prove, by my zeal and attention, that their confidence has not been misplaced, and certain I am, it shall not be abused."

After solemn music by the Band,

The Grand Chaplain addressed the Throne of the Almighty, and supplicated his gracious blessings on the proceedings of the day; after which, the Rev. Mr. Post, Pastor of the Church, in a most eloquent and appropriate manner, addressed the assembled Masons and Citizens, and closed the ceremonies of the day with prayer.

The procession then marched into the City Hall in common order—the Grand Master, &c. in front, and there was dismissed.

The procession was formed and conducted under the direction of Brothers BENJAMIN M. BELT, Grand Marshal of the Grand Lodge, assisted by his Deputies, Brothers THOMAS DONOHU and ROBERT G. LANPHER—to all of whom great credit is due, for the very able and efficient performance of their duties.

The fine Band of the Marine Corps attended on the occasion, and performed with its accustomed ability.

Charity, in the works of moralists, is defined to be the love of our brethren, or a kind of brotherly affection one towards another. The rule and standard that this habit is to be examined and regulated by among Christians, is the love we bear ourselves, or that the Mediator bore towards us; that is, it must be unfeigned, constant, and out of no other design than man's happiness.

ELECTIONS.

Plattsburgh Encampment, Plattsburgh, N. Y.

At a regular communication of Plattsburgh Encampment, No. 8, of Knights Templars, held on the 13th inst. Good Friday, the following Sir Knights were elected officers for the ensuing year:

Sir William F. Haile, Grand Commander; Sir John Bleecker, Generalissimo; Sir Samuel Emery, Captain General; Sir John M'Kee, Prelate; Sir St. John B. L. Skinner, Senior Warden; Sir Winslow C. Watson, Junior Warden; Sir Roswell Wait, Treasurer; Sir George W. Hicks, Recorder; Sir William H. Morgan, Standard Bearer; Sir Hiram Wood, Sword Bearer; Sir Charles S. Movers, Warder; Sir Michael M'Durmot, Sentinel.

SCIENCE AND THE ARTS.

BRICKS.

The best bricks are made of a clayey loam without having too much clay on the one hand, which is apt to shrink in drying; or too much on the other, which makes them too brittle. The earth of which bricks are to be manufactured, should be dug in the autumn, and allowed to remain during the winter exposed to the frost, which, by mellowing and pulverizing it, renders it afterwards more easily tempered. When the season arrives for preparing it, the clay should be broken into pieces and thrown into pits, where, after being watered, it should remain soaking for several days. Tempering, which is the next process, requires great labour. In England, instead of the old mode of treading with men or oxen, they employ a clay or pug mill, which performs this operation with less labour and more efficacy. "This mill, which is worked by horses, consists, according to Nicholson, of a large vertical cone, having strong knives, with a spiral arrangement, and inclination, fixed on its internal surface. Passing through the centre, and terminating in a pivot at the bottom is a strong perpendicular shaft with similar radiating knives, so that the knives by the revolution of the shaft, cut, separate and purify the clay, till it be reduced to homogeneous paste, which passes through an orifice at the bottom into a receiver placed for that purpose." The clay being thus tempered, should be formed into moulds, previously dipped into sand by the moulder, who strikes off the superfluous earth with a flat smooth piece of wood. One good moulder, it is said, can mould from 5,000 to 7,000 bricks a day. The bricks are then to be taken from the moulder's bench, and ranged on ground prepared for their reception; and after they are sufficiently hardened to admit of being handled, they are to be dressed with a knife, built up in long walls, and protected from the weather. The next process is the burning, which is performed in a kiln. The usual size of these kilns is 40 bricks by 37, and 35 bricks in height. It takes 60 cords of wood for a kiln of these dimensions, or about half a cord to every thousand. Pine is the kind of wood most commonly used. The heat must be gradually increased till it attains its greatest height, and afterwards continued uniformly till the bricks are burned, which is generally completed in six days and nights.

The use of bricks is of very high antiquity. The first bricks which men attempted to form, were probably rude masses of clay, awkwardly fashioned, dried in the air, and hardened by the sun. Time and experience taught them how to mould them, and by this means to give them a regular and uniform figure, which rendered their transportation and use more easy and less expensive, than those of stone. The tower of Babel or Belus, is the most ancient monument of unburnt bricks of which we have any vestiges. The ruins of Babylon, too, furnish another proof of the great antiquity of this material, and show that these unburnt bricks were, in those dry climates, as durable as burnt bricks, and the hardest stone, in cold and humid countries. The ancient Egyptians also constructed magnificent monuments of unburnt brick, which still remain. The ruins of one of these are now to be seen about ten leagues from Grand Cairo. These are thought to be the remains of the pyramid erected by Asychis, king of Egypt, which Herodotus mentions. The ancient Greeks and Romans likewise employed this material in the construction of their public edifices.

[Black Rock Gaz.]

GEORAMA.

Among the new inventions in Paris, destined to render the study of geography more easy and intelligible to young people, must be distinguished this beautiful machine.

The *Georama*, or *View of the Earth*, is a hollow sphere of 40 feet diameter, formed by an assemblage of 36 bars of iron, which represents the parallels and meridians, and which are covered by bluish cloth, destined to admit the lights, and to represent seas and lakes. The land, mountains and rivers, are painted with much care on paper, pasted on this covering. The two poles are situated, as in maps

of the world, at the extremities of the vertical diameter of the sphere. Around this diameter, are two spiral staircases, which land on three little circular galleries, placed one above another, so that the spectator at his pleasure, can approach any point of the sphere that he wishes to examine. This disposition, as convenient as it is ingenious, at first astonishes him. The imposing grandeur of the blue vault which represents seas, the irregularity of the masses of land which interrupt their monotony, the novelty of his situation, all concur to produce a sort of stupor and hesitation, from which he is soon relieved as he discovers, though in a reversed situation, the parts of the world which he has been accustomed to behold.

The relief of mountains is expressed by shades more or less prolonged; rivers, by lines of a paler color; volcanoes by a fiery color. All analogous divisions (and one may judge how numerous they are, since France has the names of all its departments and chief places) are designated by similar letters. All confusion is avoided, by the manner in which the delineations are made.

[Silliman's Journal.]

COMPRESSION OF WATER.

Professor Oersted uses a very simple instrument for measuring the compression of water. After having deprived the atmospheric air by ebullition, he fills a glass cylinder with it, whose upper part is mounted with a brass cover, hermetically sealed, and which is traversed by a screw, with a small piston at its lower extremity which presses upon the fluid. In the cylinder is placed a small thermometer tube, both filled with the water of the cylinder, except that in the upper part of the tube, which remains open, there is a small column of mercury, which, on account of the extreme fineness of the tube, keeps its place without falling down into the ball.

Now suppose that the water is compressed by turning the screw of the piston: this pressure being equal both within and without the ball and its tube, they will not bear expansion nor contraction, and consequently the position of the mercury above the water in the thermometric tube will immediately indicate the compression. Mr. Oersted previously determined the capacity of the tube and that of the ball, by taking the weight of the volume of mercury which fills them. The pressure exerted upon the water by the screw is measured by a tube filled with air and also enclosed in the cylinder. He has ascertained by this instrument that the compressibility of water diminishes very rapidly as the pressure increases, and that the mean compressibility under a pressure of three or four atmospheres is 45 one hundred thousandths, for each atmosphere, a result which very nearly accords with the experiments of Canton.

[Ibid.]

DISCOVERY IN HYDRAULICS.

A prospectus has been circulated in Paris, of a new machine, which, if we may believe its inventors, will effect wonders in hydraulics. They engage to supply a small steam-engine, which will raise water to the height of sixty feet, at the rate of fifteen quarts per minute. The machine will, it is said, consume but a penny worth of coals in an hour, in which time it will raise 900 quarts to the specified height. It is to cost 600 francs, and to last more than a hundred years. The proprietors likewise offer, at a progressive advance, machines which will raise double, treble, and decuple heights, (i. e. 120, 180 or 600 feet,) and thus in infinite progression. The proprietors are Messrs. Croissons, brothers, both of them pupils in the Polytechnic School, and one of them is a commandant of artillery, whose talents are said, in the Parisian circles, to inspire the greatest confidence. They keep their discovery a secret, and will not divulge it till they have raised subscriptions for 20,000 inches of water, according to their mode of calculation.

THE CENTRE OF THE EARTH.

Boerhave, Boyle, and various other writers, who devoted their lives to a profound study of nature, are of opinion, that the earth contains a mass of

lava in a state of perpetual fusion; and some philosophers, from the influence which this internal heat may be supposed to exercise over vegetation and the formation of minerals, have styled this ocean of flame a second sun.

Various observations tend to support this idea. In the first place, the rays of the sun have scarcely any power ten feet beneath the surface of the earth. Secondly, M. de Luc, who, on the 5th of June, 1778, during very fine weather, descended the mines of Hartz, to the depth of 1,359 feet, found the air somewhat warmer than on the surface of the earth. [Philosophical Transactions.]

In the mines of Hungary, which are 500 fathoms deep, the heat becomes insupportable when the workmen descend lower than 180 feet. (*Marius de Loies Subterraneis*.) Those who admit the hypothesis of the existence of an internal fire, suppose that the waters of the sea are continually filtered through their sandy bed; and that by coming in contact with this subterranean furnace, they produce an agitation in the liquified matter, which gives rise to volcanic eruptions.

HORTICULTURAL.

GARDENING.

Little time ought now to be lost in preparing new and old gardens for early spring crops. See that the fences are in good order. Hogs and cattle soon find out a faulty pannel, and will not fail to take advantage of it; and a whole season's work may be destroyed for want of a few hours work at the fence.

Next to a good fence, it is indispensably necessary to have a sufficiency of suitable manure; without this, in the soils of this country especially, labor is vain, without a portion of well rotted stable dung. Lime is the most powerful and most suitable fertilizer of our soils, with which we are acquainted. If the soil be moderately deep, a half bushel of slacked lime may be evenly spread over every twenty feet square. If the soil be sodden and clayey, a moderate coat of coal ashes, sand or the black coal dirt, well known here, will be of signal benefit. The liming must not be repeated for several years. The life and soil of a garden, after it is well manured, is to have it well worked. If it is a new lot, let it be ploughed and cross ploughed, and well harrowed; if an old one, it ought to be dug at least two spades deep, if the soil will admit of it, and be well turned up and pulverised in the digging. It is an injurious and slovenly practice, too common here, to scratch over the surface of the earth a few inches deep. The consequence is, plants put forth their roots and very soon meet a hard unfertilized stratum, which they cannot penetrate, and quickly become puny and sickly from want of room and nourishment; and being so near the surface of the earth, the least drought kills them out-right. It is then a subject of wonder and surprise, what can be the matter,—and the poor soil or climate, or both, has to bear all the blame of the laziness or inattention of the Gardener.

It is all important to have the best seeds. The fruits will assuredly partake of the nature of the seeds. If you sow seeds of poor unprofitable kinds, your produce will be of the same description.

As we are writing for the information of new beginners, we shall be excused enumerating some of the plants and herbs which ought to find a place in every kitchen garden.

Esculents. Beans, Peas, Cabbage, Carrots, Potatoes, Beets, Turnips, Indian Corn, Tomatoes, Squashes, Spinach, Parsnips, Onions, Leeks, Cucumbers, Nasturtion, Okra, Egg Plant, Culi Flower, Asparagus, Artichokes, Peppers, Horse Radish, Scorzoneria, &c.

Sallads.—Celery, Chives, Cress, Lettuce, Endives, Mustard, Parsley, Radish, Shallot, &c.

Herbs.—Anise, Basil, Coriander, Carraway, Chamomile, Lavender, Marigold, Marjorum, Mint, Sage, Savory, Thyme, &c.

In addition to an ordinary garden fruits of Apples, Peaches, Plums, Gooseberries, Currents, &c. &c. we would especially recommend the cultivation of the

Grape. The vine will form a beautiful and highly ornamented shade, and the fruit a delicious desert. Or if you have space and time to cultivate it to a greater extent, you may save, besides abundance of fruit for the table, a glass of good wine for yourself and a friend.

It is too generally supposed that the Grape is difficult to raise, and laborious to cultivate; neither of these suppositions are well founded. It may be raised and cultivated almost with as little expense of money and labor as any other fruit. After selecting suitable kinds, but little skill and attention are required. Our soil and climate is well adapted to the purpose; in proof of this we need but remark the abundance of wild grapes which flourish and bear luxuriously in all quarters around us. And here we would observe that several kinds of these are well worth cultivation. The large white fox grape common here, is little inferior in sweetness and flavour to some of the Foreign cultivated Grapes, and has the advantage of being a native, and congenial to the soil and climate. The small chicken or winter grape is another kind which makes a most delicious preserve.

Gardening is too much neglected in this State. It is considered, in the country, a petty concern, and abandoned to the care of women and children. We desire, if possible, to claim for this subject, suitable attention. The produce of a garden will afford a family many comforts and luxuries; and what contributes more to the value and beauty of a house, than a neat and productive garden? Cultivating a garden is a healthy exercise for the sedentary, and a pleasing recreation for the laborer. It leads to industry, neatness, economy and good order. If every dwelling house had a good garden attached to it, it would, at least in our estimation, raise the value of the state twenty-five per cent.

[Pottsville (Pa.) Journal.]

HISTORICAL.

ABORIGINES OF AMERICA.

The last published number of the North American Review contains an able and interesting article in relation to the Indians, once the undisturbed proprietors of the continent of America, from which we make the following extracts:

When we look back upon the long interval of Indian intercourse, which elapsed between the first settlement on the shores of the Atlantic, and the final consolidation of the British power, nothing but a dreary waste meets the eye. Not a verdant spot cheers the sight, nor a single Oasis in this worse than Libyan desert. Remote and feeble colonies had become important and flourishing provinces, and the aboriginal inhabitants had disappeared, or receded, before the mighty tide of population, which already, from the summit of the Alleghany, was spreading with exterminating force over the forests and prairies of the west. We hold no fellowship with those, to whom the sound of the Indian's rifle is more attractive than that of the woodman's axe, nor are we believers in that system of legal metaphysics, which would give to a few naked and wandering savages, a perpetual title to an immense continent. But it will not at this day be disputed, that when, in the progress of improvement, the hunting grounds of the Indians give place to cultivated fields, it is our duty to render them a full equivalent. The British government is responsible for the whole course of measures, in relation to the Indians in this country, until the war of the Revolution. Their orders were executed by their own officers, and during a part of this period, a superintendent of Indian affairs for the northern, and another for the southern department, were appointed by the crown.

Not a vestige remains of any permanent advantage derived by the Indians from the cessions or sacrifices they made. Their actual relations with the British government may be emphatically stated in a few words. *They were useful, and were used in war to fight, and in peace to trade.* Queen Anne, indeed, presented sacramental vessels to the Mohawks, and other furniture for a chapel, and this is about the extent, as far as we have been able to discover, of the direct interference of the British

government in any plan to improve the moral condition of the Indians. Pious and benevolent men were engaged then, as they are now, in this interesting task, and the names of Eliot and Brainerd have come down to us with apostolic sanctity. The Society for Propagating the Gospel attempted something; but they discovered, as they said, "that the Indians obstinately rejected their care," and abandoned the effort, without suspecting, that the fault was in the plan of the teacher, and not in the docility of the scholar. Generally, however, great indifference prevailed, and it is said in the Biographia Britannica, that Lord Granville reproved the converting of the Indians, "because a knowledge of Christianity will introduce them to a knowledge of the arts, and such a consummation will make them dangerous to our plantations. Of a similar character is the policy, stated by Hutchinson to have been pursued, that of keeping up so much contention among the Indians, as to prevent a combination, and to make an appeal to us as umpires necessary from time to time."

In the few Indian treaties which have escaped from the official bureaux, a piece or two of "strouding," some "duffels," "kettles," "flints," &c. constitute the whole value paid for important cessions. These presents were too inconsiderable for general distribution, and they disappeared almost as speedily as the council which produced them. A permanent arrangement, by which an annual consideration should always be given, and a supply thus provided for never ending wants, was neither adopted nor proposed. This plan of permanent annuities, which constitutes an era in the relations existing between the white and the red man upon the continent, was introduced under the American government, and was first extensively embodied in Wayne's treaty of 1795; a treaty to which no parallel can be found in history. The Indians had waged a bloody and causeless war against our settlements for many years. They had been overthrown in a signal battle, and their confidence in themselves and their cause utterly destroyed. They were invited to a general council at Greenville, where the same terms were granted, which had been offered to them long before. Many important advantages were secured to them, and perpetual annuities were guaranteed to each tribe.

If any restraints were imposed by the British authorities, before our revolution, upon the Indian traders, either in relation to their general conduct, or the price of their goods, such restraints have escaped our investigation. We speak advisedly when we say, that none such now exist. Nor is there any prohibition against the introduction of spirituous liquors into any part of their Indian country. We may close this branch of the subject in a few words. There was no attempt to provide a permanent residence for the Indians. There were no schools, and no efforts to introduce agriculture, or the mechanic arts. There were no annuities, no regulations to direct the conduct of the traders, and no law to prevent the sale of ardent spirits. A century and a half had passed away since the first settlement of the country. The rulers who governed it, heedless of the condition and sufferings of its aboriginal inhabitants, abandoned them to that current of events, which is yet hurrying them onward to their doom. The records of history cannot furnish a more cold-blooded, heartless document, than the official report of Sir Jeffrey Amherst, the British commander in chief, dated Albany, 13th August, 1763, and communicating the result of Colonel Grant's expedition against the Cherokees. He states, that "Colonel Grant had burnt fifteen towns, and all the plantations of the country; destroyed fourteen hundred acres of corn; and driven about five thousand men, women, and children into the woods and mountains, where, having nothing to subsist upon, they must either starve or sue for peace."

But that great revolution had now approached, which had already produced, and is yet destined to produce, important changes in the social and political systems of the world. The American government, at the commencement of its operations, used every effort to prevent the Indians from taking part in the contest, and the desperate struggle in which

the early patriots were engaged, still left them to devise plans for the moral and physical melioration of their unhappy neighbors.

The condition of our primitive people, is a moral phenomenon, perhaps without a parallel in the whole history of man. During two centuries, they have been in contact with a civilized people. They have seen our improvements, and felt our superiority. They have relinquished their bows, and arrows, and skins, and flint knives, and stone tomahawks, and have adopted our arms and ammunition, our cloths, and many of our instruments of iron and steel. But in their own moral qualities, if they have not receded, they certainly have not advanced. A principle of progressive improvement seems almost inherent in human nature. Communities of men, as well as individuals, are stimulated by a desire to meliorate their condition. There is nothing stationary around us. We are all striving in the career of life to acquire riches, or honour, or power, or some other object, whose possession is to realize the day dreams of our imaginations; and the aggregate of these efforts constitute the advance of society.

But there is little of all this in the constitution of our savages. Like the bear, and deer, and buffalo of his own forests, an Indian lives as his father lived, and dies as his father died. His life passes away in a succession of listless indolence, and of vigorous exertion to provide for his animal wants, or to gratify his baleful passions. He never looks around him, with a spirit of emulation, to compare his situation with that of others, and to resolve on improving it. In a season of abundance, he never provides for a season of scarcity. Want never teaches him to be provident, nor misery to be industrious. This fatuity is not the result of ignorance. Efforts, however ill directed, have not been wanting to teach and reclaim him. But he is perhaps destined to disappear with the forests, which have afforded him food and clothing, and whose existence seems essential to his own.

THE TRAVELLER.

ITALY.

We went to the church of St. Mathews, to see the tomb of Andrew Doria. A young priest lighted a flambeau, and conducted us down a flight of steps into a vault, which consists of a noble arch of white marble, adorned with bass relief, and embossed with gold. It is a splendid sepulture, rather imperial than republican in its character, and destitute of that simplicity which one would wish to find in every thing connected with such a man. He shares a common tomb with the rest of his family.

The solitude and silence of the crypt, hallowed by the dust of the hero; the glare of the taper upon the fretted roof of an antique sculpture, imparted a deep solemnity to this mansion of the dead. On our return to the cheerful light of day, half an hour was spent in examining the church of St. Mathews, the interior of which is among the richest of Genoa, being filled with presents from the Doria family. The gothic front is inscribed with the deeds of the chief who reposes below. We were shocked, while sauntering about the aisles, to come suddenly upon a rude image of the Saviour, large as life, gashed with wounds and besmeared with blood, stretched out like a corpse in one of the recesses, where it had been stowed away as part of the lumber of the church, to be borne through the streets on the next religious festival.

On taking leave of the young priest who conducted us to the vault, and presenting to him the ordinary pittance for his trouble, he seized our hands and pressed them to his lips. In Italy, every thing is done by kissing. Full grown, bearded men, kiss each other on both cheeks, at meeting and parting, as a common salutation—a most unmanly custom, and disgusting to the eye of a stranger. Devotees kiss not only crosses and crucifixes, the faces and feet of statues, but the very doors and steps of churches. A practice so universally prevalent is strongly characteristic of the effeminacy of Italian manners.

POPULAR TALES.

From the Boston Lyceum, for April 15.

THE LAST SUPPER.

"It is enough," exclaimed the excellent old Andrea Verochia, mournfully smiling as he laid his easel aside and leant back in a remote corner of his room; "here I will rest."

He approached slowly and stood before the portrait of his departed wife, Joanna, whose countenance, the pencil of his scholar Leonardo de Vinci had drawn for the figure of an angel; but the ethereal smile was more than the master himself could have portrayed.

"Here—" he again began, just as Leonardo entered and caught the sound of his master's voice. "Look my son," exclaimed Andrea, turning towards him—"With this angel thou hast begun, and it is where I leave off. One man cannot accomplish all, nor should any mortal have the presumption to expect to reach perfection in the noblest arts. But one succeeding another may do much. I lay my pencil down and paint no more! But thou art in the spring-tide of life,—be active and vigorous, and the fame of thy glory shall extend over Italy!"

Enraptured with the praise of his master, Leonardo stood and gazed, with sparkling eyes on the portrait he had just completed.

"There is no self-distrust there!" exclaimed Andrea, penetrating to the soul of Leonardo, and reading the secret pride of the youth. "Now is the time to administer a bitter dose that may assist his better nature in gaining the victory. Yes," continued he, pressing in a friendly manner the hand of his pupil, "yes, my son, thou wilt shine, yet thy brightness will not be like the splendour of noon-day, but like the rising beam of the morning, or the mild lustre of the evening. Look at this angel nearer, is there not some mistake in the fore-shortening? the expression, though at first striking, is too languishing for a 'rapt seraph,' and this curl over the right eye, is not the hair of an unnatural colour, as if it had been burnt by the curling iron? No, Leonardo, this work of thine will not descend to posterity, but thou now knowest of what thou art capable. Attain it, and let this imperfect performance pass away. This is the last stroke of my pencil"—and he drew the brush over the picture, obliterating its beauty and grace with a dark and dingy colour.

The deed was like a thunder-clap to Leonardo. A torrent of angry words trembled on his lips, but he repressed them and was silent, for submission was a lesson his master had long since taught him. He suppressed the gall which vanity had excited, and nobly resolved to subdue his pride and self-conceit.

"I thank you master," he exclaimed, rubbing off the newly added covering of paint—"my imperfections shall be my study." And, as with the eye of a critic he began to examine the picture, he found more to condemn than approve. He now carried his self-dissatisfaction too far; the greater excellence he attained in the art, the more fault he found with his productions. Many of his performances he destroyed. His mind was at first depressed by a sense of inferiority, but by the judicious kindness of his master, the gloom was dissipated, and he proceeded with persevering energy.

"This is all as it should be," exclaimed Andrea, "he is on the road to immortality." And indeed, he now studied his subjects day and night, for he realized, that diligence and application were as necessary as genius and talent.

So taught Andrea Verochia, the Florentine, his beloved pupil. But his last hours drew nigh, and he summoned his scholar to his dying bed.

"Why weepst thou, my son," said he, "in this unmanly manner? It is time that I should go. The earth is ready for its offering and its right."

"And Heaven too," exclaimed Leonardo, kissing the cold hand of his master; "Heaven is waiting for the glorious and immortal spirit to return to its home."

"And canst thou then regret," said Andrea, "that I am going thither? and do I not feel that I leave in thee a part of myself? My mission is finished—my feeble endeavours have shed a dawning light, that from the temple of thy art shall irradiate Italy."

"But what," said Leonardo gloomily, "if it is obscured by Pietro Perugino?"

"No envy my son," gently interrupted the master, "Pietro is a painter as thou art, and is there not room in the same road that we walk for many more? Observe how multiplied and various are the forms of nature, how endless the realm of imagination that the ideal fills. Dost thou believe that there is but one path of eminence in creation? Guard against envy; it is unworthy an artist, and all unworthy the noblest of arts. Cultivate a patient and humble temper; be open to reproof, and above all, my son, learn to subdue thy irritable nature. If thou art suffering under the scourge of oppression, or the bitterness of undeserved calumny—profane not thy exalted art by low and satirical revenge. Virtue creates immortality; genius can only emblazon it to the lower world, the reward is in heaven. There are many," continued he kindly, as he spoke, "who think that the art of covering the canvass makes a painter. The artist produces a picture badly designed, but well enough executed for his own taste, and if it ever goes down to posterity it bears the lineaments of an Egyptian mummy. But he whose own glowing soul animates his works, he will live in the forms his pencil creates, and in the love and remembrance of after ages. But my strength fails, I must depart to that land where the blessed shall meet again. Give me thy hand. Tread with firm and generous steps the path of fame, and honor the excellence of thy competitors."

Leonardo pressed the hand of his master. Andrea gazed upon him with a smile—"Perhaps," said he, "I may be permitted to watch over thy progress. My spirit will hover round thee, and when thou shalt be ready to sink under the persecution of enemies, when injustice or scorn shall point its finger at thee, call aloud and I will hear thee among the palm trees of paradise. Call and I will—" The angel of death interrupted the consoling promise, and the head of the enthusiast sunk on the bosom of his pupil. Leonardo gently closed his eyes and signed the holy cross on his venerable countenance.

From day to day, and year to year, Leonardo advanced in excellence, reflected on the lessons of his master, and modelled himself by his precepts. His universal genius excited the attention of the age. He looked on every object with the eye of a mechanic and an architect; he formed the canal of Mortesana, and conducted the waters of Adda two hundred miles to the city of Milan. He created wonderful automations. In 1479 he was desirous of constructing some new entertainment, in honour of the entrance of Louis XII of France into Milan, and he made an automaton in the form of a Lion, which marched out to meet the King, reared upon its hind legs, and opening its breast, displayed an escutcheon with the arms of France quartered on it. He was master of the art of writing, and his knowledge of music diffused joy and gladness over his darkest hours. As an equestrian, he was unrivalled, and could manage the wildest and most ungovernable steed.

His fame had spread throughout Italy. Ludovico Moro Sforza, Duke of Milan, had invited him to his court by splendid offers. Unwillingly he left his native land, the then fair Florence, and when the disorders of Lombardy took place, he returned again and flourished under the Medici.

At this time, Michael Angelo Buonarrotta had just begun to distinguish himself. Though both of the artists were excellent, their perfections lay in a different line. Leonardo was full of sensibility and imagination—he could devote himself to what was pure and noble, and express the exalted affections of the soul. He was select in his choice of subjects, and unless they were such as to interest his heart, his hand became paralyzed and he abandoned his attempt; he was sensitive and delicate, but his passions when excited were hasty and violent. If Raphael afterwards surpassed him, he had, nevertheless, the glory of striking out the new path.

Michael Angelo studied strength and sublimity rather than beauty, and delighted in being great and terrible. Perhaps he affected to look down on the less bold conceptions of Leonardo—for all the advances of the latter were met with coldness, and he became at length so much disgusted by Michael's unkindness that he again quitted his beloved Flo-

rence, and the spot which contained the ashes of his master, and repaired once more to Milan.

The cunning and proud Ludovico welcomed Leonardo, and spoke soft, and smiling, and loaded him with honors. But the artist shrunk from his professions, for his countenance expressed the low passions of his soul, and these awoke no sympathy in Leonardo's heart.

There was also one who was constantly with the Duke, that regarded the Florentine with an evil eye; it was the Prior of the Dominican convent, and the favourite of the duke. Though his words dropped honey, it was honey mingled with gall. His dark malicious eyes slyly looked out from overhanging eyebrows—his forehead was knit into a thousand wrinkles, and his scornful mouth was covered with a black bristly beard. From the moment that Leonardo beheld him, a cold shudder crept over him, and his horror increased as he gazed upon his fiend-like countenance. Nothing could have been more uncongenial to Leonardo than the society of the duke and his favourite. The darkest gloom took possession of his mind, and it was in vain that he tried to banish it;—in the open air, when he was engaged in his mechanical or architectural works, he sometimes succeeded, for then the bright and glowing colours of nature spread their hue over his feelings—the fresh air invigorated his mind—the showers of the morning, the dews of the evening, the exhalations of the night, under the starry vault of the heavens, all gave impulse to his spirit, and carried him over hill and valley. But when he sat silent, before his easel, then his brow became clouded, his hand unsteady. It is from this circumstance that so many of the pictures of Leonardo are lost—they were often destroyed by himself when they wanted only a few masterly strokes to complete them. The Duke often stood enraptured over the works of the artist, but when he began to feel that he was sure of some new production, and that it would soon adorn his gallery, it had disappeared.

"Now," cried he one day, addressing the painter, "you shall paint my portrait,—that at least will be saved from destruction!"

Leonardo trembled at the order—while the Dominican looked at him with a malicious smile. He well knew the peculiar and sensitive mind of the artist, and he foresaw certain ruin in store for him. How could Leonardo, who delighted to paint nature in its fairest forms, endure such a subject, such a combination of ugliness without a particle of its sublime! The red shock hair, the gray twinkling eyes, the ashy cheek, and ill-shaped head? No, it was impossible—and yet the Duke had commanded it! What should he do, paint or not paint? If he painted, should he flatter the tyrant, and disguise his ugliness by deceitful falsehoods? then would the picture bear no resemblance to the original. If he painted him true to nature, what a specimen of his art to adorn a gallery for countless years! In vain Leonardo called on Andrea his ancient master, he heard him not as he had promised, amidst his grove of palm trees. "Well, then," he exclaimed "I must drink the bitter cup and paint him as he is; it is true the tyrant will read in his countenance his own hateful character, but if I paint a false likeness, I shall justly deserve the scorn of after ages."

With a trembling hand he seized the pencil, while the Duke sat before him in proud importance, and arrayed in princely ermine. The nearer the painting approached its completion, the more dissatisfied became Leonardo. At length the last stroke was given, and it stood finished against the wall, and the truth appeared in its homely and revolting aspect.

"How," cried Leonardo, "shall a picture like this go down to posterity? shall I tarnish all the fame I have acquired, and soil the future greatness of my art by such a specimen? Get thee behind me Satan!" he exclaimed, striking his foot with violence against the pannel. It flew into a thousand pieces!

"So, so, master," cried the Dominican prior, who at that moment entered the room by the Duke's command, to enquire after the picture—"thou art possessed of an evil spirit—I will not interrupt thee," and he hastily retired.

Leonardo awoke from the delirium of his passion.

to the consciousness of the deed. The picture of his Prince he had destroyed, and what could he hope from his mercy. A feeling of self reproach was even more poignant than his terrors. It was his protector, his benefactor, that he had insulted. "What have I done?" he exclaimed, as he gazed upon the fragments and gathered them from the floor, "those eyes have looked upon me with kindness—those colourless lips have spoken words of friendship. O, my Prince, thou mightest have been what thou wouldst to others,—but to me thou wert a friend and benefactor!" and his tears fell upon the fragments of the picture.

At that moment the door opened, and the messenger came to say the Duke required his presence.

Leonardo trembled,—“but I will not call on thee Andrea,” said he to himself, “for I have sinned against thy precepts.” With faltering steps he approached the Duke, whose countenance was dark and lowering. The monk stood beside him with folded hands and affected humility.

“What have you done with my portrait?” said the Prince, with suppressed rage.

“It is destroyed,” replied Leonardo in a trembling voice.

“Destroyed!” cried the Duke, “and who destroyed it?”

“I, myself,” replied Leonardo.

“And why?”

“It was the feeling of his own worthlessness, Sire,” exclaimed the monk, “the consciousness that he could not do justice to merit like yours.”

“It is false!” exclaimed Leonardo.

“False!” said the Duke, approaching him, his face pale with rage—“speak! what was your motive?”

“Madness!” answered Leonardo firmly, “folly and want of self-command.”

The Duke stood silent for a moment,—“whatever it was,” said he proudly, “perhaps you have done well, I forgive you if you accept my conditions.”

“Name them, my Prince,” said Leonardo, “command me through fire and water and you shall be obeyed. Make me undergo any torments and I will not complain. I will work day and night to be restored to your confidence, and render myself worthy of your goodness.”

“Be it so then,” said the Duke, “you shall no longer have your attention distracted by the things of the world, your art shall be consecrated to holy purposes. The Refectory of the Dominican Cloister needs decoration, and your pencil shall be devoted to this work. I will give you a year to accomplish it.”

The Prior was astonished at the calmness of the Duke—he had expected to see the storm burst and overwhelm the artist, but he was incapable of estimating the consequence which genius and talent bestow. The Florentine was already the ornament of the age, and commanded the respect of a nation. The monk cast a malicious glance upon him, and Leonardo felt its force; it was indeed hard for him to be shut up with such a man; to serve him with his noble art, and to be subject to the petty vexations he might inflict, and to which he knew his malice was fully equal. But he determined to bear with fortitude the evils he had drawn upon himself, and labour to redeem the confidence of the Duke.

But what subject should he select for this work? it was a new perplexity. One fine day, when the passion-week had just begun—Leonardo was walking in the beautiful garden which is near Milan. His mind was pondering upon the subject of his painting. The spring had already awoke the young blossoms, from their winter’s sleep, and the trees and hedges were crowned with foliage. “I will paint the season sacred to our Lord!” he exclaimed—“his last supper with his beloved disciples—would that my pencil was equal to the subject!”

The sun was just setting as he returned home, his mind filled with the vastness of his project. Unconsciously he arrived at the cloister of the Dominicans; the pealing tones of the organ struck upon his ear, while the lofty roof of the church resounded with the chanting of the monks. The solemn sounds had stilled the tumult of his breast, and his heart was filled with sweet emotion. “O thou!” he cried, “who died for the sins of the world, how shall my feeble hand pourtray thy glory? how shall I paint that last sorrowful night when the apostles

gathered around thee!” As he thus thought on the subject, it opened to his mind; he beheld the long table and the Saviour in the midst of his disciples,—the last rays of the evening shining on his head—a mild radiance beaming from his eyes, at the moment when he said, “*Verily I say unto you, there is one of you shall betray me!*” Leonardo was no longer in doubt; he began his work, and the Refectory was closed to all but himself and the Prior while he painted. But the Dominican well understood the art of tormenting, and it required all the self possession and resolution of the artist not to commit some extravagance—yet he persevered in his labours.

With what beauty did the group spring to light! how fresh, and yet how soft the colouring! but it was indeed an arduous task. The spring had come round, the appointed time was near, and two of the heads remained unfinished. One was the Saviour’s, the other that of Judas. In vain Leonardo seized his pencil and prayed for divine inspiration to paint the Saviour of the world. His touch was cold and formal. Judas, too, could human nature pourtray the betrayer of his Lord? The last week arrived—the Dominican knew that the heads remained unfinished—he exulted in his triumph over his victim, and felt that his ruin was certain. Success or death had been the conditions, and they were fast closing upon him.

It was now that Leonardo thought of the promise of his master—“Andrea!” he cried, “let my voice reach thee among the shade of the palm trees!” Then confidence took possession of his mind; a thousand bright images floated before his imagination, and he again seized his pencil—not as before was his work unsuccessful.

The day arrived—nobles and priests were assembled—Leonardo appeared, and his friend Ambrosio with him, bearing the picture. The figure of the Saviour was completed, and all contemplated it with pious rapture—but when they turned to Judas they beheld the head of the Dominican Prior.

“It is the monk of the cloister!” exclaimed the multitude, and young and old by whom he was equally hated, joined in the shout.

But Leonardo felt no exultation, he knew that Andrea would have condemned such revenge, and he shut himself in his room and forgot the homage of the world. It was the last burst of passion.

The original picture of the Last Supper, in the refectory, gives to the traveller but an indistinct idea of its glory—but the painter and the engraver have transmitted to posterity many thousand copies of it.

Leonardo de Vinci, in 1520, at the age of seventy years, returned to France, in consequence of the pressing invitation of Francis I. His health was feeble, and the king often came to see him at Fontainebleau.

One day when he entered, Leonardo rose up in his bed to receive him, but fainted from weakness; Francis supported him, but the eyes of the artist had closed forever, and Leonardo lay encircled in the arms of the Monarch. P. P.

VARIETY.

OYSTERS. The following specimen of refined and ludicrous humanity, is taken from Dr. Kitchen’s Cook’s Oracle:

The true lover of an oyster, will have some regard to the feelings of his little favourite, and will never abandon it to the mercy of a bungling operator, but will open it himself, and contrive to detach the fish from the shell so dexterously, that the oyster is hardly conscious he has been ejected from his lodgings, till he feels the teeth of the piscivorous gourmand tickling him to death.

THE REWARDS OF WAR. The Duke of Marlborough, observing a soldier leaning pensively on the butt-end of his musket, just after victory had declared itself in favour of the British arms, at the battle of Blenheim, accosted him thus: “Why so pensive, my friend, after so glorious a victory?” “It may be glorious,” replied the brave fellow, “but I am thinking, that all the human blood I have spilt this day, has only earned me four pence.”

INVENTIONS. A monk invented gunpowder; a bishop, bombs; a Benedictine, artillery; and a

Capuchin (Father Joseph) first suggested the introduction of paid spies in the police and *letters de cachets*.

EFFECTS OF DINNER. A dinner is remarkable for the waveless calm that it spreads over the most stormy mind. Let a man sit down to table in a passion, and he all at once finds himself imbued with its social spirit; with the very first mouthful, his voice sinks from the tempestuous tones of the north wind to the melodious modulations of the zephyr—his face softens down into an ingenious simper, and finally he becomes as purely angelic as the imperfect limits of humanity will allow. The hypochondriac in Nightmare Abbey, who delayed cutting his throat till he had previously discussed a beef steak and bottle of port, only exemplified a general rule. Dandide deferred his suicide for a similar reason, and was astonished to find, after the digestion of a creditable meal, how reconciled he had become to existence. Talk not to us, then, of care and its countless attendants; life knows but one pleasure and one sorrow; a dinner or no dinner.

A woman in the country went for a pound of candles, when, to her astonishment and mortification, she was informed that they had risen a penny in the pound since she last purchased them: “Why,” says she, “what can be the cause of such an exorbitant rise as a penny?” “I can’t tell,” says the man, “but I believe it is principally owing to the war.” “Why, curse them,” cried she, “do they fight by candle-light?”

THE ROYAL FAMILY OF RUSSIA. The number of assassinations in the Royal Family of Russia, exceeds any thing in history. Ivan IV. killed one of his sons, and died in a cloister. Feodor I. did not reign till he immolated Demetrius; the Monk Ortopine strangled Feodor II. Wasse sacrificed him in his turn. Peter the Great deposed his brother Ivan—condemned his son Alexis to death, repudiated his wife, and massacred eight thousand of the Strelitzers. The Empress Elizabeth toro the young Ivan (the legitimate prince) from his cradle, shut him up in a fortress, and caused herself to be proclaimed empress. Her successor, Peter III. was murdered by his wife Catharine, whose successor, Paul, was murdered with the privy of his son, the Emperor Alexander, who recently lost his life, no body knows how.

It has been a prevailing notion among sailors that Friday is an unlucky day of the week, and few can be found willing to go to sea on that day. To know that Friday does not always portend ill, this useful class of people may be told that Christopher Columbus embarked on his voyage for the discovery of America on Friday, August the 3d, 1492; and landed on Turk’s Island (the first land made) on Friday, October the 12th, of the same year.

The Duke of Angouleme wishing to walk in the park of the Duke d’Infantado, of Bustrago, the steward was desirous of offering some exhibition; and he caused the various flocks of Merino sheep which were fed in it, to be collected upon a hill. There were 45,000 of these animals, who were distributed and put into motion by their dogs and keepers, being made to pass before the prince in the way of an army in review. And, behold in this single scene—Spain! On one side immense riches collected in the hands of a single lord; on the other, a people possessing not an inch of ground; and who, covering their nakedness only with a tattered cloak, seem to be devoted by the laws to a perpetual idleness and stationary apathy.

[Owenard’s Memoirs.

STATUES. Cato the censor used to say to such as expressed their surprise, that so many obscure persons, of no merit at all, should have statues, and he should have none; “I had rather it should be asked, why no statue has been erected to Cato, than why there has.” [Plutarch’s Lives.

The editor of a southern paper being charged with having, contrary to the established custom, taken compensation for announcing a death in his paper, assures his subscribers that “it would afford him pleasure at all times to insert any notice of the kind gratis, and especially should it concern any of the patrons of his paper.”

ALBANY:

SATURDAY, APRIL 28, 1827.

☞ "Superstitious Notions, No. I." by our old friend G. shall be inserted in our next.

VIVIAN is received. We will tell him next week whether we will give him a place; and in the mean time would caution him against writing "in haste;" it is a bad excuse for a bad essay—particularly when the subject does not demand it, and the author has time for reflection.

☞ ROBERT MEIGHAN, Esq. of York, Upper Canada, will act as agent for the American Masonic Record, and Albany Saturday Magazine, in that place and its vicinity.

☞ Subscribers in this city, who contemplate changing their residence on the 1st of May, will please to give us information of their intended location, in order that they may be regularly served after that time.

SCENES IN THE WEST. Since the western humbug has lost its novelty, and it is ascertained beyond a doubt that the inflammatory coinage of "the proprietors" and the Lewiston gentlemen is chiefly, if not wholly, made up of "sound and fury," there is a disposition generally evinced to treat the absence of Morgan in a calm and deliberate manner. We no longer receive papers from every quarter filled with anathemas against the masonic fraternity. The ill-advised meetings which fostered the excitement have ceased; and with the exception of the interference of demagogues, in a few instances, in the election of town officers, the mighty fever appears to have lost the main of its influence. We are glad to see the people coming to their senses again. Hasty and intemperate measures, while they establish bad precedents and tend to the dismemberment of society, afford few facilities for discovering the guilty. We do not believe the fate of Morgan will ever be discovered, unless a calm and dispassionate procedure be persisted in. Blustering may make a great noise, but there is always more sound than substance in it.

Our readers will find in another column the presentment of the Grand Jury for the county of Niagara, relating to the abduction of Morgan. It was ascertained by that Jury that Morgan had not been upon the Ridge Road, and the appearance in Fort Niagara was so satisfactorily accounted for, that it was admitted as a certainty that Morgan had not been there. At this result a few of the courtiers of popularity in the west affect to be very much surprised, and they talk about the truth of stories being self-evident, when the only "self-evident" portion of them is their falsity. With such men it would be useless to contend; they have already prostituted their abilities to the last extent, and it would seem as if they were like the fellow in the *School for Scandal*, who imagined that to tell one truth or do a just deed would bring certain destruction upon his worldly prospects.

The feud attempted to be created between masonry and politics cannot be too fervently deprecated; nor can those who seek personal aggrandizement by means of it, be too severely censured. Masonry does not interfere in the political movements of nations, and it is the extent of absurdity to attempt a connexion or a breach between them. We already have specimens of the effects of such measures.

One town at the west rather than put masons in office has elected a man to the two-fold office of commissioner and inspector of common schools, *who cannot write his own name!* and another to the same office, *who is so often intoxicated as to be unfit for any business!* These are literal facts; and such are the consequences of the excitement created for the benefit of the speculating gentry. How must the parents of that town feel, while the education of their offspring is intrusted to the care of such men? The one a mere ignoramus—a perfect dolt; the other so beastly intemperate that the civil law, if exerted, would place his own offspring beyond the deadly influence of his protection.

Some editors are very much disposed to give but little credit to the recent declaration of Sir Walter Scott; and if they needs must yield their belief, will war against Sir Walter's moral reputation. The New-York Saturday Evening Gazette has "some slight suspicion" that the story is a hoax, and says that "that species of fun is so common now-a-days that we should not be surprized if some jocose fellow was laughing in his sleeve at the gullibility of the world." And continues—"We really cannot bring ourselves to think that a man of Sir Walter Scott's exalted character and intellect could exhibit such puerility; so much caprice; so little respect for himself and the public as to disclose in a moment of careless conviviality, what he has strenuously endeavoured to conceal for so long a period. To think that the resolution of years should be broken in a mere frolicsome sally, is to us incredible. If so, we must ascribe all to wine; it has broken more potent spells than that: it has disclosed more important secrets too. It was a pity the inquisitive caterers for the public did not before seize some happy moment of Bacchanalian indulgence to coax this secret from the long-suspected UNKNOWN. Sir Walter is made to say in the speech alluded to that he would not enter into the reasons which determined him to keep so long silent; "perhaps," he adds, "caprice had a great share in it." Verily we believe it had a very great share."

Now, it is not uncommon for caprice to be associated with genius; and if this be the case in the present instance, it is no criminal affair. But the probability is, as the language of Sir Walter leaves room to infer, that he had other motives for concealment. Perhaps he doubted the success of the works in the first instance; and having assumed the mask without evil intentions, was not disposed to throw it aside to gratify his vanity. The National Advocate observes upon this subject, that "Scott had a name as a poet before Waverly was begun, and if he felt doubts about the success of that novel and its fellows, he might very easily have known that his whole reputation would have gone down. But it may be asked why he concealed his name after the popularity was established? It certainly could scarcely arise from a want of moral feeling which might be supposed to influence him to tell the truth. The safety of no man's reputation depended on the concealment. On the other hand it is very plain that ordinary men, possessing but the usual share of vanity, could not have kept the secret as Scott did. If the author of Waverly had been a vain man, the declaration would have been made long since. It was not vanity—it could not be want of moral feeling that influenced his conduct. What was it then? Perhaps a love of mystery, or caprice which is sometimes associated with genius."

☞ Mr. Luther Pratt, principal of the Juvenile Academy, and author of the Juvenile Assistant, &c. &c. proposes to publish in this city a periodical journal, under the title of the *Juvenile Magazine; or Children's Monthly Visitor*. It is the design, of the work, "to excite in the youth of our country, a laudable emulation in the pursuit of useful knowledge; to inculcate the moral and social virtues; and above all, to inspire the tender mind with a due reverence and affection for the Supreme Being." The elementary principles of science will be illustrated in a plain and easy manner; and such miscellaneous matter as shall be calculated to strengthen the morals and encourage the laudable propensities of the youthful mind, will be introduced into its pages. It is intended to arrange the work in such manner that it may with benefit be introduced into schools, as a class-book. The utility of a well conducted work of this description, can scarcely be doubted; and Mr. Pratt submits his plea to the consideration of parents, guardians and teachers, and respectfully solicits their patronage. The Juvenile Magazine will be published in monthly numbers of 36 18mo pages, and be delivered free of postage to subscribers in Albany, New-York, Newburgh, Poughkeepsie, Catskill, Hudson, Troy, Lansingburgh, and Waterford, for one dollar and fifty cents a year, payable in advance; or twelve and a half cents, to be paid on the delivery of each number, as may best suit the convenience of subscribers.

☞ We have received the first number of a new publication entitled *New-York Saturday Evening Gazette*, edited by T. W. Clerke and S. Paine. It is to be devoted to news, literature, masonry, mechanics, &c. The contents of the present number are interesting, and the editorial matter written with spirit. It is printed in the folio form, on an imperial sheet, for two dollars and fifty cents, per annum, payable in advance.

CHIT CHAT.

The morals of society depend more upon early education than any other thing. A New-Jersey paper says Newark has voted this year \$800 for her free schools; Trenton \$300; Elizabeth \$300; Paterson \$400.—For several weeks past, (says the Trenton True American,) a considerable religious excitement has prevailed in this city, the effect of which has been the admission of twenty-seven persons to the church membership.—There are some counterfeit twenty dollar bills of the United States Bank in circulation. They purport to be made payable at Charleston Office, in favor of Jos. Johnson, President. They bear date 1st February, 1820, and are signed by L. Cheves, President, and Sona Smith, Cashier. The plate is marked with the letter M. The signature of Mr. Cheves is very well executed—that of Mr. Smith and of Mr. Johnson, but indifferently—but the most perceptible defects consist in the indifferant manner in which the other blanks are filled up when compared with the genuine notes.—Thirty barrels of wine have been made from the grapes of the country, by a farmer near Dayton, Ohio: and one near Germantown, made one hundred barrels.—The Ladies' Fair, at Baltimore, has produced upwards of \$1500, for the benefit of the Greeks.—A poor melancholy woman, by the name of Catharine Gander, hung herself by a grape-vine from a tree, in Chatham, N. C. last week, and was found dead.—Miss Kelly is travelling westward. She was last at Louisville, and was engaged at Cincinnati, Ohio. These western cities are rapidly becoming fashionable.—We were yesterday, says a Charleston paper of the 11th, politely presented by a friend with two *Strawberries*, each measuring in circumference upwards of four inches, and weighing 3lb. 20gr. They are the growth of a garden in the neighbourhood of Cannonsborough.—A tree of gigantic size has lately been felled in Berks County, Penn. It was one hundred and seventeen feet in height and sixty-four from the butt to the first branch, and its greatest circumference was twenty feet seven inches. It was perfectly sound, and from the concentric circles at the end of the trunk, was estimated to be three hundred years old.—The *salix herbacea*, or dwarf Alpine willow, common in Norway, is so diminutive

a plant, that half a dozen trees, with all their branches, leaves, flowers, and roots, may be compressed between two leaves of a pocket-book. A modern traveller said that he had placed twenty of them between two pages of a duodecimo volume.

There are said to be 3,664 languages in use in the world; of which 987 are Asiatic, 587 European, 275 African, and 1624 American languages and dialects. The winter has been extremely severe and tempestuous in Prussia. In some parts of the province of Glatz, the snow has been so deep that the inhabitants of some of the villages have been obliged to form tunnels under it, in order to get to and from their dwellings. A gentleman having a remarkably long visage, was one day riding by the school, at the gate of which he overheard young Sheridan say to another lad: "That gentleman's face is longer than his life." Struck by the strangeness of this rude observation, the man turned his horse's head, and requested an explanation. "Sir," said the boy, "I meant no offence in the world; but I have read in the Bible at School, that a man's life is but a span, and I am sure your face is double that length." The gentleman could not help laughing, and he threw the lad sixpence for his wit. A little treatise by Aristotle, on the length of the lives of animals, has recently been republished at Goettingen, with notes by Professor Schultz. These notes contain a summary of all that is known on the subject by the moderns. M. Schultz gives an account of some very curious experiments on *cercaria ephemera*; and although, of all vertebral animals, birds are those which have the shortest lives, he brings forward, in opposition to these beings of a few hours, the instance of a parrot, carried in 1633 from Italy to France, which was still living in 1743, and which, consequently was above 110 years old. He also quotes the no less remarkable fact of a fish, taken at Kayerslautern, in 1467, in a reservoir, where it had been deposited 267 years before; as appeared from a ring of copper with which its head was encircled. Whales, which, according to Buffon, live for 1,000 years, are not forgotten; but M. Schultz prudently observes, that the celebrated naturalist may perhaps have been deceived on that point. A. M. Lagnel has constructed a machine, which is at present at work on the Rhone, by which he contrives to tow vessels against the stream at the rate of three quarters of a league in the hour; the ordinary rate of vessels towed by horses being two leagues and a half, or three leagues in a day. He has presented a model of his machine, on the scale of an inch to a foot, to the French Academy of Sciences.

THE MASONIC HALL.

This splendid edifice will soon be completed. It is built in the Gothic style of architecture, and reminds us in its external appearance of those hallowed monuments of antiquity with which the old world abounds. It is executed with care, and exhibits considerable taste if not critical correctness in its construction. Its numerous rooms are to be made use of as places of meeting for various Masonic lodges in the city, affording such accommodations for the purpose as are seldom offered any where. The imposing external appearance of the edifice is a great ornament to the city, and particularly to Broadway. It gives an air of grandeur to the neighbourhood in which it is situated, that we did not expect it would assume for many years. Nothing more clearly displays the progress of the arts in New-York than the various public buildings which are beginning to adorn every portion of it. A taste for architecture is always co-existent with a high state of refinement. When the edifice is completed we purpose giving a minute description of it. [N. Y. Sat. Eve. Gaz.]

MISS. WRIGHT. The philanthropist mania is spreading rapidly among the blue stockings and the philosophers. Mr. Owen, notwithstanding his very untoward prospects, has not altogether given up the ship. Who has not heard of the celebrated Miss Frances Wright who published a book in the United States one day, in which she belaboured this country with praise and told a horrible story of the burning of a steam-boat in one of the western lakes? This lady is one of the learned, but she has given over writing books. She has taken a covey of blacks under her protection and intends, in the wilds of Kentucky, to raise up a new Africa. Whether she will succeed better in whitewashing the blacks than she did in blackballing the English Tories is still in the womb of futurity. A black settlement, however, may succeed better under petticoat government than even a white colony under Mr. Owen's "circumstances" and "parallelograms." All these attempts to remodel both black and white society are

very benevolent experiments, which, should they fail, will still be useful to the philosopher and the historian. We hope Miss Wright is yet right.

[National Advocate.]

FOREIGN NEWS.

From the New-York Enquirer.

We find nothing in our files of English and French papers by the Liverpool and Havre packets which gives intelligence of interest not received by the Columbia from London; but there is a mass of miscellaneous news from the continent, and notices of local events, and much readable matter, which we shall prepare at leisure. Affairs in Portugal are by no means settled, neither is it apparent that the rebels are utterly discomfited; they have been defeated in several actions, but they seem to rally with fresh spirit. This must arise from facilities afforded by Spain, and by the jealousy entertained towards their English friends. The priests take an open stand against the charter, and seem to be flush of money. The queen secludes herself, and is in constant fear of being poisoned. She drinks no water but such as has been three days under her own lock and key, and then only after seeing its effect on the servant who attends her during that time. Yet, from the treasures which she commands, and the faithful counsellors whom she consults at midnight, she is enabled to busy herself with the destruction of the new representative system not only on the northern and ill-guarded verges of Tras-os-Montes and Galicia, but in the capital, under the very nose of the Executive, though supported with all the aids of English forces, and the prudence of the diplomatic corps. It was discovered that a company of the 9th cavalry were preparing to desert, and upon their seizure it was found that they were furnished with an almost wanton abundance of money and equipments.

Sir Henry Clinton, commander of the British and Portuguese forces, seems to be popular, but the Portuguese utterly refuse being commanded by Marshal Berresford. The revolution is by no means ended.

We have another fact to state, which places the morality and taste of royalty in an entire new light.

The Prince de Pucklar Muskan of Prussia, who married a daughter of the late Prince de Hardenburg has divorced his wife for the purpose of marrying the ex-queen of Hayti, widow of Christophe. The Americans who have visited Port-au-Prince in her time will remember that she is a fat, greasy wench, as black as the ace of spades, and one who would find it difficult to get a place as a cook in this city. So much for royal taste.

If the great naval force at sea from Egypt, only shares the fate of preceding expeditions, the Greeks have nothing to apprehend. They have great confidence that the Turks will never again obtain possession of their country. The French and English ministers at the Porte have represented to the Reis Effendi that it is the general wish of the Christian Powers to have peace.

Twenty-five Englishmen have arrived at Warsaw for the purpose of constructing machines to work the Polish mines.

The Sunday Times says, it is rumored in the court circles that a disagreement—not likely to be reconciled—has occurred between two most exalted personages in Ireland, who, since their marriage, were distinguished for connubial happiness. The exalted lady possessed every requisite to confer happiness, having intellectual attainments and wealth. Certain it is, that she has left Ireland, and rumor alleges that she will retrace her steps to a more distant land. It is said that the cause of disagreement was the intrusion into domestic arrangements of some near relatives to the noble lord.

Can this lady be the Marchioness of Wellesley, late Mrs. Patterson, of Baltimore? "Retracing her steps to a more distant land" looks like it. Happiness is not always the fruits of rank and wealth.

ROYAL WHIMS. Amongst the articles at the sale of the late Duke of York's effects we find two items "which provoke a smile." "Twenty walking sticks, and sixteen whips." One would think his Royal Highness had been a dealer in these things. They show how sadly put to it these weal-

thy idlers are to get through their money. It is probable that in other and costlier matters there was the same superfluous indulgence. Indeed, with regard to princes, we might make the foregoing items a standard for computing the difference between luxuries and necessities. Take the common necessities of life (such as a walking stick) and multiply them by twenty, and you will get about the actual amount of the possessions of these royal excrescences.

THE GLEANER.

THE FRENCH CHURCH.

The following statement of the Roman Catholic and Protestant Clergy in France, with their respective stipends, paid by the French Government, is extracted from documents laid before the Chambers by the Ministers of the interior.

Roman Catholic Clergy.—The Established Church of France is composed of four cardinals, one of whom the archbishop of Paris, has 100,000 francs yearly, about \$20,000; the others 30,000 each, about \$6,000. There are 13 archbishops, besides the metropolitan, who receive each 25,000 francs, \$5,000; 66 bishops, each 15,000; 174 vicar generals, each from 2,000 to 4,000; 600 canons or prebendaries, each from 1,500 to 2,400; 2,917 cures or rectors, each from 1,100 to 1,600; 22,316 desert-vants or curates, each from 750 to 900 francs per annum. To the colleges for educating the young clergy, \$40,000 francs, or \$158,000; and for repairing and building churches, 200,000, or \$400,000. The whole expense of the establishment, including annuities to the infirm clergy, is estimated at 25,850,000 francs, or \$5,130,000.

Protestant Clergy.—The Calvinists have three pastors, who receive yearly, each three thousand francs; 28 who receive each two thousand; 69 who receive each one thousand five hundred; and lastly 195 pastors, each one thousand—total Calvinist ministers 295. There are two Lutheran pastors, each receiving three thousand francs; 25, each two thousand; 21, each one thousand five hundred; and 175 pastors, each one thousand—total, 220 Lutheran Ministers. Sum total paid to the Protestant Clergy, six hundred and twenty-three thousand francs, (one hundred, twenty-four thousand and six hundred dollars.) Twenty-four thousand francs allowed for their colleges, and fifty thousand for places of worship—sum total for the Protestant religion, one hundred thirty-nine thousand and four hundred dollars. This sum is paid by the French government; but it must also be remarked, that there are many Protestant clergy in France who do not receive any stipend from the government, it being a regulation not to make any grant where the Protestant population does not amount to a thousand.

It will be seen by the foregoing statement that the proportion of the expense of the Protestant, to the expense of the Catholic Church, is about one to fourteen. Comparisons also may be made between the Catholic Clergy in France and the Protestant Clergy in England, by which it will appear that the English clergy have not much greater emoluments, considering the cheapness of living in France, and that a French ecclesiastic has no family to provide for; his stipend is spent upon himself alone. Some of our bishoprics and large livings may perhaps form an exception, but the inferior clergy in France are decidedly better remunerated than the same body of most laborious and useful men are in England.

MORGAN, &c.

PRESENTMENT

Of the Grand Jury of the county of Niagara, impaneled at the April term of the Court of Oyer and Terminer, for said county.

The Grand Jury for the body of the county of Niagara leave to represent to the Honorable Court, that they have been charged by his Honor the Judge, especially to inquire into the outrage (said to have been committed) upon the person of William Morgan, and his forcible abduction from the county of Ontario to parts unknown, as well as into the circumstances alleged to be connected therewith, have taken the subject under serious consideration, and have made diligent inquiry in relation thereto.

That every person supposed to have knowledge of this transaction might be produced before the Grand Jury, three members of the Lewiston Committee, who have been exceedingly active in their exertions to bring to light the perpetrators of this high handed outrage, were examined by the Grand Jury. This committee were furnished with subpoenas to compel the attendance of witnesses, and thirty-one persons were examined at their summoning, in addition to fifteen others, produced by the District Attorney. That having patiently and diligently investigated the subject, and having heard all the testimony offered to them, are confirmed in their opinions that no facts have been disclosed whereby they as Jurors, upon their oaths could impeach or make presentment or indictment against any citizen for the offence aforesaid, or for any offence connected therewith.

The Grand Jury can assure this honorable court, that they in common with every good citizen of this county, highly disapprove of the conduct of those, whoever they may be, that have in any manner been connected with the aforesaid outrage.

Packard, Solomon Hersely, Gordon Davis, John Gould, Amos S. Tryon.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO THE GRAVE.

O Grave! if I had laid
My infant smiling form in thy embrace,
Then had the weight of sorrow's tempests staid,
Which beat like winter on my lengthening days.

Then had some precious tears
Dropped like the dews of heaven above my head—
Sad consolation!—but 'tis all endears
This life,—that some will weep when we are dead.

I had not then the frowns
Of tyrant fortune, nor of slavish men,
To banish the too transient peace which crowns
The brow of Hope, who smiled so beautiful then.

And the green turf had been
An altar on whose head fair hands would fling
Garlands of flowers, and wreathes of evergreen,
To soften down their tender sorrowing.

O Death! thou hast no sting,
When one lays down young, aimless and beloved;
Who would not rather hide beneath thy wing,
Than range the desert waste my life hath proved?

And yet, if I had laid
My infant smiling form in thy embrace,
The storms of darkening destiny had staid,
Which beat like winter on my riper days.

But now thou art to me
A dreary home,—a dark oblivious spot,—
Where I must sleep, like those the stormy sea
Rolls its dark billows over,—aye forgot.

THE LAST TREE OF THE FOREST.

BY MRS. HEMANS.

Whisper, thou Tree, thou lonely Tree,
One, where a thousand stood!
Well might proud tales be told by thee,
Last of the solemn Wood!

Dwells there no voice amidst thy boughs,
With leaves yet darkly green?
Stillness is round, and moonlight glows—
Tell us what thou hast seen.

"I have seen the forest-shadows lie
Where now man reaps the corn;
I have seen the kingly chase rush by,
Through the deep glades at morn.

"With the glance of many a gallant spear,
And the wave of many a plume,
And the bounding of a hundred deer
It hath lit the woodland's gloom.

"I have seen the knight and his train ride past
With his banner borne on high;
O'er all my leaves there was brightness cast
From his gleaming panoply.

"The pilgrim at my feet hath laid
His palm-branch 'midst the flowers,
And told his beads, and meekly pray'd,
Kneeling at Vesper-hours.

"And the merry men of wild and glen,
In the green array they wore,
Have feasted here with the red wine's cheer,
And the hunter's song, of yore.

"And the minstrel, resting in my shade,
Hath made the forest ring
With the lordly tales of the high Crusade,
Once loved by chief and king.

"But now the noble forms are gone,
That walk'd the earth of old;
The soft wind hath a mournful tone,
The sunny light looks cold.

"There is no glory left us now
Like the glory with the dead:—
I would that where they slumber low,
My latest leaves were shed."

Oh! thou dark Tree, thou lonely Tree,
That mournest for the Past!
A peasant's home in thy shades I see,
Embower'd from every blast.

A lovely and a mirthful sound
Of laughter meets mine ear;
For the poor man's children sport around
On the turf with nought to fear.

And roses lend that cabin's wall
A happy summer-glow;
And the open door stands free to all,
For it recks not of a foe.

And the village-bells are on the breeze
That stir thy leaf, dark Tree!—
How can I mourn, amidst things like these,
For the stormy Past with thee?

A BLUE STOCKING.

BY FITZ-GREENE HALLECK.

Her Leghorn hat was of the bright gold tint
The setting sunbeams gave to autumn clouds;
The riband that encircled it as blue
As spots of sky upon a moonlight night,
When stars are keeping revelry in heaven;
A single ringlet of her clustering hair
Fell gracefully beneath her hat, in curls
As dark as down upon the raven's wing;
The kerchief, partly o'er her shoulder flung,
And partly waving in the wind, was woven
Of every colour the first rainbow wore,
When it came smiling in its hues of beauty,
A promise from on high to a lost world.
Her robe seemed of the snow just fallen to earth,
Pure from its home in the fair winter clouds,
As white, as stainless; and around her waist
(You might have spann'd it with your thumb and finger)
A girdle of the hue of Indian pearls
Was twined, resembling the faint line of water
That follows the swift bark o'er quiet seas.
Her face I saw not—but her shape—her form—
Was one of those with which creating bards
People a world of their own fashioning—
Forms for the heart to love and cherish ever—
The visiting angels of our twilight dreams.
Her foot was loveliest of remembered things,
Small as a fairy's on a moonlit leaf,
Listening the wind-harp's song, and watching by
The wild-thyme pillow of her sleeping queen,
When proud Titania shuns her Oberon
But 'twas that foot which broke the spell—alas!
Its stocking had a deep, deep tinge of blue—
I turned away in sadness, and passed on.

SKELETONS.

It chills the gayest heart to see
The playthings which the revelling worms
Make of the godliest human forms—

* * * * *

Behold the skeletons of wit—
Of Shakspeare, Milton, Gray, or Pitt!
Think (fancying thou see'st them) how
Burn'd once the orbs so vacant now!

The first—how spiritually fired
With all the sacred Nine inspired!
Diffusing, in his earliest youth,
By Avon's stream, the light of truth;
And after, when experience taught,
The light of nature and of thought!
Full from his mind, o'er History's page
Pouring enchantment's mystic spell;
The gifted Bard of every age—
Imagination's couple!

The second!—yet no second he—
How bright the eye that could not see,
O'er his expansive brow when shone
The effulgent glories—still his own:
Oh! who could track that spirit's flight
To the empyreal heavens on high,
The worlds of uncreated light,
Where he beheld the angelic fight?
Then, with inspired soul and gifted eye,
Pierced downward, through chaotic night,
To the deep hell where the damn'd spirits lie!
Saw the fierce council of Satanic pride;
Heard the arch fiend disclose his subtle plan,
Whereby was wrought the primal Fall of Man!

The Third!—within that hollow space
How glow'd the fire of minstrel grace!
And, ever and anon, how came
The thunderbolt of lyric flame!
To think those eyeless holes contain'd
The balls where wit and genius reign'd—
That mused o'er Baton's distant towers,
That went o'er ruthless Edward's powers,
That contemplated wrapt in shade,
The garden where the dead are laid!

And fourth!—how Britain's senate hung
On every accent of his tongue!
How every eye to him was turn'd
While from his lips those accents burn'd!
Time was—(our country's genius knows,
Through all disguise her friends and foes)—
Time was, our country's genius lit
The eyes of her immortal Pitt,
The friend of freedom!—for if he
Had chain'd the wing of Liberty,
Nay, sullied but one heavenly plume,
I'd write my "shame" upon his tomb;
Shame—were he not the champion true
Of a free throne and freedom too!
Alas! that he, who ne'er can die,
Should ever thus in bondage lie;
Forget the land that gave him birth,
Forget the interests of earth.
Forget his own surpassing fame—
Glory, that beckon'd him to stay,
But could not, with his magic name,
Immortalize his shroud of day!

STANZAS.

Like the young spring buds, sweet and bright,
And like the lark, and like the light,
And like the wind, and like the wave,
E'en such is Hope: Buds find a grave,

The lark gives place unto the owl,
The light is quenched in darkness foul,
The winds are fickle, waves betray,
And hope is falser far than they.

And like the dew upon the thorn,
And like the bluish break of morn,
And like a vessel harboured well,
And like a song, and like a spell,
E'en such is Man: the dew exhales,
The morning's past, the vessel sails,
The song is sweet but swiftly flies,
The spell is burst and man he dies.

And like the azure skies of June,
And like the sun, and like the moon,
And like a bowl, and like a smile,
And like a taper's burning pile,
E'en such is Life: the charged sky rains,
The sun goes down, the pale moon wanes,
The bowl is drained, that smile's the last,
The taper's spent, and Life is past.

LACONICS.

BY SIR WILLIAM TEMPLE.

It is in no man's power to avoid enemies; they injure by chance in a crowd sometimes, and without design; then hate always whom they once injured.

Many friends may do one little good; one enemy much hurt. Whoever can die easily, may live easily.

Sharpness cuts slight things best; solid, nothing cuts through both weight and strength; the same in the use of intellectuals.

Man, is a thinking being, whether he will or no; all he can do is to turn his thoughts the best way.

The greatest pleasure of life is love; the greatest treasure is contentment; the greatest possession is health; the greatest ease is sleep; and the greatest medicine is a true friend.

Dying is a piece of our nature as well as living; therefore, if not content with one, we cannot be perfectly so with the other.

Sometimes, in one age, great men are without great occasions; in another, great occasions without great men; and, in both, one lost for want of the other.

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

A DISCOURSE

ON THE BEST WAY OF DEFENDING FREEMASONRY.

BY THADDEUS MASON HARRIS.

"With well doing ye may put to silence the ignorance of foolish men. As free, and not using your liberty for a cloak of maliciousness, but as the servants of God."

[1 PETER, II. 15, 16.]

I shall use these words, my brethren, as the motto to a discourse, wherein I propose, after adverting to the injustice of those imputations which are brought forward against freemasonry, briefly to consider the way in which we can best preserve it from misrepresentations, and best defend it against censures.

Whilst we feel our minds enlarged by its discoveries, our hearts expanded by its charities, and our satisfactions increased by its influence, we cannot grow indifferent to its interests, nor hear the reproaches repeated against it with the coldness of unconcerned auditors, without emotion and without reply. With honest zeal we come forward; not to contest the subject in "a war of words," not to discuss, but to demonstrate; not to defend opinions against those whom no reasons will satisfy and no arguments convince; but to vindicate our principles by referring to their effects upon our temper and our conduct.

Modesty, which retires from observation; diffidence, which always entertains an humble opinion of its own merit, and avoids ostentation as it does censure; have hitherto restrained us from such a plea: but our enemies impel us to this issue.

1. Freemasonry, you know, is, at the present day, viewed in an unfavourable light: and we are considered by some as covenanting on principles and associated on purposes destructive of civil subordination, and tending to dissoluteness and infidelity; to the disavowal of all that is venerable in virtue or sacred in religion. In vain have we repeatedly unfolded our sentiments to public examination, in the most honest, ingenuous, and explicit manner. Our protestations are disregarded; and while every paltry pamphlet or paragraph written in opposition to us is eagerly read and implicitly believed: what we publish, particularly the book of CONSTITUTIONS, which contains our laws and ceremonies, is never inquired after, never consulted.

My brethren, our inexorable accusers arraign us at the tribunal of the public, to defend ourselves, not against what they know, but what they suspect; to answer, not for what they have experienced, but what they fear. This is taking us at great disadvantage: and the unfairness, as well as injustice, of such an allegation, will excuse our passing it by in silent contempt. We challenge them to point out the instance in which we have appeared the advocates or the abettors of immorality or rebellion! We submit our actions to their prying investigation; hoping, besure, some allowance for the frailties and imperfections incident to humanity; arrogating to ourselves no immaculate purity nor indefectible virtue; but neither needing nor asking apology for any thing that is peculiar to us as MASONS.

Assured that whatever follies or imprudencies may have injured our credit as men, and that whatever vices have wounded our character as christians, it never justified the former nor allowed the latter, let us exculpate our institution; and frankly declare that our errors and crimes are from another source, the weakness and depravity of human nature, the incitements to evil and the temptations of the world, to which all alike are exposed.

A distinction must be made between what is attributive to freemasonry, and what is not; between

what is within its influence, and what is beyond its sphere. For though we may safely declare that it is impracticable to ascend into these regions without improvement of the heart and enlargement of the understanding, and without carrying along with us into the world we are obliged to act in, something to purify our conduct and meliorate our condition: yet we do not pretend that freemasonry was instituted for the express purpose of teaching morals. And though all its rites, ceremonies and charges, imply the necessity and express the importance of piety and virtue, and with impressive solemnity inculcate their observance; yet it never professed to be a substitute for natural or revealed religion, nor to prescribe the faith, regulate the conscience, or control the judgment of any. It has enough liberality to allow each man to be "free," but so much restraint as to prevent him from using his liberty for "a cloak of licentiousness."

We are the more particular in making this discrimination, because some late writers have suggested that masonry professes to supersede all religions, and to introduce a moral code of its own in their stead.

2. Many are so uncharitable as to lay the blame of every thing erroneous in the sentiments or reprehensible in the conduct of a mason, to the regulations or principles of the institution to which he belongs; falsely arguing, or obliquely insinuating that because he was reproachable, that must have been base and immoral tendencies.

Now, this mode of reasoning is not perfectly just. It is not fair to predicate worthlessness of that profession which may have some unworthy professors.

But if freemasonry has not made us better, is it certain it has made us worse? Are we more loose in our principles, more unjust in our actions, more niggardly in our dispositions, or more parsimonious in our charity, than before we entered the lodge? Are we more so than those who are not of the fraternity? Are the most thorough masons conspicuous as the most notorious villains, the most daring infidels, or the most insidious jacobins? Or are the base, the atheistical, and the factious always masons?

We confess, with sorrow, that there are some of our order who deserve not its protection and dishonour its name. But would our opposers wish to conclude from that that all masons are similar to them? Is it right to argue thus? Are such inferences admitted in estimating other professions? Doth the perfidy of a single Judas give grounds to conclude that all the other disciples were faithless and traitors? Why, then, is a mode of reasoning which is never justified in any other cases, only supportable when directed against freemasonry?

But if we have been disgraced by some, who have walked unworthy of their profession; so likewise have we been honoured by others, who would reflect lustre on any society. Admitting that there may be seen among us some whose conduct deserves the odium of all the wise and good; are there not others, whose actions even prejudice cannot censure, and whose virtues even malignity dare not impeach? If masonry be made responsible for the ill conduct of the few; ought it not, in all reason, to have credit for the good conduct of the many? The greatest characters in the world have laid aside their dignities, and put themselves on a level with us. Not that I would have it imagined that freemasonry can derive any authenticity or importance from the celebrity of those who belong to the society: it being rather calculated to confer respectability, than necessitated to borrow it. Yet, when we find in every period of its history, some of the first rate characters in every estimable respect, belonging to it and glorying in it, the conclusion cannot be considered extremely arrogant, that the institution has some real excellence; at least, that it is not so "frivolous" or "dangerous" a combina-

tion as some would fain represent it. It is not to be supposed that the great, the wise, and the good, of all ages, would have given it their decided support, had they found it containing any intrinsic principles repugnant to the interests of society, or hostile to their religious principles. Would they not, rather, have been the first to have proclaimed the evil of its tendency, and to have avowed their condemnation of its spirit and design?

Suffer me now, in conclusion, my brethren, briefly to point out what I consider the best, I might say the only effectual method of vindicating the principles and re-establishing the credit of the order.

To remove the veil which misinformation and prejudice have thrown over the eyes of our enemies, it remains for us to convince them by our lives, of the truth of our declarations; and to let our conduct be a letter of recommendation, "seen and read by all men."

This is a kind of conviction which must at length prevail over the most obstinate and unyielding prepossessions.

A good life is an unanswerable refutation of every charge.

By a life and conversation regulated by wisdom and sanctioned by virtue; by discharging every duty with integrity and fidelity; and by exercising to all around us every friendly and tender office of charity; we shall demonstratively prove that our institution does not train us up in demoralizing principles; and that they are either ignorant or foolish men who have said that it did.

By piety towards God and faith in the Lord Jesus Christ; by a veneration of the gospel, an exemplary obedience to its precepts, and a regular observance of its institutions; we shall get clear of the charge of being "Anti-christian Conspirators."

Lastly: By our zeal for the interests of our country; by maintaining, supporting, and defending its civil and religious rights and liberties; by paying all due allegiance, honour, and submission to its magistrates, supreme and subordinate; by leading peaceable lives in all godliness and honesty; and by endeavouring to promote harmony and good will, condescension and subordination among all orders of men; we shall put to silence the opprobrious allegations of those who strive to prejudice the public against freemasonry, by insinuating that it is "the hot-bed of sedition," and fraught with purposes for the subversion of all government and rule, all thrones, principalities and powers.

Thus, my brethren,

"We'll dissipate each dark and threatening cloud
That prejudice and calumny can raise,
By radiant probity of heart and life,
And persevering deeds of love and peace."

Defended and illustrated by an edifying example, freemasonry will yet triumph in its influence, and be respected in its effects.

While we evince in practice those principles we profess in theory, our institution will "have a good report of all men, and of the truth itself;" and those who "speak evil of us as evil doers, will be ashamed," seeing they falsely accuse and misrepresent us.

Regulated by the precepts of wisdom, supported by the strength of virtue, and adorned with the beauty of beneficence, our actions will escape censure, if they meet not praise. If we live within compass, act upon the square, subdue the passions, keep a tongue of good report, maintain truth and practise charity; we shall not only display the principles, but honour the cause we have espoused. Such an exemplification of its tendencies, will do more to wipe away the unfavourable impressions which any have received against the institution, and will more effectually conciliate their esteem of it, than all the reasoning of laboured argument, or all the eloquence of verbal panegyric.

Then, as we honour our profession, our profession will be an honour to us.

Remember, brethren, that the interests of free-masonry are in your hands. Be careful then, not to blend with it your weaknesses, nor to stain it with your vices. Consider how much the world expects of you; and how unwilling to make you any abatements. Consider with what dignity, fidelity, and respectability you ought to support the character you bear: and render the name of *free-mason* illustrious, as designating worth and virtue of superior stamp.

It is highly incumbent on you to "walk in wisdom towards them that are without;" doing nothing that should render your principles suspicious, or disgrace your institution in their eyes, nothing that should give them new occasion of dislike, or increase their former prejudices. For, "be assured that, if in your conduct you forget that you are men; the world, with its usual severity will remember that you are *masons*."

While ambitious of obtaining the favourable opinion of men, let us not be regardless of the honour that cometh from God. His approbation will make us ample amends for all we may suffer from their evil surmisings and unjust reproaches. Let us, therefore, seek to please God rather than men. Remembering that we are his servants; let us be fervent in spirit, serving him with fidelity, constancy, and zeal. Let the sense of his adorable presence never, for a moment, be estranged from our minds. May all our conduct be strictly and invariably directed by his will and word. May we "walk worthy of the Lord unto all pleasing;" and "when a man's ways please the Lord, he maketh even his enemies to be at peace with him."

To conclude:

If, Brethren, we have any true love for masonry; if we have at heart the honour and interest of this most ancient and venerable institution; we shall be careful, not only to rule and govern our faith, but to square our actions by the holy word of God; and, while with each other we literally walk upon the level, may we keep within due bounds with all mankind. Thus shall we merit and obtain the reputation, not only of "good men and true," but of wise and skilful, free and accepted masons. And when he who is "the first born among many brethren," shall again appear "to be glorified in his saints, and admired in all them that believe," may he pronounce our commendation and designate our reward by this declaration, "these shall walk with me in white, for they are worthy!"

Authority is by nothing so much strengthened and confirmed as by custom.

Order is the effect of thought, and the cause of all good productions.

SCIENCE AND THE ARTS.

From the *New-Harmony Gazette*.

DISCOVERY OF COBALT IN MISSOURI.

Cobalt is an article which has hitherto been imported from Europe. It is true there exists in Connecticut, at Chatham near Middletown, cobalt ore containing arsenic and sulphur and disseminated in a horn-blend rock, but this cobalt is said to be so much contaminated with nickle that the expenses of mining and of purification were higher than the amount of the sales of the cobalt; its manufacture has therefore been abandoned.

In our pedestrian tour through the mining district of Missouri, we found some fragments of this ore. And having received two or three weeks ago, the boxes with our specimens, we are now able to congratulate the inhabitants of that district on the possession of that valuable article, which by its analysis, proves to be the best variety that exists; and if it be abundant, which we have reason to believe it is, the discovery is of very great value.

It appears by analysis that this ore contains, when free from adherent matter, upwards of seventy-five per cent. of cobalt. The richest ore in Europe, analyzed by Klaproth, contains only forty-four per cent.

As many of your readers may be unacquainted with this metal, we annex a short account of its history and uses.

Its name seems to be derived from *Cobalus*, which was the name of the spirit that, according to the superstitious notions of the times, haunted mines, destroyed the labours of the miners and often gave them a great deal of unnecessary trouble. The miners probably gave this name to the mineral out of joke, because it thwarted as much as the supposed spirit, by exciting false hopes, and rendering their labours often fruitless; for as it was not known at first to what use the mineral could be applied, they threw it aside as useless. It was once customary in Germany to introduce into the church service a prayer that God would preserve miners and their work from *cobalts and spirits*.

Matthesius in his tenth sermon, where he speaks of *cadmia fossilis* (probably cobalt ore) says "Ye miners call it *cobalt*; the Germans call it the black devil and the old devil's whores and hags, old and black *kobel*, which by their witchcraft do injury to people and to their cattle."

It was used in Europe since the 15th century to tinge glass of a blue colour. But the nature of this mineral was altogether unknown till it was examined by Brand in 1733. The celebrated Swedish chemist obtained from it a new metal, to which he gave the name of cobalt. Lehmann published a very full account of every thing relating to this metal in 1761. Bergman confirmed and extended the discovery of Brand in different dissertations published in the year 1780. Scarcely any further addition was made to our knowledge of this metal till 1798, when a paper on it was published by Mr. Tassaert. In 1800 a new set of experiments were made upon it at the school of mines at Paris, in order to procure it perfectly pure, and to ascertain its properties when in that state. In 1802 a new series of tracts was published by Thenard, which threw considerable light on its combinations with oxygen. And in 1806, Prouse published a set of experiments on the same subject.

Cobalt is principally used in a state of saffre. This substance being melted with sand and potash forms the beautiful blue known by the name *Small* from which the azure or powder blue is manufactured. It is used to imitate some of the blue precious stones, as the sapphire—the blue colour on the porcelain, queensware, and all pottery, or the enamel is made with cobalt. It is likewise employed for some chemical uses.

The extent of the coloring power is perhaps more than that of any of the other metallic oxyds; for one grain of the pure oxide will give a very full blue to half an ounce, or two hundred and forty grains of glass. The oxide melted per se gives so intense a blue, as to appear perfectly black, except just at the thin edges of the sharp fragments, when broken.

Though the uses of this metal seems to be very limited, it is nevertheless a very important branch of industry to those countries which produce it. For instance the saffre is prepared in Bohemia, Wirtemberg, Silesia, Lorraine, and we believe Sweden and some other parts of the continent of Europe; but in Saxony alone it yields to the proprietors an annual revenue of 200,000 crowns.

G. TROOST.
C. A. LESUEUR.

New-Harmony, April 4, 1827.

ROMAN POLISH.

Sir—Having frequently visited the Vatican during my stay at Rome, in the winter of 1818, I was much struck with the brilliant polish of their mahogany (if I remember right) bookcases; and as the then Pope Pius the Seventh was adding to the library, and putting up additional bookcases, that were made equally brilliant, upon the spot, I not only watched the progress, but asked one of the workmen how it was done. As I have read much about French Polish in your interesting Magazine, perhaps you would not object to a recipe for a Roman Polish, which has the advantage of requiring no varnish, and is very much at your service.

Brick dust, sifted very fine; olive oil mixed with it, just to give it the dampness of flour; this is rubbed by a pumice stone upon the wood till perfectly smooth; then add spirits of wine, and continue rubbing it till you have the required polish, which is beautiful and more durable than any other.

[Mech. Mag.]

CONTRACTION AND EXPANSION OF WATER IN COOLING.

Fill a thermometer tube with tepid water, and immerse it in a glass vessel containing water of the same temperature, in which a mercurial thermometer is placed. If the whole apparatus be now placed in a bed of snow, or in a frigorific mixture, the water in the tube will gradually contract, till the mercury shows the temperature of 40 deg.; it will then begin to expand gradually until it becomes ice. From this simple experiment the reader may see, what is otherwise, however, a well established fact, that the specific gravity of water is greatest at 42 deg. The expansion of this fluid, when cooled still further, is an exception to the general law of bodies expanding by heat and contracting by cold, and as we are unable to account for it, or refer it to any class of facts, it seems like a perpetual miracle, and may excite both our wonder and our gratitude whenever it is contemplated. It is in consequence of this miracle that ice swims on water, and does not sink down, choking up the streams and stopping the currents of the rivers, the continued flow of which is as necessary to the existence of the world as the circulation of blood is to our existence.

[Chemist.]

UTILITY OF THE NETTLE.

In the weekly newspapers of the Bavarian Agricultural Society, 1823, No. 6, the nettle is said to have the following properties: 1. Eaten in salad, it cures consumption. 2. It fattens horned cattle, whether eaten green or dried. 3. Experience not only shows that it fattens calves, but improves their breed. 4. It is an antidote to most maladies. 5. Sheep which eat it bring forth healthy vigorous lambs. 6. It promotes the laying of eggs in hens. 7. It improves the fat of pigs. 8. It grows all the year round, even in the coldest weather. 9. The fibres of the stem make an excellent hemp.

The Bavarian oracle might have added, that few plants force better or more rapidly, and that the tender shoots so produced, make a delicate and high-flavoured pot-herb, resembling the points of the shoots of pumpions.

It is certain the nettle is much valued in Holland, where its young shoots are used as a pot-herb, its roots for dyeing yellow; where the horse dealers give them to horses, to make them brisk and give them a fine skin; and where considerable portions of fields are planted with it, and mown five or six times a year as green food. [Gard. Mag.]

CHARACTER.

MANUEL RODRIGUEZ.

Among the most interesting persons who have appeared in the revolution of Chile, may be reckoned MANUEL RODRIGUEZ, the friend, adviser, and coadjutor of the Carreras. As far as a man's purposes can be understood from his professions and acts, it may be truly said of Rodriguez, that he had the liberty and equal rights of his countrymen, as well their independence really at heart. As far, at least, as the refusal of office, and compensation of inestimable services in his country's cause, will go as an argument in his favour, we may believe him to have been governed by disinterested patriotism. Till recently, his fate has been involved in the deepest mystery; no one has pronounced his name but with the utmost caution, or scarcely heard it without crossing himself. He was equal in rank to his friends the Carreras, but he was destined to different pursuits in life, having devoted himself to the study of the law, in which profession he was rising to eminence.

At the commencement of the revolution he joined the patriot party, and adhered to it without wavering to the last. He was the Mentor of the Carreras, and when their fortunes declined, he accompanied them across the Andes. His spirit and exertions did not flag with their ill success; he enlisted in the cause of his country with the same zeal, when its interests were entrusted to San Martin as when they were in the hands of his friends. When Buenos Ayres undertook the emancipation of Chile, Rodriguez was one of the most forward in council and in action. His chivalrous spirit induced him to chuse the most perilous and important office, that fell to the lot of any one engaged in the enterprise, that of personally conveying information to the friends of the insurrection in Santiago, and ascertaining the disposition of the people at large in Chile. In the execution of the trust he proved himself another Proteus. Though cautious and prudent where the interest of his cause was in jeopardy, yet there was no personal hazard or adventure that had not a charm for him. He engaged to cross the Andes and enter Chile for purposes of secret observation, at a time, when the government could not but have been jealous and wary, as well of the Carrera party, as of the people of Buenos Ayres. During the period between the battles of Rancagua and of Chacabuco, while the royalists retained undisturbed possession of the kingdom, he passed the mountains and entered Chile in various disguises three different times, travelling generally on foot. He appeared sometimes in the dress of a minor, sometimes of a friar begging alms for his convent, and sometimes of a pedlar. In this manner he went as far south as Talca, eighty leagues from Santiago, and about the same distance towards Coquimbo, frequently making himself known, but only to those with whom he was thoroughly acquainted. At one time in Santiago, when he thought himself pursued, he was concealed for a day, and part of a night, in the house of one of his friends, in a tenaca, or large earthen wine jar; at another time, when returning from Chile to Mendoza, he was impressed by an officer, who with a guard of soldiers, had been posted in a pass of the Cordilleras, for the very purpose of interrupting the correspondence, and preventing communication with the other side, and whose men were then employed in repairing the road. Rodriguez was immediately set to work, and he showed that he could handle the spade and axe, as skilfully as he had formerly done his pen. He was detained two days, and all the time had concealed about his person important letters and papers the discovery of any one of which would inevitably have cost him his head.

He frequently went at noon day to the houses of some of the first men in the city, in tatters, and with a basket of fruit upon his head, and while bargaining for the fruit made himself known, and received important communications.

Rodriguez accompanied the army of San Martin into Chile, and after the battle of Chacabuco he returned to the city, and set himself quietly down in his study. He mingled no further in public affairs, than any other decided private patriot, till the dispersion of San Martin's army at Cauterida. When the news of this disastrous event reached the city,

all eyes were instantly turned off Rodriguez. To him was owing in a great measure the success of exertions, which have too often been attributed exclusively to San Martin. For the moment, he assumed the office of Director, and executed its duties. He harangued the people, exposed to them the folly of despair, the rashness of flight, and the absolute necessity of a last struggle, although it should be the struggle of death. He succeeded in calming their fears and inspiring hope. The soldiers, who were all on the wing for the Cordilleras, he induced to remain and prepare to be organized anew; and before the arrival of San Martin and the Director was announced in the capital, he had quelled the first impulse of terror in the inhabitants, and put affairs into the train that led to the glorious results which ensued.

In the space of three days he raised an organized corps of six hundred horsemen; and in as many more had them disciplined and ready for the field. This would be incredible; did we not know that a Chileno's home is on horseback, and that the youth of the better sort are universally accustomed to the exercise of the broadsword. This corps received the appellation of La Battalion de la bueno Maerte. In the hard fought battle of Maypu, an important post was assigned to it, and Rodriguez proved himself on that occasion as well fitted for the field as for the cabinet. Unfortunately, however, it soon appeared, that more of the credit of this victory, and the events preparatory to it, were by popular opinion attributed to him than was consistent with his safety. Six or eight days after the battle and in the midst of the festivities consequent upon it, he suddenly disappeared, and no man dared to ask, where is Rodriguez? He has never since been seen.

THE TRAVELLER.

From Buckingham's Travels.

LOVE IN TURCOMANIA.

The women of the Turcomans, who are in general fair, ruddy and handsome, neither disfigure themselves by blue stains, nor veil themselves, after the manner of the Arabs. The jealousy of the men, regarding their honor, is, however, still stronger. Mr. Museyk, who, it should be added, is a Dutch merchant of the highest respectability, and has resided at Aleppo for forty years and more, journeys through every part of the surrounding country, told me an instance in proof of this, which I should scarcely have believed, if I had not heard it from his own mouth.

Two young persons of the same tribe loved each other, and were betrothed in marriage; their passion was open and avowed, and known to all their friends, who had consented to their union, and even fixed the period for its celebration. It happened, one evening, that they met, accidentally, alone, but in sight of all the tents; they stopped to speak to each other, and were on the point of passing on, when the brothers of the girl perceiving it, rushed out, with arms in their hands, to avenge their disgrace. The young man took to flight, and escaped with a musket wound; but the poor girl received five balls in her body, besides being mangled by the daggers of her own brothers, who had aimed to plunge them in her heart: and when she fell, they abandoned her carcass to the dogs!

The young man gained the tent of a powerful friend, the chief of another tribe encamped near them, and told his story; begging that he would assist him with a troop of horse, to enable him to rescue the body of his love from its present degradation. He went, accompanied by some of his own people, and found life still remaining. He then repaired to the tent of her enraged brothers, and asked them why they had done this? They replied, that they could not suffer their sister to survive the loss of her honor, which had been stained by her stopping to talk with her intended husband, on the public road, before her marriage. The lover demanded her body for burial; when her brothers, suspecting the motive, exclaimed, "What, is she not yet lifeless?—then we will finish this work of death;" and were rushing out to execute their purpose, when the youth caused the troop of horsemen, sent to aid his purpose, to appear, and threatened instant death to him who should first stir to interrupt his design. The young girl was conveyed to his

tent, and, after a series of kind attentions, slowly recovered.

During her illness, the distracted lover, now expelled from his own tribe, came under cover of the night, to see her; and weeping over her wounds, continually regretted that he had been so base as to seek his safety in flight, and not to have died in defending her. She as heroically replied, "No! No! It is my highest happiness that I have suffered and that you have escaped; we shall both live and Heaven will yet bless us with many pledges of our lasting love." This really happened; the girl recovered, was married to her impassioned swain, and they are still both alive, with a numerous family of children.

So romantic a tale of love, jealousy, revenge, fidelity, and heroism, would have been incredible, were it not that all the parties were known to Mr. Museyk, who related it; that he did so in the presence of many other persons born in Aleppo, and acquainted by report with the fact; and that the veracity of the narrator may be regarded as unquestionable.

SPORTING IN ARABIA.

Three of our party went out shooting in the desert, and had excellent sport. Hares, black partridges, and snipes, were in the greatest abundance. For my own share of the game, I claim a brace of partridges, not a little proud that nearly the first birds which ever fell by my gun should have been killed in the garden of Eden. Another of our party killed a hare, but the boatmen objected to our having it dressed on board, as it had not undergone the ceremony of being made *hulaul*, (lawful.) This is performed by repeating a prayer, and by cutting the throat of the animal, with the neck turned towards the tomb of Mahomet. Yet according to the Jewish law, from which nearly all the Mahometan prohibitions respecting food, are taken, the hare is an unclean animal, "because he cheweth the cud, and divideth not the hoof."

At four o'clock we stopped at a patch of brushwood jungle, where nearly all the boatmen and guard went to cut wood for fuel. In the midst of this employment, one of the party disturbed a lion that was sleeping under a bush. He was greatly frightened, and speedily communicated his terror to his comrades, who hastened on board. The lion stole away, and the trackers who had to walk thro' the same jungle, continued their work without making any objection. Game of every description is abundant throughout, which reminds us that we are in the ancient kingdom of Nimrod, that "mighty hunter before the Lord." The spot we were now passing was quite living with the immense quantities of animals of all descriptions. At every step our trackers put up pelicans, swans, geese, ducks, and snipes; numbers of hogs were seen galloping about in every direction; a lioness strolled towards our boat, and stood staring at us for two or three seconds; when within thirty yards, Mr. Hamilton and myself both fired at her, but as we were loaded with small shot, we did her no injury; the noise of our guns made her turn quietly round, and she went away as leisurely as she came.

We saw, this afternoon, a numerous flock of small birds, which presented the appearance of a large whirlwind and literally darkened the air in their flight. Both Mr. Lamb and Mr. Hart had seen the same in India, and told me that they were birds of the ortolan species. Juhul Afees is said to be coeval with the ruins at Fillfilah and Sooroot. While we were examining these ruins, we put up great numbers of hares and partridges. We met also some men with greyhounds; these dogs are very beautiful animals, and are somewhat smaller than the English breed; the ears hang down, the tail is feathered, and both are covered with hair as fine as silk. The Arabs are very fond of this species; but the dog being an unclean animal, according to the Mahometan law, the faithful are not allowed to touch it, except on the crown of the head, that being the only part of the animal which he is unable to pollute with his tongue. The owner of these dogs was rather an anomalous being for an inhabitant of the Desert—a young Arab dandy: his turban and robes were adjusted with the greatest neatness, his eyelids were strained with antimony, two or three rings graced each finger, and he conversed with an air of the most amusing puppyism. [Keppel's Journey.]

POPULAR TALES.

From the Nantucket Inquirer.

THE SPECTER OF THE ROPE WALK.

By the blue and yellow haze of a midnight lamp—at a moment, O! complaisant reader—when all thy senses are absorbed in dreamy darkness, lulled by the soporific smorzando of thy nasal cornicle—when the pageantry of life is to thee a nihility; and time and space and things thereunto pertaining, are all resolved into a shapeless lump of oblivion—when thy recumbent brow, whether at noon-day crowned with gorgeous diadems or surmounted by a greasy tarpaulin, is happy enjoying an utter negation of earthly care, and resting in the fathomless vacuum of sleep—when

"past twelve o'clock," the drowsy watchman bawls, as Peter Pindar hath it—and when, as inditeth the same poet,

From murky vaults

The dough-faced spectres do crowd forth,

blinking and gibbering at each other like witches in a thunder squall—lo! the plodding historian sitteth down to the relation of a veritable tale, that shall make thy muscles to tremble, and thy scalp to tingle with amazement.

Somewhere in the neighbourhood of the anno domini one thousand eight hundred and blank, there came into this port a barque from the realms of Ching Hong Fohi, lord of the celestial empire, where growth tea and bandanas. Among the souls on board, was that of Boshong Hushi, surnamed *Le*, a mandarin, of the seventeenth grade, escaped from the perils of degradation from his *caste*; and from the tongues of three wooden-shod wives. Upon his tunic there were silver buttons curiously wrought, and innumerable threads of gaudy coloured silk were interwoven among the compartments of his grotesque turban. His projecting cheek bones, compressed nose, liberal mouth beset with teeth of bronze

"like angel visits, few and far between"—

united to a complexion of sedate sallowness, gave him altogether an affecting and ghastly interest among inquisitive and anxious beholders.

With his camphor wood trunks and other valuables, he at length debarked; and, after idly wandering for some months amidst the populace and the sands, he became penniless and discontented. He sighed in secret for his country; and he lamented in public the absence of his consorts, whose very scolding in classical Chinese, was to him far preferable to the outlandish jargon that fell so constantly upon the thin tympanum of his little oriental auricle. He thought of tea and tamarinds, and ruminated on rice and river water—articles of import or scarcity. He dreamed of the lovely Quanghai, pondered on the swarthy charms of Mingshin, and over him came visions of the polished Phi Kien. There was a romantic stare in his small olive coloured optics, that told of absent comforts, and of estranged attachments. He walked upon the strand by starlight, and strolled over the cliffs on rainy afternoons, meditating things inexpressible. At one moment he was half determined to fall in love with some individual of the feminine gender, could he find a countenance and finger-nails resembling the beauties of India. But opportunity, that convenient commodity, occurred not—and poor *Le*—the matter cannot be minced—resolved in his distraction, to hang himself!

To a few intimates he hinted this determination, and his desire to "go home." He was advised to proceed by water; but he deemed it more practicable and expeditious to adopt a different line; religiously believing that strangulation would immediately introduce him into the society of his long-lost kindred, located in the flourishing village of Whompee, towards the rising sun. Expostulation therefore was in vain; for who, in this free country, will attempt to impede the progress of religious opinion, or meddle with the pious rites even of an unregenerated heathen? The spot selected by *Le*, for the performance of this ceremony, was the site of a deserted ropewalk, extending along the margin of our harbour, alienated from public notice, and screened by its own forbidding aspect from the gaze of vulgar eyes. Thither he repaired at mid-

night, one twenty-ninth of February, with a long rope under one arm, and an eleemosynary pig under the other. Whether the swinish victim were designed as a propitiatory sacrifice, or as the subject of scientific experiment, no mortal can divine. Howbeit, some strolling boys, emulous of shelter from a sudden shower, incautiously entered the dark and dismal edifice, at its southern extremity. They had approached but a few paces, when the eyeballs of some bristly monster, "midway in air," seemed to glare horribly upon the intruders. At the farther end, they discovered a human figure, whither they bent their steps. "He is dancing," said one of the lads, as the thunders bellowed, the rain drove through the frequent crevices, and the whole building reeled under the pressure of broken and spiteful blasts. They hurried towards the corpse of *Le*, as it swung to and fro amidst the elemental uproar. But soon, with a simultaneous shriek, they bolted forth at a ready outlet, and bore the awful tidings through storm and peril to the nearest neighbour. The unfortunate pagan suicide and his companion, were soon after, removed from their elevated attitude, and deposited horizontally within the bosom of a christian soil.

But, on taking down those bodies, the hempen halters by which they had been fatally suspended, were left dangling in *terrorem* upon the crazy beams—a sad and deplorable oversight, as shall be shown in the sequel. Since that memorable juncture, no human being, with one exception, has dared to approximate within arm's length of the appalling strings, nor had the temerity to look upon them a moment after sunset. Albeit, exactly four years thereafter, to wit, at the first quadrennial return of the said 29th of February, Mr. Nicholas Noodle, chancing to perambulate the precincts of the premises for no sort of good, at a very witching time of night, was suddenly astounded with an unearthly squeal, coming forth of the ropewalk aforesaid. Physically terrified and mentally strengthened by dint of recent brandy sling, Mr. Noodle drew nigh unto the noise. He looked at the long, low, dark wooden skeleton before him—he looked beyond, where insensibly uprose the rotund moon, majestically and quietly stealing towards the zenith—he looked behind, where stretched the placid bay, reposing on its hollow bed, breathing in gentle ripples, and reflecting here and there a flash from some straggling moon-beam. He looked—and he thought it a clear case of desolation. But he moved onward, though somewhat less ardently, until he could distinctly hear a shrill voice, exclaiming in the Chinese tongue, *le, le, le!* Mr. Noodle waxed desperate, and advanced—oh! presumptuous Noodle! Presently he saw a sharp face like that of a pig, poked through a broad crevice into the cold and naked moonshine. He lifted his foot with intent to kick—when he felt himself whirled into the cranny, and in a twinkling tripped up by the heels beneath the horrible gibbet of Boshong Hushi. His brain was turned; and he beheld myriads of sprites and goblins with green eyes and red hair, making all manner of supernatural mouths, and capering about him like ghosts in the garret of bedlam. Dizzy with dismay and upside-downishness, he rose into a swoon ***** and when Mrs. Noodle called him down to breakfast the next morning, placing before him the relics of a soused minister's face, Mr. Noodle vowed with an affirmation—a vow since scrupulously observed—thenceforth to abstain from brandy slings!

From Fairy Legends and Traditions of the South of Ireland.

THE BREWERY OF EGG SHELLS.

It may be considered impertinent were I to explain what is meant by a changeling; both Shakespeare and Spenser have already done so, and who is there unacquainted with the Midsummer Night's Dream* and the Fairy Queen?

Now Mrs. Sullivan fancied that her youngest child had been changed by "fairies theft," and certainly appearances warranted such a conclusion; for in one night her healthy, blue eyed boy had become shrivelled up into almost nothing, and never ceased squalling and crying. This naturally made poor Mrs. Sullivan very unhappy; and all the neighbours, by way of comforting her, said, that her own child was, beyond any kind of doubt, with

the good people, and that one of themselves was put in his place.

Mrs. Sullivan of course could not disbelieve what every one told her, but she did not wish to hurt the thing; for although its face was so withered, and its body wasted away to a mere skeleton it had still a strong resemblance to her own boy: she therefore could not find it in her heart to roast it alive on the griddle, or to burn its nose off with the red hot tongs, or to throw it out in the snow on the road side, notwithstanding these, and several like proceedings, were strongly recommended to her for the recovery of her child.

One day, who should Mrs. Sullivan meet, but a cunning woman, well known about the country by the name of Ellen Leah (or Grey Ellen.) She had the gift, however she got it, of telling where the dead were, and what was good for the rest of their souls; and could charm away warts and wens, and do a great many wonderful things of the same nature.

"You're in grief this morning Mrs. Sullivan," were the first words of Ellen Leah to her.

"You may say that, Ellen," said Mrs. Sullivan, "and good cause I have to be in grief, for there was my own fine child whipped off from me out of his cradle, without as much as by your leave or ask your pardon, and an ugly bony bit of a shrivelled up fairy put in his place: no wonder then that you see me in grief, Ellen."

"Small blame to you, Mrs. Sullivan," said Ellen Leah; "but are you sure 'tis a fairy?"

"Sure!" echoed Mrs. Sullivan, "sure enough am I to my sorrow, and can I doubt my own two eyes? Every mother's soul must feel for me!"

"Will you take an old woman's advice?" said Ellen Leah, fixing her wild and mysterious gaze upon the unhappy mother; and, after a pause, she added, "but may be you'll call it foolish?"

"Can you get me back my child, my own child, Ellen?" said Mrs. Sullivan with great energy.

"If you do as I bid you," returned Ellen Leah, "you'll know." Mrs. Sullivan was silent in expectation, and Ellen continued, "Put down the big pot, full of water, on the fire, and make it boil like mad; then get a dozen new laid eggs, break them, and keep the shells, but throw away the rest; when that is done, put the shells into the pot of boiling water, and you will soon know whether it is your own boy or a fairy. If you find it is a fairy in the cradle, take the red hot poker and cram it down his ugly throat, and you will not have much trouble with him after that, I promise you."

Home went Mrs. Sullivan, and did as Ellen Leah desired. She put the pot on the fire, and plenty of turf under it, and set the water boiling at such a rate, that if ever water was red hot—it surely was.

The child was lying, for a wonder, quite easy and quiet in the cradle, every now and then cocking his eye, that would twinkle as keen as a star in a frosty night, over at the great fire, and the big pot upon it; and he looked on with great attention at Mrs. Sullivan breaking the eggs, and putting down the egg-shells to boil. At last he asked, with the voice of a very old man, "What are you doing, mammy?"

Mrs. Sullivan's heart, as she said herself, was up in her mouth ready to choke her, at hearing the child speak. But she contrived to put the poker in the fire, and to answer without making any wonder at the words, "I'm brewing, a vick," (my son.)

"And what are you brewing, mammy?" said the little imp, whose supernatural gift of speech now proved beyond question, that he was a fairy substitute.

"I wish the poker was red," thought Mrs. Sullivan; but it was a large one, and took a long time heating; so she determined to keep him in talk until the poker was in a proper state to thrust down his throat, and therefore repeated the question.

"Is it what I'm brewing, a vick," said she, "you want to know?"

"Yes, mammy: what are you brewing?" returned the fairy.

"Egg-shells, a vick," said Mrs. Sullivan.

"Oh!" shrieked the imp, starting up in the cradle, and clapping his hands together, "I'm fifteen hundred years in the world, and I never saw a brewery of egg-shells before!" The poker was by this time

quite red, and Mrs. Sullivan seizing it, ran furiously towards the cradle; but somehow or other her foot slipped, and she fell flat on the floor, and the poker flew out of her hand to the other end of the house. However, she got up, without much loss of time, and went to the cradle intending to pitch the wicked thing that was in it into the pot of boiling water, when there she saw her own child in a sweet sleep, one of its soft round arms rested upon the pillow—his features were as placid as if their repose had never been disturbed, save the rosy mouth which moved with a gentle and regular breathing.

Who can tell the feelings of a mother when she looks upon her sleeping child? Why should I therefore endeavour to describe those of Mrs. Sullivan at again beholding her long lost boy? The fountains of the heart overflowed with the excess of joy—and she wept!—tears trickled silently down her cheek, nor did she strive to check them—they were tears not of sorrow, but of happiness.

* "For Oberon is passing fell and wrath
Because that she, as her attendant, hath
A lovely boy, stol'n from an Indian king:
She never had so sweet a changeling."

MIDSUMMER NIGHT'S DREAM, Act ii. s. 1.

† "—A fairy thee unwittingly left,
There as thou sleepest in tender swathing band,
And her base elfin brood there for thee left,
Such men do changelings call—so changed by fairies
thrift."

FAIRY QUEEN, Book i Canto 10.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

SUPERSTITIOUS NOTIONS.

NUMBER I.

We of this enlightened age and country, or rather those who are enlightened, and feel a national pride, while they look upon our free institutions, and the liberal opinions we cherish, are apt to thank Providence for these privileges, and consider themselves superlatively happy in not being enveloped in the ignorance and bigotry which prevail so widely in other regions of the world. But in these grateful exercises they much resemble the Pharisee in the parable. They pride themselves for an exemption which is only imaginary—and laugh at the clownish credulity of a foreign nation, which they only know from report, while the same error exists in all its absurdity directly in their neighbourhood. I allude to the faith which many have in ghosts, witches, fortune-tellers, &c.

The belief which the Scotch or Irish peasantry attach to the gift of second sight, or faculty of seeing an object distinctly long before it exists, would be very justly entitled to our ridicule, were we wholly clear from the same credulity. Of all the many ridiculous examples of Scottish superstition, I never heard of none that would bear comparison with the grave and assured narrations of my own neighbours;—persons of the firmest veracity, and sustaining the character of men of science. Not ten miles from my present seat, are perhaps ten respectable men, and of decent education for farmers, who will attest to the truth of the relation I am about to give you; and the Lord only knows how many women would confirm the same, though by the bye, their word has seldom much currency with me in such matters.

It was in the war of the revolution, when the army of General Burgoyne had just stepped upon the rebel ground, and with all the mighty strength of proclamations, Indians, Tories and mercenary German soldiers, were blowing from their lips tobacco-smoke, threats and death, to the affrighted people of this now great state. The inhabitants of a town lying on the west side of the Hudson, were quietly retiring from their fields of labour, to refresh their weary bodies with a dish of suppaan and milk, and a pipe of tobacco, before retiring to bed. The sun was just sinking behind the northern summits of the Catskill, leaving behind him a few clouds, and a sky, tinged with such glorious hues as no painter but nature can imitate. There was scarcely a breath of air, and no noise but the lowing of cattle and the bleating of sheep. The attention of the whole neighbourhood was suddenly attracted by a prodigy that appeared in the air. Ap-

parently as high as some of the scattered broken clouds which hung over them, an army of men, in regular files, and following the exact course of the main road from Albany downward, with a regularity of step and evolution that no discipline could match, passed on as if marching to the music of the spheres. Here was an ample field for prognostication; the whigs mourned over the devastation about to come on their homes, and already in fancy saw their houses and barns smoking before the ranks of the victorious Burgoyne; and the Tories could hardly refrain from dancing with joy. The event however deceived them both; but certain it was that not many weeks after this vision, a part of Burgoyne's army passed down this very road, as prisoners of war.

Who has not heard of the wonderful second sight of persons born, as the knowing ones say, with a veil over their eyes? Funerals, deaths, &c. are said to be seen by such individuals, weeks, and even months before they occur.

But Ghosts—ghosts are the grand article of faith with some; and are believed in by many who are ashamed to own their folly. An aunt of mine was so much a slave to her imagination, that she often put her whole family into a fright at the appearance of a ghost, which as often turned out to be a white horse, a stump, or some linen hung out to dry. But her faith could not be shaken, and she died a firm believer in the doctrine of spiritual shadows.

The power of charms, or magic which does not strictly belong to witchcraft is another prevalent belief among many of our illiterate people. It was doubtless introduced, and kept alive by the German settlers in this state. I know several of this cast who verily believe they can charm a gun; and I have heard a certain industrious and respectable mechanic in the county of S——, who told me "upon honour," as Gen. Smyth says, that he could secure his tools by a charm alone, so that the thief who dare attempt to steal them, would be kept as upright and motionless as Lot's wife, until he himself should dispel the enchantment. On asking him whether he had tried it, I was answered in the negative: his sole reason being that he believed it an undue exercise of power, and of course sinful.

The Reformed Dutch Church, in its form for administering the Lord's Supper, admonish such as "enchanters, diviners, charmers, and such as confide in such enchantments to keep themselves from the table of the Lord."

This is wholesome admonition, and would go far either to prove that the founders of that church were not, as superstitious as they are accounted to be. But I have, not a year since, known an instance of a certain deacon who went thirty miles, to consult a fortune-teller about a stolen Pocket Book. A divine too who sermonizes not ten miles from Albany, gave me his unqualified opinion, that certain charms used by divers quack farriers, such as hazel twigs, &c., were efficient and sure in their operation. These are such things as the bigotted mind loves, I know; but they are in direct opposition to the spirit of religion, and I think also to the doctrines supported by every Christian denomination in this country.

I would say something on witches, warnings, &c. but must defer them for the present. In my next, I may lay open a field for some dispute, by advancing some opinions concerning witches, which may be called new. I will conclude by observing that we need not go to Scotland for specimens of bigotry, nor read Dr. Faustus for instances of diabolical agency. They may be very well illustrated nearer home, by drawings taken from real life.

G.

VARIETY.

The celebrated Lord Gardenstone once performed on Mr. Crosbie a practical joke of a very humorous nature. This gentleman, in the course of a walk from Morganside, where he resided, met a rustic going to Edinburgh, in order to hear his cause pled that forenoon, in which Mr. C. had been retained as counsel. The facetious Senator directed the man to procure a dozen or two of farthings at a

snuff shop in the Grass Market, to wrap them up separately in a white paper, under the disguise of guineas, and to present them, as occasion served, in the capacity of fees. Mr. C's heart not happening to be in the case, he frequently flagged in his eloquence, to the eminent danger of being nonsuited. His treacherous client, however, kept close behind his back, and ever and anon as he perceived him bringing his voice to a cadence for the purpose of closing his argument, slipped the other into his hand. The repeated application of this silent encouragement, so far stimulated Mr. C. in his exertions, that he strained every nerve his soul possessed, in grateful zeal for the interest of his client; and at the fourteenth farthing he gained the cause. The denouement of the conspiracy, which took place immediately after, in John's coffee house, over a bottle of wine, with which Mr. Crosbie had treated Lord Gardenstone with the profits of his pleading, can only be imagined.

Whitaker, in his history of Manchester, relates, that in an early period of English history, "Two dogs suffered death for assaulting one of the lions of the tower, on the principle of its being treason against royalty."

In some of the villages in Kent, when a man is known to have beaten his wife, it is usual to strew chaff before his door; then the joke runs through town, that such a man was thrashing last night, as the chaff was seen in front of his house. Such notoriety is said to be a more wholesome restraint on bad husbands, than any legal enchantment.

A foolish fellow in Windham, sent to a famous doctor to obtain some pills, being told that they would recover stray cattle! The doctor gave the man three pills, which he took: and in going home had occasion to go into the woods, where he found his father's stray ox. The fellow went home and swore the doctor sold pills which would recover stray cattle.

MADAME DE MAINTENON'S INFLUENCE OVER LOUIS XIV. On the days of business, says the Duc de St. Simon, Madame de Maintenon, in whose apartment the ministers transacted affairs with the king, sat by, reading or working tapestry. She quietly heard all that passed, and rarely threw in a word. The word was still more rarely of any consequence. The king often asked her advice, addressing her in a playful tone, as—your solidity, or your reasonableness. She answered slowly and coldly, scarcely ever betraying a prepossession for any thing, and never for any person; but the ministers had their cue. If by chance the king at first fixed on her candidate, it was well, the ministers were sure to agree; and they contrived to hinder the mention of any other. If he shewed a preference for any other, the minister read over his own list, rarely recommending any one directly, but hinting at the objections to all, so as to leave the king perplexed. In this embarrassment he often asked the advice of the minister, who, after balancing the good and bad qualities of all, shewed a slight preference for one. The king hesitated, and frequently in that stage referred to Madame de Maintenon; she smiled, affected to be incapable of judging; said something in favour of another candidate, but at last, sometimes slowly, as if deliberating—sometimes, as if by a sudden accidental recollection, returned to the candidate whom she had prompted the minister to recommend; and in this manner she disposed of all favours in France.

A RIGHT TO SHOOT. Des Essarts, an actor at the Hague, having been caught poaching on the preserves of the Stadtholder, availed himself of the resources of his profession to get out of the scrape. A gamekeeper, who had never seen the tragedian except in the garb of royalty, asked him by what right he came there to shoot? Des Essarts, with an air and tone of the most heroic haughtiness, replied—"Ask you by what right?"

"By that great right the vast and towering mind
Has o'er the grovelling instinct of the vulgar!"

These lines, uttered with tragic and theatrical air, so panic-struck the poor gamekeeper, that he exclaimed, "Oh, if I had known that of course I should not have interfered."

ALBANY:

SATURDAY, MAY 5, 1827.

§5-Vivian is declined. We would advise him to become more cheerful and to try again.

INTEMPERANCE. We do not approve of making hobbies of the good or bad practices of the world; nor do we think that lucubrations touching the degeneracy of morals, properly belong to the most interesting species of reading. Every one knows the evil effects of vicious habits; and all who consult either their temporal or spiritual welfare will shun them. It is of but little use to talk of broken constitutions, disease and premature death; for the man who is content to stagger, or even to walk steadily through the street, with ruby eyes, a pestulous proboscis, and tumid cheeks, is generally of that way of thinking (if he ever thinks at all) concerning this world and the next too, that sobriety and propriety of conduct are with him affairs of quite inferior importance. Besides, a certain portion of mankind is prone to consider vice as a sort of personal property, with which no one except the possessor has any authority to meddle: These and similar causes have hitherto prevented us from entering into the crusade against dram-drinking. We detest the practice in our very soul: it is one of the vilest sins imaginable. It is the cause of innumerable inconveniences, and is the mother of vice. It destroys the energy of the mind, and leads to profanity and a total disregard of every moral and religious obligation. It destroys domestic peace, sends families to bed supperless, and rears pale and emaciated children, without education. We would not insinuate that Albany is worse in this respect than other cities; but we know it is not an uncommon occurrence for a stripling to pass a whole night at a keno table, and after losing all his money and credit, to stagger to his business in the morning, drowsy, bewildered, and intoxicated. There are some men here who follow drinking almost as a profession, others whose terms of tipping are periodical. Some who have cunning enough to shun drunkenness live by feasting the bad passions of others, and those might be named who yearly collect thousands as fees for leading the unwary into the paths of dissipation. We know from observation that this is matter of fact; and we should not think the law a very "blue" one that should have for its object the repression of the haunts where these wretches congregate. These places may be termed the manufactories of drunkards and villains. Boys enter them as spectators; from spectators they become participators; and from participators, professors; and they learn to lie, to cheat, to swear, and to guzzle rum. We shall, one of these days, cast our observation abroad upon this ancient city, and then we shall spare neither persons nor places. The secret places of iniquity should be made known, and the sooner the better.

It appears that intemperance is a vice of very general prevalence. The editor of the New-York Enquirer says that he recently saw two men staggering at mid-day through the streets of a village, neighbouring that city. Upon inquiry he learned that one was the wealthiest man in the place, worth something more than 100,000 dollars, and that the other was the postmaster! This vice flourishes in the principle cities to a great extent. A late medical journal states that "during the last five years

65,000 paupers were admitted into the Philadelphia Almshouse, being an average of 13,000 a year." Here, then, are 13,000 miserable beings annually thrown upon the public charity by the intemperate use of ardent spirits in one city. But the evil does not stop here. After these wretches are lodged in the Almshouse, it is thought necessary to administer to them every year nearly two thousand dollars worth of ardent spirits, besides wine and cider, in order to keep them alive and comfortable! New-York and Boston are not much better off; and doubtless, if the truth were known, Albany contributes its modicum to magnify to the extent of the evil.

The Boston Medical Intelligencer, in speaking of the practice of administering spirituous liquor to invalids, says: "We believe it to be the conviction of every sound and observing physician, that the opinion that ardent spirit is necessary to sustain or recruit a drunkard, derives not the smallest support from any facts or observations which have been made in relation to this subject. It might as truly be said that another portion of poison is necessary to restore him to life who is now expiring under the quantity already swallowed. It is true that the system which is disordered and broken down by intemperance, needs something for support and restoration which is different from the food that is adapted to the wants and assimilating powers of a healthy body. But shall this be rum, brandy, gin, whiskey,—any of the life-destroying forms of spirit, which are already prostrating the physical and moral man? You might as well admit to your confidence the murderer, who with friendly professions in his mouth, waits only for an opportunity to plunge a dagger to your heart. We will undertake to assert, that if it shall, on any proper occasion, be required, hundreds of cases can be brought forward to prove the fact, that as many instances have occurred where the habitually and deeply intemperate have been restored to perfect health, and in a short time too, by an instantaneous and total subduction of ardent spirit in all its forms and disguises. With these facts before us which have been for years accessible to all who have sought for them, is it credible that the overseers of a public charity, in an enlightened city, should in the space of five short years permit themselves to spend 9000 dollars for ardent spirit, to say nothing of wine and cider, for paupers, to keep them alive and comfortable, when in all probability this very restoration had made them paupers? Is it to be believed that any well informed and humane physician has recommended this proceeding? We will not say that every intemperate man can be restored to health of body and mind, by breaking off his vicious habit; for there are many cases in which the inroads and ravages of intemperance have become so deep and indelible, that nothing but the wreck and ruins of the man can be preserved, a dreary monument of what the victim was."

The discoveries of Messrs. Loiseau and Chambers promise to be of much benefit. The accounts from New Orleans continue to bear favourable testimony of the remedy of the former, and some of the New-York journals speak in very high terms of the latter. The following is given in the newspapers as Mr. Loiseau's prescription: "Tincture Assafetida, Tart. Antimony: Ipecacuanha. Mix these with the particular spirit or liquor which you want to shun, and drink a wine glass full every morning, fasting, for a week, when I will insure a voluntary abstinence for one year. An infusion of the leaves of

tobacco, will prove a valuable auxiliary. As soon as any inclination is felt to resume the cup, the remedy must be promptly applied, or there will be a relapse." The remedy of Dr. Chambers has been stated to be a secret, confined to Rutgers College and its professors. This has since been denied by the faculty of that college, who say that there exists no connexion between Dr. Chambers and that Institution. They express a hope, however, that his remedy may prove to be genuine; and declare a willingness to encourage it, if such shall be the case. A writer in the New-York Enquirer complains of the exorbitant price of Dr. Chambers' medicine, and publishes a remedy discovered by himself, which, he says, has proved uniformly successful. He says that the success of his remedy is founded "on that immutable principle in our nature, that we loathe whatever produces a disagreeable or unpleasant impression. It is obvious that such impressions may be obliterated by time, hence a repetition of the remedy sometimes becomes necessary." His prescription is "Antimonial Wine, half an ounce; Wine of Ipecac, two drachms, Tincture of Assafetida, one drachm. A portion of this, and in cases of long standing, the whole of it, is to be mixed with the liquor to which the person is addicted, and, in many cases, unless the person is told, he will swallow the dose without suspicion. It is not always necessary that all of the ingredients should be administered, and the dose can be graduated according to the constitution, age and inveteracy of habit. The relish for liquor will be instantly and entirely destroyed; and whenever the liquor is seen, and in many instances even mentioned, the principle of association will immediately call up the disagreeable impression. As long, therefore, as this is retained in the memory there will be no danger of a relapse: as soon as symptoms of this are observed, a much smaller dose will wonderfully refresh the memory." A person in Worcester, Mass. who had taken this medicine attempted to make use of ardent spirits again, but after swallowing a small quantity, he had only time to walk across the room to the door before he vomited it. Instances are numerous in which notorious drunkards have been entirely reformed by using either of the above prescriptions; and we think it is incumbent on all who are friendly to the suppression of intemperance (and who is not?) to make known discoveries which are calculated to exercise so beneficial an influence over the morals, and consequently over the character and harmony of society.

§6-A monthly publication, under the title of *The Western Medical and Physical Journal*, original and eclectic, and edited by DANIEL DRAKE, M. D. late professor of the theory and practice of medicine in Transylvania University, and GUY W. WRIGHT, M. D. was commenced in the city of Cincinnati, Ohio, in April. We have received the first number, but being wholly unacquainted with medical affairs, we are not capable of judging with what degree of scientific ability it is conducted. The papers of that city speak in the most favourable terms of its editors, and expect from their professional attainments and unwearied industry, and the anticipated co-operation of their medical brethren, the entire success of the work. Upon gentlemen of the medical profession this journal will undoubtedly rely for support; and none, better than themselves, can appreciate the importance of every attempt to extend the sphere of knowledge in the "healing

art." If any of our medical friends wish to examine the present number of the Western Medical and Physical Journal, they can do so by calling at this office. Contents—Neuralgia Facialis, by D. DRAKE, M. D., Purulent Ophthalmia, by J. H. SAVAGE, M. D., Traumatic Hemorrhage, by H. G. JAMESON, MAKITTRICK'S Commentaries on the principles and Practice of Physick, COOPER'S Lectures on the principles and practice of Surgery, Wounded Nerves and their treatment, by G. BELL, Humoral Pathology, by M. SEGALAS, Experiment on Hydrocyanic acid by M. DUPUY, Chloruret of Lime in burns, Original Intelligence and Notices, Graduates of the Medical College of Ohio, Graduates of Transylvania University. Conditions—The Western Medical and Physical Journal will be published monthly: each Number will contain from 56 to 64 octavo pages—making annually a volume of about 750. It will be transmitted to subscribers by mail, unless otherwise ordered. The price, per annum, is FOUR DOLLARS, payable in advance. All communications must be addressed to N. & G. Guilford, the publishers, Cincinnati, (post paid)—to whom all subscriptions are made payable.

LITERARY PRIZES.

In compliance with a wish very generally expressed, the Editor and Publishers of THE MEMORIAL give notice to those who intend forwarding communications for the premiums already offered, that the examination of the contributions will be deferred to the 16th of JUNE.

The prizes are:

For the best original Poem, a prize of \$60.

For the second ditto, a prize of \$40.

For the best original Prose tale, a prize of \$60.

For the second ditto, a prize of \$40.

Communications must be addressed "To the Editor of the Memorial, care of Messrs. True & Greene, Boston, Mass."

Editors who have inserted the former advertisement, will confer a favour by giving publicity to the change proposed above.

CHIT CHAT.

As a matter of justice we say that, we are often pretty largely indebted to the National Advocate for items of *chit chat*. We sometimes alter dates, and suit other trifles to the meridian of Albany, but the matters of fact and many of the best observations belong to the Advocate.—A new Medical Hall is to be erected for the Transylvanian University, Kentucky. The professors are to deliver a course of lectures during the summer.—Captain Partridge wants to establish a military school at Lexington. We are afraid these military schools will soon get out of vogue.—The Philadelphia Greek Fund nearly amounts to \$21,000.—The Winyaw (S. C.) Farming Society have authorised the hiring of two suitable persons to watch negro traders and report the violations of the law. This is a sort of *espionage* in a free country.—The line of morality is sometimes very fancifully drawn. A municipal law of Georgetown, S. C., declares to play billiards after 12 o'clock at night is dangerous to morals, but playing before twelve o'clock is proper and legal. If a game therefore is begun a few minutes before twelve and ended a few minutes after twelve, the first part is correct and proper, but the latter damnable and corrupt. When the clock designates between vice and virtue, clock-makers are the greatest philosophers.—The steamboat Tecumseh has arrived at Louisville from New-Orleans in nine days four hours, having lost one whole night and part of another by fog—distance 1500 miles. The Tecumseh passed eighteen boats on the way. It will be recollected that within a very few years the citizens of Louisville gave that enterprising officer, Capt Shreve, a public dinner for performing the trip in twenty-five days!—It is calculated that the value of the produce which has been floated down the Susquehanna, up to the 23d ult. is equal to eight hundred thousand dollars.—The automaton chess player has arrived in Baltimore. The newspapers are calling out all their players to the scratch.—More deposits of gold have been found in North Carolina.—Fifty dollar notes on the Farmer's Bank of Virginia, altered from five, are in circulation in Baltimore.—"It is said" the old ladies in the neighbourhood of

Fort Niagara are in continual fear, in consequence of the nightly appearance of Morgau's spook. Sometimes he is seen like a wizzard, darting across the Niagara upon a broomstick—at others, he presents himself in the very heart of the great Israelitish city of Arrarat, with a pair of compasses, as though he was planning a palace for the Grand Judge; but his most favourite avocation appears to be sailing up and down the cataract upon a mason's trowel, using its handle for a rudder! Thus "it is said."—A mechanic of Exmouth, (Eng.) has constructed a model of King Solomon's temple, in shell work and minerals, containing 985 windows, 11 towers, 885 pinnacles, 188 pillars, formed of 150,000 English shells. The model is four feet ten inches in length, and three feet seven in breadth; the centre tower four feet six in height.—Abbe Plank (professor) was murdered at Vienna by a person who formed an acquaintance with him for improvement in mathematics. The murderer plundered the professor of certain bonds, which were described in his will (made in favour of the students) and by means of which description the murderer was detected in offering the bonds to be cashed.—*The largest Kettle in the world!* This remarkable vessel is at the Convent of Bernardines, of Pisa. It is of cast iron, and is said to be fifty feet in height, and a hundred and forty feet in circumference.—The Mayor of New-York has offered a reward of one hundred dollars for the "apprehension and conviction of any person or persons concerned in the murder and abduction of Peter Haviland, a respectable citizen." Was he a mason?

From English papers.—It is said a considerable curiosity exists in England respecting the measures to be adopted for tranquillizing the people of Ireland.—All the west coast of England is principally supplied with butcher's meat from Ireland.—Millions of acres of fine land are in a state of nature in Ireland. The nation wants a circulating medium.—It is said that the warlike preparations making in Spain have no hostile view upon England or Portugal. They are directed against Spain.—The Emperor of Russia has declared Georgia, Caucasasia, and the territory of the Cossacks to be in a state of war.—A new farce was recently brought out at Drury Lane Theatre called "Comfortable Lodgings." The dialogue is full of puns. Its success was doubtful.—Justice Burrough, at the Winchester Assizes, stated that if the Magistrates remained quiet and did not interfere when a "prize fight" was going to take place, they were liable to an indictment for inattention to their duties.—The coinage at Lima during the six months preceding November last has been nearly two millions of dollars.

FOREIGN NEWS.

LATEST FROM EUROPE.

By the packet ship William Thompson, Captain Maxwell, English files to the 19th March, inclusive, have been received.

The affairs of Greece are looking more prosperous than heretofore. It is supposed that Missolonghi will soon be restored to the Greek government.

The news of the loss of the Catholic question in the House of Commons had inspired the Catholics with fresh courage, and urged to renewed efforts. In Ireland the news had excited feelings of regret and indignation. Various plans had been proposed in order to keep the public attention fixed on the question. Among other measures it is proposed to send a deputation of the most powerful Catholics in Ireland, to England, in order to obtain a personal interview with the King, and to implore his Majesty to grant his powerful aid to the Catholic cause. The question will be again discussed on the 1st of May.

Lord Liverpool has recovered so far as to be able to walk in his chamber.

All the Austrians had left Naples last February.

A very considerable quarrel has taken place between the Protestants and Catholics near Berlin.

Extensive forgeries in bills and notes have been committed near Dundee in Scotland. The amount is stated at £200,000.

The London Courier of the 17th states, that the Greeks have re-possessed themselves of the ruins of Missolonghi.

The Catholic Association met on the 10th March, but nothing was done.

The new English Corn bill is called a *lumbag*. It is just as bad as the old system.

It was asserted in Parliament that the fees of the Lord Chancellor on account of his jurisdiction in bankruptcy amounted to £20,000.

It is said that Mr. Canning has tendered the resignation of his office.

The London Morning Chronicle fears that the boasted prosperity of England is on the decline, not only with regard to manufactures, but to revenue.

The political horizon of England is gloomy. Trade, manufactures, and agriculture, are languid.

From the London Times.

We copy from a Dublin paper the following extraordinary paragraph.

DUBLIN, March 12.

"Friday, after the arrival of the packet bringing the account of the defeat of the Catholic question in the House of Commons, orders were sent to the Pigeon-house, to forward 5,000,000, rounds of musket ball cartridges to the different garrisons throughout the country." [Freeman's Journal.]

Here, then, is the commentary on that text which the Orangemen have delivered to Parliament for the guidance of its policy towards the Irish nation. Men demand their rights, and the answer is five millions of leaden bullets! Almost a cartridge a piece for the Catholics of Ireland. God help them.

By the ship Emerald, Captain Howes, arrived at Boston, Liverpool and London newspapers to the 24th and 26th March have been received by Mr. Topliff. Though some sixteen days later than previous advices, we find but little in their columns to interest the American reader. The latest London paper speaks favourably of the convalescence both of Lord Liverpool and Mr. Canning; the latter was well enough "to take an airing" on the 23d. The Literary Gazette remarks that the appointment of Mr. Canning as prime minister was the most popular statement of the day.

So great had been the importations into England of French silks, that persons engaged in the silk trade contemplated a memorial to ministers, representing the ruin that must ensue unless measures were taken to lessen the importation. A complete stagnation in the trade was produced in London, and the distress among the weavers in Spitalfields had been scarcely exceeded.

The trial of the Wakefields for the abduction of Miss Turner, (an heiress) was to take place at Lancaster on the 23d March.

A stage between Bristol and Gloucester was literally blown over by a gust of wind, and altho' full of passengers no serious injury occurred.

Greece. The information concerning Greece is of considerable interest. Lord Cochrane at last sailed for Greece from St. Tropez, in the beginning of March, in a brig, the purchase, fitting out, and arming of which cost 290,000 francs, or about \$50,000. He was furnished besides with 355,000 francs to pay the crew and troops under his command, it being thought necessary, for the preservation of harmony, that he should be able to maintain his crews. The steamboat Perseverance, Captain Hastings, which had been sometime in Greece, had done considerable service. Another steam-boat, the Enterprise was nearly ready to sail from England for Greece, to join the Perseverance. She was tried on the 20th March, and made a trip to Nore, running a distance of nearly 50 miles, in five hours and a half.

A letter from Leghorn of the 5th of March says, "Yesterday the Unicorn, with Lord Cochrane on board, appeared off the point of the Mole. It happened oddly enough, that it passed very near the Egyptian corvette; but instead of entering the port, the Unicorn suddenly tacked, and to-day we see it at the distance of 586 miles. It is believed that the object of this manœuvre was to examine the corvette, in order to pursue it with greater certainty when it shall be time. The appearance of the Unicorn in those seas had excited the greatest terror in the agent of the Pacha of Egypt, M. Rosetti, who suddenly lowered all the sails of his vessel, though he was ready to depart."

Mr. Gordon is said, in letters of a late date, to be at the head of 5000 men, better appointed and better disciplined than any that have yet taken the field in the cause of Greek liberty; and the Greek chiefs are represented as only waiting the arrival of Lord Cochrane, who was hourly expected, to commence active exertions. The Neapolitan General Church (an Englishman,) and Mr. Lambion, the late member for Durham, have sailed from Naples to join the Greeks.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

THE LYRE OF SAPPHO.

Hast thou my dear the enchanted Lyre
Unhappy Sappho strung,
And couldst thou give it half the fire
With which the maiden minstrel sung,
Thy Phæon I would fainly be,
But not to spurn thy fervent strain,
Nor let such angel minstrelsy
Die on the Lyre in vain.

Sure Sappho was not fair like thee,
Or Phæon had no heart;
For where's the generous breast could be
Indifferent to such mighty art?
Art?—No—it is not art—'tis soul,—
'Tis inspiration,—and the breast
Which feels not—owns not its control
Is aught but virtue's rest.

There is a language few can speak,
Though all can read it well;
It is written on the virgin's cheek,
And, like some bright unearthly spell,
It binds the eye that reads it there,
And throws a charm upon the heart
That challenges Time, Distance, Care
Or wretchedness to part.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

CAROLINE DE MOOR.

BY WILLIAM L. McLAUGHLIN.

The sun had set, the earth was wet,
With heaven's balmy dew,
The western gale sigh'd in the vale,
The vernal rose to woo;
The evening star shone bright afar
Upon the cottage door,
Where by its light I sought that night
Fair Caroline de Moor.

In twilight shade I met the maid
Before my heart I knew,
And long I lov'd and long I prov'd
That heart both fond and true;
By sweet consent that night I went
To woo and win her sure,
In hopes gay bloom to hear my doom
From Caroline de Moor.

The lilac grove, and bower of love,
Was balm as I drew near,
And mem'ry sought each well known spot,
To young affection dear;
My pulses beat, with hasty feet
I sprang into the door,
And madly prest the death cold breast
Of Caroline de Moor!

There is a grief that mocks belief,
And feeds upon the soul,
So cold and drear that not a tear
Can mark its deep controul;
I've prov'd its smart, and when my heart,
No longer will endure,
From nature driv'n, I'll seek in heaven,
Sweet Caroline de Moor!

H. S. Ship Lexington, April 2d, 1827.

ABSALOM.

BY N. P. WILLIS, OF YALE COLLEGE.

The waters slept. Night's silvery veil hung low
On Jordan's bosom, and the eddies curl'd
Their glassy rings beneath it, like the still
Unbroken beating of the sleeper's pulse.
The reeds bent down the stream—the willow leaves
With a soft cheek upon the lulling tide
Forgot the lifting winds, and the long stems
Whose flowers the waters like a gentle nurse
Bear on its bosom, quietly gave way
And leaned in graceful attitudes to rest.
How strikingly the course of nature tells,
By its light heed of human suffering,
That it was fashioned for a happier world!

King David's limbs were weary. He had fled
From far Jerusalem, and now he stood
With his faint people for a little rest
Upon the shore of Jordan. The light wind
Of morn was stirring, and he bared his brow
To its refreshing breath, for he had worn

The mourner's covering; and he had not felt
That he could see his people until now.
They gathered round him on the fresh green bank
And spoke their kindly words, and as the sun
Rose up in heaven, he knelt among them there,
And bowed his head upon his hands to pray.
Oh when the heart is full—when bitter thoughts
Come crowding thickly up for utterance,
And the poor common words of courtesy
Are such a very mockery—how much
The bursting heart may pour itself in prayer!
He pray'd for Israel; and his voice went up
Strongly and fervently—he pray'd for those
Whose love had been his shield; and his deep tones
Grew tremulous—but oh for Absalom—
For his estranged, misguided Absalom—
The proud, bright being who had burst away
In all his princely beauty to defy
The heart that cherished him—for him he pour'd
In agony that would not be controll'd,
Strong supplication, and forgave him there
Before his God, for his deep sinfulness.

The pall was settled. He who slept beneath
Was straiten'd for the grave; and as the folds
Sunk to the still proportions, they betrayed
The matchless symmetry of Absalom.
His hair was yet unshorn, and silken curls
Were floating round the tassels as they sway'd
To the admitted air, as glossy now
As when in hours of gentle dalliance bathing
The snowy fingers of Judea's girls.
His helm was at his feet—his banner, soil'd
With trailing through Jerusalem, was laid
Reversed beside him—and the jewel'd hilt
Whose diamonds lit the passage of his blade,
Rest'd like mockery on his cover'd brow.
The soldiers of the king trod to and fro,
Clad in the garb of battle, and their chief,
The mighty Joab, stood beside his bier
And gaz'd upon the dark pall stedfastly,
As if he fear'd the slumberer might stir.
A slow step startl'd him. He grasp'd his blade
As if a trumpet rang; but the bent form
Of David enter'd, and he gave command
In a low tone to his few followers,
And left him with his dead. The king stood still
Till the last echo died; then throwing off
The sackcloth from his brow, and laying back
The pall from the still features of his child,
He bow'd his head upon him, and broke forth
In the resistless eloquence of woe.

"Alas, my noble boy—that thou should'st die!
Thou who wert made so beautifully fair—
That death should settle in thy glorious eye,
And leave his stillness in this clustering hair!
How could he mark thee for the silent tomb,
My proud boy Absalom?"

"Cold is thy brow, my son!—and I am chill
As to my bosom I have tried to press thee—
How was I wont to feel my pulses thrill,
Like a rich harp-string, yearning to caress thee!
And hear thy sweet "My Father" from these dumb
And cold lips, Absalom!"

"The grave hath won thee—I shall hear the gush
Of music, and the voices of the young—
And life will pass me in the mantling blush
And the dark tresses to the soft wing flung—
But thou no more with thy sweet voice shall come
To meet me, Absalom!"

"And oh! when I am stricken—and my heart
Like a bruised reed is waiting to be broken—
How will its love for thee, as I depart,
Yearn for thine ear to drink its last deep token!
It were so sweet amid Death's gathering gloom
To see thee, Absalom!"

"And now farewell! 'tis hard to give thee up,
With death so like a gentle slumber on thee.
And thy dark sin!—Oh I could drink the cup
If from this wo its bitterness had won thee.
May God have call'd thee like a wanderer home,
My erring Absalom!"

He covered up his face, and bow'd himself
A moment on his child—then giving him
A look of melting tenderness, he clasp'd
His hands convulsively as if in prayer,
And as a strength were given him of God,
He rose up calmly, and composed the pall
Firmly and decently, and left him there
As if his rest had been a breathing sleep.

TIME'S SONG.

BY MRS. HEMANS.

O'er the level plain where mountains
Greet me as I go,
O'er the desert waste where fountains
At my bidding flow,
On the boundless beam by day,
On the cloud by night,
I am rushing hence away!
Who will chain my flight?

War his weary watch was keeping;
I have crush'd his spear;
Grief within her bower weeping;
I have dried her tear;
Pleasure caught a minute's hold—

Then I hurried by,
Leaving all her banquet cold
And her goblet dry.

Power had won a throne of glory—
Where is now his fame?
Genius said—"I live in story!"
Who hath heard his name?
Love, beneath a myrtle bough,
Whisper'd—"Why so fast?"
And the roses on his brow
Wither'd as I pass'd.

I have heard the heifer lowing
O'er the wild wave's bed,
I have seen the billow flowing
Where the cattle fed;
Where began my wanderings?
Memory will not say;
Where will rest my weary wings?
Science turns away.

THE SCOTS SOLDIER'S LAMENT.

Hame frae the wars, broken, frien'less and poor—
Hame frae the wars to my Scotland I came;
I saw my dear cabin just ower the lang muir,
I stood i' the gate, but I found not a hame.

Oh! 'twas desolate a'—an' the smile o' my dearie
No longer shone there, darting love through the breast;
Nae bosom o' truth for the wounded an' wearie,
Nae lips of affection to sweeten my rest.

No; my wife an' my wean i' the cauld grave are sleeping,
And thou, O my Scotland! art hameless to me;
The heart o' my love brak wi' waiting an' weeping,
Ance sae warm, now 'tis chill—Oh as mine soon maun be!

Then I'll e'en lay me down by my hearth-stane deserted,
And dream o' my dear i' the land o' the leal;
Death, death will befriend the forlorn broken hearted,
And heal the deep wound that time ne'er can heal.

LAMENT.

Oh! fare thee well, dearest, the morning may bloom,
And deck the wild flowers that breath on thy tomb,
But its rays cannot brighten the spirit that's fled,
Nor awake the sweet corpse from the trance of the dead.

Oh! fare thee well dearest—the even may close
The leaves of the bashful and beautiful rose;
But the fairest of flowers is sunk on its breast,
The loveliest of roses in slumber is blessed.

Oh! fare thee well dearest—thy spirit though gone,
Shall live in this desolate bosom alone,
Till it burst in the splendor of weakness forgiven,
And immaculate shine in the lustre of heaven.

MASONIC RECORD.

—Semita certe,
Tranquilla per virtutem patet unica vitz. [Juv. Sat.]

GRAND MASTER SMITH'S CHARGE.

GRAND LODGE OF SOUTH CAROLINA, 5795.

Respectable Brethren—You have so often received, from this chair, discourses illustrating the high antiquity and peculiar excellencies of freemasonry, that you cannot expect from me any thing on those topics, either instructive or entertaining. Indeed, so little competent do I feel myself to the task of addressing you at all on this interesting occasion, that I should have requested to decline it altogether, had I not too much respected the custom which sanctions these addresses, a custom not only venerable in itself, but attended in its effects with essential advantages. By a periodical assembly of the brotherhood, by drawing our minds to an attentive view of the origin, duration and excellence of the order, and by impressing on them its great and noble objects, we are taught to reverence the former with unabating respect, and to pursue the latter with increasing affection.

Freemasonry is an institution of very remote antiquity; it is the growth of every clime; it has flourished in all parts of the globe; it is understood in every language; indeed it may emphatically be called the language of human nature. While governments founded in fraud, deception or injustice, have been swept away by the revolutionary hand of time; while whole nations have either disappeared, or have so changed by great natural or political convulsions, as not now to be traced; freemasonry, like a venerable fabric, founded on the strong and unshaken pillars of piety, charity and benevolence, has stood the test of time, and resisted the shock of ages. Such have been the benefits to mankind from this admirable institution, that while all others have in their turns experienced the wrath of arbitrary governments, freemasonry, upheld by conscious innocence and the universal reputation of its merit, has ever escaped the ruffian fangs of tyranny and the lawless gripe of anarchy. When ruthless despots, aware that masonic principles opposed a barrier to their fierce ambition, and eager to establish their tyranny on the ruins of virtue and philanthropy, have attempted to abolish freemasonry within their dominions, they have soon found it so deep rooted in the affections of the people, as to be compelled to forego their detestable designs.

This preservation of our Order for so many ages, through so many dangers and revolutions, and in so great a portion of the world; while it must inspire us with the liveliest gratitude to the great Architect of the universe, cannot fail to warm our breasts with the purest sentiments of attachment to it, and to prompt us to the exercise of all those virtues which have constituted its basis and conducted to its permanency. Those virtues have been frequently the theme of similar discourses; but it is so interesting and so animating a theme, that fearful as I am of trespassing on your patience, and superfluous as the duty may appear after the able discourses you have heard, I shall slightly touch on some of them, trusting that you will receive with indulgence what I shall offer with deference.

Charity is the brightest jewel in the masonic temple: it is a virtue which more than any other, assimilates man to his beneficent Creator: it opens the heart to the divine effusions of unlimited sympathy and benevolence, and rubs off that rust which would gather round it and corrode every exquisite sensation. But it is a virtue of reflection as well as of feeling: in the due exercise of it, reason, no less than impulse, has its duty to perform: these should be properly tempered and balanced; for while, on the one hand, cold reflection ought not at all times to benumb the generous exertions of an amiable impulse, so, on the other, ought not an ardent sensibili-

ty to stimulate to an improper lavishness of that which might be wanted for more fit occasions. Happy is it for us, my brethren, that the bountiful hand of nature has been so prodigal of its blessings to this country; that the calls on human commiseration are, perhaps, less frequent here than in any part of the world. In this young and flourishing nation, industry can scarcely fail to be rewarded with a decent competency; and idleness ought ever to meet a freemason's frowns. Still, even in this fruitful land, poverty and distress will sometimes await the aged and the infirm: there will also be some, who, in spite of the utmost exertions of a laudable industry, will be overtaken by unavoidable misfortune: these, with the unfortunate brethren of other climes, who seek among us a shelter from transatlantic miseries, will claim and will always receive the benevolent aid of our society.

Before I quit this subject, I will mention one species of charity, which though not of the active but of the passive kind, though not a positive but a negative virtue, is, notwithstanding, attended with great social benefits: I mean that kind of charity, which restrains us from thinking too unfavourably of each other: the neglect of this virtue has often been the source of great disorders: mankind are but too prone to indulge an uncharitable disposition, to ascribe the worst views and motives to those who differ from them in the occurrences of life; this imputation of sinister designs produces an acrimonious state of society, and begets divisions, productive of social misery and public unhappiness. In the organization of the human mind, and in the structure of civil society, was it not intended that there should exist a variety of opinions? And when these neither disturb the public order nor endanger the public welfare, should not candour give credit to others for the same purity of views which we are conscious of possessing ourselves?

May I be permitted on this occasion to touch on another kind of inactive virtue, an inattention to which frequently leads to the prostration of all others: I mean sobriety. This virtue being as it were, the guardian of the others, a few observations on it may not be misplaced. An oriental apologue contains an excellent moral on this subject. A man was directed to choose which of these crimes he would commit—parricide, incest, or drunkenness; he recoiled with horror, and without hesitation chose the latter: but mark the sequel—when drunk he committed both parricide and incest. This vice, when it becomes a settled habit, is indeed attended with innumerable evils: it palsies all those fine qualities of the mind which elevate man to the similitude of the Supreme Being: it obliterates all those sublime virtues and excellencies which have distinguished man as the noblest work of God: it sinks him far below the inanimate brute; for the latter pursues the design of its creation, whereas man, by wantonly depriving himself of that reason wherewith he is endowed, entirely disappoints the views of his Creator. Can there be a more melancholy object than a human being in this degraded state, where a dark and gloomy veil is drawn over the obscured faculties of the mind; where the man, who a few hours ago, was admired for the brilliant display of his talents and genius, is now contemned for his folly and extravagancies; where he, who, but yesterday, was an object of envy or admiration, is, to-day, a subject of derision or compassion. Were we not too much familiarized with such scenes, should we not shudder at the sight of an enlightened being, suddenly reduced to the darkness of insanity, not by the inevitable act of providence, but by the wilful abuse of the comforts of life?

In making these serious reflections, far be it from my wish to check that convivial disposition, which gives a relish and a zest to social enjoyments. There are undoubtedly occasions when the honest heart will naturally expand, and the agreeable companion ought to relax from those severe restraints, which, if too rigidly observed, would deprive life of some

of its essential pleasures, and rob society of many of her principal charms.

Industry and punctuality in the observance of engagements, are also important virtues. Man was not intended for an inactive life; but every one, according to the sphere in which he finds himself, is bound by the social tie, and by his duty to his Divine Parent, to contribute his mite to the public stock. By this general co-operation, and by the happy diversity of trades and professions, into which communities are distributed, nations prosper, while individuals promote their own and each other's welfare. Idleness is not only the bane of society, but it is its own curse; for while the industrious citizen provides for the comfortable support of his family, sees every thing thriving around him, inculcates by his meritorious example, industrious habits on his children, enjoys the fruits of his labour, and the respect of his countrymen, the idler, after wasting his time in chimerical speculations or specious projects, which he wanted activity to undertake, tired and ashamed of his existence, skulks into some obscure corner, forgotten, or only remembered to be despicable.

Contentment, in whatever situation a man may be placed, is a blessing which belongs not to all; but it is one which all should strive to attain: how many have fallen victims to that restless disposition, which stimulated by mistaken and misapplied principles, has urged them to abandon a substance to grasp at a shadow! It is natural for a man to strive, by active industry and economy, to better his situation; but let him not repine at an apparent inequality of condition, and at too slow a transition from obscurity to honours: let him not, to accelerate his progress, embrace means unworthy of a good citizen. In the natural progression of things, industry and frugality must exalt some to riches and honor, while idleness and profusion will sink others to dependence and obscurity. By this revolving course of events, the children of the industrious mechanics of the present generation will probably be hereafter independent gentlemen, while the children of the idle gentlemen of the present generation will be hereafter industrious mechanics.

A scrupulous adherence to our engagements is a high masonic virtue: a strict observance of good faith between man and man enlivens the toilsome path of business and makes our duties easy and pleasant; whereas captious and evasive practices add fresh burthens to our labours, and obstruct us with difficulties, far greater than those naturally incident to the ordinary operations of trades and professions. As there is no being more despicable than a tricky character, one who is always on the watch to overreach his neighbour and take advantage of his credulity and indulgence, so is there none more respectable than an honest and industrious mechanic, who maintains and educates his family, benefits mankind by his work and his example, and honourably fulfils his engagements. Such a citizen is indeed far more respectable and infinitely more useful to society, than many of a different description, frequently and improperly called gentlemen.

Among the duties which we owe to society, is that of properly educating our children. In governments like ours every one should know his rights, that he may learn to prize them. Ignorance is incompatible with free governments: it may be called the grave of liberty. Mankind has been ingeniously divided into three classes, the wise, the fools, and the knaves: in public contests, the knaves get possession of the fools, and are then frequently an overmatch for the wise. In the United States, which enjoy superior advantages over other nations in this respect, as in all others, education has been so much attended to, that ignorance bears a smaller proportion in the general scale than elsewhere. Still public happiness depends so much on the diffusion of knowledge, that education cannot be too leading an object of our regard. Let every one, therefore, whatever his situation in life, give the

best education to his children within his means, without however interfering too much with the profession or trade to which they may be destined. A proper education is by no means inconsistent with the practice of a mechanic art. Every citizen, in every station, ought to know enough to be able to judge for himself in all the great transactions of life, and to be proof against the practices of the the ambitious and the designing. An ignorant man in the hands of a knave is like a mischievous weapon in the hands of a madman; but a well-informed citizen is not only the guardian of his own rights, but the safeguard of the honour and rights of his fellow citizens.

From the contemplation of these domestic and neighbourly virtues, allow me to lead your minds to the sublime contemplation of a virtue which acts on a more enlarged theatre, and swells the bosom to a more comprehensive scope of reflection:

You will readily perceive that love of our country is the noble sentiment alluded to. A good freemason must be a good patriot; but patriotism, like many other virtues, has been so often prostituted, by the ridiculous mummeries and wicked artifices of impostors, that it is necessary to discriminate between genuine and spurious patriotism.

When I speak therefore of this virtue, I mean not that mock patriotism, which, in all ages, and in all free countries, has been seized on by the ambitious as a cloak to cover base and insidious designs; which, bedecked with the alluring garb of tinsel jargon, has been assumed to conceal the foulest purposes; which, under the mask of hypocrisy, and with the parade of pompous language, has been ever found subservient to the most despicable and selfish views; which, at one time, has been employed as a stepladder to power, and at another, as an engine of destruction to rival popular and obnoxious competitors; I mean not that mock patriotism, which has been the siren song of seduction of the knaves, to cajole and ensnare the fools; I mean not that satire on patriotism, which blazes its own merits in ranting declamation and frothy professions, which draws from time to time out of non-existence little ephemeral insects, which glitter for a moment in the glare of their own creation, and then dissolve into their original nonentity; I mean not that profanation of patriotism, which, while it utters from the lips the most precious and pious ejaculations for the public weal, impiously bears in the heart the most atrocious designs against public order, public tranquillity, and national independence. But I mean that heaven-born patriotism, which announces itself in deeds of public utility; which delights in the maintenance of law, in the support of order, in respect for the magistracy, enforcing, by precept and by example, every moral and religious practice; which displays itself in habits of industry and frugality, in a virtuous education of one's family, and in the faithful performance of all the relative duties of a man and citizen.

Enlarging still further his views, every good freemason should embrace, in his system of philanthropy, the whole human race; universal benevolence should share in his breast a place with those social affections, which are of a more local complexion.

This expansive and magnanimous philanthropy will of course excite him, while he delights in his own domestic prospect to invoke the divine protection for those unhappy nations, which are now desolated by the scourge of war, and every public calamity; and to implore the Almighty Ruler of the universe, to stay the avenging sword, and to restore peace, liberty and happiness, to so many millions of our miserable fellow creatures.

Finally, my brethren, let me exhort you to a proper attention to your religious duties. Religion, were it not even inculcated by our Divine Master, would recommend itself to all enlightened men and civilized societies by the purity of its precepts and the excellence of its practices. Religion, by softening the manners and subduing the unruly passions, unites mankind in the bond of brotherly love, and, like freemasonry, constitutes a most salutary and durable cement to society. Do we not learn from history, that in proportion as nations have receded from the principles and practices of religion, they have advanced to ferociousness or relapsed into barbarism? And in our own country, is it not undeniable that in proportion as religion sheds its be-

nign influence over society, do justice, order, and public felicity prevail?

I have now rapidly passed over some of the most prominent features in this beautiful system of moral freemasonry. To have enumerated them all, or to have dwelt more minutely on those that have been selected, would have exhausted your patience. You will have observed; my brethren, that to accomplish the views of the Great Artificer of the world, and to be approved as true and perfect freemasons, you have many important duties to perform; you will likewise have observed, that beginning within the circle of the more domestic and social duties, your bosoms must dilate to the more enlarged circle of the public duties you owe to your country; and that, not confining your affections even there, the heart must afterwards expand to the spacious circle of human nature, and swell with emotions of universal love and benevolence. A due cultivation of these virtues will invigorate the cementing principle of brotherly love, which is the grand basis of freemasonry; for nothing is more true, than "that the better men are, the more they love one another." The practice of these virtues, will also smooth away those asperities, which are found in the rugged vale of life, and make us glide more gently down it, to that future state of bliss, which a life so spent will insure us.

Thus having fulfilled the purposes of your creation, and done honour to the inestimable principles of this institution, you will, by approving yourselves good freemasons, at the same time approve yourselves good men, good citizens and good christians.

ELECTIONS.

Greene Royal Arch Chapter, Greene, Chenango co.

Elected December 12, 5826:—Levi Farr, High Priest; George Wheeler, King; Augustus Willard, Scribe; Gideon B. Minor, Captain of the Host; Warren Gray, Principal Sojourner; Townsend Bagley, Royal Arch Captain; John Avery, Carding Jackson, Chauncey Brown, Masters of Vails; G. B. Minor, Secretary; J. Johnson, jr. Treasurer; J. L. Skell, Tyler.

Lafayette Chapter, No. 20, Granby, Connecticut.

Elected April 12, 5827:—Joseph T. Jewett, High Priest; Daniel B. Holcomb, King; Abner Case, Scribe; Hiram R. Pettibone, Captain of the Host; Joshua R. Jewett, Principal Sojourner; Harry Holcomb, Royal Arch Captain; Charles Holcomb, Orator Pinne, Walter Lewis, Masters of Vails; Joseph Smith, Treasurer; Joel C. Holcomb, Secretary; Rev. Amasa Holcomb, Chaplain; Stephen Sage, jr. Israel Goddard, Stewards; Maltby G. Hillyer, Tyler.

Clinton Council of Royal and Select Masters, No. 15, Granby, Connecticut.

Elected April 12, 5827:—Joshua R. Jewett, T. I. G. M.; George Norton, I. D. G. M.; Calvin Dibble, I. P. G.; Joseph T. Jewett, C. C.; Joseph Smith, Treasurer; Joel C. Holcomb, Recorder; Elisha E. Holcomb, Steward and Sentinel; Maltby G. Hillyer, Tyler.

SCIENCE AND THE ARTS.

TAPPING THE PERICARDIUM, OR BAG, CONTAINING THE HEART.

We feel great pleasure in being enabled to lay before our readers the following account of a most difficult and dangerous operation in surgery, successfully performed, for the first time, by a townsman. Desault, an eminent French surgeon, we are told, once attempted the same thing, about twenty years ago, but found, after the patient's death, that he had been mistaken in the complaint. M. Laennec, and others, have since proposed it; but no one till now has ventured to perform the operation. The result is of extreme importance, not only as it regards the individual more immediately concerned, but as proving the practicability of what has hitherto been considered impossible. It will be seen, that the case had assumed that decided character, that no alternative remained to save life.

"A girl named Skinner, fourteen years of age, residing in White-street, Carter-Gate, in this town, had this operation performed, on Wednesday, February 14, being the first time it has been success-

fully attempted. She was attacked with rheumatism last January, at which time Mr. Jowett, the surgeon of St. Mary's parish, discovered by the use of the stethoscope, that the pericardium and lining membrane of the heart were inflamed likewise. By very active measures, the severity of the complaint was subdued and she appeared to be recovering; but the stethoscope joined with other signs, indicated that considerable effusion, or dropsy, had taken place in the pericardium. On the 13th of February she became much worse, and on the 14th was so bad, that it was evident she could not survive the night, unless some relief was afforded. The operation having been previously proposed, was then consented to, and was performed by Mr. Jowett the same afternoon, in the presence of Dr. Manson (the consulting physician), an assistant, and the patient's friends. It was at first intended to have drawn the fluid out by means of a syringe pump, fitted with proper apparatus; but an accidental circumstance occasioned, what has since proved a material improvement, viz: the evacuation of the fluid into the left cavity of the chest, which being in a healthy state, absorbed it in a very short time. Within twelve hours after the operation there was a manifest improvement; and we are happy to say, that although she still remains in a very weak and exhausted state, considerable hopes of recovery are entertained. [Nottingham Jour.]

SECURITY OF STEAM ENGINES.

The Royal Academy of Paris has been called upon by the government, to report on the means proper to be adopted for the prevention of accidents and injury from the explosion of steam engine boilers. The means proposed had the double object of preventing the rupture of the boilers, or, in case of their destruction, preventing injury to neighbouring buildings. They directed that the boiler should be proved by the hydraulic press, with a force five times that which they would have to bear during the working of the engines; that a safety-valve should be attached to the boiler and locked up, the valve being so loaded as to open at a pressure just above that by which the boilers have been tried; that the boiler should be surrounded by a wall of masonry one metre (39.371 inches) in thickness; an interval of a metre, being left between the boiler and the wall, and again between the wall and the neighbouring buildings. Another precaution has been added by M. Dupin, (whom we congratulate on his deserved elevation to the rank of Baron) and adopted by the Academy; namely, the introduction of a metallic plug into the upper surface of the boilers, formed of such an alloy as should melt at a temperature a few degrees above that at which the engine is intended to work.

In consequence of this application, it became necessary to form a table of the pressure and temperature of vapour. The Academy appear very doubtful of estimations as yet published, but give the following table, up to eight atmospheres, as nearly correct; above that, they say, it was impossible to go without further experiments.

Elasticity in atmospheres.	Height of mercury.	Temperature of Fahrenheit.	Pressure on a square inch.
1	29.92	in 212° 0	14.61 lbs. av.
1 1-2	44.88	in 234.0	21.92
2	59.84	in 251.6	29.23
2 1-2	74.80	in 264.2	36.44
3	89.76	in 275.0	43.84
3 1-2	94.73	in 285.3	51.15
4	119.69	in 298.4	58.46
4 1-2	134.65	in 302.0	65.76
5	149.61	in 309.2	73.07
5 1-2	164.57	in 316.4	80.37
6	179.53	in 322.7	87.69
6 1-2	194.49	in 328.5	94.99
7	209.45	in 334.4	102.30
7 1-2	224.41	in 339.3	109.60
8	239.37	in 343.4	116.92

It is advised that no direction should be given for the composition of the plugs or plates, but their preparation entrusted to some competent person, who should be responsible for the accuracy of their fusing points. The fittest place for them, all things being considered, is the upper surface of the boiler. Their proper diameter and thickness have not yet been ascertained; they should be such as to

bear the force of the vapour without risk of breaking, and, when the plate is fused, to leave an aperture sufficient for the ready escape of the vapour. [*Ann. de Chimie*, xxvii. 95.]

ARTIFICIAL PUZZOLANA.

An excellent artificial Puzzolana is now prepared in France, by heating a mixture of three parts of clay and one part of slacked lime, by measure, for some hours, to redness.

IMITATION OF CHINA INK.

Dissolve six parts of isinglass in twice their weight of boiling water; and one part of Spanish liquorice in two parts of water. Mix the two solutions while warm, and incorporate them, by a little at a time, with one part of the finest ivory black, using a spatula for the purpose. When the mixture has been perfectly made, heat it in a water-bath till the water is nearly evaporated; it will then form a paste, to which any desired form may be given, by moulding it as usual. The colour and goodness of this ink will bear a comparison with the best China or Indian ink.

FRENCH COAL MINES.

The coal mines of Anzin are very extensive, and employ a large capital. They have been worked about a hundred and twenty years, and are connected with the coal mines of Fresne and Vieux Corde. At the present moment there are forty-one shafts in these mines; twenty-nine of extraction, nine of draining, and three of ventilation; and nine shafts are digging. The deepest shafts are those of Benjardin. The draining shafts are worked by five of Watt and Bolton's steam-engines of seventy-horse power, and four of Newcomen's steam-engines of fifty horse-power. Twelve of Perier's, and fifteen of Edward's engines are employed in the extraction of the coals; amounting to two hundred and twenty-four horse power. A population of about five thousand people subsists in these subterranean works. The number of working miners is nearly three thousand, about a third of whom consists of children, from ten to eighteen years of age. There are five medical men to attend the sick; and the superannuated miners retire with a pension. Their widows and orphans are also taken care of; and for the education of the latter, there are three schools of mutual instruction. The introduction of Davy's safety lamps has greatly diminished the number of accidents. The mines are also provided with rail-ways; the iron composing them is, generally speaking, wrought, which is considered much preferable to cast-iron for that purpose. The consumption of coals in France is increasing daily, which may be deemed one of the most unequivocal proofs of the growing prosperity of a country. The mines of Anzin furnish annually from five to six millions of livres' worth of this valuable fuel.

BIOGRAPHY.

From the London Literary Gazette.

M. MALTE BRUN.

This eminent geographer was born in 1775, in Jutland; he was destined by his father, who was a clergyman, for the church, and sent to the University of Copenhagen to study theology; but he occupied himself in writing verses and a theatrical journal. Politics seemed to be the favourite theme of the young student; and when the minister, Count de Bernstorff, proclaimed the liberty of the press in Denmark, and endeavoured to abolish the slavery of the Serfs, Malte Brun declared himself the champion of liberal ideas; and while his father protested with the nobles against the abolition of slavery, the son wrote boldly for the liberty of the peasants. His success encouraged him to dare more; he joined the party which desired a radical change in the government of Denmark, and wrote a violent pamphlet entitled *Catechism of the Aristocrats*. Fearing for his liberty, he fled to Sweden; but finding the government did not trouble itself to make a state affair of his pamphlet, he returned to Denmark, and wrote still more violent productions, which rendered a second flight necessary. He was in his absence condemned to perpetual banishment, at the demand of the Emperor Paul and King of Sweden, who re-

quired of the Danish court the punishment of the Jacobins of the north. He arrived at Paris, and the republican soon became an apostle of the imperial rule of Napoleon: as a writer in the *Journal de l'Empire*, he daily bespattered the idol of the day with the most extravagant praise; this lasted until the fall of Napoleon, when he quitted the *Journal de l'Empire*, for the *Quotidienne*, in which he had only to change the name of Napoleon for that of Louis XVIII. to continue in his old style of continual admiration. These changes of opinion were but too common in France during the revolution to which she submitted. But we shall not follow him through the labyrinth of his political career, in which he resembled the dial, which marks the hour exactly when the sun shines, but leaves no trace of his existence when clouds or night veil him from mortal eye.

It is therefore with pleasure we turn to M. Malte Brun's claims on society as a geographer. He published with M. Mentelle a geographical work in sixteen volumes, and afterwards another alone. Of this latter work six volumes are before the public; and we may safely aver, that M. Malte Brun was the first who treated the subject as a science, and his work therefore claims a decided superiority over every other. Unfortunately, the author did not live to complete it: the seventh volume, which concludes it, was, we believe, nearly ready for the press when he died. He had just issued a prospectus of this seventh volume, and an Abridgement for the use of schools, as well as a Treatise on Ancient Geography, to be published in 1829; but, alas! he did not survive even to prevent its being an anachronism.

M. Malte Brun's learning was considerable, and his zeal unabated: he was of very social habits, and during the winter had a regular weekly dinner of the literati of eminence of every country. He was extremely obliging, and had an excellent heart: it was only when he took the pen in his hand that he was really *mechant*; for then he neither spared friend nor foe; which made him many enemies. Though a foreigner, he wrote French with an elegance and purity at which many Frenchmen never arrive. He was the author of many other works, but his fame will entirely rest on his *Precis de la Geographie*; and we trust that it will be concluded with the same learned care that presided over the preceding volumes. He was of late years one of the editors of the *Journal des Debats*; and as the French never lose an occasion of saying a good thing, *coute qui coute*, the rival papers said he died of surprise on learning that his colleague the Abbe Feletz had been elected a Member of the Institute.

He left an amiable widow and two sons to deplore his loss.

SKETCHES OF SOCIETY.

From the London Literary Gazette.

SPAIN.

A French traveller, of the name of Blanqui, who was at Madrid in the months of August and September last, has published the observations which he was enabled to make during his residence in that capital; and the present interest of the subject induces us to translate them into the *Literary Gazette*. It appears impossible to surcharge the picture of the degradation and misery to which pride and superstition have reduced Spain. M. Blanqui was at his very entrance into the country asked for alms by the public functionaries, in rags, who required to see his passport. He remarks, that nothing can exceed the melancholy appearance, the dilapidation, and the filth of the dwellings, except the wretchedness and ignorance of the inhabitants. When you wish to go into any of these houses, the question is, "Who goes there?" to which you must answer, "Ave Maria:" your interrogator rejoins, "Who conceived without sin;" and allows you to pass. The priests and monks in various costumes stroll lazily about. They alone are well clothed and fed; they alone enjoy the good things of this world, in exchange for the orders which they issue upon eternity. Wherever they appear, they are received with marks of the most profound veneration. Having been prevented by the police from leaving Madrid, for the purpose of visiting Cadiz, M. Blanqui

insisted upon knowing from the secretary of the intendant of the police the cause of this treatment. "Sir," said the secretary, smiling, "when your countryman, General Cambronne, was in Italy with a detachment of eight hundred men, he one day demanded five thousand rations from the mayor of a little town in which his troops were to pass the night. 'What! general,' said the mayor to him, 'you ask me for five thousand rations, and you have only eight hundred men?' 'Mr. Mayor,' replied the general, 'I never talk politics.' M. Blanqui, I say to you in my turn, dispense with my talking politics." In the month of September last, the police of Madrid posted up an order respecting the theatres, of a part of which the following is a literal copy: "Every individual who allows himself either to applaud or to hiss, during the performance, or to make signs to any body in the boxes, (even if it should be to his sister) shall be condemned, for the first offence, to serve six years as a private soldier; and in case of a renewal of the crime, to be sent to the galleys for ten years." An English traveller told M. Blanqui, that while at Seville in the course of last summer, he was accosted by a tall Spaniard, who demanded his purse, threatening to poniard him if he hesitated. "There it is," said the stranger; "but you have adopted a bad trade, and in a dangerous place." The Spaniard finding that he was an Englishman, immediately changed his tone, and added, "Sir, my life depends upon you. Take my card, and call on me to-morrow. You will have it in your power either to hang me, or to render me a great service. Come without fear." The Englishman went; and found eight children devouring the remains of some coarse food, with all the signs of raging hunger. Their father (the robber) offered to return the purse, and confessed that he was a deposed magistrate, whose whole resource was despair. A similar occurrence is introduced in Tom Jones; but there it is the creation of the writer's fancy; while in Spain it passed under the observation of an eye-witness. Every journalist who dares to publish any opinion unfavourable to the absolute authority of the king, is instantly denounced. All the enlightened part of society is exposed to persecution from the ignorant and fanatical classes. These classes, stultified and rendered brutal by the priests, and living upon charity, demand the renewal of the tortures of the Inquisition, and make the industrious merchants, the physicians, the lawyers, the literary men, and all the intelligent friends of the public weal, tremble. The country is gradually losing that part of its population which alone could maintain its happiness and its glory. The towns in the south of France are encumbered with Spanish refugees, all more or less interesting, and all having more or less to complain of. It is difficult, M. Blanqui says, to mention a single Spaniard, distinguished for any eminent mental faculty, who, since the restoration of the power of the monks, has not been either disgraced or banished. The most prudent people are wholly silent; others limit their disapprobation to a gesture, or an ironical smile, whenever the apostolical regime is talked of in their presence. The officers who commanded under the Cortes, the veterans of the war of independence, can with difficulty stifle their indignation and resentment when they find that they have fought and triumphed for the Capuchins! Even Ferdinand is not treated with any respect by the priests. During the constitutional regime, a princess of the king's blood having asked his consent to her purchasing an estate belonging to the church, which would be an accommodation to her, the king said to her, "Buy it; buy it; you are right." After the restoration of Cadiz, the clergy having re-entered on their possessions, without excepting the estate in question, the princess complained to Ferdinand; whose answer was, "Why did you buy it?" M. Blanqui was much struck with the contrast between the magnificence of the royal residences, and the poverty of their furniture. He was especially shocked at that of the king's bedchamber. A very common mahogany bedstead, a miserable toilette, two old-fashioned arm chairs, and two velvet cushions, complete the shabby catalogue. The queen's bedchamber is equally paltry. Among the curious anecdotes related by M. Blanqui, is one of Murat's son, who, it seems, was decoyed beyond the lines of Gibraltar by a fictitious billet-doux, and then seized and thrown into a dungeon.

POPULAR TALES.

From the New-York Saturday Evening Gazette.

REUBEN VILLAGE.

I ask not sympathies nor meed. The thorns which I have reaped, are of the tree I planted; they have torn me and I bleed; I should have known what fruit would have sprung from such a seed.

(Byron.)

Almost every little village has had its tradition, either handed down from a distant generation, "time out of mind," or the early recollection of the eldest inhabitants, indubitably impressed upon their memory in childhood, and related as the most interesting scene of their life. Every family has its tale of wonder and misfortune, some accident or adventure, either from a remote relative, or some recent occurrence, fresh in their memory.

It was on a cool and dreary day of December, 18—, that I chanced to be travelling through some of the neat villages, on the borders of the Hudson river; the wind howled along the deserted road, and the snow had already begun to descend, when I heartily rejoiced, on reaching the summit of a hill, to behold but a short distance from me a more substantial inn than was common to that part of the country. I found a variety of guests, seated around a cheerful fire, discussing the good landlord's ale; and having much time before us, it was determined by a majority of voices, that each, in his turn, should relate some tale for the amusement of his fellow-traveller; the first duty of course fell upon *mine host*, and he, vouching for the truth of his narrative, related the following Legend of his village.

This obscure little village of Reuben, as it was called in 1776, is situated, as you all know, on the banks of the Hudson, not many miles north of the city of New-York. It then contained but a few houses; there was, however, an air of neatness around these, altogether different from the country houses that are common to the villages on the banks of the North river. From its appearance, it seemed that a few wealthy persons had chosen it for a place of resort during the summer months of the year. It was at that memorable period of American history, when all were called upon to wrestle with foreign oppression for the soil which they enjoyed; when the liberty of their country, and the love of glory, were the animating passions that swayed the breast of almost every young American, that Edwin SUMMERS, scarcely twenty-one, was called upon to act a part in the tragedy, that so deeply concerned his native land. He had been living with his uncle, and sister Amy, at their deceased parents' residence in Reuben; and, though he was loth to quit his orphan sister, the world had then too many charms for a warm and enterprising disposition, to let even that consideration deter him from accepting a commission from the young American Republic.

Amy Summers was then a wild and thoughtless girl of sixteen; no rose in her garden was of a finer hue than the bloom upon her cheek; no bird sung more merrily than she; treading with a light step over the grassy lawn, or sitting at noon-day under the shade of some spreading tree, she was thoughtless, innocent, and happy. Her uncle, then, her only acquaintance in the place, and, excepting her brother, her only relative in the world, was too old and infirm to restrain a wild, romantic girl, of her youthful age, and too inconsiderate to take any care, where he was not able to perceive some wanting. Things were in this situation when Captain Summers was called to the camp; he left the village after some parting advice to his sister, whom he had always loved with sincere affection.

But a few weeks had passed away after Edwin's departure, when a young English officer, interesting in his appearance, was brought to the village; he had been wounded in a late skirmish with the Americans, and having some relatives at Reuben, he removed there for recovery. His wound being of such a nature, that, though it disabled him from duty, did not confine him entirely to the house. It was not long ere accident made Amy and William Pemberton acquainted, and mutual inclination made them intimate. He could tell of the engagements he had been in; of the customs and wonders of his native country; and various anecdotes, ever interesting to a secluded female's ear. Scarce a month had passed away, before the recovery of Pemberton

made it necessary that he should soon return to his quarters; but a stronger tie now restrained him; acquaintance with Amy grew, perhaps unconsciously to both, into love. Amiable as he was, and above the prejudices so natural to his countrymen, he would not, or did not, consider, whether the cause he was engaged in was right or wrong; he had been sent from his country, he said, "to fight for his prince, and he contented himself with being his soldier, not his judge." The consideration that Amy would not be contented to leave her native land, the recollection of other ties, and the necessity of his returning to his country as soon as possible, made him sensible he was forming an imprudent attachment; but these considerations, like the dew-fall at night, would be dispelled at the sun's rising on the morrow. He daily saw Amy Somers, and daily determined that his next visit should be the last; and even while he still visited her, he was forced to think, that if he saw her "with the thoughts of marrying her, he was a fool; and if not, a villain." True and violent love is far stronger, it is said, than any rules of prudence, and he soon found that he must marry Amy, or remain unhappy. One pleasant day they had strolled to visit an old Hermit, or solitary, who lived almost secluded from the world, in a rude cottage, a short distance from the village. He had been an old friend of Amy's parents, though his history was but little known to them, or any of the inhabitants of the surrounding country. As Pemberton appeared with Amy he regarded the young soldier with a doubtful eye, and told her that she must look for the serpent among the fairest flowers; with many insinuations, which alarmed Amy, who, though wild, romantic, and imprudent, was still amiable, and had her moments of thoughtfulness. But on their return, after the persuasions of her lover, she could see nothing very wrong, in promising to become his bride. A secret marriage took place in a few days after, when, on account of various circumstances, and the wish of Pemberton, they each vowed to keep it secret, until they should mutually consent to its being revealed, or circumstances should render its concealment no longer necessary.

The utmost time that Capt. Pemberton could remain at Reuben Village had nearly passed away, and he prepared to leave his young bride for the camp, on the afternoon of the tenth day succeeding their marriage; it being necessary that the noon of the following day should see him at his quarters.

There is every thing in the first, however small, deviation from the direct path of truth and prudence; it is always the foundation of great crime, and continued unhappiness. It was the duty of Amy Summers to have taken the guidance of her brother, and it was her intention so to do, but the knowledge of his antipathy to the English soldiers, she knew would either cause enmity between her brother and herself, or put an end to all her fond anticipations of happiness. Few will blame her for not revealing the state of her affections, when she knew it would be the means of destroying her peace. She should have told her lover she had a brother; on some consideration or other she did not, and it was a circumstance altogether unknown to him.

It was on the evening of the day that Pemberton was to depart for the camp, that a horseman was seen by the inmates of Reuben Inn, rapidly descending the steep road opposite its entrance. As he halted before the door, it was perceived that the dress of the traveller bespoke the camp. Having hastily alighted from his horse and entered, he was immediately hailed by well-known voices with various inquiries from the American Army: it was Edwin Summers.

Capt. Summers' unexpected arrival at Reuben, was a matter of no small surprise to most of the villagers, while some of the more sagacious thought much but said nothing. He had stopped at the cottage of the hermit as he passed along, where he learnt sufficient to arouse his already half-awakened suspicions for his sister.

A vague imperfect report had reached him in his quarters through the agency of the hermit, that an English officer had fallen in love with a lovely girl at Reuben while her brother had gone to the war. This, with other considerations, brought him in full speed to the village. And though he knew Amy

was rather of a romantic and self-willed disposition, he would have treated any offer for her hand, coming from an English soldier, with contempt, however advantageous it might seem. He had inquired of the hermit as he passed by his cottage, if his sister had been there during his absence, and on learning she had, and with Pemberton too, his old and mortal foe, he hastened to see his sister and enact vengeance on his enemy.

His first inquiry on reaching the inn, was, if there had been any soldier lately in the village. He heard there were none except Pemberton. Their bitter enmity was known to nearly all the surrounding country, while it had never reached the ears of poor secluded Amy. On learning he was to depart that evening for the camp, he soon satisfied the eager inquiries of his acquaintances at the inn, and took the road that led to his sister's residence, some little distance from the heart of the village.

The moon had just risen, and was shedding its pale light through the thick trees that surrounded the cottage of Amy, affording but an imperfect light around, while she was momentarily expecting her husband; he had promised to stop a moment ere his departure for his quarters which, travelling through the whole night would scarcely enable him to reach betimes on the following day.

Edwin Somers had scarcely reached the gate that opened before the path, leading to the door of the cottage of his sister, when his attention was arrested by hearing the distant sound of horses' hoofs; nearer and nearer they approached, until the horseman reached the place where Edwin stood, when throwing himself from his horse, he was about to enter, and felt the rough hand of Edwin at his throat. In Captain Somers he had unexpectedly met his sworn foe; twice already had they been together at the point of the sword, and the last time he had severely wounded Edwin, who, in the delirium which attended his illness spoke vaguely of young Pemberton and his sister, which his mother had interpreted into some mystery concerning them, and she was induced to consider him as the enemy of her family; an idea that attended her to her death-bed. The quarrel he formerly had with Edwin, was in relation to a young lady, and he thought it was some such pretensions he had to Amy, and would have told him his situation, for though he recollected he was of the same name as his bride, yet as Amy never told him she had a brother, and his former quarrels were at a different place, he had no idea of their being related.

The struggle between the two soldiers was long and violent. Edwin at last was thrown rolling over the grass; he instantly arose with redoubled anger, and hastily drawing his sword struck his adversary on the shoulder, bidding him defend himself. Edwin had not only infused some of his passion into Pemberton, but had put such a stain upon his honor, which in the language of a soldier, "blood could only wash out." Noticing, however, that it was so near the cottage of Amy, he motioned and led the way towards the banks of the river; Edwin followed.

Both too proud to hold communication with each other, they drew when at the destined spot, and the pure light of the moon shone on their blades, as they struck at each other's lives. It was but a moment ere Pemberton fell, severely wounded and unable to speak. Edwin now saw to what extremity his passion had driven him; his horrible situation rushed with all its force upon his mind; Pemberton would probably die before aid could be procured, and what plea could he have to excuse him if they should be found together. A duel! fought without seconds! The known enmity between them made it most probable, his fame would more severely suffer even than his piece of mind.

It was on the banks of the river that Pemberton fell, and nearly the same distance to the solitary residence as to his sister's cottage. This determined him to chuse the former place to convey his fallen enemy, with the resolution to give him all the assistance that could be procured. He soon obtained a light waggon, and drove with Pemberton resting on his bosom, to the hermit's cottage; his heavy breathing denoted him still alive, but on the brink of eternity. The united skill of Edwin and his aged companion, (whose name was coupled with a kind of sanctity by the surrounding inhabitants, for the wonderful cures

he had performed by means of herbs,) could not avail, and but a few moments elapsed ere the vital spark fled forever.

(Conclusion next week.)

ORIGINAL ESSAYS.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

ON THE MIND.

NUMBER VII.

Nature, a mother kind alike to all,
Still grants her bliss at labor's earnest call;
With food as well the peasant is supplied
On Ida's cliffs as Arno's shelvy side. [Goldsmith.]

Man is a singular and highly gifted animal. He is elevated above the brute creation, by that superiority of intellect; by that brilliance of the mental faculties which is evidently an emanation of the Deity. He is monarch over all living creatures, and holds the sceptre of command over the temporal destinies of the world. Nature is the common mother of the whole, united as the earth, the sea and air. She is governed by immaculate and immutable laws, which like the attraction of gravitation, never swerve from the destined centre, or the object for which they were intended. But from a hasty view of the subject, we should be inclined to suppose that she is in some instances, partial to particular individuals, or classes of men. We observe in some men, that nature has bestowed a far greater degree of genius, and we behold it bursting forth in brilliant streams, like the liquid lava from the hitherto dark crater of a volcano, spreading astonishment and wonder in all its course. And we frequently observe this where education and science have aided in an inconsiderable degree. We sometimes behold an orator, who was born to poverty, and consequently had not the means or resources by which he could become proficient in the rules of logic, thundering from the pulpit such strains of untaught eloquence, that we are struck dumb by the amazing power which he displays, and are ready to imagine that nature has been niggardly to us, when put in competition with the character designated. We sometimes read the strains of a bard, who, perhaps, has been very little favoured with the learning of the schools, and in the ecstasy of his own language, we are ready to exclaim, "how far short my talents are, when compared to his." We sometimes listen to the ever fascinating sarcasms and burlesque expressions of the witty, and cry out, when we see the multitude in a roar, "I would give the world to possess his inimitable talent."

All these circumstances, and particularly that of the poet, whom nature in all instances inspires, have a tendency to persuade us, that she is a niggard to the larger portion of mankind, and that she has bestowed all her favors upon a few, and upon the majority, none. But let us reverse the subject, and view the picture on the opposite side. Were all men gifted in the same manner, it would break in on the order and regularity of human society. Where nature bestows on one score, she denies upon another. The man of bright genius, and expanded intellect, is seldom blest with the exterior charms of beauty, which we see particularly exemplified in the features of Shakspeare, Samuel Johnson, the literary star of the eighteenth century, and Alexander Pope. And the greater number of women celebrated for their talents are remarkably ugly; for instance, Miss A. M. Porter, and Lady Morgan; formerly Miss Owenson, said to be the most talented woman in Europe. Deformity is frequently connected with great and splendid genius, as was the case with Johnson and Pope. But there are exceptions to all general rules.

The blacksmith is compensated for his denial of the brighter part, by those Herculean limbs, and ponderous muscles, which characterize him as the chief forgerman of Vulcan. The ladies' man, is remunerated for his insignificant character, by personal beauty, and an inexhaustible fund of insipid nugacity, or small talk. His Adonis form, is the pride of his heart, and he asks no greater boon of heaven. The miser, or more properly, the fool, sells his remnant of mind and morality for the golden ore, and becomes the most wealthy man in the country, and the least respected. But he has the talent of skinning a flint, and of converting a grindstone, into his favorite metal, and he aspires to no

more. We seldom behold an accomplished orator, a great writer, or a great writer an accomplished orator. The man who would shine, perhaps, as a poet, sinks far below his original avocation, when he aspires to the learned professions, and much reminds us of the fable of the frog, whose vanity taught him to believe that he might acquire the size of the ox, by excessive inspirations of air, but which ended in the eruption of the thorax and abdomen, and finally the extinction of life.

Thus, by reasoning in the abstract, we are led to perceive that nature repairs every breach, by some gift better adapted to the peculiar formation of the brain, and the order and arrangement of the mental faculties. If by a fortuitous circumstance, a man lose an eye, she will render the remaining one of double strength, as a compensation for the lost one, and where the lower extremities have become useless, by the effect of mercury, rheumatism, &c., she makes up the breach, by giving greater dexterity and strength to the arms. In case of fracture of one of the bones, she will cause to be poured out a redundant supply of osseous matter, as a safeguard against future accidents or fractures.

But I digress; and will return to the subject. No man should grasp at that which is entirely out of his reach, or attempt to become learned, when nature has withheld her succour; or in other language, when she has not given him that capacity by which he may rise from the chaotic gloom which surrounds him. The inclination of the human mind may be discovered in early youth by various means, and we are told by historians that it was a custom with parents, in the once polished republic of Athens, to pierce into the genius of their children, by presenting to them while at play, a number of instruments of different kinds, such as mechanical tools, toys, coats of arms, &c., thereby discovering which they were most pleased with by the choice. This is said to have been the means by which the great Ulysses was discovered, whom prophecy said was a boy, and if found, was destined to lay in ruins the celebrated city of Troy. We are credibly informed by Plutarch, that in the time that the city of Rome was the glory of the globe, and mistress of the world, some children were seen holding a mock forum and pleading in miniature, the criminal case of some pretended offender. The Roman youth, it appears, were altogether inclined to the forensic studies, united with the manly exercises, in which they made great proficiency, as we observe in Cicero, and many others. Thus we see that man is a gifted animal, and that each has a particular talent bestowed upon him from the ancient mother, nature. Let not the gray headed, reverend senior smile with contempt at the rude term *animal*; for if he will trace the word to its origin and make the proper inquiry, he will find that every creature on the earth that inhales the atmospheric air, or more properly, that breathes oxygen, is an animal.

Every youth should be dedicated to that avocation which nature has designed for him, and never be driven to the learned professions, when his inclinations do not prompt him, as the act will only entail disgrace upon him, and bring down the curse of ignorance on his head.

MILFORD BARD.

VARIETY.

HISTORICAL FRAGMENT.—The church of St. Peter's, at Rome, has generally been considered as one of the most magnificent edifices in the world. It was begun by Pope Julian; but left unfinished at the time of his death. His successor, Pope Leo the Tenth, was desirous to complete this superb fabric; but being involved in debt, and finding the Apostolic chamber deserted, he had recourse to the disgraceful, though gainful, traffic of selling indulgences, to raise the sum that was required. In 1517, he accordingly gave publicity to his resolution, by offering indulgences throughout Europe, to all who would contribute to the building of St. Peter's. The price of sin was stipulated. The sum of ten shillings was sufficient to procure pardon for every offence, and to release a soul from purgatory. It was against this abominable merchandise that Luther, though strongly attached to the church of Rome, lifted his voice; and the contest terminated in the establishment of the Reformation.

A TURKISH ANECDOTE.—Some years ago, a French frigate being at Boodroom the commander expressed a great desire to see the marbles of the fortress; but the then governor absolutely refused to admit him, without direct orders from the Porte. The commander had interest; the ambassador was set to work; and in a short time the frigate returned, bearing the necessary firman. The governor put it to his forehead, in acknowledgment of its authority, and declared his readiness to proceed. Arrived at the outer gate, "Effendi," said the governor, "the orders of my Imperial master must be implicitly obeyed." "Let me in, then," exclaimed the impatient captain. "Undoubtedly," replied the Turk, "for so I am enjoined to do by the firman: but as it contains no directions about your coming out again, you will perhaps forgive this momentary pause, before we pass the drawbridge." The French commandant, not chusing to put such hazardous irony to the test, departed.

A captain of a trading ship being not long since in the city of Constantinople, lodged in the house of a seafaring Turk. One day he observed to the Musselman, that in all his walks through the immense city of Constantinople and its suburbs, he had not seen any thing like a jail for imprisonment of debtors. Christian dog! (said the disciple of Mahomet) do you suppose we are so debased as to copy the Nazarine policy? We take care to strip a debtor of all his property—but there we leave him—we instantly turn him loose to begin the world again. The believers in our prophet are above shutting up their fellow men in cages in order to starve, persecute and torment them. We make a distinction between a man and a rat. I have been in several of the Nazarine (Christian) cities, and never looked at a debtor's prison without horror, as a place where man is degraded to the condition of a rat!

FASHIONABLE NOMENCLATURE.—A *Utility* is a young man who hates cards and dancing, yet is always ready to stand up in a quadrille, or take a hand at whist when called upon by the lady of the house. An *Indispensable* is one who takes care of gloves, fan, handkerchiefs, &c. &c. hands ices and lemonade, assists in cloaking and shawling, and calls up the coach. An *Indefatigable* is either a young gentleman just come out, or an old beau who goes to three different parties every evening; dances indiscriminately with old and young, pretty and plain, plays on the fiddle, the flute, and the piano-forte; always arrives first, and stays till the wax lights are twinkling in their sockets.

SAGACITY OF IRISH POTATOES.—"Did you ever hear the old fable of Jack Finnane, and the white eyes?" said Sandy. "To be sure, I didn't; for what should I?" "Sit aisy, then, and I'll tell you it. This Mr. John Finnane, you see, was a kind of half-air, a middleman, that used to be great long ago, letting out land in acres, and half acres, and quarter acres, to the poor people, that would, may be, want a *gival* (ariful) of the praties, coming on the idle season; and a hard and a bitter landlord he was, to the poor fellows that wouldn't have the rent agen the gale day; and good care he took, I'll be bound, that not a single cannop (potatoe) ever left the airth until every camack (penny token) was paid, dead gale and all. Signs on, it often chanced, as most like was, that the poor tenants not having the deference o' the rint, used to go into the pratie fields at night, pulling up the stalks, filling their little Jack daws (John Doe, a small bag) with what God sent up with the roots; which being made known to John Finnane, you see, he sat up of a night, to know would he catch any of the plunderers at their doings, which they baving notice of, didn't come—as why should they? being marked for the quarter sessions, surely. Well, 'twas coming on midnight, and Mr. Finnane being, as it were, tired with himself, sat down on a ridge of the praties, with his feet in the furrough, and he very sleepy, it being Jerry Craham's quarter. 'Tis aisyly known, he opened his eyes wide enough, when he heard—what do you think? only Jerry's white eyes talking to one another, in the ground under him! He stooped his head down and began to hearken." "Will you grow any more?" says a little pratie to a big one. "No a gragal," says the big pratie: "it's big enough I am already." "Well, then," says the other,

"move out o' the way with you a piece, and let us grow for Jerry Graham and the craters." "I'd be happy to oblige you then," says the big pratie; "but sure it's well you know none of us can stir from our places an inch, until John Finnane gets his rint." [Hollandtide, or Munster Popular Tales.

THE FIELD OF SORROW. The following extract from Bell's Observations on Italy, describes a spot and scene near Lyons, in France.

"Near these gardens, and hard by the river side, there is a green meadow, a place rendered memorable by circumstances of deep and touching interest. On this spot were massacred some of the wretched victims of the Revolution. The people of Lyons, with a just sensibility, have named it 'The field of Sorrow,'—*Champ de la Douleur*." A body of the citizens were carried forth to this place, conducted by the Gendarmerie. In crossing the bridge they were counted over, and being found to exceed the allotted number by two persons, the commanding officer, Vallot, was informed of the circumstance, and was asked whether the two should be saved, and in such a case, which two. He replied, 'what matter is it? who cares for two, more or less? if they go to-day they do not go to-morrow.' They proceeded, therefore, and 210 men, accompanied by these two ill-fated beings, whom accident had involved in the massacre, were conducted to death. Their hands were tied behind them, and they were bound to a cable, passed from tree to tree, along a range of tall willows; the soldiers were drawn up in an opposite line, with two pieces of artillery. At the appointed signal, their limbs flew in every direction. Those whose arms were shot away fell from the cable, and rose and fled, pursued by the cavalry, who cut them down. Those who were wounded, but yet not released from the cable, cried out to their butchers to finish their work; and they did so without delay with the bayonet and sabre. Their number was such as to render the work of butchery long and fatiguing, many were left breathing and palpitating in the agonies of death, and next morning many, still alive, were buried with the dead, by those who came out to pillage and who threw lime on them, still quick and alive."

Such is the narrative of a Frenchman. Alas! the French have many, very many such massacres to relate; blood which ages of peace and penitence will not wash away. We saw the spot where the trees had stood. They are now cut down and replaced by monumental stones, to the memory of those who perished.

ALBANY:

SATURDAY, MAY 12, 1827.

Mr. MACREADY, the greatest tragedian now living, has personated three characters at the Albany Theatre during the present week—viz: *Hamlet*, *Macbeth*, and *Virginius*. We believe that Mr. Macready's delineation of these several characters, is esteemed as decidedly superior to that of every other actor that has appeared upon the Albany boards. His *Hamlet* and *Virginius*, in particular, were uniformly natural and excellent. *Hamlet* is, perhaps, a character as difficult in conception and personation as any in the whole range of the drama; but it was undoubtedly perfectly embodied in the simple and philosophical representation of Mr. Macready. His *Virginius* was last evening received by a crowded and fashionable house, with such applause as never before made the welkin of our theatre ring. As to his acting, the least we can say of it is, that, take it "for all in all," most probably "we shall not look upon its like again."

It is a peculiar uniformity in Mr. Macready's acting which forbids criticism to indulge its propensity to rest upon particular scenes. Most of the eminent performers who have preceded this gentleman upon the Albany stage, have walked tamely through the minor scenes of the play, and exerted every

faculty to redeem their reputation in such scenes as possessed of greater interest. If there be particular scenes in which Mr. Macready excels more than in others, they are such as require a greater exercise of the passions than of the mouth.

SOMETHING NEW UNDER THE SUN. A very good and worthy friend of ours, S. De Witt Drown, Esq. Post Master at De Witt's Valley, recently published a pamphlet of sixteen pages, under the unique title of *The Perpetual Almanack, Interest Table, and Mathematical Liquor Guager*. Mr. Drown belongs to that class of men who derive their principal zest from the contemplation and establishment of improvements in the mathematical, literary, and physical departments of human affairs, and a liberal support and exercise of masonic virtue. The plan upon which Mr. Drown proceeds in the pamphlet under consideration, is not such a one as will admit of a clear elucidation in the columns of a public journal; and we are in consequence deprived of the satisfaction which a review of the subject would afford us.

We are also under the necessity of soliciting our author's pardon for having been compelled to suspend the publication of a very excellent system of short-hand-writing, which was forwarded to us many months since. We have hitherto been unable to procure the requisite characters; but as soon as this can be done, we shall take pleasure in making our readers acquainted with Mr. Drown's stenography. In the mean time, we wish his laudable endeavours the best success.

THE PRAIRIE. According to the newspapers, a new novel, entitled *The Prairie*, from the pen of the author of *The Spy*, &c. &c. will be published this day, simultaneously in England, Paris, Berlin, and Philadelphia. We have seen an extract from *The Prairie*, by means of which we recognised an old acquaintance in the character of the Trapper.

SUNDAY SCHOOLS. There is not, probably, in the long list of institutions created for the purpose of ameliorating the condition of the poor, one which fulfils its duties in a more salutary manner than the Sunday School. Its influence is always exerted directly and efficiently over that portion of the community which is always deserving and in need of the Christian's charity. Its object is improvement at home, and, however deserving may be the noble institutions whose benevolence is apparently (though not really) exerted through a larger sphere, we think that its influence is more in accordance with the true spirit of charity, than is that of the more ostentatious societies. It is a sufficient proof of the excellence of the Sunday School, that all denominations zealously unite in its support.

The anniversary of the New-York Sunday School Union took place at Castle Garden, in that city, on Tuesday last, at which time and place (says the New-York Times) about seven thousand five hundred pupils of both sexes were present. After prayers and addresses from several of the Rev. Clergy, the assembly was dismissed at 6 o'clock. In the evening the annual report was read, and elections of officers took place at the Middle Church; from the former it appears that the total number of scholars is 7796; and of Libraries, 24; containing 6660 volumes.

The publication of the Niagara Sentinel, published at Lewiston, Niagara county, has been suspended. Among the causes which have led to this re-

sult, the editor enumerates the excitement caused by the absence of Morgan. We are not aware that the editor of the Sentinel has deviated from an honest course in relation to the scenes connected with Morgan; and it is to be regretted that the good sense of any portion of the community, should suffer the press to be trampled under foot while discharging its salutary duties.

We have received the specimen Number of a very neat publication entitled *The Ariel, and Ladies Literary Gazette*; to be published every other Saturday, at Philadelphia, in the quarto form, at the low rate of one dollar a year. If we are to judge from the present number, *The Ariel* will be found worthy of holding a respectable station among the literary journals of our country. Its selections display a cultivated taste, and its original matter is free from the insipidity which is too often the characteristic of flippancy. The editor promises occasionally to embellish the Ariel with appropriate engravings. The regular series was to commence on Saturday last. We will with pleasure act as agents in this place.

The Caskeys, or Flowers of Literature, Wit and Sentiment, for May, 1827, was published last week, and is embellished with a portrait of Robert Fulton, Esq. with a biographical sketch; a view of the Falls of Treponton, in the state of New-York; three Nos. of the School of Flora; and a ballad, set to music, called "Comin' thro' the Rye," as sung with great applause by Mrs. Knight. Our readers are acquainted with this publication.

The New-York Spy has been much improved in appearance. The second volume was commenced last Saturday, in the quarto form; and among other departments we notice one devoted to masonry. We have received the first numbers of two semi-weekly papers, issued from the New-York press the past week. One is entitled the *Morning Courier*, and is edited by Skillman, Brooks (late editor of the Gazette and Atheneum) and Lawson. The other is entitled the *Morning Chronicle*, and is edited by C. N. Baldwin and E. J. Roberts.

A weekly paper, entitled the *New-York Farmer*, was commenced, about a month since, in the city of New-York.

Three or four new papers recently made their debut at Cincinnati. The printers of the present day appear to have an "itching palm" for first appearances. We wish them all, long life and a superabundance of the needful.

OHIT CHAT.

A Tontine establishment is building in New-Haven and nearly finished. It is to be kept by Messrs. Drake and Andrews, who were formerly known at the Springs. The building is located directly in front of the Green, extending on Church street 75 feet, and 136 feet on Court street. It is built of brick, four stories above the basement, with 67 apartments; including a dining hall, 50 feet by 25, a ball room, 102 by 26, and a masonic hall, 35 by 10; all of which are fitting up in good style.—Mr. T. J. Randolph in reply for the \$10,000 granted by South Carolina to the daughter of Mr. Jefferson, says "it preserved from the hammer the furniture of her father's bed room."—A jury of Tuscaloosa county, Alabama, recently returned a verdict of \$1525 damages for a plaintiff, in a suit brought for damages in a case of seduction.—Books, umbrellas, penknives, and tobacco boxes, are, according to the modern system of morals, said to be common property.—A poor pensioner who had drawn the pittance his country allows him from the bank, was robbed of the whole of it, by some cold blooded villain who was a fellow lodger, in a virtual cellar in Boston.—The Erie and Chaplain canals are open through the whole line.—A steamboat recently proceeded 50 miles from Pittsburgh, on an experimental excursion up the Alle-

ghany.—A "Fireman" in the U. S. Gazette says that fifteen fires have occurred in Philadelphia since the 1st of January, exclusive of sixty-five alarms, one-third of which were chimneys.—Union Canal, Pennsylvania, is on the point of being put into immediate operation. The law authorising this canal was passed in 1797, but languished for thirty-five years and started afresh when New-York showed the example.

FOREIGN NEWS.

The arrival at New-York on Monday evening of the ship Dalhousie Castle, brings Liverpool papers to the 17th April, and London to the 14th, which confirm and give the particulars of important changes in the British Cabinet.

Mr. Canning is appointed first commissioner of his Majesty's treasury, or, in other words, prime minister.

The late British cabinet (says the Evening Post) consisted of *fourteen* individuals, usually denominated "King's ministers," one half of whom it appears, resigned on the appointment of Mr. Canning to this exalted and commanding situation—a result most gratifying to us citizens of a free republic, as evincing in the most conclusive manner the diffusion and ascendancy of liberal sentiments. Although the situation of Mr. Canning may be somewhat unpleasant for a time, in consequence of the opposition of a part of the high tory and aristocratic party, yet, there can be little doubt of his complete success in the administration of the government, upheld as he is by a power paramount to all others—*public opinion*; more especially when that is corroborated by the acknowledged support and esteem of the sovereign.

The following are the seceding members of the cabinet:—

Eldon, Lord Chancellor.
Wellington, Master General of the Ordnance and Commander-in-Chief.
Lord Melville, of the Admiralty Board.
Bathurst, Secretary of State for the War Department and Colonies.
Westmoreland, Lord Privy Seal.
Bexley, Chancellor of the Duchy of Lancaster.
Peel, Secretary of State for the Home Department.

Of which it is said that Lord Bexley, (late Mr. Nicholas Vansittart) had signified his wish to recal his resignation.

The London Courier says, that the statement that Lord Sidmouth had sent in his resignation, is erroneous. Lord Sidmouth is not a cabinet minister, and could not be affected by the state of the ministry.

The Duke of Clarence had been appointed at the head of the Board of Admiralty.

It is certain that Mr. Canning has assurances of the cordial support of the King; and that the resignations have been accepted without hesitation.

It is said that Mr. Canning refused to accept the place of prime minister unless he should be left at liberty to form a cabinet according to his own views, and that this condition had been agreed to by the King. In the mean time conjecture is busy in speculating on the formation of the new administration.

On this subject the Liverpool Albion has the following pertinent and sensible remarks:

The appointment of Mr. Canning to the office of first Lord of the treasury has met with the general approbation of the country. This event, for which the public mind had been prepared before it was announced, has, however, produced one of the most extraordinary and unexpected cabinet revolutions that has ever taken place in the political world. The appointment of the right honourable gentleman to the premiership was the signal for seven of his colleagues to send in their resignations to his Majesty. The names of the ministers who have *struck*, as their act has been insignificantly and emphatically designated, are given elsewhere. The only resignation for which the country will feel regret is that of Mr. Peel. This gentleman is said to have thrown up his office from personal considerations alone; and his secession from the ministry is described as having had no connexion with the resignation of the noble gang who have deserted their Sovereign "at his utmost need," and at a period

when the exigencies of the country imperiously demanded their wisest counsels and their most devoted services.

Of the motives which have induced the *seven wise men* to take the extraordinary step which has excited the astonishment of the country, we cannot be supposed to know much. Rumour, with its hundred tongues, or, rather, with its hundred pens, has been busy; and the reports in circulation on the subject, are as vague as they are numerous. The Catholic question, it is clear, was the great stumbling block which obstructed Mr. Canning's advancement to the premiership at an earlier period than he obtained the post. Anti-catholics themselves, the most powerful of his colleagues either feared, or affected to fear, that he would, if made their chief, use all the influence of his high station to carry the question triumphantly through Parliament. But their intrigues to prejudice the mind of the King against this great statesman have completely failed, as all iniquitous combinations should fail. The King, following the voice of the country, appointed Mr. Canning his prime minister; and seven of his colleagues, in pet and dudgeon, simultaneously sent in their resignations, exclaiming, as they quitted the office, "We will not have *this man* to reign over us!"

With the exception of Mr. Peel, the conduct of the ex-ministers has met with the indignant reprobation of the country. Their attempt to intimidate, to overawe the King in his own palace, and to dictate to him whom he should appoint as his first minister, was most undutiful, most unconstitutional, nay, most atrocious. The conspiracy which they so disgracefully formed against their Sovereign, happily failed; and the band of noble conspirators have lost both place and character at one and the same moment. The King has acted, throughout this trying occasion, with a spirit becoming his house; and this firmness at this juncture has annihilated an oligarchy the most insolent and overbearing, whose aim it evidently was to dictate to the Monarch and to overtop the Throne itself.

Mr. Canning now stands upon a proud and commanding eminence; an eminence to which he has attained by the force of talent and character alone. His position, however, is one of great difficulty. He will have much to fight against, before he can enjoy his power tranquilly. But the country is with him; and he will, we are confident, soon triumph over the miserable and the characterless faction which his elevation to the premiership may be expected to array against him.

PORTUGAL AND SPAIN.—It is said that the affairs of Portugal are assuming a more serious aspect. (All French accounts, of the Peninsula affairs, however, must be taken with many grains of allowance.) The rebels, as they are called, have been victorious, and it is evident that the British must send heavy reinforcements, or the troops they have there already will be beaten. The *Indicateur* of Bordeaux says they will be reinforced considerably, and adds, that appearances are more than ever for war. Spain and the Portuguese revolutionists are on the best terms, and France, no doubt, urges them on.

The *Quotidienne* contains the following extract of a private letter of the 31st of March, from Madrid—"The most complete harmony prevails between the Portuguese Royalists and the Spanish authorities, who have received them. The Marquis de Chaves has had horses bought at Toro, Medina, and Fuente, and a singular circumstance is that the Portuguese royalists have a great number of arms of English manufacture. We are assured that an insurrectional movement has taken place in Portugal at Moro Novo, fifteen leagues from Lisbon, which extends already as far as the mountains of Portalegre. It is certain that the greatest effervescence prevails in that country from Tras-os-Montes to Algarves."

The *Echo du Midi* mentions the discovery of a conspiracy that had been formed at the very gates of Madrid. The conspirators are said to have been eight hundred in number, and twenty-seven of them have been shot. One of the leaders, upon promising to reveal the details of the plot, was spared and conducted to Madrid.

The interior troubles of Spain increase. In Catalonia, armed bands are running through the country crying Vive Charles V.—Death to Ferdinand VII.—Vive Charles V. and the Inquisition. Ge-

ronne, although occupied by the troops of Ferdinand, supports the conspiracy in this province.—Rebels have threatened also to enter Figueras, and have even appeared at the gates. Bands multiply and threaten Puyceida. The authorities are greatly alarmed, and have sent to Perpignan for assistance. The exportation of powder from France has been prohibited: but women have attempted to purchase it at Perpignan. The greatest excesses are committed by the rebels towards the constitutionalists. The Marquis of Tamarites is at the head of the conspiracy at Tortosa, together with some monks. Troops to the number of 500 have refused to obey the intendant general of Zamora and set his authority at defiance.

At Barcelona affairs wore a threatening aspect.

At Figueras, in an insurrection, two or three persons were killed.

FRANCE.—The French papers announce the vote of the New-York Legislature not to send the Greeks the 1000 barrels of flour.

The Duke of Broglie has been chosen by the Greek committee to take the place of the Duke of Rochefoucault.

The Count Alexander de Lambeth has deposited in the hands of the Greek committee the sum of 300 francs, a gift of the Duke of Orleans, and a like sum for his daughter.

Lady Cochrane arrived on the 7th April at Bordeaux from Marseilles. She was on her way to Paris.

Peace is about to take place between Russia and Persia.

GREAT BRITAIN.—By the last quarter's return of the British revenue, ending 5th of April, it appears that there is a decrease of 1469,548, making a deficiency for the year of 11,709,897.

The Courier says, "the real produce of the revenue, by taxation, in the present quarter, divested of all incidental advantages which attached to the corresponding quarter of 1826, is as nearly equal as possible, and by no means indicating any permanent depression."

A powerful intrigue and opposition from the Continental Powers, were said to have been on foot against appointing Mr. Canning Prime Minister.

Accounts from China, to the last of December, state that an alarming revolution had broken out in Tartary, and that the emperor was making the most extensive preparations for suppressing it.

The London Courier, in noticing the fact of the correspondence between Great Britain and this country having been laid before Parliament, speaks in the most exalted terms of Mr. Canning's abilities as a statesman, and concludes with the following *left-handed* compliment to Mr. Gallatin:—"Nor are we disposed, while we claim this praise for Mr. Canning, to deny that the American minister, Mr. Gallatin, bating the vice of his country, prolixity, displays no mean talents, which only require to be removed from their juxtaposition with the effusions from the pen of the honourable gentleman, to impress us with a favourable notion of his diplomatic ability."

THE GREEKS AND TURKS.—Advices from Constantinople are to the 26th of February. Nothing further had transpired respecting the interference of Russia and England for the pacification of Greece. The Reis Effendi had not answered Stratford Canning's note of the 5th of Feb. and the two ministers had agreed upon a certain day to make a final and energetic attempt to bring the subject to a close. It is stated that the French, Austrian and Prussian ambassadors had, informally, advised the Reis Effendi to accept the propositions of the other powers, except those of Russia and England. It was also presumed that the courts of Vienna and Berlin had already or would accede to the terms proposed. Notwithstanding all this, it was confidently asserted that the court would not assent to any proposition, the Reis Effendi having verbally declared that the proposals were inadmissible, being contrary to the rights of the Sultan and human reason. The Porte seems to be persuaded, that notwithstanding their menacing tone, the Christian cabinets will go no farther except in words.

The Greeks had provisioned the Acropolis afresh, having driven the Seraskier a league from Athens. Omer Pacha had experienced a great defeat at Dirmo.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

TO LAURA.

Laura, I have often told thee
That my heart should never wed;
That mine eye should ne'er behold thee,
Graceful in the nuptial bed:
Love has never caught me kneeling,
Cupid ne'er unveiled his dart;
I have never felt the feeling
That shall captivate my heart.

Cease, then, Laura, cease thy glances,
Bend thine eye another way;
Modest conduct grace enhances,
Not coquettish airs so gay:
Beauty more attracts in weeping,
Beauty is more fair in tears—
Than the eye, in leering, peeping,
Or the breast, unveiled appears.

Hidden love is more enchanting,
To the feeling bosom, young,
Than the bosom, heaving, panting,
Or the gabbling coquette's tongue:
I have seen deceit oft lurking
In the semblance of a smile;
I have seen destruction working
In the words of cunning guile.

I entreat you, Laura, never
Mention love to me again;
Let the tie your absence sever,
I to be alone would fain—
Fain be left in age to moulder,
In celibacy's cold band;
Love I cannot feel when older,
Nor can wish for beauty's hand.

Laura, when thy beauty's fading,
And the rose has ceased to bloom;
Pale will be the lily shading—
Beauty sinking to the tomb:
When thy charms have all departed,
Which external beauty gives;
Then the sigh will be extorted,
While old age the wrinkle weaves.

But when Ellen's beauty lingers,
And shall bid farewell to her;
Education's balmy fingers
Shall impart a transport dear:
'Tis refinement, more than beauty,
That adorns the female mind;
Virtue points to moral duty,
And her graces are refined.

THE STAR THAT RULED MY BIRTH.

The star that ruled my birth, I never saw,
But feel its gloomy influence too well,—
And feel it but alone—for who would draw
The bosom's veil aside, and stoop to tell
To every careless ear, the tides that swell
The ocean of my bitterness. The draught
Which fate hath offered, and the deadly spell
It holds, shall be with the same lightness quaffed
As ever inspiring wine by him who drank and laughed.

And why should I look sad, when none will feel
For the regrets I shew? If to the gay
The ill-feigned trifler's features I reveal,
The trifier's smile will answer. Then away
With the dark brow, and trembling sigh, which lay
Their claim in vain no sympathetic feeling;
'Twere better to waste mirth, than be a prey
To irony, and all the soul-congealing
Neglect the world shews to wounds too deep for healing.

My aching brow I'll dress with smiles, and force
A double cheek upon the rising sigh;
I'll turn my thoughts away from their dark course,
And raise to forms of light this vacant eye;
I'll teach my lips the sound of peace, and ply
My voice to melody of gayest measure;
And though the flattering images which fly
Like leaves of autumn past me, bring no pleasure,
Has earth, or aught that earth affords, a truer treasure?
May 8.

MIND.

"Now, this fellow has a head!"

I.
I've marked upon the mountain top,
The sun a pebble kiss;
And then it seemed a starry drop,
Come from its azure fields of bliss,
To tell the earth how pure and fair
Was its fine home above the air.

II.
I've seen a stone attempt to shine,
Beneath the restless wave;
But 'twas a faint and flickering line—
As trifling as the fire-fly gave
When he went roving for a bride,
At the dark hour that day-birds hide.

III.
I've watched a man whose thoughts were high—
Bright as the mountain stone;
Mind, mighty mind, was in his eye;
Above the earth he stood, alone;
A light between the earth and sky;
Filled with a hue which could not die.

IV.
But man will grovel; and the wave
Of earth o'ershade his beams;
His life's oft shrouded like his grave;
He gives the sunken pebbles gleams;
Unmindful of that inward light,
Which is a star at morn or night.

THE SONG OF THE COTTAGER.

BY MRS. HAILE.

There's a cot at the foot of yon fir-crowned hill,
Where the voice of the bird and the gush of the rill,
When Spring is weaving her leafy crown,
And the wild rose budding, come softening down,
Afar through the elm's dark boughs are seen
The clustering roofs round the village green;
Lofty those dwellings arise and fair,
The hum of the busy tribe is there,
And pride and pomp—but ye'll pass them by;
'Tis the cottage will fix the thoughtful eye.

Secure it looks mid a world of change,
And the heart may rove, and the foot may range,
Yet who can gaze on a quiet spot,
But a wish will arise to share its lot?
Summer is bright o'er the teeming earth,
But its loveliest flowers are of lowliest birth;
They bloom and breathe round that cottager,—
And pure as their incense his pure thoughts stir;
Even Winter, sweeping in wrath along,
Bears on its blast the cottager's song:

"They urge me abroad, and tell of joys,
But the spirit of peace ne'er dwells in noise—
There's the crowded hall and the gay saloon,
Where lamps are shedding the lustre of noon,
And mirrors the gorgeous show reflect
Of the laughing crowd in their pride bedecked,
While music proclaims that care hath fled,
And the dancer's light step is deemed pleasure's tread—
O! I know they're gay—but the thought will come,
'Tis not like the joy of my own dear home.

"Then give me my parlour, so neat and fair,
And snug by the fire place my favourite chair;
Let the taper be trimmed on the table near—
But away with the flaring chandelier,—
I ask not a lustre so blazing and bright,
My fancy best suits with a sober light:
I liken its glow to constant love,
Or that peace whose sweet beamings descend from above!
O, blest! might such rays forever illumine
The quiet retreat of my own dear home.

"Joy's beam is the glance from a smiling eye;
Love's music, the tone of a soft reply;
How bright that beam—that music how dear,
When to circle my warm heart my loved ones appear!
O, if earth has a pleasure that breathes of heaven,
It is to the union of pure hearts given;
Theirs is the altar and truth and love,
Bright with the flame that descends from above!
Give riches and power the pillared dome—
Peace, is mine in my own dear home."

From the London Literary Gazette.

OCEAN.

Ocean! I remember well
How my young heart sank in awe,
When thy billows' mighty swell
I with childish wonder saw.

Little then my spirit dreamt
Of the tempest's raging shocks:
Still I marvelled who would tempt
Depths unknown and hidden rocks.

Yet 'twas on a tranquil night,
First thy pebbled shore I prest,
And the pale moon's placid light
Slumbered on thy heaving breast.

Though upon my listening ear
Gently came thy murmuring voice,
Felt I still too much of fear,
In its soft sound to rejoice.

Only one joy then I proved,
Thinking each dear friend was found,
In the land so well beloved,
Circled by thy watery bound.

Ocean! can I love thee now,
More than in my childhood's day,
When thy dark tide's ceaseless flow
Has borne those friends far, far away? ROSA.

LACONICS.

BY SIR WILLIAM TEMPLE.

Study gives strength to the mind; conversation grace; the first is apt to give stiffness, the other suppleness: one gives substance and form to the statue, the other polishes it.

The great happiness is to have a friend to observe and tell one of one's faults, whom one had reason to esteem, and is apt to believe.

The best rules to form a young man: to talk little, to hear much, to reflect alone on what has passed in company, to distrust one's own opinions, and value others that deserve it.

The chief ingredients into the composition of those qualities, that gain esteem and praise, are good nature, truth, good sense and good breeding. Good nature is seen in a disposition to say and do what one thinks will please and profit others—good breeding in doing nothing one thinks will either hurt or displease them. Good nature and good sense come from our births or tempers; good breeding and truth chiefly by education and converse with men.

Against a foreign enemy, and for defence of evident interest, all that can bear arms in a nation are (or ought to be) soldiers. Their cause is common safety; their pay is honor; and when they have purchased these, they return to their homes and former conditions of peaceable lives. But, standing troops, and in constant pay, are properly servants armed, who use the lance and the sword, as other servants do the sickle and the bill, at the command and will of those who entertain them. And, therefore, martial law is, of all others, the most absolute, and not like the government of a father, but a master.

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

EXTRACTS FROM A MASONIC SERMON.

Text—"Light was against light, in three ranks."

Our first and most excellent Grand Master, Solomon king of Israel, strengthened by the strength of Hiram, king of Tyre, who strengthened him in his glorious undertaking, had now completed that mighty fabric on the summit of mount Moriah which has immortalized his name; and being called thereby from the labour of seven revolving years, to the refreshment of a moment's rest, his active and intelligent mind employed that moment to draw the outlines of a spacious and magnificent edifice, sacred to the genius of the mystic order, and devoted to the regular assemblings of the faithful and the true; the worthy and the good.

The foundation and the capstone of this elegant monument of fraternal affection and royal munificence, king Solomon gave in charge to the widow's son, by whose cunning contrivance and curious workmanship, the pillars and their chapiters were beautified and adorned with lily work, network and pomegranates, inlaid in the seven times refined silver of Parvaim, combined with perfections of gold from Ophir and Uphaz; united to the mild radiance of the oriental pearl, and gemmed by ten thousand stars, composed of sparkling diamonds, set in polished rubies.

Obedient to the mandate of his illustrious companion and brother, Hiram el Abif selected a deep vale in the forest of Lebanon, where the voice of the lion had never been heard, nor the volume of the serpent pressed the flowery turf, and projecting an oblong square, due east and west, of one hundred and fifty feet in length; and seventy-five in breadth, between north and south; the lower court, middle chamber, and third story rose from the earth to the heavens, forty-five feet in height; and the whole building was supported on its base, in the centre, and at the capital, by thrice fifteen cedar columns of the ancient and original orders, emblematic of the illustrious elect, elected of three times five; and alluding to those ineffable mysteries which can only be learned in the audience chamber of the grand, most potent and sublime.

Forbidden to rend the purple veil which hides the ever burning lamp; nor permitted to explain the secret engraving in crimson capitals; we therefore shall confine our present researches to that *light against light in three ranks*, whereby this magnificent dome was perpetually illumined, as with the noontide splendours of the glory and beauty of the day; and this *light against light in three ranks* it will be our happiness to exhibit, as the three greater lights in the golden candlesticks of the temple, comprehending the first great light of the Holy Bible, the second great light of the perfect square, and the third great light of the extended compasses; and may each one of these grand, sublime, masonic solar orbs commingle social rays, in harmonies of moral and of heavenly light; and so enlighten the worshipful master, wardens and brethren of this right worshipful lodge, that having faith in God, hope in immortality, and charity to all mankind, they may realize the pleasing satisfaction which results from a life well spent, die at last in peace with God and man, and awake to raptures of ecstatic bliss in yon bright world of everlasting day, which neither needs the sun, the moon, nor morning star, for the Lord God Almighty is the temple thereof, and the Lamb in the midst of the rainbow diademed throne, its cloudless and eternal light.

Masonry, my brethren, my friends, is moral and spiritual science, progressing from faint degrees of natural light, to brighter and more perfect degrees of intellectual day: and while her sons profess to revere that elder scripture, penned on vast creation's wide expanded scroll, they are taught to acknow-

ledge still superior obligations, to a far superior light than nature, or than reason can presume to boast: For although it be a serious and a solemn truth, as the apostle Paul hath justly observed, that the eternal power and deity of the Supreme Architect of the universe may be clearly inferred and positively proved, from the visibles of creative wisdom, strength and beauty, as impressed on the heavens above, and engraven on the earth beneath; yet, incredible as it may appear; astonishing, as indeed it is; and humiliating, as it must be, to philosophic pride, the inhabitants of the world, from the rising of the sun, to the going down of the same, stand solemnly charged at the dread tribunal of the high and the lofty One, who inhabiteth eternity, with having changed the glory of the incorruptible Jehovah, into an image made like to corruptible man; and the bird of the air, the beast of the earth, and meaner reptiles of the dust, have received that worship, homage, and fear, from rational, intelligent, and immortal beings, which ought forever to ascend, as a morning oblation, a noontide offering, or an evening sacrifice, to the only blessed Potentate, the King of kings, and Lord of Lords, who is clothed upon with light, as with a garment; who is decked with honour and majesty, for a covering; who maketh the clouds his chariot, and walketh abroad upon the wings of the wind; in whose presence, angel and archangel, veil the radiant face, while cherubim and seraphim continually cry, Holy, holy, thrice holy, is the Lord, the Lord, the Lord of hosts; and to whom, the first born sons of elder paradise, from golden harps, perpetually respond. The heavens are full of thy glory, thy goodness, O God! and let the earth be filled with thy praise, thou grand Master Builder of the mighty, the stupendous whole; Artificer supreme, of worlds on worlds, that roll amid the vast expanse!

Thus taught to know the weakness of imperfect man; and learned to feel the frailties of feeble dust, as men, as masons, we confess the necessity and need of a divine revelation, in which, the name, the nature, and perfections, of the great first cause; the sovereign cause of uses and effects, shall be engraven, as with the point of a diamond, on the rock of celestial truth; and by the clear shinings of whose unspotted light, the craft may be enabled to walk through the darkness of the valley, evermore offering the incense of piety, perfumed by odours of praise, to the munificent giver of every good and perfect gift, for the manifold blessings and comforts of life, profusely sprinkled in a vale of tears; and specially adoring the ineffable riches of that unspeakable grace, which hath set before the sons of amity and peace, a hope full of immortality, beyond the clouded canopy of time; where sorrow and sighing shall flee away; sickness and pain be known no more; and death himself give up the sith, resign the quiver and the bow, and yield his iron sceptre, to the Son of God.

But it is not, my brethren and my friends, the lighter shade of superstition, the deeper gloom of bigotry, nor yet, the more awful horrors of idolatry, which alone have impelled the fraternity of free and accepted masons, to rejoice with exceeding great joy, in that light of the knowledge of the glory of God, which the gospel of the blessed Redeemer, hath benignantly revealed, as the path of the just, shining brighter and brighter unto more perfect day: but they are also convinced from indubitable records, supported by historic fact, that Grecian philosophy and Roman ethics are but the darkness of the midnight hour, when compared with that purer light of the morn, which glows on revelation's lucid page; and we feel ourselves bound to acknowledge, what Socrates and Plato confessed as truth, that weak, imperfect, and benighted man needs a lamp to his feet, and a light to his path, inkindled at the altar of the skies, and fed upon the oil of heavenly grace.

This pure and spotless light, a light above the brightness of the mid day sun, above the radiance

of the queen of heaven, our ancient patrons found within the compass of the book divine: and HE,* whose birth we celebrate this day, and one, whose memory masons hold most dear, have added many a wheel of light, involving light, in triple rank, to revelation's glowing car: and here permit me to observe, that this great light of life; this greater light in death; not only reflects the light of heavenly truth, on the whole sphere of obligation, which is due to the Grand Architect of the heavens, the earth, and the sea; the Creator of all things above, below, beneath, around; but it also sweeps the compass of knowledge, circle within circle of moral duty, as duty respects the great brotherhood of the one family of man universal: and likewise it teaches that reverence, which we owe to ourselves, as bearing the image and superscription of the imperial Augustus of the worlds on high; as deathless emanations from the brightness of the King eternal, immortal, invisible; who alone by his wisdom stretched forth the heavens; by his strength, based the corner stone of earth on the fiat of his word; and swept the royal arch of beauty round yon azure skies!

Persuaded as men, convinced as masons, and believing as christians, that no other light, except the sun of righteousness himself, can possibly equal this great light of present, and of future life; this light of God from heaven above, reflecting light on earth beneath, it is therefore established by a solemn masonic decree, immutable as the law of Media and of Persia which changeth not, that the first great light of the Holy Bible shall forever adorn the altar and the column; perpetually shine within the temple and the veil; and evermore move onwards before the journeyings of the craft; as a pillar of fire, moving mid the wilderness of old; and beaming meridian splendours of light, on the deepest gloom of low twelve; while our ancient books of original constitutions, and primitive rolls of sacred charges, received from the Master in Israel, on the top of Mount Horeb, and confirmed by himself, in the depths of the valley of Jehosaphat, have unitedly ordained, that the faith and practice of masons must be conformed to the divine principles, and heavenly pattern of the supreme, sublime, grand Master of the universe; from whose written word we are taught; and by whose exemplar we are taught, to walk as children of the light and of the day, having on the breastplate of faith; and being clothed with the ephod of love, unsullied by hypocrisy, and unstained by dissimulation; evermore loving God, who first loved us, with all the heart, and soul and mind, and might, and strength; which is far more acceptable than thousands of rams, ten thousands of rivers of oil, or the sweetest perfumes of Sabea's spicy groves: and loving our neighbours as ourselves; speaking truth and peace; showing mercy and compassion; executing judgment and justice; thinking no evil against a brother; and working no ill to an enemy; we thus fulfil the royal law of heaven, the law of liberty and love: for these are the two great commandments of the Mosaic and Christian economies united as one, in love to God, and love to man; and they contain within the golden points, extended from the bosom of Moses, to the breast of Jesus, the sum of all the law at Sinai given; the substance of prophetic truth from Samuel, to the days of John; and comprehend the glorious gospel of the blessed God, reflecting of the mingled rays of legal and prophetic light; and which like charity, abides the greatest of the three, forever blessing and forever blest.

Let us remember to *work* in this life with a reference to that which is to come; and whilst we are seeking after words, and pass-words, with which to obtain a knowledge of the mysteries of antiquity, let us not neglect to seek diligently after that word, that inestimable NAME, which deprives death and

* St. John the Baptist and St. John the Evangelist.

the grave of their power, and which secures to its possessor the greater mysteries of futurity, life and bliss, uninterrupted and eternal.

MASONIC ANNIVERSARY.

The approaching anniversary of St. John the Baptist, will be celebrated in the city of Hudson, by Hudson Lodge, No. 15, Hudson Royal Arch Chapter, No. 6, and Lafayette Encampment, No. 7. An address will be delivered, and a dinner provided on the occasion. The brethren generally in the vicinity, and neighbouring Lodges, are respectfully invited to attend.

JOHN TALLMAN, LIONEL U. LAWRENCE,
AMBROSE L. JORDAN, EDWARD C. THURSTON,
ELIHU GIFFORD, ROBERT A. BARNARD,
CAMPBELL BUSHNELL, FLETCHER M. BEEKMAN,
CHARLES DARLING, LUKE POWER,
CYRUS CURTISS, Committee of Arrangements.

The festival of the nativity of St. John the Baptist, will be celebrated in Danby (Tompkins county), on Monday, the 25th of June next. Members of neighbouring Lodges, and worthy sojourning brethren, are respectfully invited to attend. The Lodge will be opened at the lodge room, at 10 o'clock, A. M.

ASHBEL PATTERSON, HUDSON JENNINGS,
GEORGE THOMPSON, JULIUS RANNEY,
SHERMAN MILLER, Committee of Arrangements.

The Batavia Chapter and Batavia Lodge have resolved to celebrate in public the anniversary of St. John the Baptist, on Monday, the 25th day of June next. The neighbouring Encampments, Chapters, and Lodges in their corporate capacities, as well as Sir Knights, Companions, and Brethren, in the vicinity, will be invited to attend.

Cuba Lodge, No. 436 will be consecrated on the 25th day of June next, at the house of Calvin T. Chamberlain, in the town of Cuba (Allegany county), after the ancient usages of the order. The attendance of the neighbouring Lodges and visiting brethren is most earnestly solicited.

STEPHEN CADY, HENRY STEPHENS,
KENDAL WILDER, Committee of Arrangements.

SCIENCE AND THE ARTS.

OF THE ACTION OF FORCES.

All matter is continually under the operation of forces, which, if acting upon it equally, and in opposite directions, maintain it in a state of rest. But if a newly created force act upon a body in such a direction, and to such an extent, as to overcome the forces under whose action that body, in common with all other matter, exists, the result will be motion communicated to that body; and in an exact proportion as that newly created force exceeded the amount of forces that were previously acting upon it in the opposite direction. For example, if a man lift a pound weight three feet from the ground, the amount of motion created by that action, is exactly equal to the amount his newly created force exceeded the force of gravity, or weight which acted on the matter: for if his force had not exceeded the force of gravity, it is manifest that that motion could not have been created; and if the force of gravity had not existed, it is again manifest that the amount of motion would be exactly in proportion to the amount of the whole of the force he had applied. Again, if his force only exactly equalled, and did not exceed, the force of gravitation, motion could not have taken place, and the body would have remained at rest.

This state of rest, maintained by the contrary action of two equal forces upon a body is called *equilibrium*. But the term equilibrium is most commonly applied when one or more bodies are, by the mere force of gravitation maintained in a state of quiescence, or rest:—thus, if a bar of iron is supported at its centre, it will balance, or remain horizontal, as the quantity of matter in one end is equal to that in the other, and the amount of the gravitating force proportional to the quantity of matter that is in each arm of the bar: likewise, if a ball be acted upon by a force at one end and by another force, exactly equal, at the other end, the ball will be maintained in a state of quiescence, termed *equilibrium*.

In the common operations of mechanics, the former state of equilibrium frequently occurs; the latter rarely, and never with any permanent duration; by the term equilibrium, therefore, in general is understood the position first cited.

Upon duly considering that matter, when between forces acting in opposite directions, is in a state of equilibrium quiescence, it will be manifest, that motion cannot be obtained without destroying the equilibrium. It must not therefore be supposed, that the forces of gravitation or adhesive attraction can produce motion, as has been erroneously urged by some, but rather, that all the motion these powers

are capable of producing was primarily exerted to bring matter into that state of equilibrium, in which we find it. Wherever that equilibrium is disturbed by extraneous causes, the resultant motion, attainable by such disturbance of the general equilibrium, has long since been known and applied to useful purposes. We may with propriety, therefore, deduce from these considerations, the perfect fallacy of that most ruinous and speculative notion of a perpetually moving force. Many who have wasted their time in attempts to attain that object, have either supposed that the force of gravitation could obtain motion, or that motion once obtained could of itself increase its force; which was about as rational as to suppose that any substance could of itself increase its own bulk. The powers with which nature has supplied us, have, as far as we are aware of, been already applied; and should there be others existing of which we are ignorant, or which we have not reduced to our command, the search for, and development of such objects, are praiseworthy and valuable: but let us with confidence hope, that the labours of ingenuity will no longer be drawn aside from the paths of prolific study, by this destructive phantasy.

Returning from this digression, when a body is operated upon by a force, and acquires motion, that motion, taking into account the amount of space through which the body passes in a given time, is called the *velocity of the body*; and according as the extent of distance increases or decreases in a greater or less period of time, the velocity is said to increase or decrease.

PHILOSOPHICAL.

Light goes about thirteen millions of miles in a minute. A strong wind goes twenty feet in a second. When a cannon is fired, if we are distant a mile, we hear the report twenty-four seconds after we see the flash. The nearest of the stars is five thousand times more distant from us than the sun, its distance then is seventy-seven billions, four hundred millions of miles. Were a cannon to be fired from a star it would require five millions four hundred thousand years for the report to reach us.

THE TRAVELLER.

HUNGARIAN CHAMBER OF DEPUTIES.

FROM "NOTES AND REFLECTIONS ON GERMANY."

In the hall of the Hungarian deputies, it is impossible not to feel a momentary delight, the picture is so new and so startling. I sat in the gallery, whither I went at an early hour; but it was filled to suffocation before the members took their seats. The hall is nothing remarkable, merely a long lofty chamber. A chair is raised on a step at the upper end, for the president. Tables run the whole length of the hall, covered with green cloth, and supplied abundantly with materials for writing. Immediately below and on the right of the president, sat such bishops and dignitaries of the church as have seats in this assembly. The rest of the members, and there appeared to be more than three hundred present, wore the national dress of Hungary. It consists of a hussar jacket, and pantaloons of brown cloth, and a hussar boot. The ornaments are of black silk lace, plain, warlike and becoming. A very few, indeed, were sheeted in gold lace, and few more wore a tassel of gold bullion on the boot, and a gold cord fastening the pelisse. The reason of this difference, I learned to be, that some were actually in the military service, and the tassel and cord of others, were little vain additions, which men dandified by a residence in Vienna had ventured to assume; nothing could be more plain, or in better taste than the costume of the many. There was a spur on every heel, a sword on every thigh, and by the side of every man, on the table at which he sat, stood the calpac, with its rich brown fur, and that falling top of crimson cloth, which, when in former time, the Hungarian galloped to the field, flew bravely in the wind, giving life and menace to his motion. It is impossible to gaze down without interest on this belted assembly, the descendants of a race of warriors, ever ready to leap into their saddles—in fact, the vanguard of Europe against the Turk. I cordially hate the Turk, not because he is a Mahometan: I am not so wretched or so narrow minded a christian as that; but because all of him

that is not slave is tyrant; because he would, if he could, bring back upon the earth a moral darkness.

I must admit, indeed, that the Hungarian has something of the tyrant in him; a haughtiness, gotten centuries ago on horseback; and that he has, in his day, lorded it among his vassals, as did the barons of our own country (blessings on their memory, nevertheless!) in the days of king John: but when we reflect that the nobles and privileged classes of Hungary, form, at least, a twentieth part of her population; that, upon the whole, that population has generally been found attached to them; and that the diet of Hungary has often resisted and defied the crown of Austria, we cannot say that it is composed of slaves. No longer, indeed, can they be said to defy the crown; and in the consciousness, perhaps, that they have sunk nearer to the people, so they feel more with them and raise their voices more loudly for them. The debate was carried on in Latin: numbers spoke, and in general they had a ready and fluent command of language, and a very animated and manly delivery. Few of their speeches were more than ten minutes in length, and the greater part still shorter. It is true that, as it has seldom fallen to my lot to hear Latin spoken since, as a youth, I listened to declamations, I cannot pretend to speak to the classical correctness of expressions, or the construction of sentences; but thus far I can say, it was not a bald, meagre, thin Latin; and many of the sentences fell richly rounded on my ear. There was one churchman, an abbot, I think, who spoke rapidly, bitterly, and very well; and there was an elderly deputy, with gray hairs, who replied to him most eloquently, with a fire and a freedom that surprised me. I could not get fully at the subject, but it was some question connected with a tax that had been imposed, under the late viceroy, on salt, and that was felt and complained of by the people. This fine old Hungarian, in the course of his speech, dwelt proudly upon the ancient privileges of his country, and complained that the spirit of them had been greatly invaded during the late lieutenancy. His loyal expressions towards the person and family of the emperor, were warm, and seemed to be sincere; but he returned, quite as bitterly, to his attack on the measure on which he sought to impeach the minister; and, in one part, where he was more particularly pleading the cause of the people, he cried out with animation, '*Vox populi, vox Dei!*' It electrified the whole assembly. There were many loud Vivats; not only from among the deputies themselves, but also from almost all the persons in the gallery. For a brief moment I might have fancied myself in a free assembly; but the calm, complacent smile upon the features of a keen-looking president, who is the representative of the crown, reminded me that there was a bridle upon the Hungarian steed, and, although he is suffered to prance loftily in pride and beauty, and to fancy as he gallops, that he is running far and away, his rider sits laughingly at his ease in the saddle, and knows better. The illusion is still more completely dissipated at the doors of this assembly; no fiery horses stand saddled and neighing for their masters; but a long row of mean open carriages, each however, with a hussar behind them; wait tamely in the street, and such of the spurred members as have one, get slowly into it, loll indolently back, and are driven to their lodgings. This, it will be observed, was a meeting of the second chamber: a holding of the full diet, where the magnates attend, I was not fortunate enough to see; and I am still left, in spite of all description, a little in doubt as to the picture it would actually present; magnificent it may be, yet, methinks, judging from what I did see, the splendour has been somewhat exaggerated; that of the guard noble undoubtedly is. They have good, but not remarkable horses. The hussar dress of scarlet and silver is rich and dazzling, as they ride down to mount guard, to see them followed by a train of orderlies mounted, and with led horses, although the pelisses of these orderlies were old, and rusty green, and the horses might have been turned out in higher order, has an appearance somewhat imposing. But the young men composing this corps differ in size, figure, and carriage, and scarce look like soldiers by the side of the old Austrian cuirassiers. A regiment of these last lay in garrison here, and some strong battalions of infantry, consisting entirely of men from the Italian provinces of the em-

pire. So much for the houses of lords and commons at Presburg, and for the chance of free discussion in the kingdom of Hungary.

THE HUMOURIST.

From the Nantucket Inquirer.

PROGRESS OF A DANDY.

Eleazer Muckleton was born, and partly bred, in a town not far from the metropolis of Massachusetts. Oldsquire Muckleton, the father, was an uncouth, left-handed, parrot-toed sort of a clod-hopper; while his lady, having once spent a winter among the fashionables in the city, was altogether devoted to the punctilios and observances of high life. Many a time had she undergone most inexpressible chagrin, when the squire unceremoniously intruded upon her select parties, clad in his docked coat of faded brown, mulberry-coloured vest, breeches of grey satin, disclosing the warp at the knees, and double-soled cow-hide half-boots—about his neck a coarse pulicat, and about his hands a visible as well as fragrant portion of the compost so essential to the prosperity of squash and cabbage. "Dong it," he would exclaim on such occasions, "Why didn't you let us know of this 'ere scrape?"—whereat the lady would strive to blush, or avert in scorn the offended dignity of her countenance.

These frequent encroachments upon the purlieus of style, excited Mrs. M. to the contrivance, either of a remedy, or of a consolation. She began with the squire himself; and, after finding all her lectures and expostulations utterly ineffectual, she resolved on making a gentleman of Eleazer, then in his 19th year. So, one afternoon calling in the lad from his avocation in the barn yard, she disclosed her project as followeth:

"Eleazer, my darling, your father is such a downright clown, that I despair of living peaceably in any genteel manner, until you have become so far polished, and have acquired that gentlemanlike sort of address which may make our family respectable, and render his appearance at our fashionable assemblies no longer necessary. Therefore you must go to Boston, get a place in some retail store on Cornhill, attend Mr. Carter's dancing school one or two quarters, and come home in two years, perfectly accomplished."

"I like that plan darned well," responded Eleazer. "It's jest what I was a thinking on, t'other day, when I slumped into the muck-hole—I thought how I should rather like to be one of them 'ere gentsel fellows behind the counter, where I went to sell the tow cloth and mittens that aunt Polly made. Gor! I guess I'd roll out the ribbon, and haul down the calico, as well as any on 'em! Besides they're all as rich as mud—they've got ruffles to their shirts, and watch-chains, and don't wear the least bit of homespun, and their boots always shines like a junk bottle."

Delighted with this evidence of taste, and these incipient uprisings of ambition, Mrs. M. exercised all due diligence in despatching her hopeful heir to the land of politeness. The squire himself was forced to succumb; and the plan succeeded to a miracle. A situation was soon obtained, and Eleazer was transformed by degrees into the similitude of a gentleman. At the first, it is true, there was some incongruity in his appearance—the new coat did not exactly tally with the red and yellow swans-down vest, the false collar ill accorded with the factory-shirt, the white pantaloons revolted from the yarn hose and rough brogans, and the cropped pate disclosed certain proofs that the upper portion of his visage had been deprived of its protection against the glare of a burning sun. But all these matters soon wore into consistency; and at the end of two years, Eleazer again visited his parents, as finished a dandy as his fond mother could desire, and as foppish a butterfly as was ever generated from a despicable muckworm, and warmed into giddy and senseless existence.

So extensively in fact had he profitted by the good lady's instructions, and so thoroughly had he completed his education, that the doting mother found him to be much too far advanced in the science of gentility, either to subserve her original design, or to come within the range of her comprehension. Since her sojourn at the capital, very important

changes in the world of fashion had occurred. New habiliments, new manners, and new terms had been invented—and while Muckleton the younger dilated on these topics, the old-school disciple was wrapt in doubtful astonishment and admirable perplexity. It was therefore with no great reluctance that the parents consented to encourage the genius of Mr. Eleazer with a viaticum of five thousand dollars, wherewith to proceed to the emporium of dry goods within the dominions of his majesty of England, in order to make purchases, return, and make his fortune.

With these views he departed; and an absence of six months contributed to transform the Cornhill coxcomb into an Exquisite of the highest grade. He had swelled himself out of every body's memory—so that he could not possibly recognize his former acquaintances. For every dollar carried with him to London and Leeds and Manchester and Birmingham, he brought back four in the shape of merchandise. Resolved on cutting a monstrous flourish, he rented a large store and commenced wholesale dealer, with all the paraphernalia of clerks, apprentices, yard-sticks and scissors. His counting-room in the second story was fitted exactly to his taste, and according to his special order—there were double desks, book-racks, big folios, blank checks and so forth—the door panels glistened in all the ostentation of spanish brown mahogany, and the floor was marbled most raving-distractedly. He was for doing business on a splendid scale—and he so did it, for a whole twelvemonth—when old squire Muckleton was fain to visit the city, pay off the wholesale dealer's debts, and take him home, polished into an utter unfitnes for any useful employment—at the cost of some ten thousand dollars.

The following article from "Bell's Life in London," is replete with amusement.

THE FIRST OF APRIL.

SIR—As I know many of your readers "love fun," in the hopes that I may contribute to the frolics of the day, and afford some useful hints to the admirers of practical jokes, I send you a short sketch of my own sport on the first of April last:—

Got up early, and placed a large basin of cold water close to my wife's side of the bed, laid down on the hearth rug, and screamed ten thousand murders. Poor Betsey seeing me, as she thought, in dreadful agony, jumped out to my assistance, when popping both her feet into the basin in her alarm, she overturned the unexpected bath, slipped on her back, and was completely soured. Scrambled up laughing, and ran out crying "April fool." Rushed up stairs, and calling the cook, told her her mistress was in a fit, and desired her to go to her assistance. Down ran cooky, *en chemise*, and rushing into the room, received the empty basin full in her face, intended as the "retort courteous" for me. Her nose was split, the basin broke, and I had to pay the doctor's bill; but then I had my joke. Went into the parlour, and seeing my brother's boots at the fire, dropped an egg in each. Was delighted to see him crack them both, and draw out his feet covered with the yolk. Laughed heartily, and exclaimed, "April fool." Threw his boot at my head, but ducking, the iron heel smashed a pier glass. "Who's the fool," cries Jem. Heated the handle of the poker, and told Molly to stir the fire. In ecstasies, at seeing her drop it with about four inches of the skin off her fingers. Unfortunately, it fell on a valuable china plate filled with toast—the former was broken and the latter spoiled, but then it was the first of April. Looked demure when my wife came to breakfast. Said nothing, but thought it was d—d bad. Took another cup and complained, when Betsey consoled me by observing that it was the first of April, and she thought a little *jalap* would do me good. Didn't relish such jokes. Heard an old Irish woman crying *mackerel*. Called her several times. Highly amused to see her turn round, and scream "coming." Twiggged me at last, and flung her pattern at the window, to the detriment of two squares. Wrote a note to Alderman Gobble to dine with his friend Thompson, who I knew was in the country. Gobble took the bait, but unfortunately, finding Thompson abroad, he just "dropped in" upon me at dinner time, and nearly devoured a whole dish of smelts, which I had got

as a treat for self and rib. Met Mrs. Williams. Asked if she had heard of her son's accident. "Good God! no," said she, in great alarm; "what is it?" "He has broke—" "Broke what? in the name of heaven!" she shrieked with increasing alarm. "His walking stick," said I, and trotted on in a roar of laughter; but, not noticing where I was going, stepped into a milk pail, to the great injury of my black silk stockings, as well as to the annoyance of the vender, who called me all the fools she could lay her tongue to. Went into Baston's, called for a basin of soup; drank it, emptied the ink bottles into the basin, and then asked the waiter how he could bring me such stuff. He begged pardon, and I left him to find out his mistake. Sent my son with a bottle of Apothecaries' Hall for sixpenny worth of pigeons' milk. Came back in half an hour, and said they had none made. "Where's the sixpence," said I, "I spent it in oranges," said the young rogue and had the grin of me.

Brushed into my neighbour's, and told him I was sure there was a fire in his house. Dreadfully alarmed, he ran into every room on the premises, but returned with an assurance that I was mistaken. Called him "April Fool," and bid him look in the kitchen. Sent Molly to Spital-square to see a master silk-weaver roasted. Came back in a hurry, and said he was only "in a stew." Voxed with Alderman Gobble about the smelts. Asked him to take a glass of Madeira, and accidentally, on purpose, poured him out a glass of vinegar. Burst into a snort of laughter to see his wry face. My own wine went the wrong way, and I was nearly choked. Filled a blind nut with cayenne pepper, and gave it my wife to crack. Had her a second time. I thought she would have spit out her eye teeth in getting rid of its effects. Knew my brother was going out to an evening party, and had soaped the soles of his shoes. Was delighted to hear him come hump down on his crupper, overhead. Went up to have my laugh, and found him crying with a sprained ankle. Run down to send for a doctor, but nobody would go, believing I only meant to make them "April Fool." Went myself, and came all haste back with Dr. Bolus. Found a cat tied by the tail to the knocker, kicking up a precious clatter. Couldn't go near for fear of my eyes. At last, she worked the skin off her tail, and bolted. Cook opened the door, all consternation. Scrambled up stairs to my brother's room, with Bolus at my heels, but he was not there. Came running down again; trod on some peas which my son Jack had placed to overturn the maids, was launched forward like a seventy-four, and rose majestically with all the skin off my back. Limped into the drawing room, and found my brother had only been gammoning. Made a virtue of necessity, and laughed with tears in my eyes, and pains in my bones. Not done yet. Sent cook to the linen-draper for two yards of ell wide pack-thread. Came back, and said, "they an't got none so narrow." Had another hearty laugh; but changed my tone on old dripping coming back, and saying she had left the door ajar while she was gone for the ell-wide pack-thread, and some fool or other had walked off with my great coat, and Alderman Gobble's hat. No such fool, either, thought I. Wanted to get rid of Gobble, and told Jack to tell Tom to get some one to come and say that his mother was dead. The news came, but Gobble took it very easy. "I know it," said he, "for I was at her funeral when I was fourteen. No go," and he had the smile in his favour. Determined to be even with him, and after supper filled the kettle with gin, and put a bottle of the same on the table. Swore it was fine strong spirit, and tried in vain to weaken it with water from the kettle. Got blind drunk, played the devil with the Turkey carpet, and I was obliged to send him home in a coach. Slipped slyly up stairs, while my wife was gone to see all right in the kitchen, and made "apple pie" with the sheet by turning it up half way with the tail towards the head. Thought I should have died of laughing to see her getting in. Called me an old booby, and got out to make the bed again. Put out the candle, and got in myself, but found to my great dismay, that there were two sorts of bed-pies, for Betty had actually placed a large dish of hare-pies under the clothes, into which I jumped, but was very well content, in the end, to find it was nothing worse.

Yours, &c.

AN OLD JOKER.

POPULAR TALES.

From the New-York Saturday Evening Gazette.

REUBEN VILLAGE.

(Concluded.)

The dream, for it could seem nothing else to Edwin, was horrible; the thoughts of the act he had committed, though justified by some on a point of honour, could not altogether still his conscience, nor prevent him from thinking that his violence of temper alone was the cause;—and as he gazed on the still, pale form of his late adversary he bitterly wished it was himself that had fallen.

The evening had not so far elapsed as to prevent his visiting Amy, and with a heavy heart he took the road that led to her cottage. Amy had long been impatiently awaiting the appearance of her husband, when, hearing the light tap at the door, she flew to receive him as she thought; her brother stood before her; surprise made her tremble for a moment, but the next she was in his arms.

That night, to Edwin, was miserable, and as the sun first gave token of its rising on the succeeding morning, he was in the hall of the cottage; but Amy was there before him. "There is one scene of my childhood," said he to her, "that will never be erased from my memory, it always casts a shade of unhappiness over me for a moment, whenever any object brings it fresh to my mind; I have often strived but in vain, to forget it, each effort seeming to bind it stronger to my memory. You can but recollect, that on the hill side, you often went with me to see a solitary's cottage; one lives there whom misfortunes, that perhaps were not unmerited, had driven from the world to that lonely spot—

"And does that affect your happiness, Edwin?" said Amy.

"Listen: last night in my journey here I passed that way, with all the impatience that I had, to see a sister, and the shades of night approaching so fast, could not deter me from seeing him, and his words went like a dagger to my heart. When first he saw me approach, with his cane he pointed towards your cottage, and bade me 'hasten to save a sister's honour!' Startled at the thought, I staid not to answer him, but hastened here."

"And what has that to do with me?" said Amy, "some busy, wandering woman, or mischievous boy, has told him an idle slander, in their visits to his cottage, and this he frightens you with; you know him well, some say he is far from possessing reason."

"He was our dying mother's only friend, for this you should respect him," said Edwin.

"And you believe his idle tales?"

"I knew him well, Amy; but this only brings me nearer to what I would say to you; for oh! what followed was the wonder! In the village, as I passed, I heard your name pronounced with violence in a dispute, and hastened to learn the cause, when I saw two young men talking of you in the village inn; one of them I heard say, 'her brother, when he comes, will make all right.'"

"'Tis impossible!" said Amy shuddering with alarm.

"'Tis true as heaven! and, fired at the insult, I rushed upon them to learn the cause of thus using your name with such freedom, they escaped me, but some one whispered Pemberton. Good God! do you shrink at that? You know him! he has been here!"

As Edwin mentioned her husband's name, a deadly paleness overspread the face of Amy, which was almost immediately changed to the deepest red, as the apprehension for Pemberton's safety, and the fear that her brother had discovered their marriage, assailed her mind. She well knew that if Edwin became acquainted with her situation with Pemberton, notwithstanding his prejudices against his countrymen, it having been kept secret from him, would be enough to make him spurn her from him. It would make him and herself unhappy, and she was in the present circumstances, determined to keep it still secret; though should she ever wish it, she now, for the first time, felt she was solemnly bound not to reveal it. She therefore satisfied him with saying, that Pemberton had merely called at the cottage, and he believed that nothing further had occurred. "But listen, Amy," said he "our mother, when she died, with tears in her eyes, entrusted

you most solemnly to me; whether it was but the delusion of a fading and dying mind, I know not, but she said that you were destined by fate to be the child of unhappiness. At her command I knelt beside her in her last moments, and took an oath that I would guard you dearer than any other tie. That Pemberton was the man with whom, when at our residence in the city, I fought with, and was severely wounded; since that time, I have not seen him, excepting last night. Our mother from what cause I not, made me sacredly vow that I would guard you from him, and never let acquaintance or connection be between you.

"What, paler still, Amy?" This was the scene that I told you was ever first in my memory; and that hermit was the only witness to this strange oath, that, though it but bound me to my duty, the strangeness of our parent's conduct, and the fear that you should meet him, have made me melancholy ever since. I never can forget our mother's dying words; 'your's and your sister's honour is all I leave you; let no rude thorns lie in the path your sister treads, that a brother's hand can remove, her way will not be strewn with flowers, but to you I trust her, guard her as if she were as dear to thee as hopes of heaven.'"

"You have," said Amy, "ever shown me more than a brother's love and care."

"And I am sure you will never wrong it; but now I conjure you by every holy recollection of our mother's dying words, if there is any secret within your mind, though you may think it innocent, you must tell me unless you could withstand the idea of your mother's rising from the grave to curse you. I have heard much of this Pemberton, but him you will never see again."

"Have you seen him since your arrival at the village?" said she eagerly.

"I have, but from him you have nothing to fear; he is your country's foe; for that you should hate him."

"Can he honourably be otherwise than loyal to his Prince?" said Amy.

"He is like too many of our own countrymen, Amy, that would think it cowardice to brook the slightest taunt unrevenged, and yet would rob the garden of its fairest flower, and smile, unheeding its destruction. Oh do not, my dearest sister, rob me of the only happiness I have, of seeing you thus innocent and happy as when we were left unprotected, in our infancy, to the wide world. Let no rude passion sway your tender breast, until reason shall have cause to sanctify it."

With but ill-concealed agitation, Amy had listened to her brother, and deeper and stronger reasons for concealing her marriage were now very apparent. While she shuddered at the thoughts of some "ignorant sin she had committed," she was determined to keep it secret from her brother, whose happiness seemed to rest upon her. But she must be assured of her husband's safety; Edwin had seen him since his arrival, and he was to have called at the cottage the preceding evening. Could they have met and fought; for she had often heard of his mortal foe, but was ignorant of his name as well as offence. It was with not a little agitation that Amy asked what had passed between them. This question brought the melancholy recollection of his misfortune fresh to Edwin's mind. "We have both seen him for the last time," said he; "I may have trouble on his account, but it was all fair and honourable, though no witnesses were present, save God, and our honour, and he had as fair a chance for my life as I for his."

But where was Amy now; she had listened with the most eager attention to her brother, when, shrieking "You have murdered my husband," fell at his feet pale and apparently lifeless as the marble she laid upon. The rest of this sad tale is soon told. Edwin, driven almost to madness at the emotions that contended for superiority in his bosom, after summoning the servants to his sister's assistance, rushed in desperation from the house, and was met by one of his friends, who told him that blood had been traced by the villagers from some distance to the solitary cottage where Pemberton's body was discovered. His sudden arrival at the village, and their well known enmity, had fixed suspicions upon him, and said he, innocent or guilty, your life is only in your escape, as the officers of justice will soon be in pursuit. This was too much for him to bear, and with

the desperation that had marked him from his childhood, he rushed to one of the highest rocks on the banks of the river, and dashed headlong in—a violent emotion of the water—a struggle—fainter and fainter each moment—the water settling with less and less motion—was the certainty that all was over.

Amy soon recovered to life and misery; the rose left her cheek forever, and seated melancholy took the place of that gayety which had ever before illuminated her countenance; but a year had scarcely elapsed, ere she was no more.

Edwin was sought for, but in vain, and was supposed to have escaped, when his body was washed ashore, some distance from the spot where the tragic act was committed.

The old hermit explained the reason of Edwin Somers' oath, that his mother, by some delusion, was thought to consider Pemberton as the foe to her daughter's happiness, as he had been to her own, and to Edwin's safety; this was the only reason she had for his taking the oath he had, and which he considered was the act of his parent, when her senses were over-clouded with severe illness.

The name of this village has long since been changed, and perhaps its original one forgotten, or never known, to most of its inhabitants. But there is still an old decaying tomb of rough stones over the lonely grave of these unhappy beings, and the spot is yet venerated for their misfortunes; a large willow tree is planted near it, which is sometimes pointed out to the passing traveller, as a place rendered sacred by the misfortunes of those who lie buried there. B.

SKETCHES OF SOCIETY.

MISSOLOGHI.

A history of the siege of Missolonghi has been published at Paris, by M. Auguste Fabre, a French writer of considerable celebrity. It contains a number of most interesting details with respect to that memorable event. The bravery and self-devotion of the unfortunate Greeks are painted with a very masterly pencil. It is well known, that after having been disappointed in all their hopes of aid, feeling their ramparts crumbling under their feet, seeing their fathers, their wives and their children, perishing by famine, the garrison sent a communication to the only corps which was able to give them any succour, that of Kairaskaki, requesting it to attack the rear of the enemy on a certain day, and to announce its arrival by a general discharge of musketry, at which moment the garrison would make a sortie and endeavour to cut their way thro' the besieging army. On the appointed day, the population of Missolonghi was assembled. There remained three thousand soldiers (including those who, although sick or wounded, were capable of marching with the assistance of their comrades), a thousand artificers or other men unused to fighting, and about five thousand women and children. The Grecian women, who fancied themselves strong enough to brave the fatigue and danger of the sortie, dressed themselves in men's clothes, in order that if they were unable to escape the enemy, they might be mistaken for soldiers, and put to death instantly. Many of them hung round their necks and the necks of their children, as a protecting talisman, the revered relics of their ancestors; and wore concealed daggers, with which either to strike the enemy, or to secure their not being taken alive. Those whose weakness forbade them to follow the troops, joined the desperately wounded, the sick, the aged, and the infants, and resolved to bury themselves in the ruins of the town. It was a terrible moment. Almost all the families of Missolonghi were divided into two parts; those who remained in expectation of death, and those who were on the point of rushing forth to vengeance and to new dangers. The hardiest warriors were subdued to tears; and the bravest hearts quailed at the approaching separation. All those preparations were, however, rendered abortive by the infamous treachery of a Bulgarian soldier, who had deserted to Ibrahim, and disclosed the whole plan. The Turks suddenly attacked the town, and bathed themselves in Christian blood. The scene that followed was hideous. "But one voice was heard among the despairing women,"

says M. Fabre: "To the sea! to the sea!" Many precipitated themselves into wells, into which they first threw their children. But the wells at length became full, and it was a long way from the ramparts to that part of the harbour which was sufficiently deep for the purpose of death. The conquerors, anxious for slaves, followed close on their victims. Several women, and even several children, had the address and the good fortune to free themselves by throwing themselves on the naked swords of the Arabs; others plunged into the flames of the burning houses; twelve hundred, who could discover no way of destroying themselves, fell into the hands of the enemy. The attention of the conquerors was soon drawn to the powder magazine. The size and the solidity of the building induced them to believe that the wealth of the inhabitants had been there deposited. It contained, however, only women and children, and Capsalis (one of the primates of the town, who, having obstinately refused to accompany the garrison in their projected sortie, conducted to the powder magazine a crowd of women and children, saying, 'Come, and be still; I will myself set fire to it'). They wept not; they had no parting to apprehend; the grave was about to unite them forever. The mothers tranquilly pressed their infants to their breasts, relying on Capsalis. In the meanwhile, the enemy crowded round their asylum; some attempted to break open the doors; some to enter by the windows; some climbed to the roof, and endeavoured to demolish it. At length, Capsalis, perceiving that a vast number had assembled, uttered a brief prayer, familiar to the Greeks—'Lord remember me!' and applied the match. The explosion was so violent, that the neighbouring houses were thrown down, large chasms were produced in the earth, and the sea moving from its bed, inundated one part of the town. Two thousand barbarians were blown up with Capsalis." Such was the catastrophe of this terrible drama!

IRISH LEGENDS.

CON M'GILLIGAN.

The following tale, extracted from a late publication entitled *Sketches in Ireland*, portrays the singular Irish belief in the "good people" so well, that we cannot do better than give it our readers.

Manus M'Swine in this way had a fine boy taken from him, and one all head and mouth left in its stead; there it lay in the chimney corner, everlastingly bawling—the roar never out of its mouth except when it was crammed with milk and white bread; and the day the priest went to cristen it, you would hear its bawls all over the hills and up to Lough Salt;—thus it lay the world's torment, until one day that Con M'Gilligan, the tailor, came. Now Con used to come once a year to give a week's mending and making; and so he staid in the house a sewing, while Manus was abroad working and working, and the mistress went out to milk the cow; and just to make the needle run glibly through the cloth, Con began to lilt up a song, when with a squaking voice from the cradle in the hob, the little crathur cried out, "Con, jewel, go to the salt-box and take out an egg, my dacent lad, and just dress it in the ashes for me, or I will cry so loud that it will spoil your singing." "O, then," says Con, "is it you that spakes—by the powers, I all along knew you were nothing at all but a leaving of the good people—not the breadth of my nail will I go until you tell me all about yourself." "Well, now, do, Con, make haste and roast the egg for me before the mistress comes in, and believe me it will be well for you." So Con thought it all but dangerous to anger the crathur, and so he went and roasted the egg in the ashes, and afterwards, though he did not much like it, fed the urchin, who seemed to like mightily a fresh egg. "Well, and now my sweet little fellow, who are you, and where did you come from? for sartin I am that you are not a natural bairn." "Oh, then, Con, you never said a truer word than that—I am one of the good people—I am sent here by our king as a bit of a punishment; but next hollantide eve, please the pipes, I will be back and dancing on the moor braes round the Rock of Doune." "Well, and," said Con, "when and where

were you born." "Tut, man, I was never born—I was once upon a time as pretty a winged angel in heaven as could be, as beautiful, as good, and as happy as the day was long; and there was terrible war there, for they that are devils now, rebelled and were turned out, and down they came falling head foremost, tumbling and rolling until they dropped into hell. I with all those who are now called good people, took neither hand nor part in the fray—we joined neither god nor devil; and so, because we were neither good nor bad, neither this thing nor that thing, God Almighty was pleased to turn us out—not indeed into hell, but here we came to flit up and down through the world—sometimes indeed for good, more times for bad—now merry—now sad, and here we are to be until the day of judgment, growing less and less, time after time, and I fare very much unless we mend our manners we must all of us in the end go to hell. But no more of that now, my dear Con, for its a sore subject; you seem to be a good and likely boy, and know how to roast an egg, so Con, dear, meet me the night of hollantide at the Rock—I will be after making your fortune." The week before hollantide the child was observed to bawl no more; it would not sup any more milk; and one morning it was found stiff and cold in its cradle. To be sure Manus and his wife were not sorry to be so well rid of what was a vexation and a shame, and Manus went with a light heart with the unlucky thing under his arm, and he put it quietly in the church yard on the north side of the old abbey, where the sun never shone upon it. Twenty times a day did Con M'Gilligan argue with himself whether he would mind the fairy's bidding, and go to Doune Rock on the night of All-Souls, or not: 'twas head or harg between conscience and curiosity—and curiosity won the toss; and so he set out in the light of the full moon to the Rock. As he came near, and was turning the corner of a rocky ridge out of which an oak in the former times used to grow, he found something drop from the tree on his shoulder, and looking up, he saw the natest little gentleman in the world sitting there just like an old acquaintance. "I'm glad to see you, Con—and so you can put trust in the good people's word: and now it's I that will shew you that I am a gentleman, and up to my word to a hair's breadth; so now mind my bidding, and follow me; but first take this musheroon in your left hand, 'twill make you, while you hold it, as light, and thin, and small as myself: and mind for your life you don't name the name of God, or say a Pater Noster." As Con had gone so far, he thought he might as well go on; so taking the musheroon from the fairy, in the twinkling of an eye, he became less than a ninepin, and it was all his wonder that though his legs were so small, he went as fast as thought; so thus they slid on, until they came to the side of the Rock where the fairies' door is, when his leader put his hand in his fob, took out a little key, and slipping it in the keyhole, before you could say Jack Robinson they were in the finest palace in the world. King Solomon, nor King David, nor King George, God bless him! neither have nor had such furniture, such household stuff, in kitchen nor in parlour. "And now," says the fairy to Con, "don't you want a little money? come this way with me and fill your pockets." So they turned down an entry and came to a great iron grated door, with a huge padlock to it, which at the fairy's touch opened, and they entered into a sort of cellar, full of bags of gold. "Make haste now, Con, and fill your pockets." So Con set to work, and crammed as fast as he could; and just when he had all his pockets full, he cried out, "thank God I'm rich enough forever!" He had no sooner said this, than crash, dash, went every thing about his ears; light left his eyes, and sense his brain; and on the following morning, as if awaking out of a sound sleep, he found himself lying at the mouth of the cave, and what was best of all, he found when he clapped his hands to his pockets, that they were full of good hard cash. So up he got; and as he was going towards home, says Con to himself, "What came by fairies may go by fairies; if I stay here in this country, there may little luck or grace go along with me or my money." So Con set off for Derry, and took shipping for New-York, as he heard for sartin that fairies never go as far as America; and there he lived and died—and there his children are rich people to this very day.

VARIETY.

CALIGRAPHY OF DR. CHALMERS AND MR. JEFFREY.—"Pray did you ever see Jeffrey's scrawl, or the pot hooks of Dr. Chalmers?" "Never." "Then you are no judge of the beauties or varieties of human writing. I've had a note of the latter lying by me three years, and I've never been able to decipher it yet, nor have I ever met with a being who could. I showed it to Professor Lee, as Arabic, written to me by the celebrated Mirza Seid Moosshedabad, of Ispahan! He said at once, 'I can make neither head nor tail of it. But pray, Madam, preserve it; it's a very great curiosity.' As to little Jeffrey's caligraphy, you shall hear what Mr. Willison, of Edinburgh, said to me respecting it. 'Did you ever see his writing? Of all the pot hooks—Lord save us! a cook maid would have written better with a skewer! He's often sent me sheets which were actually illegible—a mass of mere up and down strokes—I could have wept to look at them! Perhaps I could make out the first letter—say it was p—well, then all the rest was a matter of guess work; and whether it was particular, or praiseworthy, or professional, or party spirit, or periwinkle, I had to conjecture from the context. Surely never man made such a g, l, and p, as he does! And then the cantrips, which his highness would occasionally play up! Often when I had got a whole number in type, he would come down, cancel three or four articles and leave me as many fresh ones in their place. And times beyond number he has presented himself to me, seen the proof of a long and difficult article, and altered and remodelled every line of it! And then if we made a mistake or two more than ordinary, he would fume, and rage, and fret, and talk of his time, and our stupidity, as if his writing was copperplate! I've often said to Mr. Constable, Jeffrey will drive me demented at last: and if ever I'm put into a madhouse, see that he pays the charge o't.'"

ETYMOLOGIES.—Mr. Horne Tooke, in his *Diversions of Purley*, introduces the derivation of King Pepin from the Greek noun *asper*: as thus—*asper*, oper; diaper; napkin, nipkin, pipkin, pepin—king—King Pepin! And in another work, we find, the etymology of pickled cucumber from King Jeremiah! *exempli gratia*, King Jeremiah—Jeremiah King; Jerry, king; jerkin, gerkin, pickled cucumber! Also, the name of Mr. Fox as derived from a rainy day; as thus—rainy day, rain a little, rain much, rain hard, reynard, fox! Every scholar must be also able to prove to a demonstration that a pigeon-pie is an eel-pie. Lest the reader may not be a student or an etymologist, here it is—pigeon is pie-jack; pie-jack is jack-pie; jack-pie is fish-pie! and fish-pie is eel-pie!

CONFESSION.—An Irish lad, whose father was a Catholic, was pursued to go to the priest and confess. He consented, but upon the priest demanding a shilling before hand, he made a pause, and asked, "Do you confess?" "Yes," said the priest, "I confess to the dean." "Does he charge you?" asked the boy. "Yes, a white thirteen," replied the priest. "And who does the dean confess to?" "The bishop." "And the bishop?" "He confesses to the pope." "And do deans and bishops pay?" "Yes, emartly too," replied the priest. "Who, then, does the pope confess to?" inquired the boy. "To God," was the reply. "And what does God charge?" "Nothing." "Then I'll confess to God, and save my shilling," said the boy.

DEFINITION OF A DRUNKARD. A pious divine of the old school says, "a drunkard is the annoyance of modesty, the trouble of civility, the caterpillar of industry, the tunnel of wealth, the ale-house benefactor, the beggar's companion, the constable's trouble, the wo of his wife, the scoff of his neighbour, his own shame, the picture of a beast, and the monster of a man."

There are said to be no less than 3,664 known languages in use in the world; of which 937 are Asiatic, 687 European, 275 African, and 1624 American languages and dialects.

A great fortune in the hands of a fool is a great misfortune. The more riches a fool has, the greater fool he is.

ALBANY :

SATURDAY, MAY 19, 1827.

THE FESTIVAL. We invite the attention of the fraternity to the notices on our second page, and in particular, those whose residences are in the immediate vicinity of the several places of celebration.

Besides the satisfaction which every worthy brother may derive from the society of those whom masonry has made near and dear to him, celebrations, if well attended, and prudently conducted, have a directly salutary influence upon community at large, in more particulars than even their best friends are always aware of. In the first place, they give rise to a mutual courtesy, and exchange of compliments between places which are too often induced by secular interest, to look coldly and jealously on each other. Invitations are passed, and repassed; assistance, if needed, is cheerfully tendered, with a firm confidence that it will be as cheerfully reciprocated; acquaintances are formed, which often ripen into the firmest friendships, and by these, the interests of each become the charge of all. Then, talents are elicited which the monotony of familiar exercise have too often rendered dull. The orator of the day will exert his utmost, for the best reason in the world,—an opportunity to send his name beyond the circle of those friends, who perhaps have grown indifferent to his abilities; and his success on that day will brighten them, in the same proportion as they give him a confidence in himself. Again, the science of music on such occasions, receives attention of no inconsiderable advantage. The chorister puts his best judgement in requisition, and selects the most appropriate pieces for his choir,—who, in their turn, never pass over a season like this without improving, both in taste and theory. In short, we might go on and enumerate a host of benefits, to be derived from celebrations; but it would only consume time, as we trust that reflecting masons will pursue the hints we have thrown out to them, till they arrive at the conclusion to go, and put the matter to a fair and impartial test.

CIVILIZATION. There are few of the privileges we enjoy, for which we are not far more indebted to the wisdom and enlightened liberality of the generations before us, than we are apt to imagine. It is true, that the present age is more fertile in that genius of invention which is so conducive to human ease, than many which have passed; but we must not infer from this, that our ancestors were less wise, or filled a less important link in the chain of Time. There are arts which their industry and enterprise have perfected, though humble in their character, which added as much to the refinement and glory of the days in which they lived, and perhaps more to the real welfare of humanity, than the boasted discoveries and learned theories of the present era.

We have often beguiled our hours of tedium, with reflections on the rise of the human mind, from its first feeble flutterings, to the sphere in which it now soars; the monarch of the world, the tamer of the elements, the scrutinizing inspector of the farthest and most mysterious works of God. We cannot but think that man at his creation received such knowledge from his Maker, as was never communicated to any other form of dust:—a knowledge that even his offspring become possessed of only by imitation,—for example, the faculty of speech. Whether this revealed knowledge extended any

further, it is not our province to decide; but it is more than probable, that, were man totally cut off from all opportunity to imitate, or to receive instruction from his fellow man, he would remain and die in a state of intellect very little if any above the complete idiocy in which he was born. And this position is not without facts to support it, of the most conclusive nature. Besides the daily proofs which any man of sound and cultivated reason may see in the crowds of human forms around him, history furnishes some facts which amount, in our humble opinion, to a demonstration.

We find in the history of Poland, that a part of that ill-fated country, some hundred years ago, was overrun with hordes of warlike Tartars. The cities and villages were burned, and their inhabitants, men, women, and children, driven away into captivity beyond the Wolga, or forced to fly to the mountains and caverns of the forests. Time, the only sure comforter, at length restored peace to the valleys of Lithuania; but he did not in all cases unite the parted captives, or bewildered fugitives. Many a mother was left to dream of her lost child, and many a brother knew not whether to weep for the living in exile, or the more happy dead; and their hearts were rung, both by the recollections of joys that were, and the uncertainty of the fate of those who to them were not.

Some twenty or thirty years after this, the attention of the curious was excited by the capture of several wild men; probably the children of some parents who were massacred by the Tartars, or separated from them in their flight; and being left destitute of the aid of one single being like themselves, they had relapsed into all the ferocity and degradation of brutes.

They were found individually alone, went on all fours, and showed no other proofs of sagacity than an amazing dexterity in climbing trees, and procuring their customary food,—the wild fruits and nuts of the forest. Gentle treatment and persevering efforts restored some few of them to their speech and to humanity; but on others, all that art and patience could bestow had no impression. They were still as indocile as the orang-outang.

Those on whom the humane efforts of their captors had the most salutary effect, arrived at considerable proficiency in the art of speech; but strange to tell, when questioned as to their mode of life and feelings, while wild, they were uniformly found totally destitute of the faculty of memory, till founded on the associations and discipline of civilized life.

If this be the natural state of man,—if he has risen to his present rank in intellectual improvement, from a situation like this,—where shall we fix the bourn of his scaring mind? If from a state bordering on idiocy, he has arisen to a knowledge and a power which enables him to bridle the storm, and bring down the lightning to his subserviency, why may we not infer that he will go on increasing in knowledge, till even the bottom of the ocean is as familiar to him as the cellar of his own house, and the planets and fixed stars become to him like next door neighbours.

REFLECTION. The difficulty of confining our thoughts to a profitable subject, and the intrusion of ideas wholly remote from those we wish to retain, are among the most serious obstacles which throng the path of solitary reflection. Nothing is a surer

check to the vagrancy of the thoughts than to shun all dangerous and foolish practices, which have been improperly termed recreations. We mean such amusements as gaming, carousing, &c. These pursuits are followed by many for the sole purpose of driving away those thoughts which are painful to them; for with them, to think at all is a species of torment, which they shun with the ingenuity of the conscience-stricken felon. If exercise and amusement are necessary to health (and they are absolutely so in many cases), there are diversions which are really recreative. Hunting, riding, walking, and even music, are of this kind; affording at the same time, an easy exercise to the body, and a spacious field for the entertainment of the mind.

We do not mean that it is desirable, or even salutary, to be debarred entirely from the society of the gay. To become a mere hermit would turn the thoughts away from every pleasant, as well as every profitable channel. The most happy, and we think we may add, the most wise, are those, whose discretion is most plainly discoverable in the division of their time; giving to the duties of labour, refreshment, devotion, and reflection, each its separate and limited portion of the day. It is evident that the comparative quantity of each division must be adapted to your pursuits, and circumstances in life; for in some situations, the part allotted to the purposes of labour must be greater, while that devoted to reflection must of course be less in its turn. The order of arrangement, too, must necessarily be different, as the person's station in society and pursuits vary; but we know not the individual, who, having the exercise of his reason, and a healthy constitution of mind and body, may not devote some portion of every day to each of these duties.

As a specimen of management proper for those who are studious either from necessity or choice, we take the following extract from a work of sterling worth, which every reflecting person will find both interesting and profitable,—Zimmerman on Solitude. "What character, however luxurious, ever felt the same content at any splendid entertainment, as Rousseau experienced in his humble meal? 'I return home,' says he, 'with tired feet, but with a contented mind, and experience the calmest repose in resigning myself to the impression of objects, without exercising thought, indulging imagination, or doing any thing to interrupt the peaceful felicity of my situation. The table is ready spread on my lawn, and furnished with refreshments. Surrounded by my small and happy family, I eat my supper with healthy appetite, and without any appearance of servitude to annoy the love and kindness by which we are united. The gayety of my mind throughout the evening testifies that I lived alone through the day; for, being seldom pleased with others, and never with myself when visitors have disturbed me, I sit, during the whole evening of the day when company has interrupted me, grumbling or silent. Having thus made my humble and cheerful meal, I take a few turns round my little garden, or play some favourite air on my spinette, and experience from my pillow a soft content, more sweet, if possible, than undisturbed repose.'"

THE LATE EXCITEMENT. The following are extracts of letters from gentlemen of the first respectability in the places from which they are dated. They serve to show the standing of persons whose ebullitions of malignity are so actively and

zealously scattered through the country by mischievous and designing men.

"*Canandaigua, (Ontario co.) May 3, 1827.*

"The excitement can't last forever, and we look for more quiet times. Since the town meetings have been held, there is less said on the subject. The petty brawlers, and aspirants for petty offices, have, in a measure, been gratified. The most noisy and contemptible fellow here, was, for his over zealous efforts, rewarded with the *high and honourable station of keeper of the pound!* by the unanimous vote of the town."

"*Bath, (Steuben co.) May 6, 1827.*

"There is yet much excitement in this vicinity, on the subject of the alleged abduction of Morgan; but it prevails only among a class of people not remarkable for brightness of intellect—men whose opinions, at home, are not worth a straw; but when blazoned to strangers, are looked upon as expressive of the feelings and sentiments of the community at large. And if the numerous meetings which have denounced masonry in such energetic terms, should be properly scanned; they would be found to have consisted principally of knaves and fools—knaves who endeavour to make it a political question, and fools who suffer themselves to be wheedled by such profound absurdity."

MASONRY IN MEXICO. From the New-York Times, of Thursday, we extract the following:—"Vera Cruz papers to the 11th ult. have been received in New-Orleans. one of which mentions that on the 3d of April, there was a warm debate in the Mexican legislature, on the policy of tolerating freemasonry, and which rite was to be preferred, the York or the Scottish. The paper states that the galleries were crowded by people of both sexes and of all colours. The report of a committee, for imposing some restraints on the secret proceedings of Masonic Lodges, was finally adopted—in the Senate by a vote of 24 to 7—in the House of Representatives, 40 to 24.

OHIT CHAT.

Settlers from Europe are pouring into Canada. About 1000 arrived at Quebec the first week in May.—The Emperor of Russia has appointed a special commission to consider of measures for encouraging the building of merchant vessels.—At Newport, N. H. last week, an action, *Miss Thankful B. Pollard vs. Elijah Cooper*, was tried. The auditors were so numerous that the court adjourned to the meeting house. Verdict for plaintiff—damages \$150, for breach of promise of marriage.—At a late trial in England, a witness testified against a Welshman that he had known him drink ten gallons of ale in a day—and sometimes he would sit for successive days, drinking, and would never leave off while he could get ale. It is extraordinary he had not a certain ail called the dropsy.—It is proposed in London, to conduct the smoke of their fires under ground, to a respectful distance from the city before they let it taint the air. But the saucy wind may afterwards blow it over the houses—and place a cloud between the sun and nobility.—A poor man, a native of Ireland, having gathered together a few pounds, and not liking to have it about him, gave it to a gentleman to take care of, that he might draw when occasion required it; but the gentleman had not had it many days in his possession before he died. The poor man on hearing of his death went to bed immediately, and died in twenty-four hours after.—*London paper*—The Pacific, arrived at New-York from Liverpool, saw about 100 islands of ice—about lat. 45, and from lon. 49 to 52—the summit of one was 244 feet above the sea.—The *Manch Chunk Railway* is in successful operation. It is said some of the descending cars have been permitted to run a mile a minute!—In Catholic towns the bells are chimed at the birth of a child—and in a town of France they play *Malbrook* for a boy, and *bon jour, Mam'selle*, for a girl.—The hills in Canterbury, N. H. and the tops of *Kear-sage* and *Cardigan*, in sight of Concord, N. H. were covered with snow, May 3d, which fell two days before.—The steam boat *Olive-Branch* was destroyed by fire at New Orleans, on the 21st ult.

FOREIGN NEWS.

London papers of the 16th ult. and Liverpool of the 17th, are received by the Florida, capt. Tinkham.

Nothing certain was known in regard to the formation of a new ministry, but the Times of the 16th, states that the following arrangements are in contemplation.

Sir John Copely to be Lord Chancellor.

Lord Granville, Foreign Secretary.

Mr. Robinson, (with a Peerage) Colonial Secretary.

Mr. Huskisson, Home Secretary, (this not certain.)

Lord Dudley and Ward, Privy Seal.

Lord Carlisle, Lord Lieutenant of Ireland.

Duke of Devonshire, Lord Chamberlain, (not certain.)

Marquis of Anglesea, Master of the Ordnance.

One paper says it is believed the Duke of Cambridge will be appointed Commander-in-Chief. Another states that the Marquis of Anglesea has been offered the post.

It is said that his Majesty received the resignation of the seceders with a tone and manner so decisive, that more than one repented he had not doubted before tendering so fatal an offer. Lord Bexley is said to have recalled his, and Mr. Peel, it was rumoured, would probably be open to explanation.

Lord Bexley is allowed to come back to the cabinet.

The new title of Mr. Robinson, is Lord Strath-earn.

The Marquis of Londonderry resigned his embassy to Vienna on hearing of Mr. Canning's appointment. It is rumoured that the Marquis has written an insolent letter to the king. Other resignations have taken place—among them, it is reported, the Attorney General.

Though it was strongly rumoured in London, on the 16th (says the New-York American) that the arrangements referred to above for the composing of the new Cabinet has been made, it is not to be taken as certain that such was the fact. One thing, however, is clear—that the King has felt himself personally aggrieved, and the respect due to his station violated, by the combined withdrawal of the old Cabinet. His feelings, therefore, as well as his judgment, will induce him to sustain and uphold Mr. Canning in the arrangements he may propose for re-forming the Cabinet.

We regret, says the London Times, to hear that a negotiation, which had been commenced by Mr. Canning with Lord Lansdown, has broken off on the impossibility of emancipation being made a Cabinet question against a declared royal wish; and further, that Ireland is still to reap a few of the comforts of a divided government. If, however, Mr. Plunket be immediately named Lord Chancellor of that country, one positive good will have been fixed beyond the reach of fortune.

SPAIN. All the reports in circulation were of a warlike character. At Madrid, many labourers were employed in making cartouches, which were despatched to Ciudad Rodrigo. The Marquis of Chaves was about to make a new inroad into Portugal.

PORTUGAL. It is said in a private letter from Madrid, of the 2d of April, that the general opinion was, that Chaves would re-enter Portugal before the end of the month; part of his troops had not been disarmed. It is also mentioned that Montea-legre had already returned into Portugal, disguised as a peasant, to endeavour to organize, by himself, a rising in *Tras-os-Montes* and *Beira*.

The generals of the constitutional Portuguese army, having requested from the Spanish authorities the delivery of the horses which had been used by the royalists, were answered that the greater part were Andalusian, and of course Spanish property; so that a restitution could not be made.

All apprehensions from the movements of the rebels had ceased at Lisbon; whatever steps they may take, will be only the struggles of an expiring cause.

A letter from Lisbon, March 28th, says: "The commander *Torlade Dazambuja*, who was ambassa-

dor of Portugal at Madrid under the Cortes, has been nominated charge d'affairs to the U. States of America, and will shortly sail for his destination.

TURKEY. A letter from Constantinople, of the 10th March, says: "After the evasive answers given by the Reis Effendi to the propositions of the European powers respecting the Greeks, the ministers of England, Russia, Austria, France and Prussia, determined, in a conference held at Pera, to present a note unanimously, in which they call upon the Porte peremptorily to accept the proposition. A favourable result to their proceedings is expected."

"The labours of the arsenal are pushed forward actively, and the troops continue their exercises daily. The government exhibits the greatest severity in upholding the public tranquility."

LONDON, April 16. Contrary to the expectation, little effect has been produced on the funds by the dissolution of one ministry, and the bustle incidental to the information of another.

A Carlisle paper says, that a number of operatives have set out to embark for America, or are preparing to do so. The price of weaving the lowest class of gingham is now so much reduced as to render it perfectly impossible for a weaver to provide for a large family, even with oatmeal, or potatoes, though he toil 14 hours a day.

Thomas Campbell, esq. was installed Lord Rector of the University of Glasgow, on the 12th April.

SCIENTIFIC NEWS.

BOTANICAL CURIOSITY.

A leaf of the talipot tree has lately been brought to this country from Ceylon, of which island it is a native. The leaf is in a good state of preservation. It measures fully eleven feet in height, sixteen feet and a half in its widest spread; and from thirty eight to forty feet in circumference. If expanded as a canopy, it is sufficient to protect a dinner party of six, from the rays of the sun, and in Ceylon is carried about by the natives for that purpose.

[*Asiatic Journal.*]

ENORMOUS FOSSIL VERTEBRA.

It is stated in the last number of the *Philosophical Journal*, that in the neighbourhood of Bridport, in Dorsetshire, a short time ago, a labourer, digging for an ingredient used in mortar, found a vertebra of an enormous animal, larger than a whale, and supposed to belong to a land animal. This curiosity is in the possession of a gentleman at Bridport, who generously rewarded the finder with ten guineas. Search has been made after the other parts of the same animal, but without success. The perforation for the spinal marrow is stated to be nearly equal in circumference to the body of a man.

REVOLUTION OF COMETS.

The zeal with which the interests of science were forwarded in New-Holland, by Sir T. Brisbane, deserves the warmest acknowledgement of every liberal mind. Among the most curious results obtained under his patronage, by Mr. Dunlop, at the observatory of Paramatta, may be considered the one arising from the observations on the comet of August, September, and October, 1825, and on the changes which took place in the figure of the tail, tending to establish the existence of a rotation round its axis. The periodic variations in the appearance of the tail, seemed to indicate the time of revolution to be about nineteen and a half hours. Similar appearances were observed by Le Pere Cyral, in the tail of the comet of 1618; by Helvetius, in the tails of the comets of 1652 and 1661; and by Pingrel, in the tails of the comets of 1769.

DIED,

In Rowley, on the 7th inst. after many months of extreme suffering, Mr. ROBERT S. COFFIN, the Boston Bard, son of the late Ebenezer Coffin, A. M. His remains were carried from Rowley to Newburyport, and carried into St. Paul's Church. The funeral services were performed by the Rev. Dr. Morse, and then the body of the deceased was interred in the Old-Town burial ground, by the side of his father.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

TO ———.

And now the sickening charm is gone,
The silver veil is parted,
And thou art foul to look upon,
As mean and hollow hearted.
But not by rough upbraiding verse
Shall he thou hatest mate thee;
In other forms the mourner's curse
And scorner's frowns await thee.
Fly, then to some dark shade,
Where vengeance may not teach thee
The grief that thou hast made,
—For there it yet may reach thee.

But stay!—Where shall the slanderer rest
Free from the fiends, which haunt him?
Is there no prompter in the breast,
Whose voice shall daily taunt him?
But go!—thou hast no sense of pain,
Save thine own selfish sorrow;
And pity, thou shalt seek in vain,
For all thy woes to-morrow.
Fly, then, to some dark shade,
Where none to taunt shall follow,
Whom thy false heart has made
As hard, as mean, as hollow!

THE SPIRIT OF DREAMS.

BY MISS L. E. LONDON.

Spirit of the midnight dream,
What is now upon thy wing?
Earth sleeps in the moonlight beam;
O'er that sleep what wilt thou fling?
Many a vain and shadowy thought,
All of daylight's hope and fear,
Minds strange workings, have I brought
On the sleeper's eye and ear.

There were some who prayed me give
Respite short from grief and pain;
Some few who but sought to live
Pleasures fleeting hours again.

Past I o'er a purple tent,
Down and odours wooed my stay;
But remorse and hate were sent—
Guards to banish me away.

Reached I next a lonely tower,
Pale, like him, a lamp burnt there,
While its master past the hour
O'er his scroll of learned care.

Marvelled I that he should spend
Thus the hours of my sweet reign;
When his labours find their end,
He will find, too they were vain.

Tears were in the soft dark eyes
Where I once had loved to rest;
Love had banished me, and sighs
Told he was less quiet guest.

But I bade her eye-lids close
'Neath a sweet dream's gentle sway,—
False, but yet less false than those
Which the maiden dreamed by day.

I have seen the iron brow
Grow yet darker in its rest;
While the flushed cheeks angry glow
Told what lurked in the dark breast.

I have entered the drear cell
Where the pallid murderer past
Hours whose anguish none may tell,
Yet clung to them as his last.

I have looked on craft and crime
In the hearts of youth and age:
O Night! thine's a fearful time—
Mine a weary pilgrimage!

Better love I sweet noontide,
Haunting the blue hyacinth bell,
Where the silver waters glide—
Where the falling dew-drops dwell.

Welcome to the morning hours!
Welcome to the rising sun!
I may now go haunt the flowers,—
Joy! my human task is done.

SONG.

BY MISS MITFORD.

With hound and horn and huntsman's call
They chase the fallow deer;
And thou, the noblest of them all,
Why dost thou loiter here?

Thou canst not deem within her bower
Thine own true love to see:

Dost thou not know at matin hour
I ne'er can come to thee?

My sister's voice is on the stair,
All in her maiden glee:
My mother's sitting every where,
And calling still on me.

My father's by the southern wall,
Pruning the old vine tree;
My brothers playing in the hall,—
And all are wanting me.

Then off, and mount thy gallant steed,
To hunt the fallow deer;
Off, off, and join the chase with speed
Nor loiter longer here.

At eventide my mother sits,
Her knitting on her knee,
And wakes by starts, and dreams by fits,
But never dreams of me.

At even tide my sister fair
Steals to the great oak tree;
I may not tell who meets her there,—
But naught want they of me.

At eventide, beside the bowl,
With some old comrade free,
My father many a song doth trol,
But never thinks of me.

Off, then, with hound and echoing horn,
To chase the fallow deer;
Nor deem again at peep of morn
To meet thy true-love here.

BALLAD.

A lover to his lady's bower,
With silent steps came softly stealing;
The dew was on the leaf and flower,
And night and shade the earth concealing;
He drew his lute, and breathed this lay—
"O, Lady, list, thy lover's 'plaining!—
The night is innocent as day—
Where love, and love alone, is reigning!"

The lady from her lattice high,
Came stealing, too, on feet as soundless;
She heard his lute, and heard his sigh,
Which told a tale of passion boundless.
"I know thee not, but by my fair,
By thy bold tongue thou'rt some false lover;
For love's light sins by night, the day
Will by its waking blush discover.

"Vice, when he wears the mask of night,
May look as fair as holy Virtue,
But you discern by days true light,
The sin disguised which came to hurt you:
The hawk by night may woo the dove,
And seem a dove—as tame and tender;
But with the day she knows her love,
And seeks her dove cote to defend her."

"Oh, think not so, thou lady rare!
The moon for us safe watch is keeping,
And we on bliss may fully fare,
When all the world, save us, are sleeping!
Descend, my lady dear, descend—
And where love is he never fearful;
Pure love had never sinful end—
Of love and lovers heaven is careful!"

"Then say not so—oh, say not so—
Thy words descend like drops of sorrow:
Yet since thou wilt not true love know,
Thou shalt behold him on the morrow.
May all good angels guard thy head,
When softly laid on slumber's pillow,
But I shall lie on torture's bed,
As restless as on ocean's billow!"

They parted then—the morrow came,
And to her bower the knight came riding;
She knew him, by his scarf of flame,
To be a lord and wept her chiding.
"Now tell me, surly groom—now say,
Is thy all-worshipped lady waking?
And does she know this night's delay
Weighs on my heart as it were breaking?"

Tell her I come from the Holy Wars,
With the scarf she bound about me,
Unstained, unshamed by the Moslem's scars,
With my trophies round about me!
For Richard's right, and England's might,
My sword and battle axe were wielded;
For these I fought the Christian fight,
Till every Paynim foe had yielded."

Fair lady Emma from her couch came,
And, weeping as she ran, embraced him;
She knew him by the scarf of flame,
And by the plumed helm which graced him.

"Oh, droop not so—oh, weep not so—
Thou art still true and tender-hearted;
We've parted once, but never mo'
Shall our dear loves and lives be parted!"

"Then let the merry bell ring round,
And the feast be largely given,
For I am now on England's ground,
The holy knight of heaven!
Let the priest wight by tapers light
Unite us fast as love would be;
And be the glee sung, and the carrillon rung,
And the feast and the flask move merrily!"

LACONICS.

BY SIR WILLIAM TEMPLE.

Telling *lessens* our griefs and *doubles* our joys.
Our thoughts are expressed by speech, our passions
and emotions as well without them.
Solitude damps thought and wit; too much com-
pany dissipates and hinders it from fixing.

BY JOHN GILLIES.

Men are less jealous of power than tenacious of
property, and less tenacious of property itself than
of their *ancient usages and customs*.

The desire of wealth and of power, of effeminate
ease, of frivolous amusements, and of all the artifi-
cial advantages and enjoyments of society, are only
so many *ramifications of the love of action and of
pleasure*; passions which it would be impossible to
eradicate without destroying the whole vigour of
the mind. Yet those propensities, which it is often
the vain boast of philosophy to subdue, policy may
direct to new and more exalted objects.

Few individuals are able to enjoy, without abusing
the gifts of fortune; and *no nation ever possessed
power, without aspiring at conquest*.

*The chief happiness of the mind must be sought in it-
self*, in the enjoyment of intellectual and moral plea-
sure. Our thoughts are ever, and intimately present
with us; and although the bustle of external objects,
and the tumult of passion, may sometimes divert
their current, they can never dry up their source.
The reflections on our own conduct will be con-
tinually recurring to our fancy, whatever pains we
may take to exclude them; nor can the voluptuous
enjoyment, or ambitious activity ever so totally oc-
cupy the mind of a Persian satrap or a Grecian dema-
gogue, but that their principal happiness or misery,
in the whole course of life, must chiefly depend upon
the nature of their reflections on the past, and upon
their hopes and fears about futurity.

Of all political constitutions *democracy* presents
the widest scope to the exercise of superior talents,
and has always been *most productive in great men*.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MASONIC FUNERAL HYMN.

Dark is the path that earthly wanderers tread,
And moral blackness clouds their cheerless sight;
Till He at whose rebuke old chaos fled
Points their dim vision to eternal light.
It breaks upon them—not in all its bright
And lightening lustre; but a single ray
Shoots from the east, as in his early flight,
The angel of the morning brings the day;
Increasing, till the shades shrink from his smile away

Then through this vale of sorrow must he pass,
Beset by foes without, and fears within.
Where from such danger shall he fly? alas!
No earthly refuge can his footsteps win,
When death and wo pursue! Or who hath been
Potent to ward the blow when overtaken?
He sinks. The grave yawns, and he stumbles in,
Unmarked, save by the rootless shrub, forsaken,—
He sleeps till He shall come, through whom the dead awaken.

O mourn not o'er his humble grave; in vain
Ye sigh for his return to worldly care.
He rests untortured by earth's toil and pain,
And foes pursue not his devotions there,
Then to the living glory which they share
Who from the grave first rise, and are first blest,
He and his peace are left. And when the fair
Reviving form comes forth from out thy breast
O earth! thy shades are past, and the weary soul may rest
May 23d, 1827. G.

TO THE EDITOR.

SIR—I have been several times requested to prepare a Calendar* for the use of the Lodges and Councils under the jurisdiction of the Grand Council of Princes of Jerusalem with which I am connected. That *uniformity* should obtain, as well in the mode of *dating* as in other matters appertaining to the mystic craft, is doubtless a desideratum. If a compliance with this request, will in any measure aid in promoting this object, I shall be compensated for the little research the following remarks have cost me.

As the Jewish Calendar is the one adopted by Sublime Freemasons, it appeared necessary to give a description of it. In attempting to do so, I soon found myself enwrapt in a labyrinth of matter, to present the whole of which to your readers, would make too serious an encroachment on my time and their patience. Besides, in an essay designed for a paper like yours, "*est brevitatis opus, ut currat sententia.*" On the other hand, in the effort to prevent remarks on a subject of this kind, from becoming too prolix, there is danger of their becoming obscure. I would here observe, "*en passant,*" that those who wish for a full and elaborate illustration of this calendar, can be gratified by consulting the Commentary of Dr. Adam Clarke at the end of Deuteronomy. I have also made a few observations respecting the different modes of dating, in use among freemasons, which may perhaps interest some of your masonic readers.

If you deem the following essay and circular

* I wished to reserve all remarks on this subject, for insertion in a Manual, on sublime freemasonry, long ago promised, but which circumstances have prevented, and may for sometime to come, prevent, from appearing before the public.

worthy a place in your valuable paper, please insert them in your next number; which reaching every subordinate Lodge and Council, will save me the trouble of writing particularly to each.

G. F. Y.

Sc henectady, May 16th, 1827.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MASONIC CHRONOLOGY.

It has been an immemorial custom among "blue" and "red," as well as "sublime freemasons," to date from the creation. The reason of this custom, is doubtless because the principles upon which their order is founded, can be traced from the beginning of time. With sublime freemasons, there is an additional reason. Certain circumstances detailed in some of their degrees, have an allusion to the time, when by the fiat of Jehovah, the chaotic materials of this earth were ranged in form and order, and gleams of light dispelled the darkness, that enveloped "the face of the deep." Every accomplished brother will here readily advert to our mottos, "*Lux ex tenebris,*" and "*ordo ab chao.*" And when it is considered, that the Jews were the original depositories of some of the sublime mysteries, it is not to be wondered at, that sublime freemasons should adopt, or retain, the Jewish mode of dating.

It has been a subject of much speculation, at what time before Christ to fix the epoch of the creation. "Several hundred calculations and opinions have been given, making the extreme dates differ upwards of 3000 years."* Since the most learned chronologists do not agree on this point, it is not strange surely, that freemasons should differ in their computations. Masons of the lower degrees, usually compute by the "vulgar year of our Lord," adding to it 4000 years; thus calling the present year, 5827. But Dionysius Exiguus, who, A. D. 532, first taught christians to date from the birth of Christ, commenced the Christian era *four years too late*. The true epoch of the creation, is B. C. 4004. This is the chronology established by those profound scholars, Usher, Prideaux, Calmet, and others, and is according to the Hebrew text. It has received the sanction of the greatest Protestant divines throughout the world, and is held in such high repute, that it is adopted in the authorized versions of the Holy Scriptures. Sublime freemasons use this chronology either alone, or in conjunction with the vulgar Jewish computation, which fixes the creation B. C. 3760.

In one of the sublime degrees, allusion is made to an ancient Syriac manuscript, discovered A. D. 1553, which represents the world as being many thousand years older than by the chronology of the Bible. That freemasons should make pretensions to a discovery so much at variance with the commonly received opinion of men on this subject, might by some be deemed presumptuous. In answer, we will state simply one fact. Not many years ago, the learned Dr. Hales, in his "analysis of chronology,"† has established a new era, which makes the present year of the world 7288. He has, in the most able manner, controverted the system of Usher, and if not fully established his own system, has advanced

such powerful arguments in support of it, as will stagger the most sceptical.

The "year of the restoration," which will be found in some masonic documents, cannot with propriety be used by masons below the 16th degree, and is seldom used by any except masons *above* that grade. It is calculated from the time Cyrus issued his decree for the restoration of the ancient Israelites. The Knights Templars have a date peculiar to themselves, which is computed from the time their order was established. According to these several computations, the date of this communication would be, the 19th day of the second month IYAR, Judæorum anno 5587, Anno Liberationes 2362, Anno Lucis 5831, Anno Ordinis (of the Templars) 709, which answers to the 16th day of May, Anno Domini 1827, and (it may not be impertinent to add) to the 10th day of the 11th Arabic month, called Dalhaadah [signifying month of repose] Hegira 1205.

The Rabbies maintain that the Almighty rested from the work of creation, on a day answering to the first day of their month Tisri, which corresponds with Sunday, October 23d. It is admitted that the Hebrews originally began their year with that month. But on their departure out of the land of Egypt and in commemoration thereof, they were divinely commanded* to make their year commence at the beginning of the month in which that departure took place; to wit, the month *Nisan*, then called *Abib*. Josephus says, that "Moses appointed that Nisan should be the first month for their festivals, because he brought them out of Egypt in that month: so that this month began the year as to all solemnities they observed to the honour of God; although they observed the original order of the months, as to selling and buying and other ordinary concerns."† Josephus then being judge, the Hebrews had *two* ways of beginning their year. For all matters of a civil or secular nature, they made use of, what they now term their "political" or "civil year;" which commenced about the time of the autumnal equinox with the month *Tisri*. And in the calculations of their festivals and other ecclesiastical concerns, they used their "sacred," or "ecclesiastical year;" which commenced about the time of the vernal equinox, with the month *Nisan*.

This notion of two sorts of years, is maintained by the Rabbies of the present day. That it should have been adopted by Prideaux,‡ and other christian writers, may appear somewhat singular, when it is considered that no plausible passage from Holy writ can be adduced in support of it. It does not appear from any part of the old Testament that the ancient mode of beginning the year from the month Tisri, was used after the departure of the Israelites out of Egypt. Wherever the months are named and numbered, no matter whether for civil or ecclesiastical purposes, they are numbered according to the ecclesiastical year. Examine among other passages, Exod. xiii. 4.—I. Kings vii. 1. viii. 2. Esther viii. 12—ii. 16—iii. 7—viii. 9—Zech. i. 7—vii. 2.

But whether there was a single or double com-

* Exodus xii. 1, 2.

† Josephus' Antiquities, lib. I. ch. 2. sec. 3.

* See new edition of Dalcho's "Ahiman Rezon," p. 37.

† London edition 4 vols. quarto 1809.

commencement of the ancient Jewish year, it is not of any consequence to us, as sublime freemasons, to enquire into, since we have adopted the *ecclesiastical* year of the modern Jewish Calendar. The fasts and festivals of the Jewish church are connected with this subject, and might here claim our attention. But inasmuch as this essay is designed for freemasons, who as such have nothing to do with these observances, we shall waive any remarks respecting them, and proceed to a description of the Calendar now used by the Jews.

This Calendar was settled by Rabbi Hillel, cir. A. D. 358. He made the ancient Jewish Calendar which consisted altogether of lunar months, vie in astronomical accuracy with the Julian Calendar. This last, however, was in the sixteenth century surpassed by the Gregorian Calendar, which (as is well known) is the one now in use among Christians.

(Conclusion next week.)

ELECTIONS.

Grand Lodge of the State of Connecticut.

Elected May 9th, 1827: Daniel B. Brinsmade, Grand Master; James W. Goodwin, Deputy Grand Master; Amherst D. Scovill, Grand Senior Warden; William C. Gay, Grand Junior Warden; Laban Smith, Grand Treasurer; William H. Jones, Grand Secretary; Charles A. Ingersoll, Grand Senior Deacon; Asa Child, Grand Junior Deacon; Rev Benj. M. Hill, Grand Chaplain; Philip Saunders, and William H. Ellis, Grand Stewards; Darius Higgins, Grand Tyler.

Grand R. A. Chapter of the State of Connecticut.

Elected May 10th, 1827: Thomas Hubbard, Grand High Priest; William H. Jones, Deputy Grand High Priest; Andrew Harris, Grand King; Asa Child, Grand Scribe; Ingoldsby W. Crawford, Grand Marshal; Samuel Simons, Grand Centinel.

Grand Council of the State of Connecticut.

Elected May 10th, 1827: T. I. Ingoldsby W. Crawford, G. P.; I. Andrew Harris, D. G. P.; I. Asa Child, G. T. J.; I. Samuel Simons, G. P. C.; I. John Fitch, G. C. G.; I. Andrew Kidston, G. Treasurer; I. William H. Jones, G. Recorder; I. and Rev. Benjamin M. Hill, G. Chaplain; I. William H. Ellis, G. S.; I. Darius Higgins, Grand Tyler. T. I. N. A. Phelps was re-elected, G. P. but declined.

MASONIC ANNIVERSARY.

At a regular meeting of Franklin Lodge, No. 399, it was resolved to celebrate the festival of St. John the Baptist, on Monday, the 25th June next, at the Village House kept by E. Wells, in Pittstown, Rensselaer county. A sermon and an address will be delivered, and a dinner provided on the occasion. The Worshipful Masters, Wardens, and Brethren of neighbouring Lodges, are respectfully invited to attend and join in the celebration. The services will commence at 10 o'clock, A. M. JONATHAN WORTHINGTON, ERASTUS GEER, WILLIAM TILLINGHAST, ELBERT J. WILLETT, Committee of Arrangements.

Pittstown, May 19, 1827.

At an extra communication of St. John's Lodge, No. 90, at their Lodge Room in Greenfield, on the 19th of May, 1827, it was

Resolved, That said Lodge celebrate the approaching anniversary of St. John the Baptist, at the above place, on the 25th of June next, and that the adjacent Chapters and Lodges be solicited to join in the festival. It was also

Resolved, That brothers Lewis Scott, Darius Johnson, Elihu Wing, William Burnham, and John Paige, be a committee of arrangements.

The particulars relative to the order of the day, will be hereafter given by the committee.

BENJAMIN H. AUSTIN, Sec'y.

The festival of St. John the Baptist will be celebrated in the village of Herkimer, Herkimer county, by Royal Arch Chapter, No. 27, in conjunction with Amicable Lodge, No. 37, of the same place. The procession will be formed at the house of Companion Benjamin Kelsey, at 10 o'clock, A. M. and move to the church, where an oration will be delivered; after which the procession will return to Comp. Kelsey's, who will furnish dinner and refreshments at a reasonable rate. The Companions and Brethren of neighbouring Lodges are respectfully solicited to attend said celebration. The neighbouring clergy are also invited to attend.

DAN CHAPMAN,
C. D. LOUNDSBERRY,
JAMES RYERS,
PATRICK MAHON,
LORIN DEWITT,
J. S. MAYNARD,
JOHN CARPENTER,
Committee of Arrangements.

The annual meeting of the Grand Royal Arch Chapter of the state of New-Hampshire, will be holden at the Hall of the Blazing Star Lodge, in Concord, on Thursday, next following the second Tuesday of June next, at nine o'clock, forenoon.

ALBE CADY, G. Sec'y.

May 19, 1827.

SCIENCE AND THE ARTS.

ASBESTOS.

This substance, called also amianthus, appears to be produced from the decomposition of primitive rocks, amongst which it is oftenest found. It chiefly occupies fissures and cavities of steatitic rocks, serpentine, and others abounding in magnesia. The asbestos which is found in the mountains of Tarentaise, in Savoy, forms silky filaments of more than three decimetres, or about a foot in length. People, when they see for the first time, a detached tuft of asbestos, can scarcely be convinced that it is actually a stone, and not a species of fine white silk. Asbestos abounds in Corsica; Dolomieu made use of it, instead of hay and tow, to pack up other minerals. Ciampini says, that the largest asbestos he ever saw, came from the Pyrenes. It abounds in the Uralian mountains, and in Greenland. In Corsica, they mix asbestos with the clay used in the potteries, which is thus rendered less brittle, and more capable of resisting the sudden alterations of heat and cold. The ancients spun the asbestos, and made towels, napkins and head dresses of it. When these became soiled by use, they were thrown into the fire, which did not destroy the substance of the asbestos, and upon being taken out, were found to be whiter than if they had been washed. In the funeral obsequies of kings and emperors, the dead body was enveloped with clothes of asbestos, before it was placed on the funeral pile; and thus the ashes were obtained quite unmixed. In modern times, the Russians alone have attempted, but without success, to spin the asbestos. The inhabitants of the Uralian mountains have still preserved some remains of this frivolous industry. The indestructible paper, made from this substance, appears more useful. Wicks for lamps are also formed of all the asbestos, which easily imbibe oil, and burn with a brilliant flame. Father Kircher made use of such a wick for more than two years, without any perceptible decay, but having wet it by accident, was prevented from continuing his experiment. Perhaps the fabulous accounts of unextinguishable sepulchral lamps derive their origin from this circumstance.

Of the inflammable substances, sulphur naturally presents itself first to our observation. That which is crystalized by the action of a liquid, is found in veins or in beds, amongst sulphate of lime, or amongst potters clay. These beds, which are often very extensive, border upon strata of rock salt. Crystals of sulphur sometimes adorn the interior of calcareous, or even quartz eagle stones. With respect to sulphur formed by sublimation, it is found in powder, in striated masses, or even in crystals, at the mouth of many volcanos, such as Etna, Vesuvius, and Mount Hecla. Several substances, amongst others the sulphurous pyrites, are impregnated with sulphur. We cannot doubt that sulphurous and sulphuric acid exerted a powerful agency in the primitive fermentation of the elements—but there is nothing in the existing economy of nature which can enable us to penetrate these mysteries of "chaos and ancient night."

We have already spoken of the diamond, to which the rigid justice of modern chemistry assigns a place amongst combustible substances. The anthracite, a substance similar to the pit coal, combined with stony matter, of difficult combustion, appears to have the same principle for its basis as the diamond, namely, pure carbon, accidentally mixed with flint and iron. The anthracite occurs chiefly, but not exclusively, in primitive rocks, where it forms considerable masses. Thus, as Dolomieu observes, "carbon, or the carbonaceous principle, exists in nature, independently of animals and vegetables, of which there are no traces found in the primitive soils." let us also add, that sulphur must have existed before organized bodies, since, as Delametherie observes, it is found in granite. Deluc has lately expressed the same opinion in relation to primitive calcareous earth. We seem every day becoming more disposed to admit the formal pre-existence of

all the elements which enter into the composition of the globe, whilst false logic would represent them as being wholly the remains of animals or vegetables. Let us rather say, that the organic energy of nature exerted in two different directions, has given rise on one side to calcareous rocks, alkaline-earthly substances, and animals—on the other, to quartzeous and bituminous substances, and vegetables; constantly putting in action the same elements, or their products, but always proceeding from a general and imperfect organization, to another more individual one more perfect, ascending from the stone to the diamond, from molybdena to gold, from the medusa to the shell, and from the polypus to man.

The elementary oils existed also without doubt before vegetable substances. The place they hold in nature is worthy of our attention.

[Physical Geography.]

SUBTERRANEAN SOUNDS,

HEARD AT NAKOUS ON THE RED SEA.

Baron Humboldt informs us, on the authority of most credible witnesses, that subterranean sounds, like those of an organ, are heard towards sunrise, by those who sleep upon the granite rocks, upon the banks of the Orinoco. Messrs. Jomard, Joilois, and Devilliers, three of the naturalists who accompanied Buonaparte to Egypt, heard at sunrise, in a granite monument placed at the centre of the spot on which the palace of Carnac stands, a noise like that of a string breaking.

Sounds of a nature analogous to these have been heard by Mr. Gray of University College, Oxford, at a place called Nakous, (which signifies a bell) at three leagues from Tor, on the Red Sea. This place, which is covered with sand, and surrounded with rocks in the form of an amphitheatre, presents a steep declivity towards the sea, from which it is half a mile distant. It has a height of about 300 feet, upon 30 feet of width. It has received the name of a bell, because it emits sounds, not as the statue of Memnon formerly did, at sunrise, but at every hour of the day and night, and at all seasons. The first time that Mr. Gray visited this place, he heard, at the end of a quarter of an hour, a low continuous murmuring sound, beneath his feet, which gradually changed into pulsations as it became louder, so as to resemble the striking of a clock. In five minutes it became so strong as to detach the sand. The people of Tor declare that the camels are frightened and rendered furious by these sounds.

Anxious to discover the cause of this phenomenon, which no preceding traveller had mentioned, Mr. Gray returned to the spot the next day, and remained an hour, to hear the sound, which was on that occasion heard much louder than before. As the sky was serene, and the air calm, he was satisfied that the sound could not be attributed to the introduction of the external air, and in addition to this, he could not observe any crevices by which the external air could penetrate. The Arabs of the desert ascribe these sounds to a convent of monks preserved miraculously under ground, and they are of opinion that the sound is that of their bell. Others think that it arises from volcanic causes; and they found this opinion on the fact that the hot baths of Pharaoh are on the same coast.

M. Humboldt ascribes the sounds in the granite rocks, to the difference of temperature between the external air, and the air of the narrow and deep crevices of the shelves of rocks. These crevices, he informs us, are often heated to 48 or 50 degrees during the day, and the temperature of their surface was often 39, when that of the external air was only 28 degrees. [Edinburgh Journal of Science.]

GERMAN SUSPENSION BRIDGE.

The ingenuity of German artificers has lately offered two spectacles equally interesting and curious:

1st. Placing chains for a suspension, instead of the ancient bridges, over the grand navigation of the Danube, at Basumowski, and, 2d, A manoeuvre, executed by the pioneers, by which a bridge of a new construction was thrown over a stream and lying upon the tressels, which form part of the accoutrement of this body of men, when in service; but which are thus adapted to purposes of undoubted utility in times of peace. The canal is 160 (Vien-

na) feet in width, at the part where the bridge is planted; its greatest depth is 10 feet 2 inches, and the swiftness of the currents, usually flowing at the rate of 4 feet 2 inches in the second, was greatly accelerated by the quantity and violence of the previous rains: in spite of this, one hour and three quarters saw the undertaking completed; and a bridge was raised upon eight tressels, across which large bodies of men and horse might pass with perfect safety; as, also, artillery, and light waggons, or carriages.

BOTANICAL QUESTION.

Are all plants the result of the germination of virgin earth and vegetable mould? It is undoubtedly a very remarkable phenomenon that the earth when dug to the depth of eight or ten feet or more, produces all sorts of plants, provided it is advantageously exposed to the sun; but what is more extraordinary, is that this new vegetation frequently affords plants of kinds which have never been remarked in the country. It is natural to ask, whence came these plants? Can it be admitted that the seeds of those new plants were contained in the several kinds of earth? But could all those seeds, which had been perhaps above three thousand years under ground, without having been exposed to the action of the sun, have preserved the power of generating? If we strew ashes on high and arid heaths, we should see sometime afterwards clover and vetches growing there, though these two plants had never before been seen on those places. Shall we believe that the seeds of clover and vetches were in the ground, and only waited for stimulus to germinate? But how did it come there? We know that high and arid heaths never produce clover; it cannot therefore be considered as proceeding from a plant which formerly grew there. But even should we admit the possibility that these kinds of earth may contain clover seed, this opinion cannot be maintained in some parts of East Friesland, where wild clover is made to grow by sowing pearlshells on peat marshes. [*Bulletin Universel des Sciences.*]

THE COCOOY, QUEEN BEETLE.

This astonishing insect is about one inch and a quarter in length, and what is wonderful to relate, she carries by her side, just above her waist, two brilliant lamps, which she lights up at pleasure with the solar phosphorus, furnished her by nature. These little lamps do not flash and glimmer, like that of the fire-fly, but give as steady a light as the gas light, exhibiting two perfect spheres, as large as a minute pearl, which afford light enough in the darkest night to enable one to read print by them. On carrying her into a dark closet in the day time, she immediately illuminates her lamps, and instantly extinguishes them on coming again into the light. But language cannot describe the beauty and sublimity of these lucid orbs in miniature, with which nature has endowed this queen of the insect kingdom.

TO GIVE SILVER PLATE A LUSTRE.

Dissolve alum in a strong lye, skim it carefully, then mix it with soap, and wash your utensils with it, using a linen rag.

REPOSITORY.

COMBUSTION OF THE HUMAN BODY.

The following accounts of combustion of the human body are taken from the *Emporium of Arts and Sciences*. The facts are well authenticated and accounted for on philosophical principles. They are republished with a view of aiding other means now employed for the suppression of intemperance.

We read in the *Transactions of Copenhagen*, that in 1692 a woman of the lower class, who for three years had used spirituous liquors to such an excess that she would take no other nourishment, having sat down one evening on a straw chair to sleep, was consumed in the night time, so that next morning no part of her was found but the skull and the extreme joints of the fingers; all the rest of her body, says Jacobæus, was reduced to ashes.

The following extract of a memoir of Bianchini is taken from the *Annual Register for 1763*: The Countess Cornelia Bandi, of the town of Cesana, aged 62, enjoyed a good state of health. One evening having experienced a state of drowsiness, she retired to bed, and her maid remained with her till she fell asleep. Next morning, when the girl entered to awaken her mistress, she found nothing but the remains of her body in the most horrid condition. At the distance of four feet from the bed was a heap of ashes, in which could be distinguished the legs and arms untouched. Between the legs lay the head, the brain of which, together with half the posterior part of the cranium, and the whole chin, had been consumed: three fingers were found in a state of coal; the rest of the body was reduced to ashes, which, when touched, left on the fingers a fat, foetid moisture. A small lamp which stood on the floor was covered with ashes, and contained no oil; the tallow of two candles was melted on the table, but the wicks still remained, and the feet of the candlesticks were covered with a certain moisture. The bed was not damaged; the bed clothes and coverlid were raised up and thrown on one side, as is the case when a person gets up. The furniture and tapestry were covered with a moist kind of soot of the colour of ashes, which had penetrated into the drawers and dirted the linen. The soot having been conveyed to a neighbouring kitchen, adhered to the walls and the utensils. A piece of bread in the cupboard was covered with it, and no dog would touch it. The infectious odour had been communicated to other apartments. The *Annual Register* states that the Countess of Cesana, was accustomed to bathe all her body in camphorated spirit of wine.

Mary Clues, aged 50, was much addicted to intoxication. Her propensity to this vice had increased after the death of her husband, which happened a year and a half before. For about a year, scarcely a day had passed in the course of which she did not drink at least a pint of rum or aniseed and water. Her health gradually declined, and about the beginning of February she was attacked with the jaundice and confined to her bed. Though she was incapable of much action, and not in a condition to work, she still continued her old habit of drinking every day and smoking a pipe of tobacco. The bed in which she lay stood parallel to the chimney of the apartment, and at the distance from it of about three feet. On Saturday morning, the 1st of March, she fell on the floor; and her extreme weakness having prevented her from getting up, she remained in that state till some one entered and put her to bed. The following night she wished to be left alone. A woman quitted her at half after eleven, and according to custom, shut the door and locked it. She had put on the fire two large pieces of coal, and placed a light in a candlestick on a chair at the head of her bed. At half after five in the morning a smoke was seen issuing through the window, and the door being speedily broke open, some flames which were in the room were soon extinguished. Between the bed and the chimney were found the remains of the unfortunate Clues; one leg and a thigh were entire, but there remained nothing of the skin, the muscles and viscera. The bones of the cranium, the breast, the spine, and the other extremities, were entirely calcined, and covered with a whitish efflorescence. The people were much surprised that the furniture had sustained so little injury. The side of the bed which was next to the chimney had suffered the most; the wood of it was slightly burnt; but the feather-bed, the clothes and covering were safe.

The transactions of the Royal Society of London present also an instance of human combustion no less extraordinary: It was mentioned at the time it happened in all the journals; it was then attested by a great number of eye witnesses, and became the subject of many learned discussions. Three accounts of this event, by different authors, all nearly coincide. The fact is related as follows:—"Grace Pitt, the wife of a fishmonger, of the parish of St. Clement, Ipswich, aged about sixty, had contracted a habit, which she continued for several years, of coming down every night from her bed-room, half dressed to smoke a pipe. On the night of the 9th of April, 1744, she got up from her bed as usual. Her daughter, who slept with her, did not perceive she was absent till next morning when she awoke,

soon after which she put on her clothes, and going down to the kitchen, found her mother stretched out on the right side, with her head near the grate; the body extended on the hearth, with the legs on the floor, which was of deal, having the appearance of a log of wood, consumed by a fire without apparent flame. On beholding this spectacle, the girl run in great haste and poured over her mother's body some water contained in two large vessels in order to extinguish the fire; while the foetid odour and smoke which exhaled from the body almost suffocated some of the neighbours who had hastened to the girl's assistance. The trunk was in some measure inciterated, and resembled a heap of coals covered with white ashes. The head, the arms, the legs, and the thighs, had also participated in the burning.

This woman, it is said, had drunk a large quantity of spiritous liquor in consequence of being overjoyed to hear that one of her daughters had returned from Gibraltar. There was no fire in the grate, and the candle had burnt entirely out in the socket of the candlestick which was close to her. Besides, there were found near the consumed body, the clothes of a child and a paper screen, which had sustained no injury by the fire.

HISTRIONIC PREACHER.

Mr. Whitfield displayed in his boyhood, great theatrical talent; and when afterwards called upon to the ministry of the gospel, he indulged in a histrionic manner of preaching, which would have been offensive, if it had not been rendered admirable by his natural gracefulness and inimitable power. Remarkable instances are related of the manner in which he impressed his hearers. A ship builder was once asked what he thought of him. "Think!" he replied, "I tell you, sir; every Sunday I go to my parish church, I can build a ship from stem to stern under the sermon; but were it to save my soul, under Mr. Whitfield I could not lay a single plank." Hume pronounced him the most ingenious preacher he had ever heard, and said it was worth while to go twenty miles to hear him.

The elocution of Whitfield was perfect; he never faltered, unless the feeling to which he had wrought himself, overcame him, and then his speech was interrupted by a flow of tears;—sometimes the emotions of his mind exhausted him, and the beholders felt a momentary apprehension for his life.

He would frequently describe the agony of our Saviour with such force, that the scene seemed actually before his auditors. "Look yonder," he would say, stretching out his hand, and pointing while he spoke, "what is it that I see? It is my agonizing Lord! Hark, hark! do you not hear? Oh my Father, if it be possible, let this cup pass from me! nevertheless, not my will, but thine be done!" This he introduced frequently in his sermons: and one who lived with him says, the effect was not destroyed by repetition; even to those who knew what was coming, it came as forcibly as if they had never heard it before.

Sometimes at the close of a sermon he would personate a judge about to perform the last awful duties of his office. With his eyes full of tears, and an emotion that made his speech falter, after a pause which kept the whole audience in breathless expectation of what was to come, he would say, "I am now going to put on my condemning cap. Sinners, I must do it, I must pronounce sentence upon you!" and then, in a tremendous strain of eloquence, describing the eternal punishment of the wicked, he recited the words of Christ, "depart from me, ye cursed, into everlasting fire, prepared for the devil and his angels." When he spoke of St. Peter, how after the cock crew he went out and wept bitterly, he had a fold of his gown ready, in which he hid his face.

Perfect as it was, histrionism, like this, would have produced no lasting effect upon the mind, had it not been for the unaffected earnestness and indubitable sincerity of the preacher, which equally characterised his manner, whether he rose to the height of passion in his discourse, or won the attention of the motley crowd by the introduction of familiar stories and illustrations adapted to the meanest capacities.

POPULAR TALES.

MASETTO AND HIS MARE.

BY THOMAS HOOD.

Author of "Whims and Oddities."

It is remarkable, and hardly to be believed by those who have not studied the history of superstition, what extravagant fables may be imposed on the faith of the vulgar people; especially when such fables are rehearsed in print, which of itself has passed before now as the work of a black or magical art, and has still influence enough over ignorant minds, to make them believe, like Masetto, that a book of romances is a gospel. This Masetto, like most other rustics, was a very credulous man; but more simple otherwise than country folks commonly appear, who have a great deal of crafty instinct of their own, which comes to them spontaneously, as to the ravens and magpies. And whereas pastoral people are generally churlish and headstrong, and in spite of the antique poets, of coarse and brutal tempers, Masetto, on the contrary, was very gentle and mild, and so compassionate withal that he would weep over a wounded creature like a very woman. This easy disposition made him liable to be tricked by any subtle knave that might think it worth his pains; and amongst such rogues there was none that duped him more notably than one Bruno Corvetto, a horse-courser, and as dishonest as the most capital of his trade. This fellow, observing that Masetto had a very good mare, which he kept to convey his wares to Florence, resolved to obtain her at the cheapest rate, which was by stratagem; and knowing well the simple and credulous character of the farmer he soon devised a plan. Now Masetto was very tender to all dumb animals, and especially to his mare, who was not insensible to his kindly usage, but pricked up her ears at the sound of his voice, and followed him here and there with the sagacity and affection of a faithful dog, together with many other such tokens of an intelligence that has rarely belonged to her race. The crafty Corvetto, therefore conceived great hopes of his scheme: accordingly, having planted himself in the road by which Masetto used to return home, he managed to fall into discourse with him about the mare, which he regarded very earnestly; and this he repeated for several days. At last, Masetto observing that he seemed very much affected when he talked of her, became very curious about the cause, and inquired if it had ever been his good fortune to have such another good mare as his own; to this Corvetto made no reply, put throwing his arms about the mare's neck, began to hug her so lovingly and with so many deep drawn sighs, that Masetto began to stare amazingly, and to cross himself as fast as he could. The hypocritical Corvetto then turning away from the animal,—"Alas!" said he, "this beloved creature that you see before you is no mare, but an unhappy woman, disguised in this horrible brutal shape by an accursed magician. Heaven only knows in what manner my beloved wife provoked this infernal malice, but doubtless it was by her unconquerable virtue, which was rivalled only by the loveliness of her person. I have been seeking her in this shape all over the wearisome earth, and now I have discovered her I have not wherewithal to redeem her of you, my money being all expended in the charges of travelling, otherwise I would take her instantly to the most famous wizard, Michael Scott, who is presently sojourning at Florence, and by help of his magical books might discover some charm to restore her to her natural shape." Then clasping the docile mare about the neck again, he affected to weep over her very bitterly. The simple Masetto was very much disturbed at this story, but knew not whether to believe it, till at last he bethought himself of the village priest, and proposed to consult him upon the case; and whether the lady, if there was one, might not be exorcised out of the body of his mare. The knavish Corvetto, knowing well that this would ruin his whole plot, was prepared to dissuade him. "You know" said he, "the vile curiosity of our country people, who would not fail at such a rumour to pester us out of our senses, and, especially, they would torment my unhappy wife, upon whom they would omit no experiment, however cruel, for their satisfaction. Besides, it would certainly kill her with

grief, to have her disgrace so published to the world, which she cannot but feel very bitterly; for it must be a shocking thing for a young lady who has been accustomed to listen to the loftiest praises of her womanly beauty, to know herself thus horribly degraded in the foul body of a brute. Alas! who could think that her beautiful locks, which used to shine like golden wires, are now turned by damnable magic into this coarse slovenly mane;—or her delicate white hands—oh! how pure and lily-like they were!—into these hard and iron shod hoofs!" The tender-hearted Masetto beginning to look very doleful at these exclamations, the knave saw that his performance began to take effect, and so begged no more for the present, than that Masetto would treat his mare very kindly, and rub her teeth daily with a spig of magical hornbeam, which the simple-witted rustic promised very readily to perform. He had, notwithstanding, some buzzing doubts in his head upon the matter, which Corvetto found means to remove by degrees, taking care, above all, to caress the unconscious mare whenever they met, and sometimes going half-privately to converse with her in the stable. At last, Masetto being very much distressed by these proceedings, he addressed Corvetto as follows:—"I am at my wit's end about this matter. I cannot find in my heart, from respect, to make my lady do any kind of rude work, so that my cart stands idle in the stable, and my wares are thus unsold, which is a state of things that I cannot very well afford. But, above all, your anguish, whenever you meet with your poor wife, is more than I can bear; it seems such a shocking unchristian-like sin in me, for the sake of a little money, to keep you both asunder. Take her, therefore, freely of me as a gift; or if you will not receive her thus, out of consideration for my poverty, it shall be paid me when your lady is restored to her estates, and by your favour, with her own lily-white hand. Nay, pray accept of her without a word; you must be longing, I know, to take her to the great wizard, Michael Scott; and in the mean time I will pray, myself, to the blessed saints and martyrs, that his charms may have the proper effect." The rogue, at these words, with undissembled joy fell about the mare's neck; and, taking her by the halter, after a formal parting with Masetto, began to lead her away. Her old master, with brimful eyes, continued watching her departure, till her tail was quite out of sight; whereupon, Corvetto leapt instantly on her back, and without stint or mercy, began galloping towards Florence, where he sold her, as certain Saxons are recorded to have disposed of their wives, in the market-place. Sometime afterwards, Masetto repairing to Florence on a holiday, to purchase another horse for his business, he beheld a carrier in one of the streets, who was beating his jade very cruelly. The kind Masetto directly interfered in behalf of the ill-used brute, which, indeed, was his own mare, though much altered by hard labour and scatty diet; and now got into a fresh scrape, with redoubled blows, through capering up to her old master. Masetto was much shocked, you may be sure, to discover the enchanted lady in such a wretched plight. But not doubting that she had been stolen from her afflicted husband, he taxed the carrier very roundly with the theft, who laughed at him in his turn for a madman; and proved by three witnesses, that he had purchased the mare of Corvetto. Masetto's eyes were thus opened, but by a very painful operation. However, he purchased his mare again, without bargaining for either golden hair or lily-white hands, and with a heavy heart rode back again to his village. The inhabitants, when he arrived, were met together on some public business, after which, Masetto, like an imprudent man as he was, complained bitterly amongst his neighbours of his disaster. They made themselves, therefore, very merry at his expense, and the schoolmaster especially, who was reckoned the chiefest wit in the place. Masetto bore all their raileries with great patience, defending himself with many reasonable arguments; and at last he told them he would bring them, in proof, quite as wonderful a case. Accordingly, stepping back to his own house, he returned with an old tattered volume, which Corvetto had bestowed on him, of the "Arabian Nights," and began to read to them of Sidi Nouman, whose wife was turned, as well as Corvetto's, into a beautiful mare.

His neighbours laughing more lustily than ever at this illustration, and the schoolmaster crowing above them all, Masetto interrupted him with great indignation. "How is this sir?" said he, "that you mock me so; whereas, I remember, that when I was your serving-man, and swept out the school-room, I have overheard you teaching the little children concerning people in the old ages, half men and the other half turned into horses: yea, and shewing them effigies in a print; and what was there more impossible in this matter of my own mare?" The priest interposing at this passage, in defence of the schoolmaster, Masetto answered him as he had answered the pedagogue, excepting that instead of the Centaurs, he alleged a miracle out of the holy fathers. There was some fresh laughing at this rub of the bowls against the pastor, who being a Jesuit and a very subtle man, began to consider within himself whether it was not better for their souls that his flock should believe by wholesale, than have too scrupulous a faith; and accordingly after a little deliberation, he sided with Masetto. He engaged, moreover, to write for the opinion of his college; who replied, that as sorcery was a devilish and infernal art, its existence was as certain as the devil's. Thus a belief in enchantment took root in the village, which, in the end, flourished so vigorously, that although the rustics could not be juggled out of any of their mares, they burned, nevertheless, a number of unprofitable old women.

THE TRAVELLER.

PASSAGE ACROSS THE ANDES.

From a Sketch taken among the Andes by an Englishman.

As soon as we crossed the pass, which is only seventy yards long, the capitaz told me, that it was a very bad place for baggage mules, that four hundred had been lost there, and that we should also very probably lose one. He said that he would get down to the water at a place about a hundred yards off, and wait there with his *lazo* to catch what might fall into the torrent, and he requested me to lead on his mule. However, I was resolved to see the tumble if there was to be one, so the capitaz took away my mule and his own, and while I stood on a projecting rock at the end of the pass, he scrambled down on foot, till at last he got to the level of the water.

The drove of mules now came in sight, one following another; a few were carrying no burdens, but the rest were either mounted or heavily laden, and as they wound along the crooked path, the difference of color in the animals, the different colors and shapes of the baggage they were carrying, with the picturesque dress of the peons, who were vociferating the wild song by which they drive on the mules, and the dangerous path they had to cross, formed altogether a very interesting scene.

As soon as the leading mule came to the commencement of the pass he stopped, evidently unwilling to proceed, and of course all the rest stopped also.

He was the finest mule we had, and on that account had twice as much to carry as any of the others; his load had never been relieved, and it consisted of four portmanteaus, two of which belonged to me, and which contained not only a very heavy bag of dollars, but also papers which were of such consequence, that I could hardly have continued my journey without them. The peons now redoubled their cries, and leaning over the sides of their mules and picking up stones, they threw them at the leading mule, who now commenced her journey over the path. With his nose to the ground, literally smelling his way, he walked gently on, often changing the position of his feet, if he found the ground would not bear, until he came to the bad part of the pass, where he again stopped, and then I certainly began to look with great anxiety at my portmanteaus; but the peons again threw stones at him, and he continued his path, and reached me in safety; several others followed. At last a young mule, carrying a portmanteau with two large sacks of provisions, and many other things, in passing the bad point, struck his load against the rock, which knocked his two hind legs over the precipice, and the loose stones immediately began to roll away from under them; however, his fore legs were still

upon the narrow path; he had no room to put his head there, but he placed his nose on the path on his left, and appeared to hold on by his mouth. His perilous fate was soon decided by a loose mule which came, and in walking along after him knocked his comrade's nose off the path, destroying his balance, and head over heels the poor creature instantly commenced a fall, which was really quite terrific. With all his baggage firmly lashed to him, he rolled down the steep slope, until he came to the part which was perpendicular, and then seeming to bound off, and turning round in the air, fell into the deep torrent on his back, and upon his baggage, and instantly disappeared. I thought of course that he was killed, but he rose, looking wild and scared, and immediately endeavoured to stem the torrent which was foaming about him. For a moment he seemed to succeed, but the eddy suddenly caught the great load upon his back, and turned him completely over; down went head with all the baggage and he was carried down the stream. As suddenly, however, up his head came again; but he was now weak and went down the stream, turned round and round by the eddy, until passing the corner of the rock, I lost sight of him. I saw, however, the peons with their lasos in their hands run down the side of the torrent for some little distance; but they soon stopped, and after looking towards the poor mule for some seconds, their earnest attitude gradually relaxed, and when they walked towards me I concluded that all was over. I walked up to the peons, and was just going to speak to them, when I saw at a distance a solitary mule walking towards us. We instantly perceived that he was the Phæton whose fall we had just witnessed, and in a few moments he came up to us to join his comrades.

MISCELLANY.

FATE OF CHRISTIANITY IN JAPAN.

There is an interesting account of the spread, and finally the extinction, of Christianity in Japan, in pages of the celebrated Swedish traveller, Charles Peter Thunberg, M. D. The Portuguese first introduced the new religion immediately after their discovery of the country. Missionaries were sent by the Jesuits in the year 1549. They succeeded in spreading their doctrines over the whole of the empire. The Portuguese enjoyed the most ample privileges—travelling—preaching—and carrying on commerce in every part of Japan. Many of the native princes were converted; and in the course of forty years, so firmly was the Catholic religion established, that an embassy was sent to Rome to Pope Gregory XIII. with letters and valuable presents. The wealth and dignities which flowed so copiously to the Portuguese settlers, inflated them with pride, and called into action all their bad qualities and propensities. The natives quickly changed their feelings toward them, and henceforth viewed them as avaricious and haughty intruders, rather than useful and generous benefactors. In the year 1586, the hatred of the insulted Japanese broke out in a decree for the extermination of the Christians. This was partially carried into effect, and upwards of 20,000 individuals were massacred. Once more, however, it was destined that the new religion should raise its head, and in the short space of two years after the execution of the abovementioned bloody decree, not less than 12,000 persons were converted and baptized. Even the emperor himself professed to embrace Christianity, as did his court and family, and had the Portuguese learned by experience, and conducted themselves with the gentleness and moderation, or even abstained from the perpetration of the blackest crimes, there is every reason to believe that they would have been un molested. But each day increased their haughtiness; some of their ecclesiastics publicly insulted a prince of the empire; and the consequence was, the extermination of the Christian religion, and the utter ruin of the Portuguese commerce with Japan. The final stroke took place in the year 1596. In the first instance, the priests were forbidden to preach, many of the clergy were banished out of the country, and the mercantile part of the colony sent to the island of Desima. Almost immediately after the execution of this comparatively lenient sentence, a

conspiracy was detected amongst the Portuguese, having for its aim the murder of the emperor. This led to an immediate decree of banishment to all who refused to abjure the Catholic religion, and of death to all who disobeyed. A most virulent persecution now commenced, which ended in the utter extinction of all who adhered to the faith of the church of Rome. History informs us, that 37,000 Christians who had taken refuge in and about the castle of Simabara were routed and put to death in one day. The Japanese argued from the immoralities of the Portuguese to the badness of their religion, and concluded, that a faith which did not restrain its believers from the grossest excesses and crimes, could not be of divine origin, and ought not to be tolerated in the empire. Many laws were passed to prevent the future re-establishment of Christianity in Japan; among the rest a day was ordered to be set apart in every year, for the purpose of expressing the national abhorrence of the exterminated faith; and on this occasion, the images of the saints are thrown down, trampled on, and subjected to other indignities. [Christian Inquirer.]

INGENUITY OF THE BEAVER.

M. Geoffroy de St. Hilaire relates the following fact:—A few years since there was in the royal menagerie, in the Jardin des Plantes, in Paris, a beaver, belonging to the family of the Rhone beavers, which live solitary like the water rats. The observations on this animal which I had occasion to make, placed it beyond a doubt, that this variety of the beaver species can upon emergency, exert their instinctive sagacity as a resource upon unforeseen difficulties or mishaps. As a protection from the rather severe cold of winter, our beaver was furnished with nothing but a more abundant supply of straw. The nights grew colder; and the falling door of his cage had so many chinks, that the animal was forced to set about preparing a better defence against the inclemency of the weather. It was usual to give him, as well for food as for employment in the night, a quantity of green boughs, the bark of which was always found gnawed off in the morning; and every evening regularly, before his door was closed, he received a certain allowance of other articles of food, consisting of fruit and garden vegetables. On one occasion, after it had been snowing all day, a good deal of snow had accumulated in the corner of his cage. Such were the materials which the beaver had at his disposal, and which he diverted from their proper destination, to employ them in the formation of a wall, which should defend him from the external air and the cold. With the boughs he interlaced the bars of his cage with as much regularity as is displayed in the work of a basketmaker. The platted branches, however, were not so close as not to leave open spaces, for filling which the animal had recourse to his other supplies. For this purpose he employed the turnips apples, and straw; and the former was gnawed or cut into pieces suitable to the vacancies. Lastly, although the animal was sensible that he needed a still closer shelter, he used the snow to plaster the whole, and then filled all the remaining interstices. The wall covered two-thirds of the aperture of the door, and all the provisions with which the beaver had this time been supplied were expended in its construction. The next morning the door of the cage was found by the keeper frozen fast by the snow to the new wall. It was not without some trouble that it could be detached and opened, and then the contrivance of the inhabitant was exposed to view. The man was so astonished that he left it untouched, and called me to look at it.

VARIETY.

WHOLESALE LEGISLATION. At a General Court in Boston, 1639, "an order was made to abolish that vain custom of drinking to one another, and that upon these and other grounds.

- 1st. It was a thing of no good use.
 - 2d. It was conducive to drunkenness, and occasion of quarrelling and blood shed.
 - 3d. It occasioned a waste of much wine and beer.
 - 4th. It was troublesome to many, especially the master and mistress of the feast, who were forced thereby to drink more often than they would.
- Yet divers even godly persons were loth to part

with this idle ceremony, who, when disputation was tendered, they had no argument to maintain it—such power hath custom.

CHARACTER OF A GOOD FELLOW.—How many there are who give up every pretension to the character of a good man, for the name of a *Good Fellow!* and what is a good fellow? Why, a graceless young man, who is addicted to every vice, until by debauchery and extravagance, which he does not really enjoy, he brings the "gray hairs of his parents with sorrow to the grave." This is a *good fellow!* Sometimes in visiting the hospitable mansion of a friend, he corrupts the son, or debauches the daughter; and yet he is a *good fellow!* He perhaps marries,—but to become fretful and penurious at home, and thoughtlessly profuse abroad; he dissipates that which should support his family, returning but to insult and distress them; yet he is generous over a bottle, and must be a *good fellow!* At last his money runs short, and he would borrow of his friend: few lend, and those few he forgets to pay; till every one avoids him, and he is no longer a welcome visitor, even to mine hostess; for then he is no longer a *good fellow!*

INDUSTRY. The wisest sages of antiquity, and the soundest moralists of the present age, freely admit the vast importance of activity and industry. Industry is sedulous, void of lethargy, dissipating idleness with all its train of evils, and raising monuments of greatness. It is industry that achieves that which appears impossible: it is she who continually adds comforts to society, and who banishes indolence and vice. Fostered by her, liberty exalts a nation, commerce wafts her sails, the arts and sciences flourish, and plenty opens her doors to health and contentment.

COMPLIMENTARY.—An English clergyman preaching before the court, said, at the close of his sermon, that those who did not profit by what he had advanced, would forever inhabit a place which politeness would not suffer him to name before so respectable a congregation.

AGE.—A Spanish prince used to say of age, that it appeared best in four things, viz. old wood to burn; old wine to drink; old friends to trust; and old authors to read.

PRIZE POETRY.—On the death of Gen. Wolfe, a premium being offered for the best written epitaph on that brave officer, among the rest there was a poem from which the following stanza is selected:

He marched without dread or fears,
At the head of his bold grenadiers;
And what was more miraculous—nay, very particular,
He climbed up rocks that were perpendicular.

RESOLUTION.—A lad who carries the mail between Vergennes and Poultney, in Vermont, coming to one of the rivers where the bridge has been swept away, and where the torrent was still of fearful depth, secured the mail to his body, plunged his horse in, and swam through. On being asked why he adventured upon so hazardous an experiment, he replied, with genuine yankee *sang froid*—"Why, there is a fine if we don't deliver the mail in season, and I guess they don't get the fifty dollars out of me, and be darn'd to 'em."

The biographer of John Hart, of New-Jersey, one of the signers of the Declaration of Independence, relates that after the British took possession of New-Jersey and of his own farm, being unwilling to be absent from the neighbourhood of his family, he became a wanderer in the woods, "carrying his grey hairs and his infirmities about from cottage to cottage, and from cave to cave. The extremities to which he was reduced, may be judged from two facts; one is, that for a long period he never ventured to sleep twice at the same house; and the other, which he very good humouredly told of himself, was, that on one occasion, being sorely pressed for a safe night's lodging, and being unknown where he applied for one, he was obliged to share the accommodations of a large dog—a badfellow, as he declared not in those evil times the most exceptionable."

MONEY.—No man will take counsel, but every man will take money, therefore money is better than counsel.

ALBANY:

SATURDAY, MAY 26, 1827.

Mr. ELISHA WILCOX, proprietor of the Canal bookstore, on board the boat *Encyclopedia*, is our authorised agent on the line of the Erie canal, between Albany and Buffalo.

T. J. NEVINS, Esq. of Penn-Yan, Yates county, will act as our agent, in that place and vicinity.

L. H. YOUNG, Esq. editor of the Canal of Intelligence, Norwich, Connecticut, will act as our agent in that place and vicinity.

G. W. ADDISON, Esq. editor of the Camden Journal, Camden, S. C. will act as our agent, in that place and vicinity.

Mr. NATHANIEL CARPENTER is our travelling agent, in the counties of Orleans, Genesee, and the other western counties not on the line of the canal.

The epistle from M. to our friend G. has been duly presented to him. We are authorised to tender him the thanks of G. for his polite and flattering marks of attention. If M. perceives any asperity in the notice he speaks of, he has put a construction on our words, very different from our meaning.

The excellent article on Masonic Chronology, commencing on our first page, is worthy the attention of every classic inquirer. It evinces much research, and possesses throughout, particular interest to the masonic reader. We shall be happy at all times to receive further communications from the same source.

THE PRAIRIE. Few works of so respectable origin have come before us, with less presentiment in their favour, than this last production of the author of the *Pioneers*. The great length of time since the author's intention was made public; the immoderate fruitfulness of the press in works of fiction, and even the very title of the tale, contributed to figure in our imagination a field as barren and destitute of interest as the wide wilderness it represents; and the good opinion of many of our friends, who had previously read it, did not do away our bodings of its demerit. And indeed, on reading the first two chapters, we were almost confirmed in the unfavourable opinion that we should find in the story, little else than the horizon bounded waste and sterile soil of the prairie.

But in this expectation, we have been doomed to the real pleasure of a disappointment. Incidents and characters, mysteries and discoveries, mistakes, captures and rescues, are so agreeably distributed through the whole plot, that the reader feels his interest to advance faster than he can turn over its leaves; and he is in a short time so much engaged, as to almost believe himself a character in the work,—the hero of the tale.

The scene is laid at least one thousand miles west of Washington in a right line, on the borders of one of those amazing plains, which extend farther than the eye can reach, with scarcely an object to rest the wearied sight upon besides the sky, and the ocean-like wilderness of bleaching fog. A place like this, where no history but the traditions of the Indian warrior,—no monuments of civilization but the chopped trees of the hunter, are to be found, would be the last choice of an ordinary scribbler,

for the scene of a novel. One would think it impossible to furnish incident for a tale of five hundred pages from such a desert; but the fertility of the author's fancy has proved more than a requital for the natural and moral sterility of the soil.

He has here conjured up a Kentucky squatter with seven gigantic sons, who would as willingly let slip their rifles at a man as a bear, should he cross their inclinations; his wife, a strange compound of termagant and amazon, yet not wholly destitute of the true feelings of a mother; her brother, an experienced dealer in human flesh,—the blackest character—the very Diabolus of the plot, afterwards driven to the desperate necessity of hanging himself through policy; and, next to him in point of morality, the thievish Tetons, or Sioux Indians fill a conspicuous place in the story.

We do not intend to furnish our readers with the outlines of this truly interesting work, and indeed our limits forbid it if we would. And to introduce the reader prematurely to the most prominent features of the design, would detract from the interest of the whole. Suffice it to say, it embraces characters, drawn with all that high colouring of perfection, of which writers of fiction are so fond, and in this rank are found the hero and heroine of the tale.

The author has as usual succeeded to admiration, in his masterly manner of hitting off the humble marks of peasant breeding. Like the author of *Waverly*, his actors are numerous, but perfectly distinct in character; so much so that every sentence spoken carries the speaker's name home to the reader. This is the great secret of all kinds of dramatic composition, and in this our author is not excelled if equalled by any living writer.

There is a fine drawn description of a herd of bison; of a prairie on fire; of an indian sanhedrim, by whose judgement a Pawnee chief and two white prisoners are sentenced to the torture, and of a bloody indian battle.

Some of the specimens of Teton eloquence are not to be surpassed by any composition which has come under our inspection, and the dignified observations on "natur," from the lips of the trapper, are worthy the attention of a sage, and in some respects enough to put the best theory of moral philosophy to the blush. Woman too is drawn to the life. Whether in the brawling and oppugnant forms of Esther and her daughters, the coquetry of Ellen Wade, the enthusiastic piety of Inez, or the sensitive but magnanimous jealousy of Tachechana, it is woman that appears, in her true colours, and no caricature.

That the work is faultless we do not pretend to believe. Though our hasty perusal precluded the search for defects, we could not help noticing some, not however of an unpardonable nature. In our opinion, the pains taken to keep up the mystery, through the first volume, are too artificial. When the reader is momentarily expecting a relief to his overstrained curiosity, and is carried on from chapter to chapter, in apparent proximity to that relief, the causes of his suspense must appear rather in the will of fate, than the intention of the writer, if it does not create a kind of dissatisfaction in the mind of the reader.

We cannot overlook one instance of misapplied particularity which to us is inexplicable. Ishmael, and others, are made to pronounce the verb *are* by the orthography *ar*. What pronunciation Mr.

Cooper intended to have associated with this orthography, we can form no conjecture, unless it be made to rhyme with *far*. If this be the author's meaning, the *apostrophe* is totally useless, and the clownish Ishmael gives it the true English orthoepy.

On the whole, this tale bears a place among the works of Mr. Cooper, of no ordinary importance, as containing the catastrophe of two others. To illustrate this, we will introduce the following paragraph from the close of the *Prairie*, describing the last earthly scene of the venerable trapper.

"The old man then made a long, and apparently a musing pause. At times he raised his eyes wistfully, as if he would again address Middleton; but some innate feeling seemed always to repress his words. The other, who observed his hesitation, inquired in a way most likely to encourage him to proceed, whether there was aught else, that he could wish to have done.

"I am without kith or kin in the wide world!" the trapper answered; "when I am gone, there will be an end of my race. We have never been chiefs, but honest and useful in our way, I hope it cannot be denied, we have always proved ourselves. My father lies buried near the sea, and the bones of his son will whiten on the prairies—"

"Name the spot, and your remains shall be placed by the side of your father," interrupted Middleton.

"Not so, not so, Captain. Let me sleep, where I have lived, beyond the din of the settlements. Still I see no need, why the grave of an honest man should be hid, like a Red-skin in his ambushment. I paid a man in the settlements to make and put a graven stone at the head of my father's resting place. It was of the value of twelve beaver-skins, and cunningly and curiously was it carved! Then it told to all comers that the body of such a Christian lay beneath; and it spoke of his manner of life, of his years and of his honesty. When we had done with the Frenchers in the old war, I made a journey to the spot, in order to see that all was rightly performed, and glad I am to say the workman had not forgotten his faith."

"And such a stone you would have at your grave?"

"I! no, no, I have no son, but Hard-Heart, and it is little, that an Indian knows of White fashions and usages. Besides, I am his debtor, already, seeing it is so little I have done, since I have lived in his tribe. The rifle might bring the value of such a thing—but then I know, it will give the boy pleasure to hang the piece in his hall, for many is the deer and the bird that he has seen it destroy. No, no, the gun must be sent to him, whose name is graven on the lock!"

"But there is one, who would gladly prove his affection in the way you wish; he, who owes you not only his deliverance from so many dangers, but who inherits a heavy debt of gratitude from his ancestors. The stone shall be put at the head of your grave."

The old man extended his emaciated hand, and gave the other a squeeze of thanks.

"I thought you might be willing to do it, but I was backward in asking the favour," he said, "seeing that you are not of my kin. Put no boastful words on the same, but just the name, the age, and the time of the death, with something from the holy book; no more, no more. My name will then not be altogether lost on earth; I need no more."

Middleton intimated his assent, and then followed a pause, that was only broken by distant and broken sentences from the dying man. He appeared now to have closed his accounts with the world, and to wait merely for the final summons to quit it. Middleton and Hard-Heart placed themselves on the opposite sides of his seat, and watched with melancholy solicitude the variations of his countenance. For two hours there was no very sensible alteration. The expression of his faded and time-worn features was that of a calm and dignified repose. From time to time he spoke, uttering some brief sentence in the way of advice, or asking some simple questions concerning those in whose fortunes he still took a friendly interest. During the whole of that solemn and anxious period each individual of the tribe kept his place, in the most self-restrained pa-

tience. When the old man spoke, all bent their heads to listen; and when his words were uttered, they seemed to ponder on their wisdom and usefulness.

"As the flame drew nigher the socket, his voice was hushed, and there were moments, when his attendants doubted whether he still belonged to the living. Middleton, who watched each wavering expression of his weather-beaten visage, with the interest of a keen observer of human nature, softened by the tenderness of personal regard, fancied he could read the workings of the old man's soul in the strong lineaments of his countenance. Perhaps what the enlightened soldier took for the delusion of mistaken opinion did actually occur, for who has returned from that unknown world to explain by what forms, and in what manner he was introduced into its awful precincts! Without pretending to explain what must ever be a mystery to the quick, we shall simply relate facts as they occurred.

"The trapper had remained nearly motionless for an hour. His eyes alone, had occasionally opened and shut. When opened, his gaze seemed fastened on the clouds, which hung around the western horizon, reflecting the bright colours, and giving form and loveliness to the glorious tints of an American sunset. The hour—the calm beauty of the season—the occasion—all conspired to fill the spectators with solemn awe. Suddenly, while musing on the remarkable position in which he was placed, Middleton felt the hand which he held, grasp his own with incredible power, and the old man, supported on either side by his friends, rose upright to his feet. For a single moment he looked about him, as if to invite all in presence to listen, (the lingering remnant of human frailty,) and then, with a fine military elevation of his head, and with a voice that might be heard in every part of that numerous assembly, he pronounced the emphatic word—

"Here!"

"A movement so entirely unexpected, and the air of grandeur and humility, which were so remarkably united in the mien of the trapper, together with the clear and uncommon force of his utterance, produced a short period of confusion in the faculties of all present. When Middleton and Hard-Heart, who had each involuntarily extended a hand to support the form of the old man, turned to him again, they found that the subject of their interest was removed forever beyond the necessity of care. They mournfully placed the body in its seat, and La Balafre arose to announce the termination of the scene to the tribe. The voice of the old Indian seemed a sort of echo from that invisible world, to which the meek spirit of the trapper had just departed.

"A valiant, a just, and a wise warrior, has gone on the path which will lead him to the blessed grounds of his people!" he said. "When the voice of the Wahcondah called him, he was ready to answer. Go, my children; remember the just chief of the Palefaces, and clear your own tracks from briars!"

"The grave was made beneath the shade of some noble oaks. It has been carefully watched to the present hour by the Pawnees of the Loup, and is often shown to the traveller and the trader, as a spot where a just White-man sleeps. In due time, the stone was placed at its head, with the simple inscription, which the trapper had himself requested. The only liberty taken by Middleton, was to add,—'*May no wanton hand ever disturb his remains.*'"

Thus calmly expires a man, over whose humble simplicity and interesting character, our author's friends have bent in all the luxury of fellow feeling for four years;—Hawkeye of the Last of the Mohicans—Leather-stocking of the Pioneers—and the Trapper of the Prairie. We earnestly invite our friends to examine tale the for themselves; with the assurance that, if rational amusement, and the exercise of a literary taste are their object, their time will not be spent in vain.

§ The work is for sale at the bookstore of O. Steele, No. 437, South Market street, in this city.

§ Since our last, we have received the first numbers of three new weekly papers, all published

in this city. If the multiplication of these vehicles of intelligence, is a proof of the increasing popular attention to the dissemination of knowledge, they may also be classed among other evidences of the growing importance of our city.

The *Albany Christian Register*, is edited by Mr. L. G. HOFFMAN, and handsomely printed, in the folio form, upon a large superroyal sheet, for \$2 50 per annum, in advance. We wish its editor much success in his enterprize; always believing that a religious paper, conducted on liberal principles, is capable of effectually advancing the cause of Christianity.

The *Antidote* is half an imperial sheet, very neatly printed by Webster and Wood, for \$2 00 per annum. The professed object of this publication is, in the language of the editor, to "maintain a rigid warfare with *The Correspondent*," a theological publication of a character somewhat enigmatical as well as heterogeneous, which makes its appearance once a week, in the city of New-York. We are pleased to see men take up the gauntlet in defence of revealed religion; but when their blows are aimed at an object whose insignificance and obscurity are its worst possible enemies, we apprehend that they are bringing into notice, and consequently circulation, the very work they oppose. Contention will raise the curiosity of men who do not otherwise feel interested; and the consequence will be, an extensive subscription in this city, and other places where the *Antidote* may circulate, for its opponent.

The *Standard* is a well conducted and amusing miscellany, edited by Mr. M. M. COLE, and printed by J. B. Van Steenberg, on half an imperial sheet. It is issued every Tuesday, at \$2 in advance, or \$2 50, quarterly. Mr. Cole is favourably known to the public as an editor, and it is hoped that his labours in the present instance may meet a suitable reward.

THE BOSTON LYCEUM. The May number of this work was issued on the 15th inst. Contents—The First Settler, No. 1; The Parting; The Man in the Moon; The Test of Love; The True English Grammar; Death of Virginia; Moorish Ballad; Byron and the North American Review; Stanzas: Sonnet, To Genevieve.

OBIT NOT.

The Duke Bernard, of Saxe Weimar, was in good health at Weimar, at the end of last February, and intended soon to publish an account of his interesting and extensive tour in these United States.—Dr. Chambers states, in the N. Y. Christian Advocate, that in more than 1500 cases where he has administered his medicine to the intemperate, only two or three instances of its failure have come to his knowledge.—A writer in the Lowell Journal suggests to the makers of patent medicines, the propriety of inventing a remedy for a disease with which he is much afflicted, viz: *drowsiness in meeting*. From the prevalence of the complaint, we should suppose such a medicine would meet with a rapid sale.—The Macon (Georgia) Telegraph, of the 30th ult. says,—"A novel exhibition was witnessed in our town last week. Two or three of the frail sisters had been arraigned before his honour, the Intendant, for certain things 'unbecoming a moral and religious people,' and being found guilty, it was ordered by his honour, that they be taken from the county jail, with one side of their faces blacked, and in that condition escorted through town by a sufficient guard, with drum fife, &c. playing the *Rogue's March*, at their heels, to the outskirts of the corporation, and there discharged. Which sentence was fully carried into execution.—An Alabama paper complains that the Baton Rouge (Louisiana) Gazette, of the 7th ult. 'was so literally covered with dead mosquitoes, as to prevent a perusal of it.' The pressmen must have had a comfortable time in working the sheet.—The Philadelphia Advertiser mentions the death in

tee-hms-house of Bucks county, of Joseph Force, at the Advanced age of 107 years. He was able to walk about the room on the afternoon of his death.—A foreign journal of January last, mentions the death, at Shropshire, in England, of Mr. Thomas Spear, aged one hundred and sixty-three years. He was married at the age of 30 and became a widow at 43. He had two children, a boy and girl, who lived more than a century and left numerous descendants. When 118 years of age, Spear was fined and publicly punished for having seduced a young girl. At his funeral 639 of his descendants were present.—The Milton Pa. paper of the 12th inst. states that a cow belonging to Mr. William Hull, near that place, brought forth a calf, having a head much resembling a bull dog without ears, and a hood, filled principally with water, on the top of the head, which would hold two gallons. The hood was white, the body of the calf red, and naturally formed. The skin will be dressed and preserved for the Philadelphia Museum.

FOREIGN NEWS.

GREECE.

The following news from Greece will be read with much satisfaction by the greater portion of the American people.

Corfu, March 24.—Athens is at length delivered—there can no longer be a doubt of it—from the presence of the enemy: the Greeks have succeeded in chasing Redschid Pacha from the town. All the letters announce to us the complete victory which the defenders of their country have gained over the Turks. Colleti and Gen. Caratasso have already disembarked on the Athenian territory, 1400 palicari of Olympus. The corps of Macedonians, Thracians and Thessalians, confided to the care of E. Eaian, and Gregory Soutzo, were in advance at the camp of Eleusis. Towards the end of the past month, Mavromichaeli arrived in the same camp: he who, from the commencement of the Greek Revolution, has made so many sacrifices for the liberty of his country. He brought with him 15000 Mainotes. The number of the Greeks, at this time assembled in Attica, amounted to more than 6000 men, and Kiou tahi, Seraskier of the Turkish army, had nearly 8000 soldiers; but there was a remarkable difference in the two armies. The Turks who were beaten at the Piraeus on the 16th February, and who had returned to Athens on the 18th and 19th of the same month, had lost their courage; their provisions were also short, and they were compelled to act, in order to get out of the difficulties of their situation. The Greeks, who expected no farther reinforcements, wished for nothing else but a third decisive action, and a moment favourable to their wishes failed not to present itself. On the 2d of March, a part of the troops of Redschid Pacha directed their march towards Mount Pentelicus, in order to retreat into Boeotia; the Greeks had quitted their camp at Eleusis, and advanced as far as Cephusus. Having from that station noticed the retreat of the enemy, they fell on their rear; the Turkish cavalry, which the Seraskier commanded in person, rallied, and withstood the attack of the Greeks for three hours. Redschid Pacha showed in this affair great ability. A party from the Ionian Isles, commanded by Eumorphopoulo, and some Mainotes having recognized the Pacha, made two attempts to reach him, but were repulsed—at length the Turks retired towards the hill of Brillissos. During the night nothing was heard but the enemy's cannon, and musket shots from every quarter. On the 3d, very early, the Greeks hemmed in the enemy very closely; the Turks kept their position, until one in the afternoon; when favoured by the dense smoke which covered the country round, they directed their march northward, and succeeded in making their way. The number of the killed and wounded is not yet ascertained: a great many Greeks are wounded. As to the Turks, it is presumed, that one third of the army of Redschid remains on the field of battle.

POETRY.

FOR THE MASONIC RECORD AND SATURDAY MAGAZINE.

NIGHT.

Death has a sweetness of its own,
When calmly on the hollow cheek,
The blush of youth sits all alone—
An index to the meek
And humble quietness within,
Which heaven has license to begin,
Even on this side the bleak
And rugged barriers which the soul
Leaps, to escape from earth's controul.

And when a smile is on that brow,
And beauty lingers in that eye,
Where is the heart will not allow
The peace—the bliss, to die?
Count all your pains, and look beyond
Life's thorny limit, where the fond
Hopes of the faithful lie,
And who will falter to declare
The better state lies hidden there?

Even so the death of day is sweet,
When all its lights and all its mirth
Are fled, and night's grim shadows greet
Their grim compartner earth.
The same deep blushing beauties crowd
Together round day's latest cloud,
And young stars burst to birth,
Like angel's sent to waft away
The spirit of expiring day.

Day has her pleasures, but her toil
Is constant as the ills of life;
Man's waking hours were made to moid
In endless drudgery—rife
With disappointments and regrets;
But when the star of twilight sets,
His labour and his strife
Are ended—and the night is given
To rest—a miniature of Heaven.

Then come, sweet night, and on my head
Bestow once more thy wonted boon,—
Silence and solitude. They fled
The glaring eye of noon—
Not that the cheerful social hour
Has not its own enlivening power,
And palls the sense so soon—
But music's sweetest strain, I ween,
Would grate, but for the pause between.

Then come, sweet night, the meekest hour
To rest our heads, to muse, to sing,
While earth is one extended bower
Beneath thy spangled wing.
Season of liberty and love!
When hearts of pure desire may prove
Sweets that conceal no sting,
And souls for contemplation made,
May dwell on themes that ne'er upbraid.

May 28, 1827.

G.

FRENCH MELODY.

AIR—"La Belle Gabrielle," composed by Henri Quatre.

The evening before one of his most celebrated victories, Henri Quatre passed, disguised, through the enemy's camp, and paid a visit to La Belle Gabrielle, whose castle laid a few miles behind the hostile quarters. He returned without being discovered, and was in time, the next morning, to strike the first blow of the battle. The following sentiments are supposed to have been uttered by the chivalrous and poetical monarch, at the moment of his departure, when some of his nobles remonstrated against his incurring such unnecessary perils.

The battle storm is sleeping
In silence on the hill,
And dews of night are steeping
The flow'rs which blood must fill;
But in the western sky
Thy star I see,
And thou art free.

To-morrow, ere my banner
Rise gleaming in the sun,
Ere breath of war shall fan her,
Or deed of honor's done,
This sword my hand shall wave,
This voice shall call
The brave to meet the brave
In slaughter's hall.

To-morrow, ere at even
Yon star of beauty glows,
This heart, in battle riven,
May calm in death repose;
Then fame and empires call,
And war, farewell!
And dearer still than all,
Fair Gabrielle!

NEWENGLAND COUNTRY DANCE.

BY THOMAS G. FESSENDEN.

How funny 'tis, when pretty lads and lasses
Meet all together, just to have a caper,
And the black fiddler plays you such a tune as
Sets you a frisking.

High bucks and ladies, standing in a row all,
Make finer sh. w than troops of continentals.
Balance and foot it, rigadon and chasse,
Brimful of rapture.

Thus poets tell us how one Mister Orpheus
Led a rude forest to a country-dance, and
Played the brisk tune of Yankee Doodle on a
New-Holland fiddle.

Spruce are our gallants, essenced with pomatum,
Heads powdered white as Killington-Peak snow-storm:
Ladies, how brilliant, fascinating creatures,
All silk and muslin!

But now behold a sad reverse of fortune,
Life's brightest scenes are checkered with disaster,
Clumsy Charles Clumpfoot treads on Taby's gown, and
Tears all the tail off!

Stop, stop the fiddler, all away this racket—
Hartshorn and water! see the ladies fainting,
Paler than Primrose, fluttering about like
Pigeons affrighted!

Not such the turmoil, when the sturdy farmer
Sees turbid whirlwinds beat his oats and rye down,
And the rude hail-stones, big as pistol-bullets,
Dash in his windows!

Though 'twas unhappy, never seem to mind it,
Bid punch and sherry circulate the brisker;
Or, in a bumper flowing with Madeira,
Drown the misfortune.

Willy Wagnimble dancing with Flirtilla,
Almost as light as air-balloon inflated,
Rigadoons round her, till the lady's heart is
Forced to surrender.

Benny Bamboozle cuts the drollest capers,
Just like a camel, or a hippopot'mos,
Jolly Jack Jumble makes as big a rout as
Forty Dutch horses!

See Angelina lead the mazy dance down,
Never did fairy trip it so fantastic;
How my heart flutters while my tongue pronounces,
Sweet little seraph!

Such are the joys that flow from country-dancing,
Pure as the primal happiness of Eden,
Wine, mirth, and music, kindle in accordance
Raptures ecstasie.

TO LUCASTA.

ON GOING TO THE WARS.

By Col. Richard Lovelace, 1649.

Tell me not, sweet, I am unkind,
That from the nunnerie
Of thy chaste breast and quiet minde,
To warre and armes I flie.

True, a new mistress now I chase,
The first foe in the field;
And with a stronger faith imbrace
A sword, a horse, a shield.

Yet this inconstancy is such
As you too shall adore;
I could not love thee, deare, so much,
Loved I not honour more.

LACONICS.

BY JOHN GILLIES.

Expefience proves that lewd descriptions are a
poison rather than a remedy; and, instead of cor-
recting manners, only tend to corrupt them.

In free governments there are many latent resour-
ces which public calamities alone can bring to light;
adversity, which, to individuals endowed with
vigour of mind, is the great school of virtue
and heroism, furnishes also to the enthusiasm of
popular assemblies, the noblest field for the dis-
play of national honour and magnanimity.

To prefer the mind to the body, duty to interest
and virtue to pleasure, were the great lessons of An-
tisthenes.

Prosperity, that conceals the infamy of cowardice,
robs fortitude of half its glory. It is adversity alone
that can display the full lustre of a form and manly
character.

While human nature remains unchanged, and the
passions of men run in their ordinary channel, the
right to exercise power will be attended with
strong inclination to abuse it. Unless power, there-
fore, be counteracted by liberty; unless an imper-
vious line of separation be drawn between preroga-
tive and privilege, and that part of the constitution
which sustains its political life, be kept separate
and distinct from that which tends to corruption,
it is of little consequence whether a country be
governed by one tyrant or a thousand; in both cases
alike the condition of man is precarious, and force
prevails over law.

BY WILLIAM ROBERTSON.

No custom, however absurd it may be, if it has
subsisted long, or derives its force from the manners
and prejudices of the age in which it prevails, was
ever abolished by the bare promulgation of laws
and statutes. The sentiments of the people must
change, or some new power sufficient to counteract
it must be introduced.

The operations of the Intellect are more fixed and
uniform than those of the Fancy or Taste. Truth
makes an impression nearly the same in every place;
the ideas of what is beautiful, elegant or sublime,
vary in different climates.

In passing judgement upon the characters of men,
we ought to try them by the principles and maxims,
of their own age, not by those of another! For, al-
though virtue and vice are at all times the same,
manners and customs vary continually.

Censure is the tax a man pays to the public for be-
ing eminent.

When you are all agreed upon the time, quoth
the curate, I will make it rain.

MASONIC RECORD.

—Semitæ certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MASONIC CHRONOLOGY.

(Concluded.)

A lunar year is equal to twelve lunar revolutions from one conjunction of the moon with the sun, to the next conjunction. Each month consists of 29 days, 12 hours, 40 minutes, and 23 seconds: so that a lunar year is 10 days, 21 hours, and 18 seconds shorter than a solar year. On this account, two successive months were made to contain 30 days each. According to the rules of the synagogue, the month Tisri can never begin on the first, fourth, or sixth day of the week. This circumstance causes further variations, which only occur in the months Marchesvan and Kisleu; each of which consists sometimes of 29 and sometimes of 30 days, and sometimes the former consists of 29 days, and the latter of 30 days. There is this certain rule, however, with respect to the other months—Nisan, Livan, Ab, Tisri and Shevat consist always of 30 days each, and Teveth, Iyar, Tamuz and Elul of 29 days each, and in common years, Adar hath always 29 days.

As before observed, a strictly lunar year falls more than 10 days short of a solar year: so that every lunar year would begin more than 10 days sooner than the one preceding. This in the course of 30 years, would carry the beginning of the year back again to the same point. In order to keep the seasons in their respective months, sometimes the second, and sometimes the third year is made an "Embolismic" or "leap year," consisting of 13 months. The 13th month is called *Pe-Adar*, (or second Adar) and has always 29 days. It may be noted here that in embolismic years, Adar hath always 30 days.

Rabbi Hillel resorted also to a period of 13 cycles, containing 19 years each. Some cycles consist of one day more or less than others. By the aid of all these corrections, notwithstanding the restrictions imposed by the synagogue, the Hebrew years will be found not to vary materially from the Gregorian Calendar, through the course of many centuries.

The TABLES which follow, have been digested carefully from the standard tables published by Jewish and Christian writers. The tables in all the works we have seen, are very voluminous; rendered particularly so, from the circumstance of their reciting the days of observing the numerous Jewish feasts and fasts. These tables are accommodated to the "civil year," which the Jews of the present day still use, and keep the 1st day of the 1st month of that sort of year (viz: Tisri) as their *new year's* day. Our tables are the same in this respect. Because although the ecclesiastical year commences with the month Nisan, yet the year itself, is reckoned from the month Tisri, the world having been created on the first day of that month. Should it be deemed necessary to ascertain on what day in the Gregorian Calendar the 1st of Nisan commences in any given year, from the data furnished, this calculation can be easily made.

TABLE I.

Shows the names of the months, with their significations, and the number of days in each month in common and embolismic years.

Names of the Months.	Significations.	No. of days in each mo. in common years.	No. of days in each mo. in embolismic years.
1st. Keel-mo-called Nisan (or Abib)	Standard.	30	30
2d. " "	Wat. Meadow.	29	29
3d. " "	Anim. in past.	30	30
4th. " "	The Sun.	29	29
5th. " "	Fruit.	30	30
6th. " "	Vine-press.	29	29
7th. " "	Great Ram.	30	30
8th. " "	Stormy Weather.	29	29
9th. " "	Hope.	30	30
10th. " "	Repose.	29	29
11th. " "	Purifying Fire.	30	30
12th. " "	Adar.	29	29
13th. " "	Pe-Adar.	29	29

* This month is written "Marchesvan" by every author; but is not *מַרְחֶשְׁוָן* ("Chevan") the true word!

TABLE II.

Shows on what days in the Gregorian Calendar the Jewish New-Years happen, and the number of days in each year through three lunar cycles.

Years of the Lunar Cycle.	Jewish years of the world.	Days of the Gregorian Calendar on which Tisri commences.	Number of days in each year.
1	5587	October 2, 1826.	356

12	5636	30, 1875.	355
13	5637	19, 1876.	354
14	5638	8, 1877.	355
15	5639	28, 1878.	355
16	5640	18, 1879.	354
17	5641	6, 1880.	353
18	5642	24, 1881.	355
19	5643	14, 1882.	353

Rule.—Ascertain by Table II. the number of days in any year required, then look at the bottom of Table I. for the same number of days; and you will readily see whether the year is a common or embolismic year, and how many days appertain to each month.

CIRCULAR.

Univerti Terrarum Orbis Architectonis per gloriam Ingentis.

LUX EX TENEBRAIS.

To the Lodges and Councils under the jurisdiction of the Grand Council of Princes of Jerusalem, established at the G. East of the City of Albany, N. Y. under the C. C. of the Z. which answers to the 42 deg. 39 min. N. L.

HEALTH, STABILITY, AND POWER.

That a uniform mode of "dating" may be observed by every Lodge and Council hailing under this G. Council, I have deemed it expedient to furnish you with a Calendar for the current year.

The present Jewish year is 5587, and will continue so till 22d September next; when the new Jewish year, 5588, will commence.

Given under my hand and the G. Seal of the said G. Council, this nineteenth day of the second L. S. month, Iyar, 5567, Anno Lucis, 5831, and of the Christian era, the sixteenth day of May, 1827. G. F. YATES, G. C.

NOTE.—The first stone of the first temple was laid on the 1st day of the second month, Iyar; and the first stone of the second temple was laid on the first day of the same month. In commemoration of these events, this day is celebrated by sublime freemasons: also the 15th day of the 7th month, Tisri, in memory of the dedication of the first temple. On the days of the Equinoxes, lodges of perfection meet steadily. And under this jurisdiction, the meeting on the day of autumnal Equinox is the annual meeting for election of officers, &c. See Decrees, &c.

ELECTIONS.

Grand Royal Arch Chapter, of the State of Georgia.

Elected at the annual communication held in Louisville, Georgia, on the 7th May, 5827:—William Schley, of Louisville, Grand High Priest; Jon. Olmstead, of Savannah, Deputy Grand High Priest; P. T. Schley, of Sandersville, Grand King; William Duncan, of Augusta, Grand Scribe; Rev. Thomas Darley, of Macon, Grand Chaplain; B. D. Thompson, of Augusta, Grand Treasurer; D. Hook, of Louisville, Grand Secretary; W. B. Thomas, of Augusta, Grand Marshal; Samuel Clarke, of Louisville, Grand Tyler.

Grand Council of Royal, and Select Masters of the State of Georgia.

Elected at the annual communication held in Louisville, Georgia, on the 7th, May, 1827:—B. D. Thompson of Augusta, T. Ill. G. M.; James Kilvin, of Clinton, Ill. H. of T.; Alfred Brooks, of Forsyth, Ill. H. A. B.; Thomas Darley, of Macon, G. C.; Isaac T. Cushing, of Milledgeville, G. P. C.; Levi Eckley, of Macon, G. C. G.; P. T. Schley, of Sandersville, G. S.; W. T. Gould, of Augusta, G. T.; W. B. Thomas of Augusta, G. R.; Samuel Clarke of Louisville, G. C.

Grand Lodge of North Carolina.

Officers for the present year:—Hutchins G. Burton, G. Master; Francis L. Hawks, Deputy G. Master; George E. Spruill, S. G. Warden; Louis D. Wilson, J. G. Warden; Benjamin A. Banham, G. Treasurer; Alexander J. Lawrence, G. Secretary; John C. Stedham, D. G. Secretary; Joseph Caldwell, William Green, William J. Newborn, Robert T. Daniel, G. Chaplains; John E. Lewis, William H. Haywood, jr. Joseph R. Lloyd, Edmund B. Freeman, Jesse Speight, William Davidson, Gideon C. Merchant, and E. Arnold, G. Lecturers; Samuel F. Patteson, G. S. Deacon; William H. Hunter, G. J. Deacon; Edward Ward, G. Marshal; Richard D. Speight, G. S. B.; James G. Mahon, G. P.; John T. C. Wiatt, G. Steward and Tyler.

MASONIC ANNIVERSARY.

The approaching anniversary of St. John the Baptist will be celebrated by Zerubabel Lodge, No. 216, and Rensselaer Chapter, No. 114, at the house of Gideon Butts, at Sand Lake; when the Chapter room will be consecrated, and the officers installed. An address delivered by the Rev. Companion Howard, of Troy, and a dinner prepared.

The neighbouring Encampments, Chapters and Lodges, in their corporate capacities, are respectfully invited to attend.

CALVIN THOMSON, CALVIN SLITER,
GIDEON BUTTS, GEORGE HORTON,
CALEB FINCH, MARCUS PECK,
JOHN B. ADZIT,

Committee of Arrangements.

Sand Lake, Rensselaer co. May 28, 1827.

The Festival of St. John the Baptist, will be celebrated by Solomon's Lodge, No. 6, and Solomon's Chapter, No. 31, in the village of Poughkeepsie, on Monday the 25th of June next. The Lodge will open for business at ten o'clock A. M. At twelve o'clock a procession will be formed, which will proceed to the church, where an address will be delivered by the Rev. Br. A. Welton. A dinner will be provided at the Hotel. Neighbouring Lodges and Chapters, and the brethren and companions generally, are respectfully invited to join in the festivities of the day. R. A. masons will appear with the badges of their order.

JAMES TALLMADGE, THOS. J. OAKLEY,
CLAPP RAYMOND, A. G. STORM,
JOHN W. OAKLEY, JOHN BRUSH,
H. A. LIVINGSTON, THOS. L. DAVIES,
JOSIAH BURRITT, N. P. TALLMADGE,
E. K. DAKIN, MATTHEW VASSAR,
C. P. BARNUM,

Committee of Arrangements.

Poughkeepsie, May 27th, A. L. 5827.

Clinton Lodge, Plattsburgh Chapter, and Plattsburgh Encampment, agreeably to a vote of those bodies, will celebrate the Anniversary of St. John the Baptist, on Monday, the 25th of June next. The undersigned, committee of arrangements have been directed to invite the Lodges at Chazy, Peru, Keesville, and Grand Isle, and all sojourning brethren in this vicinity, to unite with us on that day.

JOHN BLEECKER, S. EMERY,
W. H. MORGAN, W. C. WATSON,
F. P. ALLEN,

Committee of Arrangements.

Plattsburgh, May 2, 1827.

The Anniversary of St. John the Baptist, will be celebrated by the Watertown Royal Arch Chapter, of Free Masons, in the village of Watertown Jefferson county, on Monday, the 25th of June next.

A general attendance of the members of the Fraternity is respectfully requested.

ANDREW NEWELL, D. W. BUCKLIN,
I. B. CRAWE, Z. H. ADAMS,
J. W. BAKER, WALTER WOODWARD,
I. H. BRONSON, *Committee of Arrangements.*
May 22, 1827.

SCIENCE AND THE ARTS.

AMERICAN MEDICINE.

It is highly gratifying to observe the high degree of perfection to which the invaluable profession of medicine is carried by some of our countrymen in various parts of the Union. Europeans have generally been in the habit of regarding our surgeons as mere copyists of foreign practice, and entirely secondary in the higher departments of the profession. The inaccuracy of this opinion may be very clearly shown by reference to the records of American Medicine; and if additional testimony be requisite, it is abundantly afforded by the May number of the Philadelphia Medical and Physical Journal, which among various articles highly interesting and creditable to the Medical Profession, contains an account of some of the greatest and most successful surgical operations ever performed.

The first is a successful amputation of the Hip Joint, by Professor Mott, of New-York—the first operation for the removal of the whole lower inferior extremity ever performed in this country—and was followed by the perfect recovery of the patient. The second great operation was performed by Dr. John Rhea Barton, of Philadelphia; and, perhaps is altogether unprecedented in the annals of surgery. The patient operated upon, had suffered disease at the hip joint, stiffness and considerable distortion, depriving the patient of the use of his limb. Dr. Barton cut down upon the upper part of the thigh bone, sawed it through, and treated it in such a manner, during the cure, as to produce an artificial joint, by which the mobility of the limb was so far restored as to render it almost as serviceable as it ever had been. The planning of this operation, and its successful execution, entitles this enterprising surgeon to the thanks of the community, as it will no doubt lead to the relief of many who are supposed to labour under incurable maladies.

Another operation by Dr. Mott, is announced in the same work; and this triumph of Surgery would, of itself, be sufficient to inscribe indelibly the name of the distinguished individual who performed it, upon the pages of our medical history, were he not already enrolled among the most celebrated of his countrymen. This case was one of *false* (or suddenly occurring *aneurism*)—a rupture of the inner coats of the iliac artery, within the cavity of the belly. The injury was of but ten days standing, and had advanced with the greatest rapidity, producing a large tumour in the flank, accompanied by excruciating pain, and threatening speedy destruction to the patient. Dr. Mott made an incision eight inches in length, extending outwards, in the direction of the superior edge of the pelvis; he thence passed down behind the intestines, without injuring their enveloping and investing membrane, and peritoneum. The great common iliac artery was then separated from the vein, a ligature was passed around it, and it was securely tied, at its origin from the *aorta*, opposite to the junction of the spine and sacrum. As soon as the vessel was tied, the pulsation of the tumour and the excruciating pain of the patient ceased. The circulation was restored in an hour after the operation, and he regained his full health and activity in a few weeks.* Another interesting operation, by the same skilful hand, is also given in the Journal.

Among the original articles—of which this number of the Journal contains *thirteen*—there is a paper by Dr. Richard Lee Fearn, of North Carolina, which will unquestionably be regarded, both in this country and Europe, as of standard excellence. It reflects the highest credit upon its author, and promises the most beneficial results to the profession. It is an experimental inquiry relative to the nature of *tendons*, and the manner in which they are affected by various injuries, and their modes of healing, when divided. The whole research is conducted in a style of most accurate induction, and shows that

* Professor Gibson, of Philadelphia, once performed the operation of tying up the common iliac artery, in Baltimore, tho' under very different circumstances. The patient had been shot in the belly with a number of large slugs, by which the artery was divided. In this case, the artery was tied, as a matter of necessity, to arrest the bleeding; and as a large wound was made through the muscles and membrane of the belly, no operation, properly speaking, could be planned promising any thing more than temporary relief.

its author is deeply imbued with the principles of sound logic, so essential to the success of all philosophical inquiries.

MR. PERKINS' NEW ENGINE.

In a late number we promised our readers an early account of the improvements Mr. Perkins has recently made in his high pressure engine. Having in company with a few scientific gentlemen, had an opportunity of witnessing the operation of the engine a few days since, we shall now state what appears to us to be its leading advantages.

The principle (for which Mr. Perkins formerly procured a patent) of keeping water under a high state of pressure, forms the basis of his new engine; But instead of a generator, or boiler, a series of parallel pipes surround the fire, each pipe being capable of being detached or replaced without destroying the arrangement of the others. The pipes are about one inch and a half internal diameter, and four inches externally, with a view of preserving a certain degree of uniformity in the action of the fire.

The cylinder is about eight inches in diameter, with a twenty inch stroke; but the piston, instead of working in oil and packing, is furnished with an expanding double metal ring, highly polished on the edges, so as to reduce the amount of friction on the face of the cylinder (according to Mr. Perkins) to a mere fraction of what takes place in the ordinary mode of packing.

The improvement (and which we consider by far the most important) is that of effecting *nearly a perfect vacuum* at the termination of the stroke. It is not in our power, by words, to give a very accurate idea of the arrangement for this purpose, without a drawing for reference; but it is pretty nearly as follows:

Attached to the bottom of the working cylinder is an enlarged chamber which receives the foot of the piston, and communicates with a large reservoir or eduction pipe leading through the valves into the chimney flue. The steam having driven the piston down into this chamber, about seven-eighths of its elastic force escapes into the atmosphere, while the remaining seven-eighths (or probably one-tenth) is condensed in the ordinary way by a jet of water. By this arrangement Mr. Perkins considers that he obtains as perfect a degree of *vacuum* as in Bolton and Watt's condensing engine, with the advantage of saving the great consumption of water, and the friction of the air pump, in the latter engines. In order to economise the steam, it is also cut off at a quarter stroke, and allowed to operate on the principle of expansion.

The engine when exhibited to us was working under a pressure of about 360 lbs. on an inch, and was estimated by one or two gentlemen present as upwards of fifteen horse power; but the strength of the several parts of the engine is calculated to work with steam at eight hundred pounds per inch with perfect safety. In fact, the undue production of steam and consequent liability to accidental explosion, appears to us to be so effectually guarded against in this engine, as to excite no apprehension whatever on that head. If we have any doubt, it is that the wear and tear of certain parts of the engine must be very considerable. The ingenious inventor, however, states that the consumption of coals amounts to little more than one third of the usual quantity for a given quantity of labour; that the weight of the new engines will not exceed one third of that of many low pressure condensing engines; and the bulk will be also less than one third. If these calculations be well founded, (which of course can only be determined by experience) we apprehend the general introduction of this improved engine for steam navigation will follow as a matter of course. The great expense and tonnage of fuel forming the chief obstacles to the employment of steam vessels for long voyages.

[London Lit. Gaz.]

COLDS, COUGHS, AND HOARSENESS.

Quarter of pound of linseed, two ounces of stick liquorice, and a quarter of a pound of raisins, or Turkey figs: put these into two quarts of cold soft water; simmer over a slow fire until it is reduced nearly half; then add a quarter of a pound of brown

sugar candy, (pounded) one table spoonful of old rum, and two table spoonfuls of lemon juice: drink a teacup full going to bed, and take a little whenever the cough is troublesome. This recipe generally cures the worst of coughs (if taken in time) in two or three days—a week is almost infallible.

VARIETY.

THE TACITURN ACADEMY. There was at Amedan, in Persia, a celebrated Academy, the first statue of which was worded as follows: "The academicians must think much, write but little, and speak as little as possible." It was called the Taciturn Academy, and there was not a truly learned man in all Persia, who did not aspire to be one of its members. In his retirement, in a distant part of the country, Dr. Zeb, the author of a small but excellent volume, entitled "The Gag," learned that there was a place vacant in the Taciturn Academy. He set off immediately, arrived at Amedan, and presenting himself at the gate, requested the door-keeper to deliver this billet: "Dr. Zeb humbly requests the vacant place." The door-keeper executed his commission, but the doctor and his billet were too late; the place was already filled. The academy was much afflicted. It had, much against its will, been obliged to receive a young wit of the court. The president, to whose lot it fell to communicate this disagreeable news to the applicant, could hardly agree to undertake the task, and knew not how to set about it. After having meditated for a while upon the subject, he ordered a large cup to be filled with water, and so nicely filled, that the addition of a single drop would make the fluid run over. He then gave the sign to introduce the candidate. Dr. Zeb entered with that modest and unaffected manner, which almost always indicates true merit. The president rose, and, without saying a word, he pointed, with a sorrowful air, to the cup, the cup which was so completely full. The doctor immediately comprehended that no academical seat was vacant; but, far from losing courage, he endeavoured to make it obvious that no harm would arise from their admitting a supernumerary academician. He saw a rose leaf lying at his feet; he picked it up; and laid it so delicately on the surface of the water, that not a drop was spilled. This ingenious reply called forth a general clapping of hands; the regulations of the academy were allowed to be as taciturn as its members; and Dr. Zeb was received by acclamation. [From the French.]

BULL. A glorious bull is related in the "Sketch of Dr. Sims," of a countryman of his, for whom he prescribed an emetic, who said with great naïveté, "My dear Doctor, it is of no use your giving me an emetic; I tried it twice in Dublin, and it would not stay on my stomach either time."

A friar once preaching to a convent of nuns, on Easter, assured them that our Saviour when he arose, appeared first to a woman, that the news of the resurrection might be sooner spread abroad.

The dress of a Lapland priest is very grotesque, wearing a long black cloak hanging to his heels—his long hair, or rather mane, uncombed—broad brimmed old flapped hat upon his head, a black stock about his neck, and buskins on his feet.

The following story rivals the law case of *Bullus vs. Boatum*. It occurred at Nismes, in Languedoc, 1763. A gardener's ass having brought some goods to market, while the master was away, went into an adjoining church, and satiated his thirst from a basin of holy water; he was detected, seized and formally tried for sacrilege. His counsel could not resist the weight of evidence, and judgment was pronounced against the wilful animal, that he should be hanged and then burnt, and the owner to pay costs.

Sir Geo. Collyer, describing the pestilential climate of Sierra Leone, says, that after a heavy fall of rain, and the sun striking on the ground with vertical power, the vapour from the vegetable matter overrunning the streets is so perceptible, that, in drawing breath, he could feel he was inhaling a vapour which he could but compare to gas from coal.

POPULAR TALES.

A GERMAN ROMANCE.

The following tale is extracted from a new collection of German fictions, by the translator of Wilhelm Meister. It is somewhat lengthy, but is, we trust, nevertheless, wonderful and pretty enough to please our readers.

By way of introduction, let me confess that I have not always so arranged my scheme of life as to be certain of the next period in it, or even of the next day. In my youth I was no first rate economist; and often found myself in manifold perplexity. At one time I undertook a journey, thinking to derive good profit in the course of it: but the scale I went upon was too liberal; and after having commenced my travel with extra-post, and then prosecuted it for a time in the Diligence, I at last found myself obliged to front the end of it on foot. Like a gay young blade, it had been from of old my custom, on entering any inn, to look round for the landlady, or even the cook, and wheedle myself into favour with her; whereby, for most part, my shot was somewhat reduced. One night at dusk, as I was entering the post-house of a little town, and purposing to set about my customary operations, there came a fair double-seated coach, with four horses, rattling up to the door behind me. I turned round; and observed in it a young lady, without maid, without servants. I hastened to open the carriage for her, and to ask if I could help her in any thing. On stepping out, a fair form displayed itself; and her lovely countenance, if you looked at it narrowly, was adorned with a slight shade of sorrow. I again asked if there was aught I could do for her. "O yes!" said she, "if you will lift that little box carefully, which you will find standing on the seat, and bring it in: but I beg very much of you to carry it with all steadiness, and not to move or shake it in the least." I took out the box with great care; she shut the coach door; we walked up stairs together; and she told the servants that she was to stay here for the night. We were now alone in the chamber; she desired me to put the box on the table which was standing at the wall; and as, by several of her movements, I observed that she wished to be alone, I took my leave, reverently but warmly kissing her hand. "Order supper for us two," said she then; and you may well conceive with what pleasure I executed the commission; scarcely deigning, in my pride of heart, to cast even a side-glance on landlady and menials. With impatience I expected the moment that was to lead me back to her. Supper was served: we took our seats opposite each other; I refreshed my heart, for the first time during a considerable while, with a good meal; and no less with so desirable a sight beside me; nay, it seemed as if she were growing fairer and fairer every moment. Her conversation was pleasant; yet she carefully waved whatever had reference to affection and love. The cloth was removed: I still lingered; I tried all sorts of manoeuvres to get near her; but in vain; she kept me at my distance, by a certain dignity which I could not withstand; nay, against my will, I had to part from her at a rather early hour. After a night passed in waking or unrestfully dreaming, I rose early; inquired whether she had ordered horses; and learning that she had not, I walked into the garden, saw her standing dressed at the window, and hastened up to her. Here, as she looked so fair, and fairer than ever, love, roguery, and audacity, all at once started into motion within me: I rushed towards her, and clasped her in my arms. "Angelic, interesting being," cried I, "pardon! but it is impossible!"—With incredible dexterity she whisked herself out of my arms, and I had not even time to imprint a kiss on her cheek. "Forbear such outbreaks of a sudden foolish passion," said she, "if you would not scare away a happiness which lies close beside you, but which cannot be laid hold of till after some trials." "Ask of me what thou pleasest, angelic spirit!" cried I, "but do not drive me to despair." She answered with a smile: "If you mean to devote yourself to my service, hear the terms. I am come hither to visit a lady of my friends, and with her I purpose to continue for a time: in the meanwhile, I could wish that my carriage and this box were taken forward. Will you

engage with it? You have nothing to do, but carefully to lift the box into the carriage and out: to sit down beside it, and punctually take charge that it receive no harm. When you enter an inn, it is put upon a table in a chamber by itself, in which you must neither sit nor sleep. You lock the chamber-door with this key, which will open and shut any lock, and has the peculiar property, that no lock shut by it can be opened in the interim." I looked at her; I felt strangely enough at heart: I promised to do all, if I might hope to see her soon, and if she would seal this hope to me with a kiss. She did so; and from that moment I had become entirely her bondman. I was now to order horses, she said. We settled the way I was to take; the places where I was to wait and expect her. She at last pressed a purse of gold into my hand, and I pressed my lips on the fair hand that gave it me. She seemed moved at parting; and for me, I no longer knew what I was doing or was to do. On my return from giving my orders, I found the room-door locked. I directly tried my master-key, and it performed its duty perfectly. The door flew up: I found the chamber empty; only the box standing on the table where I had laid it. The carriage drove up; I carried the box carefully down with me, and placed it by my side. The hostess asked, "Where is the lady, then?" A child answered, "She is gone into the town." I nodded to the people, and rolled off in triumph from the door which I had last night entered with dusty gaiters. That in my hours of leisure I diligently meditated on this adventure, counted my money, laid many schemes, and still now and then kept glancing at the box, you will readily imagine. I posted right forward; passed several stages without alighting; and rested not till I had reached a considerable town where my fair one had appointed me to wait. Her commands had been pointedly obeyed; the box always carried to a separate room, and two wax candles lighted beside it, for such also had been her order. I would then lock the chamber, establish myself in my own, and take such comfort as the place afforded. For a while I was able to employ myself with thinking of her; but by degrees the time began to hang heavy on my hands. I was not used to live without companions; these I soon found, at tables-d'hôte, in coffee houses, and public places altogether to my wish. In such a mode of living my money began to melt away; and one night it vanished entirely from my purse, in a fit of passionate gaming. Void of money; with the appearance of a rich man, expecting a heavy bill of charges; uncertain whether and when my fair one would again make her appearance, I felt myself in the deepest embarrassment. Doubly did I now long for her; and believe that without her and her gold, it would be impossible for me to live. After supper, which I had relished very little, being forced for this time to consume it in solitude, I took to walking violently up and down my room: I spoke aloud to myself, cursed my folly with horrid execrations, threw myself on the floor, tore my hair, and indeed behaved in the most outrageous fashion. Suddenly in the adjoining chamber where the box was, I heard a slight movement, and then a soft knocking at the well bolted door which entered from my apartment. I gather myself, grope for my master key; but the door leaves fly up of themselves; and in the splendour of those burning wax-lights, enters my beauty. I cast myself at her feet, kiss her robe, her hands; she raises me; I venture not to clasp her, scarcely to look at her; but candidly and repentantly confess to her my fault. "It is pardonable," said she, "only it postpones your happiness and mine. You must now make another tour into the world, before we can meet again. Here is more money," continued she, "sufficient if you husband it with any kind of reason. But as wine and play have brought you into this perplexity, be on your guard in future against wine and women, and let me hope for a glad meeting when the time comes." She retired over the threshold; the door leaves flew together: I knocked, I entreated; but nothing farther stirred. Next morning, while presenting his bill, the waiter smiled and said: "So we have found out at last, then, why you lock your door in so artful and incomprehensible a way that no master-key can open it. We supposed you must have much money and precious ware laid up by you: but now we have seen your treasure walking down stairs;

and in good truth it seemed worthy of being well kept." To this I answered nothing; but paid my reckoning, and mounted with my box into the carriage. I again rolled forth into the world, with the firmest resolution to be heedful in future of the warning given me by my fair and mysterious friend. Scarcely, however, had I once more reached a large town, when forthwith I got acquainted with certain interesting ladies, from whom I absolutely could not tear myself away. They seemed inclined to make me pay dear for their favour; for while they still kept me at a certain distance, they led me into one expense after another; and I being anxious only to promote their satisfaction, once more ceased to think of my purse, but paid and spent straight forward, as occasion needed. But how great was my astonishment and joy, when, after some weeks, I observed that the fulness of my store was not in the least diminished, that my purse was still as round and crammed as ever! Wishing to obtain more strict knowledge of this pretty quality, I set myself down to count; I accurately marked the sum; and again proceeded in my joyous life as before. We had no want of excursions by land, and excursions by water; of dancing, singing, and other recreations. But now it required small attention to observe that the purse was actually diminishing; as if by my cursed counting I had robbed it of being uncountable. However this gay mode of existence had been once entered on; I could not draw back; and yet my ready money soon verged to a close. I execrated my situation; upbraided my fair friend, for having so led me into temptation; took it as an offence that she did not again shew herself to me; renounced, in my spleen, all duties towards her; and resolved to break open the box, and see if peradventure any help might be found there. I was just about proceeding with my purpose; but I put it off till night, that I might go through the business with full composure; and, in the meantime, I hastened off to a banquet, for which this was the appointed hour. Here again we got into a high key; the wine and the trumpet-sounding, had flushed me not a little, when, by the most villainous luck, it chanced, that during the desert, a former friend of my dearest fair one, returning from a journey, entered unexpectedly, placed himself beside her, and, without much ceremony, set about asserting his old privileges. Hence, very soon arose ill-humour, quarrelling, and battle; we plucked out our spits; and I was carried home half-dead of several wounds. The surgeon had bandaged me and gone away; it was far in the night; my sick-nurse had fallen asleep; the door of the side-room went up, my fair mysterious friend came in, and sat down by me on the bed. She asked how I was: I answered not, for I was faint and sullen. She continued speaking with much sympathy; she rubbed my temples with a certain balsam, whereby I felt myself rapidly and decidedly strengthened, so strengthened that I could now get angry and upbraid her. In a violent speech, I threw all the blame of my misfortune on her; on the passion she had inspired me with; on her appearing and vanishing; and the tedium, the longing which in such case I could not but feel. I waxed more vehement, as if a fever had been coming on; and I swore to her at last, that if she would not be mine, and would not now abide with me and wed me, I had no wish to live any longer; to all which I required a peremptory answer. As she lingered and held back with her explanation, I got altogether beside myself, and tore off my double and triple bandages, in the firmest resolution to bleed to death. But what was my amazement, when I found all my wounds healed, my skin smooth and entire, and this fair friend in my arms! Henceforth we were the happiest pair in the world. We both begged pardon of each other, without either of us rightly knowing why. She now promised to travel on along with me: and soon we were sitting side by side in the carriage; the little box lying opposite us on the other seat. Of this I had never spoken to her, nor did I now think of speaking, though it lay there before our eyes; and both of us, by tacit agreement, took charge of it, as circumstances might require; I, however, still carrying it to and from the carriage, and busying myself, as formerly, with the locking of the doors. So long as aught remained in my purse, I had continued to pay: but when my cash went down, I signified the fact to her. "That is easily helped," said she,

pointing to a couple of little pouches fixed at the top, to the side of the carriage. These I had often observed before, but never turned to use. She put her hand into one, and pulled out some gold pieces, and from the other some coins of silver; thereby shewing me the possibility of meeting any scale of expenditure which we might chuse to adopt. And thus we journeyed on from town to town, from land to land, contented with each other and with the world; and I fancied not that she would again leave me; the less so, that for sometime she had evidently been as loving wives wish to be,—a circumstance by which our happiness and mutual affection was increased still farther. But one morning, alas! she could not be found; and as my actual residence, without her company, became displeasing, I again took the road with my box; tried the virtue of the two pouches and found it still unimpaired. My journey proceeded without accident. But if I had hitherto paid little heed to the mysteries of my adventure, expecting a natural solution of the whole, there now occurred something which threw me into astonishment, into anxiety, nay into fear. Being wont, in my impatience for change of place, to hurry forward day and night, it was often my hap to be travelling in the dark; and when the lamps, by any chance went out, to be left in utter obscurity. Once in the dead of such a night I had fallen asleep, and on awaking I observed the glimmer of a light on the covering of my carriage. I examined this more strictly, and found that it was issuing from the box, in which there seemed to be a chink, as if it had been chapped by the warm and dry weather of summer, which was now come on. My thoughts of jewels again came into my head; I supposed there must be some carbuncle lying in the box, and this point I forthwith set about investigating. I postured myself as well as might be, so that my eye was in immediate contact with the chink. but how great was my surprize, when a fair apartment, well lighted, and furnished with much taste and even costliness, met my inspection, just as if I had been looking down through the opening of a dome into a royal saloon! A fire was burning in the grate, and before it stood an arm chair. I held my breath, and continued to observe. And now there entered from the other side of the apartment a lady with a book in her hand, whom I at once recognised for my wife, though her figure was contracted into the extreme of diminution. She sat down in the chair by the fire to read; she trimmed the coals with the most dainty pair of tongs; and in the course of her movements, I could clearly perceive, that this fairest little creature was also in the family way. But now I was obliged to shift my constrained posture a little; and the next moment, when I bent down to look again, and convince myself that it was no dream, the light had vanished, and my eye rested on empty darkness. How amazed, nay, terrified I was, you may easily conceive. I started a thousand thoughts on this discovery, and in truth could think nothing. In the midst of this I fell asleep; and on awaking, I fancied that it must have been a mere dream: yet I felt myself in some degree estranged from my fair one; and though I watched over the box but so much the more carefully, I knew not whether the event of her reappearance in human size was a thing which I should wish or dread. After some time she did in fact reappear: one evening, in a white robe, she came gliding in; and as it was just then growing dusky in my room, she seemed to me taller than when I had seen her last; and I remembered having heard that all beings of the mermaid and gnome species increase in stature very perceptibly at the fall of night. She flew as usual to my arms; but I could not with right gladness press her to my obstructed breast. "My dearest," said she, "I now feel by thy reception of me, what, alas! I already knew too well. Thou hast seen me in the interim, thou art acquainted with the state in which, at certain times, I find myself; thy happiness and mine is interrupted, nay, it stands on the brink of being annihilated altogether. I must leave thee; and I know not whether I shall ever see thee again." Her presence, the grace with which she spoke, directly banished from my memory almost every trace of that vision, which indeed had already hovered before me as little more than a dream. I addressed her with kind vivacity, convinced her of my passion, assured her

that I was innocent, that my discovery was accidental; in short, I so managed it that she appeared composed, and endeavoured to compose me. "Try thyself strictly," said she, "whether this discovery has not hurt thy love, whether thou canst forget that I live in two forms beside thee, whether the diminution of my being will not also contract thy affection." I looked at her; she was fairer than ever; and I thought within myself: Is it so great a misfortune, after all, to have a wife who from time to time becomes a dwarf, so that one can carry her about with him in a casket? Were it not much worse if she become a giantess, and put her husband in the box? My gayety of heart had returned. I would not for the whole world have let her go. "Best heart," said I, "let us be and continue ever as we have been. Could either of us wish to be better? Enjoy thy convenience; and I promise thee to guard the box with so much the more faithfulness. Why should the prettiest sight I have ever seen in my life make a bad impression on me? How happy would lovers be, could they but procure such miniature pictures! And after all it was but a picture, a little sleight-of-hand deception. Thou art trying and teasing me; but thou shalt see how I will stand it." "The matter is more serious than thou thinkest," said the fair one; "however, I am truly glad to see thee take it so lightly; for much good may still be awaiting us both. I will trust in thee; and for my own part do my utmost: only promise me that thou wilt never mention this discovery by way of reproach. Another prayer, likewise, I most earnestly make to thee: be more than ever on thy guard against wine and anger." I promised what she required; I could have gone on promising to all lengths; but she herself turned aside the conversation; and thenceforth all proceeded in its former routine. We had no inducement to alter our place of residence; the town was large, the society various; and the fine season gave rise to many an excursion and garden-festival."

(Conclusion next week.)

MISCELLANY.

THE GHOST & CONJUGAL FIDELITY.

A TRUE STORY.

Mr. Samuel Fisher, the inventor of the golden snuff, was acquainted with a widow lady of excellent character, who resided in Cork. This lady was inconsolable for the death of her husband; the day was spent by her in sighs and lamentations, and her pillow at night was moistened with the tears of sorrow. Her husband, her dead husband, was the continual theme of her discourse, and she seemed to live for no other object but to recite his praises, and deplore his loss. One morning, her friend Fisher found her in a state of mental agitation bordering on distraction. Her departed love, she said, had appeared to her in the night, and most peremptorily ordered her to enter the vault where his remains were deposited, and have the coffin opened. Mr. Fisher remonstrated with her on the absurdity of the idea; he said that the intensity of her sorrow had impaired her intellect; that the phantom was the mere creature of her imagination; and begged of her at least to postpone to some future period her intended visit to the corpse of her husband. The lady acquiesced for that time in his request; but the two succeeding mornings, the angry spirit of her spouse stood at her bedside, and with loud menaces repeated his command. Fisher, therefore, sent to the sexton, and matters being arranged, the weeping widow and her friend attended in the dismal vault; the coffin was opened with much solemnity and the faithful matron stooped down and kissed the clay-cold lips of her adored husband. Having reluctantly parted from the beloved corpse, she spent the remainder of the day in silent anguish. On the succeeding morning, Fisher (who intended to sail for England on that day) called to bid his afflicted friend adieu. The maid-servant told him that the lady had not yet arisen. "Tell her to get up," said Fisher, "I wish to give her a few words of consolation and advice before my departure." "Ah sir!" said the smiling girl, "it would be a pity to disturb the new married couple so early in the morning!" "What new married couple?" "My mistress, sir, was married

last night." "Married! Impossible! What, the lady who adored her deceased husband, who was nightly visited by his ghost, and who yesterday so fervently kissed the corpse! Surely you jest." "O, sir," said the maid, "my late master, poor man, on his death-bed, made my mistress promise that she would never marry any man after his decease, till he and she should meet again, (which the good man no doubt thought would never happen till they met in heaven,) and you know, my dear sir, you kindly introduced them to each other, face to face, yesterday. My mistress, sir, sends you her compliments and thanks, together with this bride-cake, to distribute among your young friends."

COUNT VITELESCHI.

There was living in 1786, at Brescia, a Count Viteleschi, a most singular man, and whose energy seemed to belong to the middle ages. All that I have heard of him announced him to be a character similar to that of Castruccio Castracani. As he was only a private individual, his character showed itself in dissipating his fortune in the most extraordinary way, committing a thousand follies to please the woman that he loved, and killing his rivals. As he was one day walking with his mistress, a man happened to look at her: "Cast down your eyes," cried Viteleschi; the man continuing to look at her, Viteleschi shot him on the spot. Adventures of this kind were looked upon but as peccadillos in a rich patrician; but Viteleschi having killed a distant relation of the noble Venetian family of Bragadin, was arrested and thrown into the famous prison at Venice, near the *ponte dei sospiri*. Viteleschi, who was a very handsome man, and not devoid of eloquence, set about seducing the jailor's wife. The jailor suspecting the intrigue, loaded him with irons. Viteleschi, though in solitary confinement, in chains and without money, soon succeeded in interesting his persecutor, though a jailor and jealous. This man used to pass two hours every day with his prisoner. On one occasion Viteleschi said to him, "What torments me most, is, that while I am here rotting in chains, my enemy is strutting about Brescia. Oh, if I could but kill him and then die." These fine sentiments touched the jailor; who said to him, "I will give you your liberty for four days." The count fell upon his neck, and on the following Friday evening quitted the prison. A gondola passed him to Mestre, where a *sediola* with relays awaited him. He arrived at Brescia at three o'clock in the afternoon of Sunday, and took his post near the church door. As his enemy came out from vespers, he stretched him dead with a shot from a carbine.

Not one of the bystanders thought of arresting Count Viteleschi; who calmly returned to his *sediola*, and was back in prison on Tuesday evening. The *Seigneurie* of Venice were soon informed of this murder, and Count Viteleschi was brought before them, so enfeebled was he by confinement. On the accusation being read—"How many witnesses have signed this new calumny?" asked Viteleschi, with a sepulchral voice. "More than two hundred," was the answer. "Your excellencies know, however, that on Sunday last, the day of the murder, I was in the cursed prison; you may now see how numerous are my enemies." This reasoning shook some of the old Judges, the young ones favoured Viteleschi on account of the singularity of his character, and in a short time, owing to this fresh murder, he was set at liberty. A year after, the jailor received, through the hands of a priest, one hundred and eighty thousand Venetian livres, (about 90,000 frs.) the price of the sole remaining unmortgaged property that Viteleschi possessed. This determined, impassioned, and extraordinary individual, whose life would make a most interesting volume, lived to a good old age, the terror of all his neighbourhood. A curious story is told of his having lived concealed for fifteen days in a chimney, for the purpose of watching his mistress, whom to his great joy he found faithful. She was in the habit of receiving the visits of a rich young man who was enamoured of her, but whom she was desirous of securing as a husband for her daughter. Viteleschi, convinced of her innocence, dropped suddenly from the chimney, and said to the astonished young man, "you have had a most fortunate

escape; see what it is to have to do with a man of probity. Another in my place would have killed you without verifying fact." He once, at the approach of Easter, made one of his retainers affect to be in articulo mortis, and send for the confessor of this same mistress; the holy man having partaken of some refreshment, in which opium had been mixed, fell asleep; when Viteleschi borrowed his clothes in which he disguised himself, and repaired to the church, whither he knew his mistress was to go that day to make her confession.

[Hendahl's "Rome, Naples, and Florence."]

ALBANY:

SATURDAY, JUNE 2, 1827.

§3-Mr. ELISHA WILCOX, proprietor of the Canal bookstore, on board the boat *Encyclopedia*, is our authorised agent on the line of the Erie canal, between Albany and Buffalo.

JUNE. Pent up in the noisy city, we can form no fair estimate of the changes, which every month effects on the country scenery. But if we step on board a steamboat, into a stage coach, or any other conveyance, and wander some twenty or thirty miles from the city, we seem to be reinstated in the forfeited shades of Eden. Now the groves and orchards have put on their full suit of green. The meadows are showing their luxuriant burdens of grass, shortly to become the toil and sport of the jocund haymakers. The gardens and door yards toss up their snowballs, their pionies, their roses, and a host of other flowers, to tickle the olfactories of the swain, or hang in withering modesty from the bosom or tresses of the damsel. Now the sheep, lightened of their heavy fleeces run briskly over the hill sides, and the horned bullocks graze lazily along, or more lazily ruminate in the shade of the umbrageous elm. Now the young corn shows its green rows on the plain, and many a barefoot boy plies the hoe among it, regardless of the sun, or sweat, or dust, while the tall rye, and the wheat of richest green, undulate before the light breeze, like a billowy lake. And the cuckoo in the orchard and the blackbird in the swamp, and the bob-o'-lincoln in the meadow, add not a little to the interest of the scene, by their incessant loquacity. Go out, and hear for yourselves, the music which no science can imitate, and gaze on the scenery which no painter can fully describe. Go and breathe the sweet air of the hills, and then own that the idea of balmy gales and spicy groves, is not wholly fabulous. You, whose ears are wearied with the cry of sweeps and the clatter of carriages, you never caught the music of the country maiden's voice, accompanied by the strains of that best and sweetest instrument of music—the spinning wheel! keeping exact time to the spring of the shuttle and the beat of the loom. Such music when it strikes the passing ear, yields a pleasure, a kind of proud and pleasant sensation, which the skill of the ablest orchestra fails to produce. Our sidewalks are indeed loaded with the richest fruits that a tropical sun ever tepefied to maturity; but what are they to the pleasure of plucking the juicy and delicious pericarp of the strawberry from the stem where it germinated? And the first of flowering shrubs, the bilberry, is fast ripening a little fruit, that shall set at nought the flavour of the orange and pine apple. Every lover of rural rambles will find the present season more replete with all that makes the country delightful, than any other month, perhaps in the whole year. And those whom ennui or melancholy estranged

from romantic pleasures, can look for no more certain and present relief than to sally forth among the hills, to breathe the pure air, and rest their wearied senses on the calm scenes of JUNE.

INDUSTRY. No one disputes that the frequent exertion of the powers of the body strengthens them. We see proofs of it daily. We see it in all classes, from children of the greenest age, to the hoary headed veteran; and it requires no supernatural gift of sight to discern a man's habits of industry through the vigour of his constitution. The infant that is confined to a chair or cradle, and not suffered to stretch and exercise its little limbs to its whole desire, generally grows peevish, pale, and sickly; its limbs are emaciated, and its joints are relaxed, till disease and death release it from its sufferings. Follow him through riper years, and man's best regulator of health will be found a wholesome and seasonable exercise of his limbs. And those who have been favoured with the longest and healthiest lives, have been universally remarkable for an industrious application to some laborious occupation.

But this is not the object we are in pursuit of. The powers of the mind are, perhaps, more susceptible of improvement from exercise than even those of the body. Genius and invention are, it is true, essential to the strength of the mind; but we would like to see the man who can convince us by fair argument, that what is commonly called genius, is not more properly the result of an industrious attention to some pursuit, than the gratuitous gift of nature. A candid research will certainly convince the most skeptical, that nature is not half so partial in her gifts as she appears. When a man meets with uncommon success in any literary pursuit, we are ready to say that nature has done a great deal for him; but if we scan his character and habits of application, we are led to the conclusion that industry has done still more. It is often the case that a mere accident turns a man's faculties into some particular channel, as was the fact with Sir Isaac Newton; but without perseverance that channel very often runs dry, and what is the consequence? Why—the popular conclusion, that the man has not a proper genius for the undertaking. The fact is, these things are not called by their right names. The literal translation, then, of the word genius, in such cases, should be *industry*.

If we ask the question, why is Sir Walter Scott a better prose writer than a poet? Or, why is Thomas Moore a better poet than prosier? Their works carry the answer in their very names. What but the most indefatigable industry, could produce from one pen, in so short a time, such a series of finished works as the Waverley novels? On the contrary, every poetical emanation from his fancy, since the commencement of his prosaic career, has been marked by public neglect. His first poetical works were well received. But since the direction of his attention to another object, their spirit has depreciated to an astonishing degree, while that other pursuit has gradually and perceptibly improved under the force and application of unwearied industry.

The mind may be constantly and profitably employed in more ways than one. To find employment for the limbs, we are often obliged to engage in some otherwise useless amusement. Not so with the mind. It can be set to work at any time and in any place, where it is disposed to be itself.

Zimmerman, among many very interesting examples of the power of solitude on the mind, says of

Petrarch—"He perfectly understood the art of managing his time. 'I rise,' said he, 'before the sun, and on the approach of day, wander contemplatively along the fields, or retire to study. I read, I write, I think. I vanquish indolence, banish sleep, avoid luxury, and forget sensuality. From morning to night I climb the barren mountains, traverse the humid valleys seek the deepest curves, or walk, accompanied only by my thoughts, along the bank of my river. I have no society to distract my mind; and men daily become less annoying to me; for I place them either far before or far behind me. I recollect what is past, and contemplate what is to come. I have found an excellent expedient to detach my mind from the world. I cultivate a fondness for my place of residence, and I am persuaded that I could be happy any where except at Avignon. Here I enjoy all my friends; as well those with whom I have actually lived, as those who have long since entered the vale of death, and of whom I have no knowledge but what their works afford.'"

LITERARY. N. H. CARTER, esq. has issued proposals for publishing by subscription, *Letters from Europe*; comprising the narrative journal of a tour through Great Britain, France, Italy, and Switzerland. They will be published as soon as the amount of subscription will justify the expense, in two volumes 8vo. of 500 pages each, for \$2.00 a volume, bound in boards.

The public is already acquainted with the merits of Mr. Carter's Letters. Numerous and interesting extracts have been laid before them during the last two years, by almost every public print in the country. They are the productions of great classical research; and we hope an extensive and liberal subscription will evince a commendable taste in the American reader, and, at the same time, afford some compensation for the fatigue and labour which necessarily await him, who furnishes food for the classic gourmand.

MASONRY IN MEXICO, AGAIN. We learn that the Governor of Vera Cruz has issued a decree prohibiting all Masonic associations; dooming to banishment and imprisonment all persons concerned in them, or who furnish them a place to convene. We presume his excellency is a priest, and recommend to him the restoration of the Holy Inquisition in Vera Cruz; or at least, to invite the magnanimous Ferdinand to take again his once rebellious, but now returning subjects under his potent sceptre. Or we may be mistaken. It may be election time in Vera Cruz. If so, they probably have their Masonic ticket, and their——Inquisition ticket. *Dominetur vulgus*, is not unfrequently the motto of tyrants.

We do not imagine that the above information need to create any fears for the interests of Masonry, in the great Republic of Mexico. There have already been several attempts, by the priests, to clap on the shackles, in the general Congress of Mexico. We have before stated the result of a deliberation in the Mexican Senate which proved that liberal principles have taken too deep root to be eradicated at once. The inhabitants of the city and neighbouring provinces, are of a more enlightened character. Many Europeans and Americans by settling among them, have given a check to the proverbial jealousy of the Spanish character: and there are, at this day, several lodges of freemasons in successful operation in the city of Mexico, and its immediate vicinity, who hold their charters from the Grand Lodge of the State of New-York.

HORTICULTURAL PREMIUM. We understand that the "Banksian Medal" of the London Horticultural Society, has been awarded to **JESSE BUEL**, Esq. of this city, for a barrel of American apples, embracing twenty varieties, forwarded to the society last winter. Judge Buel has opened the way to many important improvements in the Horticultural science of our country, for which, we are happy to see, his services are properly estimated.

✂ The Grand Lodge of the State of New-York will convene in the city of New-York on Wednesday next.

✂ The Grand Encampment of Knights Templars, and the appendant orders, of the state of New-York, will commence its annual communication in the city of New-York on Friday next.

✂ By a reference to the notices for the celebration of the ensuing masonic anniversary, it will be perceived that a disposition is evinced to commemorate the day in a truly becoming manner. The committees appointed by the several bodies, are of the first respectability,—ornaments of the craft and of community. The malignancy of the enemies of masonry will only add to its lustre. We are firm in the opinion, that in the end, it will be productive of the best results to the fraternity throughout the country.

✂ Our friends throughout the state of New-York, and the other states in the Union, and likewise those in the provinces of Upper and Lower Canada, are requested to furnish us with the proceedings of their several bodies at the ensuing anniversary, and with copies of the addresses that may be delivered on the occasion. We are desirous of keeping a faithful "Record," and must in some measure rely upon our friends for assistance.

CANAL REVENUE. The amount of toll received by the collector at Albany, from the commencement of canal navigation, on the 21st day of April, to the 1st day of June, is *Forty-four thousand five hundred and twenty-two dollars*. The number of boats that departed from Albany during the same time, is *Eleven hundred and sixty-four*.

This exceeds by *thousands*, any amount received heretofore, in the same space of time.

ALBANY DIRECTORY. This useful work, we have been informed, will be put to press during the ensuing week. It has been compiled at considerable expense of money, time and trouble, by Mr. Tobias V. Cuyler, the gentleman who, two years since, published a similar work, and the loss of whose services for the last publication were seriously felt. We hope he may meet with that liberality from the hands of our citizens, to which he is justly entitled for the able manner in which the present work has been compiled. We are assured it will present a greater quantity of valuable matter than any which has preceded it.

✂ Our readers will observe that we have given them no news this week, excepting only such as is connected with science and literature. The market is entirely destitute of foreign tidings and wonders—none having been imported the present week. As to home affairs, we hear of nothing but "murders," "melancholy accidents," "horrible catastrophes," hanging scrapes, and "the presidency;" and as we are sworn enemies to the whole of them, we shall not bring them into notice.

THE CIRCUS. This establishment, under the name of the "*North Pearl street Theatre*," will be opened for theatrical representations only, on Monday next. It will be under the management of Mr. Thompson, from the La Fayette Theatre in the city of New York.

There was at our poor house establishment, a poor wight, named Andrew Doyle, who seemed, until the period of our story, an object of almost any feeling beside that termed in usual parlance, the "tender." Our luckless hero, in addition to an impaired constitution, and fortune somewhat shattered, was as blind as the dimpled deity himself. But Doyle, like music, "had charms," and though after an acquaintance of several years they were unobserved by us, a certain female in that love-inspiring abode, saw things with better eyes. "She never told her love," but set about a plan for the delivery of Doyle from bondage, with a promptitude and secrecy, which love alone could incite, and determined (to use her own emphatic language,) to see him clear, "if she had to go through fire and water."—She was successful. In the dead silence of the night, unseen and unheard, a window was raised, and the loving pair made their escape to "*parts unknown*." They were afterwards seen making their way towards *Lewiston*; since which no tidings of their fate or place of abode have reached us. [Ontario Repository.]

[It is truly a melancholy case. We can however assure the public that if blustering and caterwauling can avail in these law-defying, these pauper-stealing times, their "*lives*" and their "*sacred liberties*," are held in very safe keeping by "the champions who stand sleepless upon the towers of freedom—watching over" abductions "with untired zeal," and the energetic and disinterested *Lewiston Convention*, whose "*able bodied*" qualities and supernatural sympathy are so well known and extensively admired.—*M. Record*.]

PROGRESS OF MUTUAL INSTRUCTION IN DENMARK. Mr. Abrahamson pursues, with indefatigable zeal, the enterprise which he began more than six years ago; that of introducing mutual and elementary instruction throughout the states of the king of Denmark. He has the satisfaction to see his efforts crowned with a far greater success than he had dared to promise himself. In his first report addressed to the king in the month of January, 1824, he announced, that at the end of the year 1823, there were in Denmark 244 schools, in which this mode of instruction was in full operation, and 263 others which had begun to be organized on this plan: so that the total number of schools which had adopted the method was 607. This number has since increased to such an extent, that at the end of the year 1824, there were 605 schools completely organized, and 312 others whose organization had commenced. There are, at present, therefore, in Denmark, 1017 communes which have frankly declared themselves in favour of mutual instruction; and it is more than probable that, in a few years, this method will be introduced into all the schools of the kingdom. Nevertheless, the introduction of the system is not decreed, but simply permitted and encouraged by the government. Among the causes of this success, Mr. Abrahamson cites, in the first place, the powerful protection of the king, who, not content with contributing to the progress of this instruction by his royal munificence, condescends also to visit in person the establishments in those towns and villages which he passes through. Mr. Abrahamson has the satisfaction to find the number of adversaries to this method considerably diminished. As a proof of the truth of this assertion, the following anecdote is given in his first reports. In a rural district, in the island of Zealand, many persons complained to the pastor of the new schools, alleging that their children learned rather to play and amuse themselves than to read and write. The pastor having asked for an explanation, the country people answered, that formerly they were obliged

to drive their children from home to compel them to go to school; whereas, now, on the contrary, they were pressing to have their breakfast more early, that they may get off. The pastor invited the parents to attend the school sometimes and hear the recital of the lessons. This they did, and became from that time the most ardent partizans of the schools.

[Silliman's Journal.]

EXTENSION OF EDUCATION.—Switzerland. The *Nouvelliste Vaudois*, (one of the best daily papers published in Switzerland,) of the 7th of October, states, that there has been organized, in the canton of Zurich, a numerous association for the amelioration of the condition of primary schools, and the improvement of teachers. The number of the primary schools, in the canton of Zurich exceeds 400; during the last twenty years, the government has devoted 17,000 francs to the instruction of teachers; 30,000 in the construction of new school houses; 27,000 in aid of the education of the poor. Independently of the moderate salaries allowed the primary teachers, there exists a fund of 49,500 francs, destined for the relief of those who have need of charitable aid.

In the prefecture of Alderfugen, in the same Canton, a society of teachers has existed for six years, who assemble periodically, with the view of communicating the experience mutually acquired in the practice of the honourable functions of instruction.

In the Canton of Basle, the teachers have formed a society of *mutual assurance*. By the payment of an admission fee, and annual assessment, every teacher may insure to his wife assistance after his death, and to his children a suitable education.

DECIPHERING OF HIEROGLYPHICS. Professor Seyffarth of Leipzig, who has been employed in deciphering the Egyptian Antiquities at Rome, states, that he has discovered all the dynasties of Egypt, from Menos to the times of the Romans; that he can show that Osiris was a real person; that he has found the picture of a Jew in bonds, and other allusions to the state of slavery to which the Jews were reduced. He adds, that he has found the Old and New Testaments in the Sefitic, and the Pentateuch in the Memphitic dialect; the acts of the councils of Nicosa in the Coptic language; Coptic glossaries and grammars in the Arabic language; and a Mexican manuscript in hieroglyphics, from which he infers, that the Mexicans and the Egyptians had intercourse with each other from the remotest antiquity, and that they had the same system of mythology.

EGYPTIAN ANTIQUITIES IN THE LIVERPOOL MUSEUM. In the last number of the *Edinburgh New Philosophical Journal*, we find the following interesting information, communicated to the editor by our scientific townsman, Dr. Trail:—We have in our museum many fine Egyptian antiquities; among these is a beautiful papyrus, found in the hand of a mummy. It is upwards of twenty feet long, the hieroglyphics beautifully executed, and interspersed with numerous pictures. One of these is a representation of the Egyptian Last Judgement, as described by Diodorus Siculus; in which the spirit of the deceased is ushered by a genius before the god *Thoth*, who sits with his tablets, writing down the result of a trial, then before him, in which the deceased are weighed in a balance, the vibrations of which are intently watched by *Cerberus*. In an upper compartment, the happy issue of the trial is announced by the introduction of the human spirit, under the guidance of the same genius *Osiris*. We have an unrolled head of a mummy, a young female, with high thin nose, and long auburn ringlets, confirming the opinion of Cuvier, Blumenbach, and others, that the Egyptians (of the era at least, of this mummy) were not negroes. We have also several mummies' shoes, and a beautiful sandal of plaited palm leaves, all which are made *right and left*, so that even this modern fashion has had an Egyptian origin. I have, in my possession, several Egyptian antiquities, among the rest, an exquisite bronze figure of Harpocrates, with his finger on his lips, and the sacred beetle on his head. The contour of the body, and the grace of the head are, quite Grecian.

POETRY.

DEATH AND THE WARRIOR.

From the new edition of "Death's Doings."

BY MRS. HEMANS.

"Ay, warrior, arm! and wear thy plume
On a proud and fearless brow!
I am the lord of the lonely tomb,
And a mightier one than thou!

Bid thy soul's love farewell, young chief!
Bid her a long farewell!
Like the morning's dew shall pass that grief—
Thou comest with me to dwell!

Thy bark may rush through the foaming deep,
Thy steed o'er the breezy hill;
But they bear thee on to a place of sleep,
Narrow, and cold, and chill!"

"Was the voice I heard thy voice, O Death?
And is thy day so near?
Then on the field shall my life's last breath
Mingle with Victory's cheer!

Banners shall float with the trumpet's note,
Above me as I die!
And the palm tree wave o'er my noble grave,
Under the Syrian sky.

High hearts shall burn in the royal hall,
When the minstrel names that spot;
And the eyes I love shall weep my fall—
Death! Death! I fear thee not."

"Warrior! thou bearest a haughty heart,
But I can bend its pride!
How shouldst thou know that thy soul will part
In the hour of Victory's tide?

It may be far from thy steel-clad bands,
That I shall make thee mine;
It may be lone on the desert-sands,
Where men for fountains pine!

It may be deep amidst heavy chains,
In some strong Paynim hold—
I have slow dull steps and lingering pains,
Wherewith to tame the bold!"

"Death! Death! I go to a doom unblest
If this indeed must be!
But the cross is bound upon my breast,
And I may not shrink for thee!

Sound, clarion, sound!—for my vows are given
To the cause of the holy shrine;
I bow my soul to the will of Heaven,
O Death! and not to thine!"

ON LEAVING KENTUCKY.

By Mrs. HOLLEY.

Farewell to the land in which broad rivers flow,
And vast prairies bloom as in Eden's young day!
Farewell to the land in which lofty trees grow
And the vine and the mistletoe's empire display!

Farewell to the land, at whose call I deserted
A dearly loved home and the place of my birth!
In sorrow I met thee, with eyes half-averted;
In sorrow I quit thee, thou bright spot of earth!

Thou land of my sojourn a brief term of years,
As a step-child I love thee for favors oft shown;
And as dim in the distance thy blue mist appears,
My heart's warm emotion thy power shall own,

With the wide world to rove as in life's early day,
But with spirits less buoyant as chastened by time,
Reflecting in sadness, I tread the lone way,
With no home in the vista on which to recline.

Farewell halls of science, where learning long strove
To maintain her dominion o'er minds wild and free!
May your seats still the science of intellect prove,
And your sons of the state the bright ornament be!

Shrubs and trees, which I've planted and nurtured with care
Geraniums, roses and myrtles, adieu!
Who your first fruits and flowers hereafter will share,
And who will o'er show such devotion to you?

Should the rude or the thoughtless invade your domain,
And ravage the scenes where my fancy will dwell,
Who then with new beauty will clothe you again,
And who will protect your young buds as they swell?

To the church, too, farewell, where in weekly devotion
My heart and my voice in full union were
With the organ's deep tones, as with lively emotion
I joined in the concert of praise and of prayer.

But how to the friends, who have cherished me ever,
Shall I utter the word, or but think we must part!
Let destiny rule as she chooses, O never
Shall their sacred remembrance be torn from my heart.

May they too forget not they once loved the stranger,
Whatever her mood was, grave, gay, or serene;
Though a pilgrim to be, in far countries a ranger,
She will still love to dwell on the days that have been.

In memory's page let her faults leave no trace,
Or be with the mantle of kindness veiled o'er,
If aught good and laudable find there a place,
Let partial affection still add to the store.

May peace round your dwellings her influence shed,
And happiness open new treasures for you,
Till at length from these mansions thy spirits have fled,
And we all to this world bid a final adieu!

Lexington, March 1827.

WOMAN.

BY FITZ-GREEN HALLACK.

[Written in the Album of an Unknown Lady.]

Lady, although we have not met
And may not meet beneath the sky;
And whether thine are eyes of jet,
Gray, or dark blue, or violet,
Or hazel—heaven knows, not I;

Whether around thy cheek of rose
A maiden's glowing locks are curled,
And to some thousand kneeling beaux,
Thy frown is cold as winter snows,
Thy smile is worth a world;

Or whether, past youth's joyous strife,
The calm of thought is on thy brow,
And thou art in thy noon of life,
Loving, and loved, a happy wife,
And happier mother now,

I know not—but whatever thou art,
Whoe'er thou art, were mine the spell,
To call Fate's joys, or blunt its dart,
There should not be one hand or heart
But served or wished thee well.

For thou art Woman—with that word
Life's dearest hopes and memory come,
Truth, Beauty, Love—in her adored,
And earth's Lost Paradise restored,
In the green bower of home.

What is man's love? His vows are broke
Even while his parting kiss is warm—
But woman's love all change will mock,
And, like the ivy round the oak,
Clings closest in the storm.

And well the poet at her shrine
May bend, and worship while he woos;
To him she is a thing divine,
The inspiration of his line,
His loved one and his muse.

If to his song the echo rings
Of Fame—'tis woman's voice he hears;
If even from his lyre's proud strings,
Flow sounds like rush of angel wings,
'Tis that she listens while he sings,
With blent smiles and tears.

Smiles,—tears,—whose blest and blessing power,
Like sun and dew o'er summer's tree,
Alone keeps green through Time's long hour,
That trifier thing than leaf or flower,
A Poet's immortality.

LONDON LYRICS.

THE LEES AND THE LAWSONS.

If you call on the Lees, north of Bloomsbury-square,
They welcome you blandly, they proffer a chair,
Decorously mild and well bred:
Intent on their music, their books, or their pen,
Employment absorbs their attention, and men
Seem totally out of their head.

If you call on the Lawsons, in Bloomsbury-place,
No fabric of order you seem to deface,
No sober arrangement to break,
They lounge on the sofa, their manners are odd,
Men drop in at luncheon, and give them a nod,
Then run to the Sherry and cake.

The house of the Lees has an orderly air,
It sets to its brethren of brick, in the square,
A model from attic to basement:
The knocker is polished, the name is japanned,
The step, unpolluted, is sprinkled with sand,
White blinds veil the drawing-room casement.

The house of the Lawsons is *tout-à-fait* chose,
It certainly proffers no air of repose,
For one of the girls always lingers
Athwart the veranda, alert as an ape,
To note to her sisters the forthcoming gape,
Be it monkeys, or Savoyard singers.

Whenever the Lees to the theatre stray,
The singers who sing, and the players who play,
Attentive, untalkative, find them:
With sound to allure them, or sense to attract,
They rarely turn round, till the end of the act,
To talk with the party behind 'em.

The Lawsons are bent on a different thing:
Miss Paton may warble, Miss Ayton may sing,
To listeners tier above tier:
They heed not song, character, pathos, or plot,
But turn their heads back, to converse with a knot
Of dandies who lounge in the rear.

In life's onward path it has happen'd to me
With many a Lawson, and many a Lee,
In parties to mix and to mingle:
And somehow, in spite of manures and plans,
I've found that the Lees get united in banus,
While most of the Lawsons keep single.

Goy Hymen is like the black maker of rum—
"De more mass call me de more I want come,"
He flies from the forward and bold:
He gives to the coy what it keeps from the kind;
The maidens who seek him, the maidens who find,
Are cast in an opposite mould.

DECEMBER AND MAY.

From T. Hood's Whims and Oddities.

"Crabbed age and youth cannot live together."
Shakspeare.

Said Nestor to his pretty wife, quite sorrowful one day,
"Why dearest will you shed in pearls those lovely eyes away?
You ought to be more fortified." "Ah, brute, be quiet, do;
I know I'm not so fortified, nor fiftyfold as you!"

"Oh, men are vile deceivers all, as I have ever heard,
You'd die for me, you swore, and I—took you at your word:
I was a tradesman's widow then—a pretty change I've made,
To live and die the wife of one, and widower by trade!"

"Come, come my dear, these flighty airs declare, in sober truth,
You want as much, in age, indeed, as I can want in youth;
Besides you said you lik'd old men, though now at me you huff,"
"Why yes," she said, "and so I do—but you're not old enough."

"Come, come, my dear, lets make it up, and have a quiet hive;
I'll be the best of men, I mean, I'll be the best alive!
Your grieving so will kill me, for it cuts me to the core,"
"I thank ye, sir, for telling—for now I'll grieve thee more."

LACONICS.

ATTRIBUTED BY BOSWELL TO DR. JOHNSON.

Knowledge always desires increase: it is like fire, which must first be kindled by some external agent, but which will afterwards propagate itself. Let it be remembered, that the efficacy of ignorance has been long tried, and has not produced the consequences expected. Let knowledge, therefore, take its turn; and let the patrons of privation stand awhile aside, and admit the operation of positive principles.

Every man is dorn *cupidus*—desirous of getting: but not *avarus*—desirous of keeping.

All censure of a man's self is oblique praise. It is in order to shew how much he can spare. It has all the invidiousness of self-praise, and all the reproach of falsehood.

There is nothing more likely to betray a man into absurdity, than *condecension*: when he seems to suppose his understanding too powerful for his company.

With an unquiet mind, neither exercise, nor diet, nor physic can be of much use.

Resolve not to be poor: whatever you have, spend less. Poverty is a great enemy to human happiness; it certainly destroys liberty, and it makes some virtues impracticable, and others extremely difficult.

Semita certe,
Tranquille per virtutem patet unica vitz. [Juv. Sat.]

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

MASONIC ODE.

BY BR. H. T. FARMER, M. D.

Set to music by Br. Wm. Nash, and sung at the celebration in the city of Charleston, S. C. December 27, 1826.

The world was darkness. No imperial flowers
Bloomed on her mounds, or blossomed in her bowers.
Fate strewed her curses on the murky wind,
And nought was left to cheer or soothe the mind.

Oh, Charity! thou harbinger of Light,
Thou sun by day, and polar star by night,
Haste to the orb which pale misfortune flies,
Where sorrow falters, and where misery dies.

Is there a hand which blunts the poisoned dart,
And turns its baleful influence from the heart?
Is there a talisman whose magic power
Can change the desert to the vermil bower?

Is there a shrine, where winter-woe is driven
To seek from tranquil climes the bliss of Heaven?
Yes! there is one, immutable, divine,
And sorrow greets it at the Mason's shrine.

A DISCOURSE,

ON THE PEACEFUL GENIUS OF FREEMASONRY.

Delivered at the Consecration of a Lodge.

BY THADDEUS MASON HARRIS.

"Let us therefore, follow after the things which make for peace, and things wherewith one may edify another."—Romans xiv. 19.

The Apostle, perceiving that some dissensions had arisen between the Jewish and gentile converts with regard to the perpetuity of the Hebrew ritual and the observance of its ceremonies, in this chapter assumes the office of peace-maker. He attempts to allay the uncharitable spirit they discovered, and warmly recommends to the brethren the exercise of mutual forbearance, candour, charity and love. And to restrain their censoriousness, and show them the impropriety of judging and condemning each other, he reminds them that they all must stand before the judgement seat of Christ, to whom alone men are accountable for their religious principles and conduct.

The passage chosen for our text is one of his friendly cautions. It calls them away from emulations and strife, and solicits their utmost endeavours in the promotion of mutual peace and edification.

The recommendation is proper, not only for those to whom it was immediately addressed, but for Christians in all ages. Indeed, so long as men will think and act differently, and dislike and displease each other for doing so; so long as jarring interests and discordant passions divide and disturb them: so long will it be necessary to recal their attention to the duties of love, the advantages of union and charms of peace. And such is the humble object of the present discourse. In pursuing it, I shall attempt to explain the duty here recommended, in general terms; and then show how it belongs to us in our individual, social, christian, and masonic characters.

I. To pursue the things which make for peace and mutual advantage, is, in general terms, to endeavour so to demean ourselves, in the various stations and offices of life, as to promote a friendly understanding and correspondence among those with whom we converse; and to prevent, as much as possible, all mistakes and jealousies, all contentions and strife.

Such are the imperfections of our nature, such the diversities or prejudices of our education, and in such different lights do we see the same thing,

that it is not probable we ever should concur exactly in the same opinions. Yet that we should make allowances for these things, and exercise charity and candour for each other, is but reasonable and just: especially since the things in which we all agree, are vastly greater and of higher importance than those in which we differ. Therefore, to censure or condemn others, because they think differently from us in small or indifferent matters, is as unreasonable as to be dissatisfied with them because they have not our features or complexion.

But, to be more particular,

II. In order to promote the amicable and pacific disposition and conduct our text recommends, we ought, as individuals, to make it our habitual endeavour to cultivate and cherish all those mild and friendly dispositions which bring serenity into our own bosoms and diffuse it to all around us; and to suppress and restrict all those inclinations and passions which inflame our sense of injuries, or excite a spirit of resentment, unkindness or animosity. Every lust, passion, and inordinate affection, tends to create discord, and sow dissension. From pride cometh contention; from ambition, wars and fightings: and discontent, envy, anger, and malice, are those roots of bitterness which spring up, and are fruitful in all the disorders of private, social, and public life.

Whoever is not at peace with his own self, will never be at peace with his fellow creatures.

If the heart be full of rancour, the conduct will be full of malignity.

But he who is kindly affectioned, who hath the rule over his own spirit, will be under no temptation to disturb the peace of his neighbour. His carriage will be always inoffensive, his manners gentle, and his conduct obliging. And thus will he conciliate universal estimation and love, aid the cause of general harmony and peace, and edify all around him by his good disposition, example, and conduct.

III. In our social character and relations we ought, also, to pursue the plans of peace and mutual edification.

Men are born for society, and designed as helps and comforts to each other. Strifes and debates, resentment and wrath, are discordant with this original destination and intent. They unsocialize man. They are destructive of all union and harmony.

The very nature and situation, the interests and happiness of mankind, shew the importance and necessity of pursuing the things which make for peace, and things wherewith one may edify another.

The duty itself implies mutual love and charity. He who observes it will be kind and condescending. His heart will glow with benevolence. His arms will be extended to the large embrace of philanthropy, or the liberal bestowment of generosity. In his intercourse with his fellow men he will show the most obliging attention to their concerns, and the most active readiness to promote their welfare. He will not needlessly give, nor take offence. He will use great compliance in all matters of indifference, and rather suffer inconvenience than excite uneasiness. He is not easily provoked, but suffereth long and is kind. He expects to meet with little affronts, and to have to deal sometimes with disobedient tempers. But he is not apt quickly and upon every slight occasion to conceive a displeasure, or to take fire at every provocation or neglect. He will pacify the resentful by a soft answer, or disarm them by an obliging courtesy. In short, he is desirous and ready upon all occasions to make up differences, to rectify misunderstandings, to soften prejudices and to restore harmony and good will between any persons and in any cases which fall within the compass of his knowledge.

Such is the character of him who endeavours as much as lieth in him, to live peaceably with all men, and to promote their peace and welfare.

As members of civil society it becomes us, likewise,

to lead quiet and peaceable lives; to promote the public tranquility and prosperity; to pay a due regard to the laws of our country; to show a high respect to our rulers, and a generous confidence in their wise administration, to avoid a factious and party spirit; and, by proving ourselves at all times the friends of order and of peace, to build up and sustain our national security, liberty and independence.

IV. CHRISTIANS, more especially, should follow after the things which make for peace and tend to mutual edification. They owe this to the common cause of the gospel. They are by their profession all "members of one body," called "in one hope," servants of "one Lord," disciples of the same heavenly teacher, instructed in "one faith," introduced in "one baptism," and consecrated to the "one God and father of all;" partakers in the same promises, and fellow heirs to the same glorious inheritance. What bonds of union are these! What considerations can prevail to divide those thus connected together by the most sacred ties! Shall they not always love with "one heart and one soul," and "keep the unity of faith in the bonds of peace?" Convinced of the propriety of such a temper and conduct of love and charity, let us, my fellow christians, make it the fixed purpose of our hearts to avoid all strifes and contention; to sacrifice all little party distinctions for mutual edification, for advancing the common interest; to cultivate and cherish the kind affections; and to do all in our power to promote and preserve concord and unanimity, harmony and peace, that we may "excel to the edifying of the church," and in the "love of the brethren."† And be it remembered, that, while we follow after the things which make for peace, we adorn the holy religion we profess, as well as evidence to the world that we belong to that Jesus who is "the Prince of peace," and who has said that all men may know his disciples by the love they bear to one another. So that LOVE is the badge and mark of the true christian; PEACE is his disposition, and EDIFICATION his desire.

Acknowledged and accepted in this character as the "children of God," may we all hereafter share "the fruits of righteousness, which are sown in peace for them that make peace," in a world where goodness flourishes in bliss eternal!

V. Lastly. As MASONS let us never neglect to pursue the things which make for peace and mutual edification. The very genius and design of our institution assigns this duty: its credit and prosperity demand it of us. Recollect for one moment, my brethren, the peculiar spirit, the appropriate object of our association. Is it not to form us to the habits and the most liberal exercise of charity and candour, forbearance and placability, humanity and peace? Are we not instructed to wear "the ornament of a meek and quiet spirit," and to retain "the law of kindness in our mouth?" Are we not instructed not only to "dwell together in unity," but to "follow peace with all men:" not only to "bear one another's burdens," but to "fulfil the whole law of love:" not only to make the kindest allowance for a brother's infirmities, but to condescend to the peculiarities of other men, excuse their imperfections, and apologize for their failings? Yes! We are taught to suppress private prejudices and party spirit; to forget animosities and to listen to the voice of reconciliation; to soften into gentleness and complaisance, sympathy and love; and to prepare for all the duties of universal benevolence. And must not the cultivation of such dis-

* "Donare inimicitias Reipublicæ"—to sacrifice all private animosities and discords to the public good, was the advice of the ancient Romans for the security of their civil state.

† Pope Alexander, in a letter recommending Peace between the kings of France and England, in 1162, has the following excellent remark: "Inter cetera bona, quæ hominem amabilem proximo, et placidum Deo reddunt, illud specialiter acceptum fore credimus, quod caritatem cordibus inserit, et animarum vinculum operatur." RYMER, Fœdera, tom. p. 21.

positions, and habits have the most happy influence on general society? Must not men thus instructed be the friends of social tranquility and public happiness? Certainly! And FREE MASONS have always proved so. For ages they have maintained this character and merited this praise. And we may be assured that all suspicions or declarations to the contrary, are unfounded, undeserved, and unjust. Be it your care, my beloved brethren, to show that they are so, by a conduct that will reflect honour upon the order. Shun whatever would fix a stigma on its character, or raise a doubt of its worth. "Walk in wisdom towards them that are without." Do not needlessly excite their jealousies, nor willingly provoke their displeasure. Convince the world, by an amiable deportment, a wise demeanour and good example, that while masonry discourages all imprudence and forbids all vice, it assists the progress and the perfection of human virtue and happiness.

The officers and brethren of the lodge this day consecrated will be pleased to accept my affectionate salutations.

I congratulate you on the auspicious occasion! May all joy and happiness ever attend you! May the beautiful edifice you are erecting, be the sanctuary of piety, the asylum of virtue, the delightful abode of love! There may wisdom exalt her throne: there "reign silence and peace!" And may you improve the instructive lectures of the craft to the best purposes, and with the happiest effect; till having passed the trials of this probationary state, you shall be raised to the temple not made with hands, eternal in the heavens, where all is harmony, and love, and bliss, uninterrupted and eternal!

"Finally, brethren, farewell. Be perfect, be of good comfort, be of one mind, live in peace; and the God of love and peace be with you!" Amen.

ELECTIONS.

Grand Royal Arch Chapter, of the State of Maryland.

Elected at the annual communication in the city of Baltimore, which closed on the 26th inst: Joseph K. Stapleton, of Baltimore, M. E. G. H. P.; Ephraim Barker, do. E. D. G. H. P.; Otho H. Williams, Hagerstown, E. G. K.; George Keyser, Baltimore, E. G. S.; Thomas Phenix, do. E. G. Treas.; C. S. Williams, do. Rev. G. Chaplain.

Grand Lodge of the State of Maryland.

Elected at the annual communication in the city of Baltimore, which closed on the 25th ult: Benjamin C. Howard, of Baltimore, M. W. G. M.; William Steuart, do. R. W. D. G. M.; Otho H. Williams, Hagerstown, R. W. S. G. W.; Dennis Claude, M. D. Annapolis, R. W. J. G. W.; Thomas Phenix, Baltimore, R. W. G. Sec.; E. G. Woodyear, R. W. G. Treas.; C. S. Williams, do. Rev. G. Chaplain.

MASONIC ANNIVERSARY.

The Nativity of St. John the Baptist will be celebrated by Mount Zion Lodge, at Barre, Me. on Saturday, the 23d of June next. Neighbouring Lodges, Encampments, and Chapters, and the Brethren generally, particularly Clergymen, are respectfully invited to attend with appropriate clothing, and officers with their insignia. An Address may be expected from M. E. M. Laurence, Esq. of Belchertown. The procession will form at 10 o'clock, A. M. from the Hall of L. Sibley Esq. by whom, and Comp. D. A. Robinson, suitable accommodations and refreshments will be provided, at \$1, and tickets supplied. Suitable accommodations for ladies connected with Masons, will be found at the house of Comp. A. Black, at 50 cents. Horse keeping, by L. Sibley, Esq. EBENEZER PERRY, Secretary of Mount Zion Lodge.

Hardwick, May 30, 1827.

The Installation of WARREN LODGE, No. 84, will take place at Milford, Union co. Ohio, on the 26th of June next. A public celebration in honour of the Nativity of St. John the Baptist, will also be held.

Members of the Masonic Institution generally, and especially those of the neighbouring Lodges are requested to attend.

May 15.

DAVID BURNHAM, Sec'y

CAUTION.

At a regular meeting of Freedom Lodge, No. 482, held in the town of Freedom, county of Cataraugus, and State of New-York on the 10th of May, 1827.

Resolved, That the conduct of BICKNEL COLE, who is a master mason, and a member of this Lodge, be taken into consideration and reported. Whereas said Bicknel Cole has left his wife, who has now seven small children in a destitute situation—seduced and clandestinely carried off a young girl, of

before unblemished character, gone to parts unknown: This is therefore, to warn all Lodges against being imposed upon by him, and to request any Lodge or any individual member who should recognise the said Bicknel Cole, to report to us the place of his retreat. Said Cole was 27 years of age, of a middling stature, well proportioned, black hair inclining to curl, black eyes, and fresh countenance, quick in his motions, and easy in his address. He followed the mercantile business while here, and carried away a load of dry goods, under the pretence of being absent several months to sell them out.

JOHN W. LEONARD, W. M.

BARBER LAWSON, Sec'y.

(To Editors of newspapers, particularly in the western states, are requested to insert the above, that justice may overtake the offender.)

SCIENCE AND THE ARTS.

WOODEN RAIL ROADS.

A correspondent of the Louisville (Ky.) Focus, expresses his gratification at the prevailing excitement in favour of railways, which he traces to the project originated in Baltimore, and proposes the construction of wooden ones. His plan is, to lay sawed timbers of five inches by twelve, and six feet long, with the edge upwards, on stone pillars a foot high, and six feet apart; the wheels to be made of the hardest wood, and of the same breadth as the rail on which they run. Between Louisville and Lexington, suitable timbers could be furnished at the rate of \$2 for a hundred feet in length, which would make the expense of timbers for every hundred feet of road, \$4, or \$212 a mile. The stone pillars, he thinks would not cost more than 5 cents a yard, or \$88 a mile. The whole expense of the work, exclusive of fastening the timbers, and planing the upper edge, would therefore be \$300 dollars a mile; and admitting that a road betwixt Louisville and Lexington would be a hundred miles in length, the whole cost would be \$40,000.

To meet the cost of renewal, and afford ten per cent, such a road must yield a profit of \$10,000 a year. As each good road-wagon costs the community, by the writer's estimate, \$1000 a year, the actual cost of keeping ten wagons, would sustain the road. If on the present road, they amount only to one hundred, the present expense of transportation would be reduced to one-tenth on the rail road. Again: one horse draws fifteen tons on an iron railway, thirty miles a day. Supposing the friction on wood so much greater, that he could draw only ten tons, still, as the expense of a man and horse at \$1 a day, for three and a half days, would be but \$3 50, the cost of transport would be one and three quarter cents per hundred, while the present cost is 70 cents per hundred.

With regard to the wear, the writer thinks that the breadth of the wooden wheels, and the use of a light carriage would obviate this difficulty; and that paint or some other composition, might prevent the rotting of the timbers, where they join, and rest on pillars. The first railways in England, he adds, were of wood, and the material was changed on account of its great cost in that country. The wood work of a road 100 miles long would not cost more than some steam boats; but the profits of such a road, in the same route, would be very much greater. What accuracy there may be in these calculations we do not pretend to know; but they show what interest is awakened on this subject, and even an erroneous estimate may have its use, by bringing out the truth from some other quarter.

JACOB PERKINS.

The London Journal of Arts and Sciences for April 1827, furnishes an interesting article on Mr. Perkins' improved steam engine. It appears from the Journal referred to, that Mr. Perkins has surmounted the many practical difficulties, with which he had to contend, in the construction of his engine, and that on the first of April, it had been several days in successful operation. The engineers who had attentively witnessed the performance, were unable to detect any fallacy, in the application of principles or in the operation of the engine. We may now safely conclude, as conjecture and speculation must always give way to experiment, that the long controversy respecting the actual power, perfect safety and great economy of this engine, is soon to be settled forever. Consequently the character of Mr. Perkins as a mechanic will either rise with the tremendous power of his engine or

descend enveloped in the high steam of his new generator. Should Mr Perkins' engine, however, possess only one of the qualifications alledged: that of absolute safety, it must then be considered one of the greatest discoveries, that has marked this or any other age. When we consider that a great proportion of the travelling in this country as well as in Europe is performed by steam-boat navigation, and that a large part of the machinery in different manufacturing establishments is also driven by steam; and that no form of the hitherto constructed, either high pressure or low pressure, has been exempt from those destructive explosions, by which too many valuable lives have already been destroyed, if Mr. Perkins has discovered the means of preventing the frequent occurrence of those awful and distressing scenes, resulting from the bursting of the boilers on board of steam boats or other works, it must be acknowledged that he will, by this valuable invention, render services to the world, of the very highest order, so far as the cause of humanity is concerned.

Mr. Perkins has taken several orders for his high pressure safety engine, and guarantees the saving of half the fuel, expended by the engines commonly in use, for any given power, the weight not to exceed one-third of the ordinary condensing engine, nor to occupy more than one third of the bulk, and always secure from the dangerous effects of explosion.

TOPOGRAPHY.

THE ARKANSAS,

ITS GRAPES AND CYPRESS SWAMPS.

We continued to float on through this deep and inundated forest, when at right angles to our course we discovered another opening. It was the Arkansas, moving on with a majestic current of waters of the colour of arnotto die. This is, next to the Missouri, the largest and most interesting tributary of the Mississippi, and from its mouth by its meanders to the mountains, is commonly computed about 2,000 miles. Its course has been traced in these mountains at least five hundred miles, and it is believed that the source or the Arkansas have not yet been explored by our people. One singularity distinguishes this river from any other of the United States. Where it winds along among the mountains, all agree that it is a broad and deep river, and carries a great volume of water. But no sooner does it emerge from the shelter of woods and mountains into a boundless and arid plain, composed to a great depth of quicksands, than it begins to disappear, and in a hundred miles from the very elevated mountain, near which it enters upon the plain, it is fordable during the summer. Still lower down it is a stream, according to the well known phrase of the country "sunk in the sand;" that is, it trickles amidst the banks of sand and pebbles, so as in many places to exhibit a dry channel of burning sand from bank to bank.

Here on these vast sandy plains, which will for ages be the Syrtes of America, the home of elks and buffaloes, are the wild fields of those rich native grapes, that all travellers in these regions have spoken of in terms of such admiration. They are said to be conical in shape, large, of a beautiful blue, and transparent. The driving sands rise round the stem, that advances still above the sand. This sand performs the best office of pruning, covering the superfluous growth and foliage, inflicting no wounds and affording a most admirable method of ripening the clusters in the highest perfection by the reflection of the sun from the sand. In the expedition of Major Long, the sweetness of these grapes is recorded, and other travellers have borne the same testimony. They speak of vast tracts covered with these rich clusters. I shall have occasion elsewhere to speak of the classes of this native grape, which are so much extolled in the internal provinces of Spain. They are common through the pine woods of Louisiana, and known by the name of the pine woods grape.

This grape ripens in June. It would probably be an admirable grape to cultivate. There are also varieties of autumnal grapes, and wonderful accounts are given of the immense quantities of grapes that ripen on the sand plains at the sources of Red

river. The hunters assert that they are richer than any cultivated grape.

At the distance of a mile or two from the river, there are first thick cane brakes, then a series of lakes, exactly resembling the river in their points and bends, and in the colour of their waters. These lakes are covered with the large leaves, and in the proper season, the flowers of the "nymphaea nelumbo," the largest and most splendid flower that I have ever seen; I have seen them of the size of the crown of a hat; the external leaves of the most brilliant white and the internal of a beautiful yellow. These lakes are so entirely covered with the large conical leaves, nearly of the size of a parasol, and a smaller class of aquatic plant, of the same form of leaves, but with a yellow flower, that a bird might walk from shore to shore, without dipping its feet in water; and these plants rise from all depths of water up to ten feet.

Beyond these lakes there are immense swamps of cypress, which swamps constitute a vast portion of the inundated lands of the Mississippi and its waters. No prospect on earth can be more gloomy. The pæcific Styx or Acheron had not a greater union of dismal circumstances. Well may the cypress have been esteemed a funeral and lugubrious tree. When the tree has shed its leaves, for it is deciduous, a cypress swamp, with its countless interlaced branches, of a hoary grey, has an aspect of desolation and death, that, often as I have been impressed with it, I cannot describe. In summer its fine, short, and deep green leaves invest these hoary branches with a drapery of crape. The water in which they grow is a vast dead level, two or three feet deep still leaving the innumerable cypress "knees as they are called, resembling circular beehives, throwing their points above the waters. This water is covered with a thick coat of green matter, resembling green buff velvet. The mosquitoes swarm above the water in countless millions. A very frequent adjunct to this horrible scenery, is the innocasin snake with his huge scaly body lying in folds upon the side of a cypress knee; and if you approach too near, lazy and reckless as he is, he throws the upper jaw of his huge mouth almost back to his neck, giving you ample warning of his ability and will to defend himself. I travelled forty miles along this river swamp, and a considerable part of the way in the edge of it; in which the horse sunk at every step half up to his knees. I was enveloped for the whole distance in a cloud of mosquitoes. Like the ancient Avernus, I do not remember to have seen a single bird in the whole distance, except the blue jay. Nothing interrupted the deathlike silence, but the hum of mosquitoes.

There cannot be well imagined another feature to the gloom of these vast and dismal forests, to finish this kind of landscape, more in keeping with the rest, than the long moss, or Spanish beard; and this funeral drapery attaches itself to the cypress in preference to any other tree. There is not that I know of an object in nature, which produces such a number of sepulchral images as the view of the cypress forests, all shagged, dark and enveloped in the hanging festoons of moss. If you would inspire an inhabitant of New England, possessed of the customary portion of feeling, with the degree of home-sickness, which would strike to the heart, transfer him instantly from the hill and dale, the bracing air and varied scenery of the north, to the cypress swamps of the south, that are covered with the long moss.

This curious appendage to the trees is first visible in the cypress swamps about thirty-three degrees, and is seen thence to the gulf. It is the constant accompaniment of the trees in deep bottoms and swampy lands, and seems to be an indication of the degree of humidity in the atmosphere. I have observed that in dry and hilly pine woods, far from streams and stagnant waters, it almost wholly disappears; but in the pine woods it reappears as you approach bottoms streams and swamps. I have remarked too, that where it so completely envelops the cypress, as to show nothing but the festoons of the dark grey moss, other trees are wholly free from it. It seems less inclined to attach itself to the cotton wood trees than to any other.

This moss is a plant of the parasitical species, being propagated by seed, which forms in a capsule that is preceded by a very minute but beautiful pur-

ple flower. Although when the trees that have cast their leaves are covered with it, they look as if they were dead, yet the moss will not live long on a dead tree. It is well known that this moss, when managed by a process like that of preparing hemp or flax, separates from its bark, and the black fibre that remains is not unlike horse hair, elastic, incorruptible, and an admirable and cheap article for mattresses, of which are formed most of the beds of the southern people of this region.

BIOGRAPHY.

MR. CANNING.

Mr. Canning was born at Paddington, near London, in 1771. His paternal ancestors were originally seated at Foxcote, in Warwickshire, where a branch of the family, we believe still remains. Queen Elizabeth conferred the manor of Garvagh, in the county of Derry, in Ireland, on a younger son of the Foxcote family, who thereupon moved into the sister island, and up to the father of the Premier, his descendants continued to reside there. Stratford Canning, Esq. of Garvagh, the grandfather, had two sons, George and Paul, the elder of whom displeased his father by marrying a dowryless beauty, was exiled from the maternal roof with an allowance of £150 a year.

Under these circumstances, he came with his lady to London, and, determining to study the law, entered himself of the Middle Temple. He died poor on the 11th of April, 1771, a few days after the birth of his son George, and was interred in the new burial ground of St. Mary-le-bone, where his tomb, with the following inscription was placed by his widow.

"Thy virtue and my woe no words can tell,
Therefore, a little while, my George farewell;
For faith and love like ours Heaven has in store
Its last best gift—to meet and part no more."

His infant son, the subject of this memoir, was placed with a maternal uncle, a respectable wine merchant in the city, who, discovering strong marks of genius, at a very early age, sent him to Eton, where he speedily distinguished himself, and in 1786 became one of the senior scholars.

In 1788, on his removal from Eton, Mr. Canning was entered at Christ Church, Oxford, where he graduated. He there formed a social connexion with several young men of rank, among whom was Mr. Jenkinson, now Lord Liverpool. Having obtained his bachelor's degree, he left the University, and entered himself of the Middle Temple, with intent to study the law. At the same time he obtained admission to a debating society, which met in Bond-street, and by his practice there, acquired that ease and facility in public speaking, which he now so eminently possesses. [*Lon. Free Press.*]

CHARACTER.

PETER PAUL SARPI.

He was honoured by the learned for his great abilities and erudition, and by the good for his integrity. He ably defended the cause of the senate of Venice, against the claims of the Pope to infallibility, and to a power paramount to all other human authority. Compelled by various conspiracies of the vindictive papists to confine himself to his convent in Venice, he wrote the History of the Council of Trent, esteemed a model of historical composition. Convinced of the corruption of the court of Rome, and the artifices of its emissaries, he said, "There is nothing more desirable than to abolish the institution of the Jesuits; the church of Rome will be involved in their ruin; and if Rome be ruined, religion will reform of itself."

In his last illness, which was caused by a wound from a stiletto, said to be inflicted by an emissary from the court of Rome, he received a visit from the doge and senate of Venice. He had merely strength enough to raise himself up in his bed, at their entrance into his apartment; and with his eyes lifted up towards heaven, he exclaimed with his expiring breath, alluding to his dear native city, "*Esto perpetua.*"

THE TRAVELLER.

CHINESE TEMPLE.

At eleven o'clock we went to visit the temple. It is built on the side of the mountain, and according to the rules of Tibetan architecture, with the front towards the south. At the foot of the declivity there is a well, near which flows a stream that rises in the neighbouring mountains. The temple is about 250 toises in circumference, and is surrounded with a wall, which, as well as the whole edifice, is built of brick painted red: the roofs are of pan tiles. At the main southern entrance, two high beams or masts are planted in the ground. Behind the wall on the east side, a wooden house contains the dining room of the lamas, at the time when their assemblies are held there, and on the west side are seven tents, the residence of the lamas attached to the service of the temple. Idam's nephew, who accompanied us, called the porter, who led us through the principle entrance into the vestibule. There were here four wooden idols of gigantic stature, representing warriors in full armour: the first had a red face, and held in his hands a twined serpent; the face of the second was white, he had in his right hand a parasol, which in china serves to distinguish ranks, and in his left hand a mouse; the third had a blue face, and carried a sword in his hand; the fourth, whose face was yellow, was playing on a lute. These bourkhans, or sacred persons, were named Ioulkoursoun, Patchibou, Tchemidzan, and Nontossere. They are tengri, or Mahu-ransakhan, who live two thousand five hundred years, and are a hundred and twenty fathoms in height. They preside over the temporal happiness of mortals, and dwell in four different regions of Mount Soumer, which is the centre of the universe and the abode of the guardian angels. This mountain has seven gilded summits, and extends a hundred thousand wersts towards each of the four yards of the world. Having crossed a court-yard, paved with bricks, we entered the principle temple, where the lamas generally assemble to pray. In winter, however, they do not meet on account of the cold. About the wooden pillars in the inside are standards, drums and kadals, the walls are hung with silk, upon which are representations of the most revered saints. Opposite to the door, on the north walls, are large copper idols; near them are places for the elder lamas, resembling arm-chairs, with cushions covered with yellow satin; carpets of felt are spread upon the floor, for the inferior priests. Every thing is kept very neat and clean. Behind this temple there is a small building, against the northern wall of which stands the gilt idol of Boudha. This temple like the first, is adorned with a great number of kadaks. A large table, with dishes full of butter and millet, stands before the idol. The Mongol, Hindoo, and Chinese priests are of opinion, that the blood of animals does not please the gods, because they abhor destruction. These tables, therefore, supply the place of the ensanguined altars, which among the heathens of the western world, were often stained with the blood even of human victims; a barbarity demonstrative of the ferocity of their priests. We saw upon the table several cups of gilt copper, filled with iced water and tea, a dish of millet, and near the table a fan made of peacock's feathers. In the third building, at the farther end of the court, they preserve in wooden repositories, the work called Ganjour, which contains the law of Boudha. It is composed of 108 volumes, of which 54 are ranged on the right side of the temple, and the other 54 on the left; each volume contains about 1000 pages. Near the copper idols is the Jom, a book in sixteen volumes. Both these works are in the Tibetan language, and are richly bound. On each side of the last building was a small empty house. These temples were erected by the ancestors of Demit, who have long resided in this country. The chief priest is a young koubiglan, who resides at Ourga for his education. [*Timkowski's Travels.*]

QUIN. Quin thought angling a very cruel diversion; and on being asked why, gave this reason: "Suppose some superior being should bait a hook with venison, and go a quinning; I should certainly bite, and what a figure I should make dangling in the air!"

POPULAR TALES.

A GERMAN ROMANCE.

(Continued.)

In all such amusements the presence of my wife was welcome, nay, eagerly desired, by women as well as men. A kind insinuating manner, joined with a certain dignity of bearing, secured to her on all hands praise and estimation. Besides, she could play beautifully on the lute, accompanying it with her voice; and no social night could be perfect, unless crowned by the graces of this talent. I will be free to confess that I have never got much good of music; on the contrary, it always rather had a disagreeable effect on me. My fair one soon noticed this, and accordingly, when by ourselves, she never tried to entertain me by such means: in return, however, she appeared to indemnify herself while in society, where indeed she always found a crowd of admirers. And now, why should I deny it, our late dialogue, in spite of my best intentions, had by no means sufficed to abolish the matter within me: on the contrary, my temper of mind had by degrees got into the strangest tune, almost without my being conscious of it. One night, in a large company, this hidden grudge broke loose, and by its consequences produced to myself the greatest damage. When I look back on it now, I in fact loved my beauty far less after that unlucky discovery: I was also growing jealous of her; a whim that had never struck me before. This night at table, I found myself placed very much to my mind beside my two neighbours, a couple of ladies, who for some time, had appeared to me very charming. Amid jesting and soft small talk, I was not sparing of my wine; while, on the other side, a pair of musical dilettanti had got hold of my wife, and at last contrived to lead the company into singing separately, and by way of chorus. This put me into ill-humour. The two amateurs appeared to me impertinent; the singing vexed me; and when, as my turn came, they even requested a solo-strophe from me, I grew truly indignant, I emptied my glass, and set it down again with no soft movement. The grace of my two fair neighbours soon pacified me, indeed; but there is an evil nature in wrath, when once it is set agoing. It went on fermenting within me, though all things were of a kind to induce joy and conviviality. On the contrary, I waxed more sullen than ever when a lute was produced, and my fair one began fingering it, and singing, to the admiration of all the rest. Unhappily, a general silence was requested. So then, I was not even to talk any more; and these tones were going through me like a toothache. Was it any wonder that, at last, the smallest spark should blow up the mine? The songstress had just ended a song amid the loudest applauses, when she looked over to me; and this truly with the most loving face in the world. Unluckily, its lovingness could not penetrate so far. She perceived that I had just gulped down a cup of wine, and was pouring out a fresh one. With her right forefinger, she beckoned to me in kind threatening. "Consider that it is wine!" said she, not louder than for myself to hear it. "Water is for mermaids!" cried I. "My ladies," said she to my neighbours, "crown the cup with all your gracefulness, that it be not too often emptied." "You will not let yourself be tutored?" "What ails the dwarf?" cried I, with a more violent gesture, in which I ever set the glass. "Ah, what have you spilt!" cried the paragon of women; at the same time, twanging her strings, as if to lead back the attention of the company from this disturbance, to herself. Her attempt succeeded; the more completely as she rose to her feet, seemingly that she might play with greater convenience, and in this attitude continued preluding. At sight of the red wine running over the table-cloth, I returned to myself. I perceived the great fault I had been guilty of; and it cut me through the very heart. Never till now had music spoken to me; the first verse she sang was a friendly good-night to the company, here as they were, as they might still feel themselves together. With the next verse they became as if scattered asunder; each felt himself solitary, separated, no one could fancy that he was present any longer. But what shall I say of the last verse? It was directed to me alone; the voice of injured love bidding farewell to moroseness and

caprice. In silence I conducted her home; foreboding no good. Scarcely, however, had we reached our chamber, when she began to show herself exceedingly kind and graceful, nay, even roguish; she made me the happiest of men. Next morning, in high spirits and full of love, I said to her: "Thou hast so often sung, when asked in company; as, for example, thy touching farewell song last night. Come, now, for my sake, and sing me a dainty gay welcome to this morning hour, that we may feel as if we were meeting for the first time." "That I may not do, my friend," said she seriously. "The song of last night referred to our parting, which must now forthwith take place: for I can only tell thee, the violation of thy promise and oath will have the worst consequences for us both; and thou hast scoffed away a great felicity, and I too must renounce my dearest wishes." As I now pressed and entreated her to explain herself more clearly, she answered: "That, alas, I can well do; for, at all events, my continuance with thee is over. Hear, then, what I would rather have concealed to the latest times. The form under which thou sawest me in the box, is my natural and proper form: for I am of the race of King Eckwald, the dread Sovereign of the Dwarfs, concerning whom authentic history has recorded so much. Our people are still as of old laborious and busy, and therefore easy to govern. Thou must not fancy that the dwarfs are behindhand in their manufacturing skill. Swords which followed the foe when you cast them after him; invisible and mysterious binding chains; impenetrable shields, and such like ware, in old times, formed their staple produce. But now they chiefly employ themselves with articles of convenience and ornament; in which truly they surpass all people of the earth. I may well say, it would astonish thee to walk through our workshops and warehouses. All this would be right and good, were it not that with the whole nation in general, but more particularly with the royal family, there is one peculiar circumstance connected." She paused for a moment; and I again begged further light on these wonderful secrets; which accordingly she forthwith proceeded to grant. "It is well known," said she, "that God, so soon as he had created the world, and the ground was dry, and the mountains were standing bright and glorious, that God, I say, thereupon, in the very first place, created the dwarfs; to the end, that there might be reasonable beings also, who, in their passages and chasms, might contemplate and adore his wonders in the inward parts of the earth. It is farther well known, that this little race by degrees became uplifted in heart, and attempted to acquire the dominion of the earth: for which reason God then created the dragons, in order to drive back the dwarfs into their mountains. Now, as the dragons themselves were wont to nestle in the large caverns and clefts, and dwell there; and many of them, too, were in the habit of spitting fire, and working much other mischief, the poor little dwarfs were by this means thrown into exceeding straits and distress, so that not knowing what in the world to do, they humbly and fervently turned to God, and called to him in prayer, that he would vouchsafe to abolish this unclean dragon generation. But though it consisted not with his wisdom to destroy his own creatures, yet the heavy sufferings of the poor dwarfs so moved his compassion, that anon he created the giants, ordaining them to fight these dragons, and if not root them out, at least lessen their numbers. Now, no sooner had the giants got moderately well through with the dragons, than their hearts also began to wax wanton; and, in their presumption, they practiced much tyranny, especially on the good little dwarfs, who then once more in their need turned to the Lord; and he, by the power of his hand, created the knights, who were to make war on the giants and dragons, and to live in concord with the dwarfs. Hereby was the work of creation completed on this side: and it is plain, that henceforth giants and dragons, as well as knights and dwarfs, have always maintained themselves in being. From this, my friend, it will be clear to thee, that we are of the oldest race on the earth; a circumstance which does us honour, but, at the same time, brings great disadvantage along with it. For as there is nothing in the world that can endure for ever, but all that has once been great must become little and fade, it is our lot, also, that

ever since the the creation of the world, we have been waning and growing smaller; especially the royal family, on whom, by reason of their pure blood, this destiny presses with the heaviest force. To remedy this evil, our wise teachers have many years ago devised the expedient of sending forth a princess of the royal house from time to time into the world, to wed some honourable knight, that so the dwarf progeny may be refected, and saved from entire decay." Though my fair one related these things with an air of the utmost sincerity, I looked at her hesitatingly; for it seemed as if she meant to palm some fable upon me. As to her own dainty lineage, I had not the smallest doubt: but that she should have laid hold of me in place of a knight, occasioned some mistrust; seeing I knew myself too well to suppose that my ancestors had come into the world by an immediate act of creation. I concealed my wonder and scepticism, and asked her kindly: "But tell me, my dear child, how hast thou attained this large and stately shape? For I know few women that in richness of form can compare with thee." "Thou shalt hear," replied she. "It is a settled maxim in the council of the dwarf kings, that this extraordinary step be forborne as long as it possibly can; which, indeed, I cannot but say is quite natural and proper. Perhaps they might have lingered still longer, had not my brother, born after me, come into the world so exceedingly small, that the nurses actually lost him out of his swaddling clothes, and no creature yet knows whither he is gone. On this occurrence, unexampled in the annals of dwarfdom, the sages were assembled; and without more ado, the resolution was taken, and I sent out in quest of a husband." "The resolution!" exclaimed I; "That is all extremely well. One can resolve, one can take his resolution; but to give a dwarf this heavenly shape, how did your sages manage that?" "It had been provided for already," said she, "by our ancestors. In the royal treasury lay a monstrous gold ring. I speak of it as it then appeared to me, when I saw it in my childhood; for it was this same ring which I have here on my finger. We now went to work as follows; I was informed of all that awaited me; and instructed what I had to do and what to forbear. A splendid palace, after the pattern of my father's favourite summer residence, was then got ready; a main edifice, wings, and whatever else you could think of. It stood at the entrance of a large rock cleft, which it decorated in the handsomest style. On the appointed day, our court moved thither, my parents also and myself. The army paraded; and four and twenty priests, not without difficulty, carried, on a costly litter, the mysterious ring. It was placed on the threshold of the building, just within the spot where you entered. Many ceremonies were observed; and after a pathetic farewell, I proceeded to my task. I stepped forward to the ring; laid my finger on it; and that instant, began perceptibly to wax in stature. In a few moments I had reached my present size; and then I put the ring on my finger. But now, in the twinkling of an eye, the doors, windows, and gates flapped to; the wings drew up into the body of the edifice; instead of a palace, stood a little box beside me, which I forthwith lifted, and carried off with me, not without a pleasant feeling in being so tall and strong; still, indeed, a dwarf to trees and mountains, to streams and tracts of land, yet a giant to grass and herbs, and above all, to ants, from whom we dwarfs, not being always on the best terms with them, often suffer considerable annoyance. How it fared with me on my pilgrimage, I might tell thee at great length. Suffice it to say, I tried many, but no one save thee seemed worthy of being honoured to renovate and perpetuate the line of the glorious Eckwald." In the course of these narrations, my head had now and then kept wagging, without myself having absolutely shaken it. I put several questions; to which I received no very satisfactory answers; on the contrary, I learned to my great affliction, that after what had happened, she must needs return to her parents. She had hopes still, she said, of getting back to me; but for the present, it was indispensibly necessary to present herself at court; as otherwise, both for her and me, there was nothing but utter ruin.

[Conclusion next week.]

MISCELLANY.

CIRCASSIAN WOMEN.

History, travellers, and romance, have said nothing of the beauty of Circassian women, which is not below the truth. Beauty has been considered an imaginary being, a thing of invention: and to justify this idea, it is alleged that what is beautiful to the eyes of one people is not to those of another; that a Chinese beauty would have no charms in France or England, and, in like manner, that the French or English beauty would have no attractions in the eyes of a Chinese. But the beauty of the Circassian women is a sufficient answer to this reasoning; since they are acknowledged to be beautiful, by all nations. They are every where sought after; and are the ornament of all the seraglios of Asia, Africa, and Europe, because they possess that pleasing union of features; that proportion of all the parts of the body; that splendour, those brilliant tints, that whole, that cannot be defined, but which exists, and necessarily constitutes beauty, since all men render it homage.

It is only in this point of view, that the inhabitants of Circassia (a country between the Caspian and Black seas), deserve the attention of the observing traveller. It will easily be conceived, that the nation which considers woman as merchandize, can never make her a companion, nor consider marriage a sacred and indissoluble union. We find, accordingly, that the Circassians have many wives, whom they change at pleasure; but the first wife always has a superiority over the others, which nothing can take away, and which she retains till death.

The first wife, who is usually married when extremely young, is purchased, like the rest, in the public markets, where an innumerable multitude of women are exposed to sale, habited in the manner which is judged most likely to excite the desire of the buyer. No inquiry is made with respect to whence the woman was brought; and if the names of her parents are asked, is it only to ascertain whether she derives her birth from a stock of pure and acknowledged beauty.

The usual price of a beautiful Circassian female is from eight to ten thousand piasters.

Women being the principal commerce in Circassia, every thing in their education and habitual life, has for its object to preserve their beauty, and facilitate its development. All domestic occupations are abandoned to the slaves—women are solely employed with the arts of the toilette and the means of pleasing. They make it a particular study to modulate their voice in soft and melodious tones, and to display grace and elegance in every motion. Their habitations are intermingled with gardens, and form small villages very near to each other, consisting of about twenty houses each. And in the middle of each of these villages is a strongly fortified tower, in which, in case of invasion, they shut the women and the riches of the country. These towers, as well as all the houses, are built of wood, decorated with great art, and finished with taste.

The dress of the Circassian men is a mixture of the Greek and Turkish habits. It consists of a pair of wide pantaloons, buskins, a close bodice fastened with a girdle, a kind of domino with open sleeves, and a cap or turban not very high, broad at the top and narrow at the bottom. They shave their beards, leaving very long mustachios.

The dress of the women is more simple and pleasing. It consists of pantaloons, a bodice, and a long robe in Armenian taste, or a large furred pelisse. From the cap or bonnet of the shape of a sugar loaf, hangs a veil. This bonnet is richly ornamented with pearls.

The dress is never sold with the woman unless agreed for separately. The Circassian women, however, like the European, wear under all a linen garment, which they change every day, and this garment the seller is obliged to give with the woman to the purchaser. In this state he delivers his merchandise.

ENORMOUS SPIDER.

We slept tolerably well, though we were frequently tormented by the fear of being attacked by *phalanges*, a species of enormous spider, common

enough in Georgia. The phalange has something disgusting, and even terrific, at first view. Its body, as large as a man's thumb, is mounted upon very short feet. The insect is very active; it has a long neck and a mouth armed with teeth, with which it seizes its prey with an appearance of the most extraordinary fury. Having put two of these phalanges into a glass jar, they immediately rushed at and seized each other by the mouth. In this position, which gave neither the advantage, the stronger dragging the other, from time to time, about. At length, tired of the struggle, the smaller one fled, and ran up, with great rapidity, the smooth side of the jar. We shook the glass and made it fall, when the large phalange pounced upon it and seized it by the throat, in such a manner that it could not make use of its teeth. In less than five minutes it detached its head from the body, and the insect expired in dreadful convulsions.

The conqueror then threw himself again upon his victim, and devoured it in an instant, all with the signs of the most intense voracity. People sometimes amuse themselves with making a scorpion and a phalange fight. The combat is a desperate one, but generally speaking, the phalange comes off victorious; however, the victory costs him dear if he happen to be wounded during the struggle; as death usually ensues in half an hour afterwards. The person on whom one of the phalanges falls, should have presence of mind enough to remain motionless, lest the insect, being irritated, should bite. However, the wound, though dangerous if no immediate remedy be applied, may be rendered harmless, by rubbing, within a quarter of hour, the part affected, with some unctuous substance, particularly oil, of which the Georgians always carry a vial full about them for the purpose.

PRUSSIAN MARRIAGES.

Perhaps nothing strikes the eye of a stranger at this metropolis, more than a MARRIAGE. If the parties are affluent or well known, their relations, friends and acquaintances, will assemble at the home of the bride, in carriages, each having a separate one, some with two and others with four horses, attached to which are two or three footmen, arrayed in the richest liveries. At these processions, it is not unusual to muster from two to three hundred carriages, of all sizes, and of all colors; the bride and bridegroom, taking the lead in the most magnificent vehicle, and in the most splendid attire. The ceremony over, they return to the house, and partake of a dinner ("ye gods, what a dinner!") consisting of the richest things the markets, nay, the whole country can produce. The sun goes down upon their feasting, and rises upon their dancing—always saving and excepting the bride and bridegroom. In the country, their feasting and smoking, drinking and waltzing, is continued for three days, and if, at this time, there should be found anything in the eatable line undemolished, they carry it off with them at their departure. It is customary for the guests to make the bride a present of a few dollars on the wedding day; and were it not for this *douceur*, many of them would literally be eaten out of house and home.

VARIETY.

MOLE.—*President of the Parliament of Paris.* De Ketz says, that no ancient Roman ever possessed the virtues of courage and of public spirit in a degree superior to this great magistrate. At the time of the Fronde at Paris, a man presented a dagger to his heart, threatening him with instant death if he would not consent to some decree, proposed in the Parliament, which M. Mole thought prejudicial to his country: "Know, my friend," said he looking sternly at him, "that the distance is infinite from the dagger of an assassin to the heart of an honest man."

A PAINTER'S NICETY. Gerard Dow ground his own colours upon a crystal, cemented into a wooden frame; and all his pencils were made by his own hands. His pallets, paints and pencils were carefully locked up in a small cabinet, where no dust could penetrate. When he placed himself upon his chair to begin his work, he sat motionless for a con-

siderable time, that every particle of dust around him might subside. He then turned gently to the cabinet near him, and cautiously took out his instruments, mixed his colours, and painted without venturing to breathe over the work. His room faced the north. The windows were very large, and a sloop or pond immediately under, which was some security against the rising of the dusty enemy from that quarter. Two gentlemen paid him a visit. The painting of a broomstick, about a finger in length excited their surprise; which appeared very highly finished; But Dow informed them it would require three days' assiduous attention before he should consider it complete.

It is told of Henry Martin, that, "making an invective speech one time against old Sir Harry Vane, when he had done with him he said, '*But for young Sir Harry Vane,*' and so sat him down. Several cried out, 'What have you to say to young Harry?' He rises up: '*Why, if young Sir Harry lives to be old, he will be old Sir Harry!*' and so sat down, and sat the whole House a laughing."

A. PATIENT COMPANION. A gentleman who once introduced his brother to Johnson, was very earnest to recommend him to the doctor's attention, which he did by saying, "Doctor, when we have sat together some time, you'll find my brother very entertaining." "Sir," said Johnson, "*I cannot wait.*"

ANECDOTE. The following anecdote affords a curious picture of the manners of the times in which it occurred. In the year 1386, a sow devoured the child of an artificer of Falaise, in Normandy, called Janet. The circumstance having come to the knowledge of the Judge, he condemned the animal to suffer publicly the *lex talionis*. The child had had its face and arm torn; the sow was mutilated in the same manner, and then hung up by the common hangman. The execution took place in the public square in the presence of all the people. The Judge presided on horseback, in the full dress of his office. The father of the victim was compelled to be present, as a punishment for not having more carefully guarded his child. When the animal was brought out, it was habited in a man's dress, with a cloak, breeches, and gloves; and a mask on its face representing a human countenance. The remembrance of this absurd farce was preserved by a fresco painting, which, within the last six years was still visible in the church of the Holy Trinity at Falaise.

The celebrated physician Malouin, at Paris, had such a veneration for his profession, that he declared himself convinced that Molier's death was a just judgment on him for his want of respect to the science of Medicine. Being once a witness of the anxious punctuality with which a patient took a most nauseous medicine, he said to him with great solemnity, "Sir you are worthy to be sick!"

At the London Bow street office, a man named Jumper was charged with robbing a Mr. Trotter. Trotter being too drunk to walk, Jumper was accused of trotting off with his watch. They were both ordered to stand still till the justice decided.

EXCOMMUNICATION. In the year 1749, the episcopal palace of Benedict de Monterrand, bishop of Lausanne, was the theatre of as amusing a judicial process as is on record. During this year the diocese was very much infested with caterpillars which spoiled all the fruits of the season; the bishop issued against them a solemn citation to appear in his court to answer for the waste which they had occasioned. The process was carried on in regular form, and that it might be altogether complete, an advocate was assigned for the caterpillars, and he pleaded their cause. When the pleadings were heard, the bishop sitting on his tribunal, gravely pronounced the sentence of anathema and excommunication against these insects.

CLEAN HANDS. Mr. C—L—, playing at whist the other evening, with an intimate friend who seemed (as far as his hands were concerned) to hold the Mahometan doctrine of ablution in supreme contempt, said to him, with a countenance "more in sorrow than in anger," "My good fellow, if dirt were trumps, what a hand you would have."

ALBANY:

SATURDAY, JUNE 9, 1827.

Mr. ELISHA WILCOX, proprietor of the Canal bookstore, on board the boat *Encyclopedia*, is our authorised agent on the line of the Erie canal, between Albany and Buffalo.

READING. If "*words are things*," he who reads little or none, can scarcely be said to raise his wisdom above the intellectual powers of brutes; for it is by reading, alone, that the meaning and proper use of words are acquired; and there is little difference between the man who can use words, yet knows not their utility, and the animal that is totally incapable of their use. If reading, then, be of such utility, who shall select for us from the immense Babel of subjects which crowd the catalogues of modern libraries?

The Pharisaical sectarian will advise you to read nothing but the Bible, with some few sermons and catechisms of his favourite sect. We have known a respectable divine, who laboured hard to dissuade a young lady from the perusal of Hervey's *Meditations*, because they were too much the flights of imagination,—too romantic. Then a person of the opposite character, a minister of pleasure, will recommend something like *Tristram Shandy*, and very likely denounce *Don Quixote* as too dull,—too full of old saws and proverbs. Our friend Mr. Stanza will entertain you an hour, by setting forth the advantages of reading poetry; while his cousin, Mr. Dilemma, is always chaunting the praises of Practical Philosophy. Miss Narcissa Mendax can read nothing but tales of fiction, without being devoured by the spleen; and she once carried home a set of the *Waverly Novels*, telling the generous lender, she did not wish to read them,—they bore too much resemblance to narratives of fact. Her uncle, old Mr. Historicus, is of a diametrically opposite turn, and no one is secure in his friendship, who insinuates that *Plutarch's Lives* are not works of fiction. Old Dr. Nostrum will allow his children to read nothing but *Natural History*; while *Natural Philosophy* is the only kind of knowledge spoken well of by Professor Moonstarer. We might go on, and carry the catalogue of opinions through, but it would swell this article to a mammoth size; for the different shades of mental colouring may, for aught we know, outnumber the stars. Sufficient has been said already to prove that there is enough to read; and whether it be well received or not, we will, also, throw in our mite of good counsel—that is, *read the Newspapers*.

PESTALOZZIAN PRIMER. It is some months since we received a little work entitled, the "*Pestalozzian Primer*, or first step in teaching children the art of reading and thinking;" by JOHN M. KEAGY, M. D. of Harrisburgh, Pa.; but owing to press of business, we have deferred the perusal of it till the present time. In indulging ourselves with a few remarks we may differ from many who have the task of teaching always before them; but to such we shall only recommend a perusal for themselves, as we do not claim that supremacy of opinion, which would make our bare *ipse dixit* a law.

We believe that much valuable time is lost in the outset, by the present mode of teaching the rudiments of literature; to say nothing of the disgust, and consequent barrenness of ambition, produced by dragging the tyro along from *a* to *abs*, and

from one syllable to six, without giving him any idea of the use of his labour. From time immemorial, it has been the custom in our schools, first to learn the alphabet in order; next to spell, or rather commit to memory, the page familiarly termed *abs*; then to plod through words of three, four, five and six letters, arranged promiscuously, without any regard to system or sound; and finally, to con over tables of two, three, four, five, and six syllables, for some three or six months, without a single exercise in the most important branch of the rudiments, to wit—reading at sight. It does not require an extraordinary perception to see that the inevitable consequence of this is, to repress all curiosity in the pupil, and make him resort to his task, rather for fear of punishment than with a desire to learn. And yet there are teachers whose heads have grown grey in their laudable avocation, who have, either from indifference or choice, persisted in this absurd custom, and given their preference to those antiquated and puerile spelling books, which their better sense if exercised must persuade them to abandon.

In the little work before us, this obstacle is thrown aside; and no sooner is the tyro made acquainted with letters enough to form a sentence, however short, than the sentence is formed. Here then, he is made acquainted with the great end of his labours, and will of course pursue it with some interest. It is a wrong opinion, that the utility of a labour has no weight with a child. Show him clearly the advantages of any acquirement, and give him an example of its accessibility, and no adult will be half so sanguine in the pursuit of it; and if his resolution ever falters, the defection is not chargeable to the child, but to the mismanagement of those who dictate to him.

There is also an agreeable and easy progression through the whole whole work. This is a material article of recommendation to those who have the guidance of the young mind. So far as reading is an art, the two qualifications named ought to weigh much with those who are interested in the advancement of it. But these are not its whole merits. A child may be taught to read, to use the words of Dr. Franklin, "as parrots speak; knowing little or nothing of the meaning." To this position no one will raise an objection; experience being a more powerful demonstrator than words. To obviate this danger, the author has interwoven a series of dianoetic lessons, in which words are given, and questions subjoined, leading to all ideas connected with them. This plan of associating sight, sound, and thought, on the threshold of his labour, must be of incalculable advantage to the future habits of the young reader.

The work "is designed to be the first of a series of elementary school books, which the author intends to publish, should the present effort meet with suitable patronage." But we cannot advise him to be too hasty in multiplying his works. Few who succeed as well as he has in this first step, are so well qualified to compile matter for maturer classes; and we would recommend to him to fulfil the promise contained in the first paragraph of his conclusion, before he attempt the second.

DISCRETION. *Knowledge is power*—a hacknied saying,—but one we think rather unqualified. If it were made to read *discreet knowledge*, or *discretion*, we would give our assent to the maxim without reserve. We have no confidence in the potency of that science, however profound, which the possess-

or scatters from him as a prodigal does his cash. He may acquire a transcendent fame among clowns and old women; but it is of all characters the most despicable, that of a *monstrous learned scholar*. We have been frequently introduced to men, as capable of giving us great assistance in our literary pursuits, and we have ever found the fact, that he whom every body extolled to the skies as a profound scholar, has been of all others the weakest in literary judgment. The very fact of his renown is the greatest proof of his weakness. The discreet scholar has a better way of publishing his talents than by speaking of them himself; they are discoverable only to those who have some knowledge themselves; and consequently as blank to the vulgar eye as the sheet that is written with sympathetic ink.

The reputed linguist has two or three of the first lines of the *Æneid*, or a few words from the first chapter of St. John's Gospel, always ready, and will never fail to deal out his ban against the English language, to the great credit of Latin and Greek. He will taper off his eulogy on his own powers, by giving his *how d'ye do* in French; and if he does not give you a word or two in Oneida, you may be thankful for the escape.

The rustic mathematician will tell you the never-to-be-forgotten problem of winding a hopvine around a pole of such and such dimensions, which he claims the honour of answering for some of the greatest scientific men in the country.

But these are mere caricatures. Let us look at those who are truly learned. Do we find the real power of knowledge with him who chatters more than he reads; who can be quizzed and set to boasting at the rate of ten knots an hour by the veriest child? Or, with him who shows no other proof in his every day communications, than a verification of the old maxim, that "a wise head keeps a close mouth?" The latter character you will generally find devoting his private hours to some useful purpose, while the former, if he spend year after year in the acquisition of scientific knowledge, does it only to gratify the vanity of being called wise by sycophants and ideots.

The truth is, knowledge is like money; power, when discreetly spent; but if acquired and used more for ostentation than to meliorate or enlighten the condition of mankind, it is worse than useless, and the humble swain may truly say "Blessed be ignorance."

It is not the polish but the weight of gold that determines its value. The bird, too, which boasts no other merit than the hue and gloss of its plumage, is generally found destitute of every other good quality. Is it not so with the mind? If you are bent on making a show of your education, as how is enough. What is the use of toiling over lamps and octavos for years, only to appear wise, when seven eighths of those whose fetid adulations you desire can be so easily cheated by the counterfeit? Let those then who study for usefulness, banish all pedantic airs; but he whose greatest ambition is to be flattered, may rest assured that the shadow, for his purpose, is better than the substance.

We are sorry that the lay-gentlemen of THE ANTIDOTE have thought proper to quibble so extensively upon our reception of their first number. We assure them that our "fears" are not a "second edition of Mr. Silliman's," or any other man's "sorrow;" nor were they dictated by an unfriendly or illiberal feeling towards The Antidote: but were this the case, we do not know that it would destroy their

justness. So long as "fears" or opinions are well founded and correct, their origin is a matter of indifferent importance. *Ipsa dixit* are grown unfashionable.

We regret that the aforesaid lay-gentlemen have also considered it necessary to dabble in sundry old-fashioned and illiberal insinuations. We are not disposed to be exceedingly fastidious, as to the reputation of our piety; believing that the opinions of men can not change the destiny which is provided for us in the world that is to come: but we think that, if meant to be applied to ourselves, the unmeaning stuff about "the candles of the Lord," and the impotent allusion to the parable of the good Samaritan, might as well have been left for the toil of meaner intellects. If the priest and the Levite *must* have counterparts, it would be rational to seek them among those who deal more largely in cant and hypocrisy than ourselves; and the unostentatious charity of the good Samaritan will probably find a similitude in the benevolence which relieves without reference to creeds, and boasts not of superior claims to the smiles of Omnipotence. Our anti-christianity, we imagine, lies in the fact that we have not boasted of our own piety, nor puffed The Antidote. But these are sins of omission, and not of commission; and we do not think that in the one we have compromised our veneration for the Scriptures, or in the other, our respect for christianity and good order in society. The truth is, as far as relates to religion, we are as much in love with the practice as we are with the profession. We are unqualifiedly opposed to a union of church and state; and we do not think that the prosperity of Great Britain is to be passed to the credit of her goading hierarchy. We entertain no ill feeling towards The Antidote: on the contrary, we are friendly to a liberal discussion of all subjects of public interest; and especially those in which every one is so deeply interested as in the idea of a resurrection and submission to ecclesiastical establishments. Yet we may doubt the issue of this religious warfare, and that honestly, too. We have looked enough into these matters to see where the tangible evidence rests, and to discover the boldness and temerity of those, whose hearts are imbued with infidelity.

☞ The Grand Lodge of the State of Delaware will meet at Wilmington, on Wednesday, the 27th inst. at 10 o'clock, A. M.

☞ We have received the first Number of the "North American, or Weekly Journal of Politics, Science, and Literature," published at Baltimore, Md. by Samuel Sands. It is the *Saturday Herald* in a new dress, printed on a super royal sheet, quarto form, at \$4 per annum in advance. Its general appearance is respectable, and its selections judicious, and we have a confidence in the success of the work.

☞ The "National Enquirer," Columbus, Ohio, has also been received, published by Horton Howard. From the phraseology, as well as its sentiments of philanthropy, we presume that the Editor is a member of the society of Friends, though not primarily devoted to the tenets of any particular society. He certainly discovers a fair specimen of editorial prudence, and we cordially wish him success. The National Enquirer is printed on a royal sheet, quarto form, for \$1 50 per annum in advance, or \$2 00 annually.

LEISURE HOURS. We have read Moore's *Lalla Rookh* twice, and found, on our second reading, redoubled reasons for admiring the work. It is true reviewers have praised it much less than it deserves, but there are many and weighty reasons for their silence, or asperity. We are not among those who attach a mystical meaning to all a man writes, but we can clearly detect the bearing of Moore's thoughts in the poem of the *Fire Worshipers*. A parallel is so closely drawn between the persecuted Ghebres, and the oppressed Irish Catholics, that it is impossible to avoid noticing it. We think too that we can glean out his moral from *The Veiled Prophet of Khorassan*. It is at any rate a faithful drawing of that phrenzy which, under the name of religion, has alienated many a bright mind from the sweets of life, and rendered the world a gehenna of hypocrisy. The proud sentiments of Moore respecting Civil and Religious Freedom, which run through the whole work, and the hypercritical spirit of the reviewers, so much like his own Fadladeen, have doubtless been the reason of the neglect, and ungenerous conduct of the British public towards Mr. Moore. Yet we venture to predict that none of the last productions of Southey, Wordsworth, or Scott, will outlive the honest fame of *Lalla Rookh*.

☞ THE CASKET, or *Flowers of Wit, Literature and Sentiment*, is an excellent monthly publication, issued from the press of Atkinson and Alexander, proprietors of the Saturday Evening Post, No. 112 Chesnut street, Philadelphia, at \$2,50 per annum, payable in advance. Each number contains forty closely printed octavo pages, embellished with elegant engravings on copper and wood. The June number was published last week, and is ornamented with a view of the Cottage of St. Leonard's in Scotland; a view of Quebec, taken from the Chaudiere; four Nos of the School of Flora; and "Yes, in the glance of thine azure eye," an original song, by Selim, set to music.

☞ When a worried scribbler, for want of argument, impudently boasts of having taken four degrees in masonry at the "beardless age of nineteen," every one, in the the least familiar with the usages of the Ancient Fraternity, knows that the said braggart is either at present an imposter; or that, at the "beardless age of nineteen," he *must* have been guilty of practices, which should render him a suspicious person, in the estimation of all honourable men. We think that the braggart's word is not worth much; but if the seeds of iniquity were really deliberately planted when the soil was so rich and young, it is not wonderful that they have flourished, and that the autumn has ripened and brought forth their fruits in abundance.

The National Intelligencer of Monday says—"We have learnt, with satisfaction, that after frequent conferences and the interchange of several official notes between Mr. Clay and Mr. Rabello, the charge des affaires of the emperor of Brazil, such explanations and assurances have been made, as will prevent a late occurrence at Rio de Janeiro endangering the peace or harmony of the two countries.

NEW INVENTION. A Spaniard, at Old Castile, has just invented a musket of large calibre, which discharges 100 times in a minute. This little gannon, of a new form, borne on a lofty carriage, and supported by two wheels, is worked by steam. The king of Spain has ordered it to be examined by two generals of artillery, whose report is favourable to the new invention.

FOREIGN NEWS.

By the packet ship *Canada*, capt. Rogers, arrived at New-York, from Liverpool, the editor of the National Advocate has received his files of English Journals to the 1st of May inclusive.

The ministerial arrangements had at length been completed. It is estimated in the Liverpool Albion that the total number of persons who have emigrated to the United States from Liverpool in one month is nearly 1300.

The shipping interest of Great Britain is represented to be in a state of great depression, and the attention of mercantile men was drawn to the consideration of the practicability of exploring new channels of commerce, and measures for employment of their mercantile marine.

The arrival of Lord Cochrane in Greece, has renovated the spirits of the Greeks; he has been received with enthusiasm wherever he has appeared.

The London Morning Herald of the 30th contains accounts from Paris of the evening of the 27th, and Constantinople to 25th March. The Greek patriarch has exiled the Metropolitan, of Ephesus, Heraclea, Demotia, and Janina.—Terms have been sent to Redshid Pacha, to enlist 10,000 Albanians, The Greek Gazette of Egeria, Nos. 27 and 28, says the army of Omar Pacha was surprised at Distomo by Karaiskaki, and put to flight. At the same time the Turkish garrison of Salona abandoned the fortress, which fell into the hands of the Greeks, under Panora. All Western Greece is now free.

Under the Madrid head of the 16th April, it is stated, that the army of old Castile has put itself in motion. General Morret is at Ciudad Rodrigo.

THE NEW MINISTRY.

[From the Courier.]

We are at length enabled to lay before our readers, an official list of the ministerial arrangements, which have been so long an object of anxious expectation on the part of the public.

LIST OF THE ADMINISTRATION.
THE CABINET.

PEERS.

Lord Chancellor, Lord Lyndhurst.
Lord President, Earl of Harrowby.
Lord Privy Seal, Duke of Portland.
Lord Chancellor of the Duchy of Lancaster, Lord Bexley.
Secretary of State for Foreign Affairs, Viscount Dudley.
Secretary of State for the Colonies, Viscount Goderish.

COMMONERS.

Secretary of State for the Home Department, the Right Hon. William Sturges Bourne.
President of the Board of Trade, the Right Hon. Wm. Huskisson.
President of the Board of Control, the Right Hon. Charles Wm. Womh.
Secretary at War, Viscount Palmerston.
First Lord of the Treasury and Chancellor of the Exchequer, the Right Hon. George Canning.

NOT IN THE CABINET.

Lord High Admiral, His Royal Highness the Duke of Clarence.
Master General of the Ordnance, Marquiss of Anglesea.
Lord Chamberlain of the Household, Duke of Devonshire.
Master of the Horse, Duke of Leeds.
Chief Secretary to the Lord Lieut. of Ireland, the Hon. W. Lamb.

LAW APPOINTMENTS.

Master of the Rolls, Sir John Leach.
Vice Chancellor, Mr. Hart.
Attorney General, Mr. Scarlett.
Solicitor General, Sir N. C. Tindal.
The name of the Marquis of Lansdown does not appear in the above list; but we have the satisfaction of being able to state, that the noble Marquis has consented to give the support of himself, and that of his political friends, to the government of Mr. Canning; though, for the present, at least, he declines taking office. The acceptance indeed, of the post of Lord Chamberlain, by his Grace the Duke of Devonshire, is the best proof of the intended concurrence of the noble Marquiss, and that of those moderate friends.

His Majesty will hold a council on Monday, at two o'clock, to receive these noblemen and gentlemen, when the ministers who have retired will deliver to the King the seals of their respective offices, who will immediately transfer them to the hands of their several successors. Some members of the new Cabinet will afterwards be sworn in of his Majesty's Privy Council, and take their seats accordingly.

[From the London Gazette, April 27.]

WHITEHALL, April 27.

The King has been pleased to direct letters patent to be passed under the Great Seal of the United Kingdom of Great Britain and Ireland, constituting and appointing the Right Honourable George Canning; Francis Nathaniel Conyngham, esq. (commonly called Earl of Mount Charles); Francis Leveson Gower, esq. (commonly called Lord Francis Leveson Gower); and Edward Granville Elliot, esq. (commonly called Lord Elliot); and also Edmund Alexander McNaghten, esq. to be Commissioners for executing the offices of Treasurer of the Exchequer of Great Britain and Lord High Treasurer of Ireland.

The King has also been pleased to direct letters patent to be passed under the Great Seal of the United Kingdom of Great Britain and Ireland, granting to the Right Honourable George Canning the offices of Chancellor and under Treasurer of his Majesty's Exchequer.

Viscount Dudley and Ward's appointment to the Foreign Department is understood to be only temporary, and it is considered probable that, at no distant period, Mr. Canning will resume the seals of the Foreign Department, and be succeeded, as Chancellor of the Exchequer, by Mr. Huskisson.

POETRY.

THE LYE.

[This poem, written by Sir WALTER RALEIGH, while under sentence of death, we extract from *Percy's Reliques of Ancient English Poetry*. It contains ideas of a loftier flight than most poetry of that age—sentiments which do honour even to the well known talents of their author—and a contempt of life, perfectly in character with a man of his mind, in such a situation; and the whole expressed in language, of which any poet of the present day might well be proud.—*Ed. M. Record*.]

Goe, soule, the bodies guest,
Upon a thanklesse arrant;
Feare not to touch the best,—
The truth shall be thy warrant:
Goe, since I needs must dye,
And give the world the lye.

Goe tell the court, it glows
And shines like rotten wood;
Goe tell the church it shoves
What's good,—and doth no good:
If church and court reply,
Then give them both the lye.

Tell potentates they live
Acting by others actions;
Not loved unless they give,—
Not strong but by their factions;
If potentates reply,
Give potentates the lye.

Tell men of high condition,
That rule affairs of state,
Their purpose is ambition,
Their practice only hate;
And if they once reply,
Then give them all the lye.

Tell them that brave it most,
They beg for more by spending,
Who in their greatest cost
Seek nothing but commending:
And if they once reply,
Spare not to give the lye.

Tell zeale, it lacks devotion;
Tell love, it is but lust;
Tell time, it is but motion;
Tell flesh, it is but dust;
And wish them not reply,
For thou must give the lye.

Tell, age, it daily wasteth;
Tell honour, how it alters;
Tell beauty, how she blasteth;
Tell favour, how she falters;
And as they shall reply,
Give each of them the lye.

Tell wit, how much it wrangles
In tickle points of nicenesse;
Tell wisdom, she entangles
Herselfe in over-wisenesse;
And if they do reply,
Straight give them both the lye.

Tell physick of her boldnesse;
Tell skill, it is pretension;
Tell charity of coldnesse;
Tell law, it is contention;
And as they yield reply,
So give them still the lye.

Tell fortune of her blindness;
Tell nature of decay;
Tell friendship of unkindnesse;
Tell justice of delay;
And if they dare reply,
Then give them all the lye.

Tell arts, they have no soundnesse,
But vary by esteeming;
Tell schooles, they want profoundnesse,
And stand too much on seeming;
If arts and schooles reply,
Give arts and schooles the lye.

Tell faith, it's fled the citie;
Tell how the countrey erreth;
Tell, manhood shakes off pittie;
Tell, vertue least preferreth:
And, if they do reply,
Spare not to give the lye.

So, when thou hast, as I
Commanded thee, done blabbing,
Although to give the lye
Deserves no less than stabbing,
Yet stab at thee who will,
No stab the soul can kill.

THE GRAVES OF MARTYRS.

BY MRS. HEMANS.

The kings of old have shrine and tomb,
In many a minster's haughty gloom;
And green along the ocean side,
The mounds arise where heroes died;
But show me, on thy flowery breast,
Earth! where thy nameless Martyrs rest!
Ten thousands, that uncheered by praise,
Have made one offering of their days;

For Truth, for Heaven, for Freedom's sake,
Resigned, the bitter cup to take,
And silently, in fearless faith,
Bowing their noble souls to death.

Where sleep they, Earth?—by no proud stone
Their narrow couch of rest is known,
The still sad glory of their name,
Hallows no mountain unto Fame,
No—not a tree the record bears
Of their deep thoughts and lonely prayers.

Yet haply all around lie strewed
The ashes of that multitude;
It may be that we each day tread
Where thus devoted hearts have bled,
And the young flowers our children sow,
Take root in holy dust below.

Oh! that the many rustling leaves
Which round our homes the summer weaves,
Or that the streams, in whose glad voice
Our own familiar paths rejoice,
Might whisper through the starry sky
To tell where those blest slumberers lie!

Would not our inmost hearts be stilled
With knowledge of their presence filled,
And by its breathings taught to prize
The meekness of self sacrifice?
—But the old woods and sounding waves
Are silent as those humble graves.

Yet what if no light footstep there
In pilgrim love and awe repair!
So let it be!—like Him, whose clay
Deepburied by his Maker lay,
They sleep in secret, but their sod,
Unknown to man, is marked of God.

[The following *petit morceau* is said to be from the pen of Sir WALTER SCOTT. It is so true to nature, that its beauties are palpable to the most ordinary intellect. The compliment to the bravery of the Scotch Highlanders is very fine, and introduced, apparently so much by accident, that one does not perceive any flattery in it.]

NORA'S VOW.

Hear what Highland Nora said—
"The Erlic's son I will not wed,
Should all the race of nature die,
And none be left but he and I;
For all the gold, for all the gear,
For all the lands both, far and near,
That ever valor lost or won,
I would not wed the Erlic's son."

"A maiden's vows," old Callum spoke,
"Are lightly made and lightly broke:
The heather on the mountain's height,
Begins to bloom in purple light;
The frost wind soon shall sweep away
The lustre deep from glen and brae;
Yet Nora, ere its bloom be gone,
May blithely wed the Erlic's son."

"The swan," she said, "the lake's clear breast
May barter for the eagle's nest;
The Awe's fierce stream may backward turn;
Ben-Cruaichan fall and crush Kilburn;
Our kilted clans, when blood is high,
Before their foes may turn and fly;
But I, were all these marvels done,
Would never wed the Erlic's son."

Still in the water-lilie's shade,
Her wonted nest the wild swan made;
Ben-Cruaichan stands as fast as ever;
Still downward foams the Awe's fierce river;
To shun the clash of foeman's steel,
No Highladd brogue has turned the heel;
But Nora's heart is lost and won,
She's wedded to the Erlic's son.

ISLAND OF CYPRUS.

Beautiful island of the sea!
Star of the hero's memory!
The light that thou shed'st on days of yore,
And the blaze of thy glory is long since o'er;
The bark of the ocean robber has passed
O'er the sea where thy ancient splendour was cast,
And the crimson banner of war is o'er thee,
And the flash of swords on the wave before thee,
Beautiful Isle! thy sparkling streams,
That come dancing to meet the sun's bright beams.

The trees that waved o'er thee in brightest of green,
And thy vine-covered groves, no longer are seen;
And amid that ocean's richest flood,
Is mingled the crimson tide of blood,
And above thy rocks is the vulture's lone brood—
Isle of the beautiful and brave!
Gem of the dark Egean wave!

Thy wreath of glory indeed is faded,
And the beams of thy splendour have long been shaded,
Yet he who sails by the sea-beat shore,
Will remember the tale of classic lore,
That fired his youthful soul to brave
The dangers of the stormy wave,
To find a grave where thy waters were streaming
O'er the home where the sword of the hero was gleaming,
And the star of the soldier above it was beaming.
Sweetest isle of the ocean wave!
Home of the generous and brave!

Still from the past will memory bring
Her richest and purest offering,
To deck the shrine of future story
With wreaths, though faded, of former glory,
And the wretched tale of fame shall still
The youthful hero's life-blood thrill.

LACONICS.

BY DR. JOHNSON.

Resolve, and keep your resolution: chuse, and pursue your choice. If you spend this day in study, you will find yourself still more able to study to-morrow; not that you are to expect that you shall at once obtain a complete victory. Depravity is not very easily overcome. Resolution will sometimes relax, and diligence will sometimes be interrupted: but let no accidental surprise or deviation, whether short or long, dispose you to despondency. Consider these failings as incident to all mankind. Begin again where you left off, and endeavour to avoid the seducements that prevailed over you before.

Pleasure, which cannot be obtained but by unseasonable or unsuitable expense, must always end in pain; and pleasure, which must be enjoyed at the expense of another's pain, can never be such as a worthy mind can fully delight in.

All knowledge is of itself of some value. There is nothing so minute or inconsiderable that I would not rather know it than not. In the same manner, all power, of whatever sort, is of itself desirable. A man would not submit to learn to hem a ruffle, of his wife, or his wife's maid; but if a mere wish could attain it, he would rather wish to be able to hem a ruffle.

That is the happiest conversation where there is no competition, no vanity but a calm interchange of sentiments.

MASONIC RECORD.

—Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

The following ode may be found in No. 5, of the Masonic Record. We republish it at the request of the author, made in consequence of several errors, which the legibility of the manuscript did not enable us to discover at the time of its former insertion. The author observes, that, "If it is worthy of publication at all, it ought at least to appear before the public as it passed from the pen of the author." We think so, too; and ask the indulgence of our readers for twice occupying a column with the same matter.

SONG.

Composed for the Installation of Syracuse Lodge, Syracuse, Onondaga co.

BY BR. L. S. BURR.

TUNE—Indian Philosopher.—Quick Time.

Hail! Masonry, thou craft divine,
Where nature's beauteous arts combine—
With science to unfold:
The glories and the bliss of heaven,
T' man whose image God has given—
A form of finest mould.

Atheists may seek the wond'rous cause,
Why craftsmen urg'd by craftsmen's laws—
Oppose all arts in vain;
An architect has form'd a plan,
That reason govern godlike man,
On nature's glorious scene.

Our lodge shall ride on reason's laws,
And reason tell the wond'rous cause—
Why man by God forgiven:
Here various sects as one combine,
Lead captive love in chains divine—
On earth a mason's heaven.

Thus spake the trumpet of the Lord,
And angels with attention heard—
Through heaven's ethereal spheres:
The architecte wand for earth
First gave to masonry a birth—
To dry the orphan's tears.

The widow shall not sigh unheard,
But as by oil on Aaron's beard—
Choice blessings were bestow'd:
A mason's love shall soothe her grief,
A mason's hand bestow relief—
The holiest gift of God.

There Eden's blooming garden bow'd,
While in the East the Master stood.
* Euphrates ceas'd to flow:
Havila's precious bdellium shone,
Her sons brought forth the onyx stone—
As gift of richest glow.

Gihon the land where Moses stood,
Proclaim'd the power of Israel's God—
A mason's rod beheld:
Hidekel spread her eastern charms,
Chose the embrace of masons arms—
And three in one revealed.

Join masons join in sign and word.
The East is guarded by the sword—
Of flames and cherubims:
Science, her joyous lights reveal,
The cordial every wound shall heal—
We praise the King of kings.

* Euphrates, Havila, Gihon and Hidekel, are rivers flowing from the garden of Eden. See Gen. chap. ii. &c. for a description.

Selected for the American Masonic Record.

AN ORATION,

Delivered at the Dedication of Free Mason's Hall, Lincoln's-Inn-Fields, London, on the 23d of May, 1776.

BY WILLIAM DODD, LL. D. G. C.

Most Worshipful Grand Master, and Brethren all, There never was a stranger paradox advanced than that, which the gloomy *Philosopher of Malmesbury* hath laboured to support, against the sociability of man. Every feeling of the human heart,—every trait of the human character,—every line in the history of civilized nature, serves to explode the idea; and to convince us, "That man is a being formed for society, and deriving from thence his highest felicity and glory." Nay, indeed the history of mankind might well be considered as "the history of social life; perpetually and invariably tending more and more to perfection."

It is not to be doubted that the mighty master-hand, which with so much facility created from the dust of the earth the two first inhabitants of it, could with equal ease, have created thousands of the same species, and have given them all the means and advantages of perfect civilization. But he thought good to create two only, with an evident purpose to a gradual population of the earth which he had formed; and to a gradual advancement of those improvements for which he wisely fitted the human mind; and in which he as wisely determined to keep that mind continually occupied.

Hence, we perceive, that from this fertile and unexhausted storehouse of human intelligence and invention, arts, sciences, and culture of every kind have proceeded with gradual progress; and MAN,—peculiarly distinguished as he is from the whole animal creation, by his boundless capability of invention and improvement—MAN hath still gone on to cultivate and adorn social life: and to beautify and bless that life with all which utility could ask; which reason could approve; nay, or even the luxuriance of fancy itself, with charmed eyes could delight in and admire!

Immortality and glory crown the men—those truly great and distinguished worthies, who have nobly added to the advancement of human happiness, by the advancement of civilization!—who, by the invention or improvement of arts and sciences,—of religion and laws,—by human or civil culture,—have been instrumental to exalt the dignity, and to enlarge the comforts of their species!

Kings of the earth!—who have furled with exulting triumph your standards, crimsoned in fellow-creatures' blood!—mighty conquerors!—who have proudly built your fame, on wide spread ruin, and fearful devastation!—how doth your false honour fade, and sink into darkness and obscurity, before the everlasting lustre of their genuine glory—those fathers, friends and benefactors of Mankind—those true heroes, who, like their just emblem, the sun, have perpetually diffused life, blessing, beneficence, have existed only to instruct, improve, and humanize the world!

These—illustrious hearers! are the men whom we exult to call BRETHREN: and of this truly honourable fraternity it is, that MASONRY, throughout all ages, hath been composed: an institution—not, as the ignorant and uninstructed vainly suppose, founded on unmeaning mystery, and supported by mere good-fellowship:—but "an institution founded on eternal reason and truth; whose deep basis is the civilization of mankind; and whose everlasting glory it is, to have the immoveable support of those two mighty pillars, science and morality!"

In proof of what I advance, permit me just to touch with a passing pencil,—as the time,—not as the unlimited nature of my subject, will admit;—just to touch upon—1st, the ANTIQUITY;—2d, the EXTENT;—3d, the COMPREHENSIVENESS;—4th, the EXCELLENCE and UTILITY of our royal art, of whose daily-advancing progress, highly-flourishing

state, and unquestionable merit, who can doubt a moment—that beholds this splendid EDIFICE; that considers this lovely, honourable, and illustrious assemblage!

I. And permit me to observe, that the brightest titles suffer no diminution of lustre; nay, that nobility itself derives distinction, from the support and countenance of an institution so venerable. For, if ANTIQUITY merits our attention, and demands our reverence,—where will the society be found, that hath an equal claim?—masons are well informed from their own private and interior records, that the building of Solomon's Temple is an important era, from whence they derive many mysteries of their art. Now be it remembered, that this great event took place above a thousand years before the Christian Era; and consequently more than a century before Homer, the first of the Grecian poets, wrote; and above five centuries before Pythagoras brought from the east his sublime system of truly masonic instruction, to illuminate our western world.

(Conclusion next week.)

ELECTIONS.

At the annual communication of the Grand Lodge of free and accepted Masons, of the State of New-York, held at Tammany Hall, in the city of New-York, on the evening of Thursday, June 7, 1827, M. W. Elisha King, Esq. in the chair, the following brethren were unanimously elected officers for the ensuing year, viz:—

STEPHEN VAN RENSSELAER, of Albany, Grand Master.

RICHARD HATFIELD, of New-York, Deputy Grand Master.

EZRA S. COZIER, of Utica, Senior Grand Warden.

WELCOME ESLEECK, of Albany, Junior Grand Warden.

OLIVER M. LOWNDS, Grand Secretary.

GEORGE W. HYER, Grand Treasurer.

Rev. Dr. READ, of Poughkeepsie, and Rev. Dr. WAINWRIGHT, of New-York, Grand Chaplains.

JOSEPH JACOBS, Grand Pursuivant.

GERRIT LANSING, Assistant Grand Pursuivant.

ROBERT YOUNG, Grand Tyler.

At the annual meeting of the Grand Encampment, of the State of New York, held at St. John's Hall, in the city of New-York, on Friday evening last, the following officers were chosen:—

M. E. His Excellency, DE WITT CLINTON, of Albany, Grand Master.

M. E. WM. F. PIATT,* M. D. of New-York, Deputy Grand Master.

M. E. JONATHAN EIGHTS, M. D. of Albany, Grand Generalissimo.

M. E. EZRA S. COZIER, of Utica, Grand Captain General.

M. E. Rev. F. H. CUMING, of Rochester, Grand Prelate.

M. E. Rev. PETER A. OVERPAUGH, of Hudson Assistant Grand Prelate.

M. E. Rev. F. C. SCHAEFFER, of New-York, do.

M. E. Rev. W. B. LACY, of Albany, do.

M. E. ORVILLE HUNGERFORD, of Watertown, Jefferson co. Senior Grand Warden.

M. E. LEVI BEARDSLEY, of Cherry Valley, Junior Grand Warden.

M. E. LIBBEUS CHAPMAN, of New-York, Grand Recorder.

M. E. EDWARD HIGGINS, of New-York, Grand Treasurer.

M. E. L. U. LAWRENCE, of Hudson, Grand Warden.

M. E. FREDERICK FITCH, of Genesee county, Grand Standard Bearer.

* In the room of M. E. OLIVER M. LOWNDS, who declined re-election.

M. E. SAMUEL EMERY, of Plattsburgh, Grand Sword Bearer.

M. E. GERRIT LANSING, of New-York, Grand Sentinel.

MASONIC ANNIVERSARY.

The Anniversary of St. John the Baptist, will be celebrated by the members of Friendship Lodge, in the village of Owego, N. Y. on Monday, the 25th of June next. The Lodge will open at the Court House, precisely at 10 A. M. Neighbouring lodges, and sojourning brethren, are respectfully invited to unite with them in the festivities of the day.

The citizens of the village and its vicinity are also invited to attend the public services and partake of refreshments with the fraternity.

J. RIPLEY, H. M'CORMICK,
L. REEVES, Committee of Arrangements.

The Anniversary of St. John the Baptist, will be celebrated by the members of Sullivan Lodge, No 272, in the village of Monticello, New York, on Monday the 25th inst. Members of neighbouring lodges and sojourning brethren, are respectfully invited to attend. The brethren are requested to meet at 10 o'clock, A. M.

J. E. RUSSELL, H. WHEELER,
I. BARNUM, Committee of Arrangements.

INSTALLATION.

The Installation of Westport Chapter will take place at Westport Village, Essex county, N. Y. on Friday, the 22d day of June next, at 10 o'clock, A. M. Companions and Brethren are invited to attend. By order of the Chapter,

O. PIER, D. HOLCOMB,
B. MYRICK, Committee of Arrangements.

SCIENCE AND THE ARTS.

INCREASE OF HEAT

IN DESCENDING INTO THE EARTH.

The increase of temperature in coal mines in proportion to their depth, is a fact familiar to every person who has had occasion to frequent them. The cause of this has been the subject of much speculation; one class of writers ascribing it to the existence of some great source of heat in the interior of the earth; and another to the decomposition of pyrites, which abounds in coal and the accompanying strata, and which is known to produce, when decomposed, actual combustion. The following explanation of the phenomenon, given by Mr. Matthew Millar in his *Memoirs of the Wernerian Natural History*, appears to us, however, a great deal more simple and satisfactory.

"In every mine, with the exception of a few, which are level free, the ventilation is carried on by causing the air at the surface to descend, and traverse the works, and then ascend. Now, it is evident, that if a portion of air from the surface be carried down to the bottom of the mine, it will be condensed in proportion to the depth of the mine, in consequence of this condensation, it will become heated, and the degree of heat will of course be in proportion to the depth of the mine. The air thus heated traverses the works, and imparts its heat to the strata; it then ascends, and is succeeded by a fresh portion of air from the surface, which in the same way becomes heated, and imparts its heat to the strata, and they, in turn, communicate it all around. Thus, in a long course of working in a deep mine, the air at the bottom is heated, and also the rocks to a considerable depth; and when the work ceases, the mine takes a long while to lose its temperature; and this is found to be the case particularly when the mine becomes full of water, the water being found at first of a high temperature, and gradually to lose its heat, which is in consequence of the strata imparting theirs to the water; and as soon as they have given out all their heat, the water indicates the mean temperature nearly of the place.

"The reverse takes place in an old mine when re-worked; in that case, the temperature rises gradually as the working continues; and in those mines which are not worked, but in which the ventilation still goes on, I believe it will be found that they do not lose more of their temperature than can be placed to the abstraction of the other causes of heat in working mines, such as that produced by the men and the lights.

"The exact quantity of heat given out by air in proportion to its condensation, it is difficult to ascertain; but every day's experience proves it to be very considerable; and, I believe, this added to the

other obvious sources of heat in mines in a state of working, will be found sufficient to account for their high temperature." [Lond. Mec. Mag.]

FRESH WATER FOUND AT SEA.

The following is an extract of a letter from D. Buchanan, esq. to professor Jamieson, of Edinburgh.

"In the beginning of September, 1824, I embarked with the officers of our regiment, in a country ship, (having most of the officers of his Majesty's 54th regiment on board,) for Chittagong. We sailed out of the Madras roads with a fair wind which continued for four days; but, on the fifth, we were becalmed, and continued so for fourteen days, having had only once or twice a very slight breeze, which never lasted longer than a few hours. It was towards the end of this calm that I observed a very strange appearance on the surface of the glassy ocean. It seemed to be furrowed in several directions. On the night of the fourteenth a breeze sprung up. Owing to our unexpected tedious passage, we ran short of provisions, particularly water. You may suppose what was our joy and astonishment the next morning, in taking up the water alongside to wash our decks, to find that it was fresh and much more palatable than that which remained in our casks, which were immediately replenished with it. By this day's observation, we were 125 miles from Chittagong, and about 100 miles from the nearest part of the Juncerbuns. The water was of a more yellow tinge than in most parts of the bay, and those who drank a great deal of it, suffered from it afterwards."

[By the remarks of some editors, it would seem that the above phenomenon is not easily accounted for. If we understand the geography of the Bay of Bengal, the writer could not be so far from the mouth of the great rivers, the Ganges and the Burrampootre, which flow into the head of the bay, as to preclude the possibility of its proceeding from their currents. The Rhone, during a flood, carries its freshness many miles out to sea; the waters of the Amazon remain fresh 240 miles from the coast; and it is said of Columbus, that he found his vessel in the fresh waters of the river Orinoco, before he saw the land near its mouth; a circumstance which sooner led to the discovery of the continent of South America.—Ed. M. Record.]

TOKAY GRAPE AND WINE.

The vine is cultivated to the greatest extent in Hungary. The well known Tokay is raised on the last chain of the Carpathian hills, in the neighbourhood of the town of Tokay. The district extends over a space of about twenty English miles. "Throughout the whole of this country it is the custom to collect the grapes which have become dry and sweet, like raisins, hanging on the trees. They are gathered one by one; and it is from them alone that the prime Tokay, or as it is termed, *Tokay Ausbruch*, is prepared; which, in 1807, sold for 100 florins the cask of 180 halbes, on the spot. They are first put together in a cask, in the bottom of which holes are bored to let that portion of the juice escape which will run from them without any pressure. This which is called Tokay essence, is generally in small quantities, and very highly prized. The grapes are then put into a vat, and trampled with the bare feet, no greater pressure being permitted. To the squeezed mass, is added an equal quantity of good wine, which is allowed to stand for twenty-four hours, and it is then strained. This juice, without Tokay, is difficult to be obtained, and sells in Vienna at the rate of £12 sterling per dozen.

The greater part of these vineyards is the property of the Emperor; several, however, are in the hands of the nobles.—Bright's Travels.

Another species of Hungarian wine, called Mineser, is said to be equal to Tokay; next to that in value, comes the wines of Edinburg, Rush, St. Gyorgy, and Ofen, followed by a great variety whose names are as various as the hills that produce them. The grape which is preferred for making the Tokay and other Hungarian wines of that character, is a

small black or blue grape, figured and described by Sickler in his *Garden Magazine* of 1804, as the Hungarian blue." [Enc. Ag.]

AEROLITES.

A Nashville (Tenn.) paper notices a shower of metallic stones which fell about eighteen miles from that place on the 7th ult. The following letter to the editor of the Nashville Banner, from the Rev. Mr. Kirkpatrick upon whose farm the stones fell, is interesting, and from its source may be presumed accurate. The description which he gives of the appearance of the stones corresponds with that of all which we have seen; viz: glazed with a thin black crust, and bearing the marks of having passed through a body of fire and smoke. The paper from which this account is taken, mentions that the noise of the explosion resembled that of thunder or heavy cannon, and was distinctly heard ten or twelve miles from the spot where the stones fell, and by some probably at a still greater distance.

[N. Y. Times.]

I will now give you a statement, as correct as is in my power, respecting a phenomenon which has taken place in my neighbourhood. In doing this I will confine myself to facts, and submit them to philosophers to explain.

On Wednesday the 9th inst. about 4 o'clock, P. M. the day being as clear as usual, my son and servant were planting corn in the field, they heard suddenly a report similar to a cannon, which was continued in the air, resembling that of a battle, the firing of cannon, or muskets by platoons, and the beating of drums. Some small clouds made a terrific appearance with a trail of black smoke, from which came (no doubt) a number of stones, with a loud whizzing noise, which struck on the earth like that of a ponderous body. One of these stones my son heard fall about fifty yards from whence he was. In its descent to the ground, it struck a pawpaw tree about the size of a small handspike, and tore it to pieces like lightning, by which means he immediately found the spot, and there saw the stone about eight or ten inches under ground, which weighed five pounds and a quarter; Mr. James Dugger was present. They state that the stone was cold, but had the scent of sulphur. On the same day, and about the same time, my son-in-law, Mr. Peter Ketring, with his hands, was in a field about one mile distant, when a stone fell which weighed eleven pounds and a half. This took place near him, his wife, and three other women. A number of respectable men were present when it was found and taken up, it was 12 inches under ground. I have seen one that fell at Mr. David Garret's, on Station Camp, and part of one that fell at Mr. John Bones'. I have also heard of one more that has been found. These stones are perfectly similar, glazed with a thin black crust, and bear the marks of having passed through a body of fire and black smoke. Many gentlemen have been excited within a few days to come to my house and see them, and say they never saw such before. At the request of some gentlemen I took them to Galatin, on Monday last, which was the first day of our county court, where they were shown publicly. I design to send the largest of them to Nashville in a few days. Yours respectfully,

HUGH KIRKPATRICK.

Drake's Creek, Sumner co. May 16th, 1827.

TOPOGRAPHY.

GEORGIA, IN ASIA.

The last number of the Quarterly Review contains an interesting article under the general title of "*Travels in Southern Russia and Georgia*." This article is founded on a work recently published by Mr. Henderson, agent of the British and Foreign Bible Society, and another by the Chevalier Gamba, the French Consul at Tiflis. The regions described by these gentlemen being in a great measure new to us, we have examined the article in the Review with more than ordinary gratification. The descriptions of the countries, the character of the various governments, and of the inhabitants, are interesting in an uncommon degree, particularly from their novelty. The regions over which the travellers passed, are generally within the immense

limits of the Russian empire, and furnish a striking and in the opinion of the Reviewers, a favourable exhibition of the influence and controul of that vastly extended and energetic government. "We cannot conclude," say they, "without saying that the perusal of these two works, from the pens of two apparently impartial and dispassionate men,—must, we think, leave on the mind of the dispassionate reader an impression highly favourable to the Russian government. So little does there appear of what Englishmen think of when they hear the mention of *despotic* power, jealousy, and unnecessary interference in private concerns—that on the contrary, a spirit of forbearance, of kindness and consideration, is every where manifested towards those who have sought protection under the imperial crown."

The following passage from the Review, contains a fine description of a very delightful country.—

"The whole country of Georgia is so beautifully diversified with grand mountain scenery, gradually spreading out into hill and dale, that some of the old travellers thought they had discovered in it the garden of Eden. The climate is equally favourable to the growth of fruits, grain, and esculent plants, and to the human constitution. The sky is almost always clear and serene, the rain being chiefly confined to thirty or forty days in the year. In summer, on the plains, the thermometer usually stands about 78 to 84 degrees, rising occasionally to 90. The winter there scarcely continues two months, during which the thermometer seldom descends below forty; however, every possible degree of temperature, down to perpetual frost may be had on the sloping spurs of the Caucasus. The hills and the ravines are covered with the finest forests of oak, beach, elm, chestnut, walnut, ash and lime trees; many of them entwined by vines growing perfectly wild, and loaded with vast quantities of the finest grapes. Most of the cultivated fruits of Europe, such as apples, pears, peaches, plums and cherries, are found growing in the forests in a state of nature. The black and white mulberry grow without culture; and Iberia was famed for its silk, long before this valuable article was brought into Italy by the two Persian monks, in the reign of Justinian. Cotton and flax grow spontaneously on the plains near the Caspian; and rice, wheat, barley, millet, sesamum and madder, are raised with very little culture. The pasturage of the valleys is excellent, and the rivers are full of fish, but being mostly mountain-torrents, are unfit for internal navigation. Honey of the finest kind is collected from bees' nests in the crevices of rocks and hollow trees, and their wax supplies no inconsiderable article of trade. In short, nature seems to have lavished on this favoured country all that can contribute to the comfort and happiness of a peaceable and industrious population."

SKETCHES OF SOCIETY.

From the Massachusetts Journal.

BERLIN, IN PRUSSIA.

DER SCHINDER. Under this title there is a class of men in this city, and indeed throughout Prussia as well as a greater part of Germany, who gain a livelihood by the execution of criminals, whether by breaking on the wheel or beheading them. These Schinders are composed of men who have been sentenced to death for crimes against the state, and have been reprieved to fill up vacancies in the honourable corps of Jack Ketches. They employ their leisure hours in cutting up dead beasts, horses, cows, dogs, cats, &c. the flesh of which they boil for the fat, and afterwards sell for dog's food. If a horse, or ox, or swine, or any animal of a Prussian, die, he is obliged to send for the Schinder to remove it, and to pay him for such removal, if a horse, \$2; and \$1 for an ox, cow, hog, dog, cat, or any other kind of animal of the smaller class. No person is allowed the privilege of interring a beast, even if it be his own property, but Herr'n Schinder.

If a man commit ever so atrocious a murder in Prussia, he can by paying the sum of \$20,000 to the government, obtain a free pardon, on condition of wearing a small black band around his neck, to

denote his commission of crime. It is the duty of the Schinder to visit these forgiven assassins, at least once a year, to shift their bands. He presents himself before the murderer with a large knife or cutlass, which he thrusts in the ground before him; he then takes the band from his neck, and replaces it with another, and exacts ten dollars for his "most infernal politeness." The Schinder will sometimes pop unawares upon a person who has temporarily laid aside his band, in which case, he demands \$50 for such contempt of the laws of the land. In truth, the Schinders are so lynx-eyed, that the bands are seldom removed by those who are doomed to wear them, and who are liable to be visited by day or night in their own dwelling, or those of others, if suspected by the Schinder.

There is a merchant now resident in Berlin who has been found guilty of the deaths of four of his fellow creatures; yet, having paid \$80,000 to the government, and wearing four black bands around his neck, he is enabled to roam at large, suffering occasional visits from his friend the Schinder. There are several persons now residing in Berlin, among whom are three females, who have committed brutal murders, escape from the penalties of which has been purchased with gold.

It is needless to add that all classes of the citizens of Prussia look upon the Schinder with unqualified disgust and abhorrence. It is ruinous to the character of any man to be found speaking to him. The street pedestrian shuns him as he would a foul and noxious weed. If he enters a wine house to drink, he has no sooner finished, than the glass is smashed on the floor before his face. The finger of scorn is forever pointed at him, and "like a foul and ugly witch," he drags his man-executing, dog-interring and band-exchanging life along.

NATIONAL CHARACTER.

From Brooke's Winter in Lapland.

LAPLAND.

The Laplander is a wanderer both from nature and necessity. His subsistence depending upon his deer, which are left free and unconstrained, his own movements may be said to be guided by theirs, and by them also his habits of life are in a great measure formed. The number of deer belonging to a herd is from 300 to 500; with these a Laplander can do well, and live in tolerable comfort. He can make in summer a sufficient quantity of cheese for the year's consumption; and during the winter season can afford to kill deer enough to supply him and his family pretty constantly with venison. With 200 deer, a man, if his family be but small, can manage to get on. If he have but 100, his subsistence is very precarious, and he cannot rely entirely upon them for support. Should he have but fifty, he is no longer independent, or able to keep a separate establishment, but generally joins his small herd with that of some richer Laplander, being then considered more in the light of a menial, undertaking the laborious office of attending upon and watching the herd, bringing them home to be milked, and other similar offices, in return for the subsistence afforded him. It happens, however, very frequently, that when, either from sickness or accident, the herd of a Laplander is reduced to this small number, he will give in charge to another what he has remaining, and will repair to the sea-coast; where he will either endeavour to get work from the Norwegian settlers, and in this manner to support himself; or else, which is more frequently the case, he settles himself on the shores of some of the neighbouring fiords, of the coast, follows the fishery for his livelihood, and from a mountain is transformed into a coast Laplander. Thus his habits are totally changed, and in time he becomes as expert at the fishery, and as undaunted in braving the dangers of the ocean, as he was before firm in bearing the numerous hardships of his former roving life. Still the charms of the liberty he enjoyed are never obliterated from his mind; he regards the Shore Laplander as an inferior being, inasmuch as he is less free; and his only thoughts are of returning to his mountains. Should he be successful he is enabled to do so, and, repairing the losses of his herd, again com-

mences his former manner of life. It more generally happens, however, that, having once become a Shore Laplander, he remains so, being too careless and too thoughtless a being to carry his views beyond the exigencies of the present moment. A Laplander who is the master of a herd of 1000 deer, is considered a rich man; though instances are not rare of their possessing 1500, or even 2000.

The household economy of the Laplander, it may readily be imagined, is extremely simple. His food during the period of his summer wanderings is spare and frugal; he no longer indulges himself in his favourite food, rein-deer venison, which forms the luxury of the winter season. In summer he is intent only upon increasing his herd, and providing against his future wants. He contents himself then generally with milk, and the remains of the curd and whey after making his cheese. In the first he indulges himself sparingly, on account of the very small quantity each deer affords, as well as of the great importance it is to him to secure a good quantity of cheese for his winter stock, and to guard against any disaster that might suddenly befall his herd, and reduce him to want. As his herd is milked during the summer season only, when this is drawing to a close, he generally sets by some milk for the purpose of being frozen. This serves not only for his own individual use during the winter, but is prized so much for its exquisite delicacy in this state, that it forms an article of trade; and the merchants with whom he deals, and who repair then to the interior, gladly purchase it at any price. From the naturally churlish temper of the Mountain Lap, and the value he justly sets upon his milk, it is extremely difficult during the summer to prevail upon him to part with even a very small quantity; and whenever I visited the tent, I saw with what reluctance these people offered it. By degrees, however, I ingratiated myself so much into their favour, partly from the circumstance of my being an Englishman, and partly by a few well-timed presents, that for some time during their stay near Fuglenæs, I had the luxury of drinking it in a morning for my breakfast; and I must confess I found it so delicious, that I think the time of any idle epicure would not be ill bestowed in making a trip to Finmark, were it solely for the pleasure of tasting this exquisite beverage. The flavour of the milk is highly aromatic, which, it is probable, is chiefly owing to the kind of herbage the animal browses upon in summer. In colour and consistency it resembles very rich cream: and its nature is such, that, however gratifying to the taste, it is difficult and even unwholesome to drink more than a small quantity of it. Rich as the quality of the rein-deer milk is, it is singular that the cheese which is made from it is extremely bad, being hard, white in colour, of a disagreeable taste, and eatable only by a Laplander. I am ignorant of the cause of it though inclined to think it arises more from its peculiar nature, than from any defect in the making. This is effected simply by placing the milk in a large iron pot over the fire, which with the addition of rennet, made from the stomach of the deer, quickly turns it. The curd is then pressed, and the whey being separated from it, is put into small shallow moulds. The general size of the cheese is that of a small plate, and it is little more than half an inch in thickness. Possibly its being made so thin may have an effect upon the goodness of it, as, when cut, the hard rind composes the larger portion. Bad as it is, it is highly prized by the Laplanders, who eat it both raw and toasted: in the latter state it appears at the tables of the merchants, and is rather more palatable. Notwithstanding its previous hard and dry appearance, when applied to the fire, a rich pure oil distils from it, which is found extremely serviceable in removing the effects arising from being frost bitten; for, being rubbed on the frozen part it prevents mortification from ensuing. This is used when the common remedy of snow-rubbing has been neglected, I was induced, from curiosity, to bring with me to England several rein-deer cheeses; some of which were, until lately, in my possession. I did not find that age at all improved their flavour; not having in any degree softened them, or produced any other effect than creating a singular quantity of mites, which accumulate again almost immediately after the former have been removed.

POPULAR TALES.

A GERMAN ROMANCE.

(Concluded.)

The purses would soon cease to pay; and who knew what would be the consequences? On hearing that our money would run short, I inquired no farther into consequences: I shrugged my shoulders; I was silent, and she seemed to understand me. We now packed up, and got into our carriage, the box standing opposite to us; in which, however, I could still see no symptoms of a palace. In this way we proceeded several stages. Post-money and drink-money were readily and richly paid from the pouches to the right and left; till at last we reached a mountainous district; and no sooner had we alighted here, than my fair one walked forward, directing me to follow her with the box. She led me by rather steep paths to a parrow plot of green ground, thro' which a clear brook now gushed in little falls, now ran in quiet windings. She pointed to a little knoll; bade me set the box down there, then said: "Farewell! Thou wilt easily find the way back; remember me: I hope to see thee again." At this moment, I felt as if I could not leave her. She was just now in one of her fine days, or if you will, her fine hours. Alone with so fair a being, on the green sward, among grass and flowers, girt in by rocks, waters murmuring round you, what heart could have remained insensible! I came forward to seize her hand, to clasp her in my arms: but she motioned me back; threatening me, though still kindly enough, with great danger, if I did not instantly withdraw. "Is there no possibility, then," exclaimed I, "of my staying with thee; of thy keeping me beside thee?" These words I uttered with such rueful tones and gestures, that she seemed touched by them, and after some thought, confessed to me that a continuance of our union was not entirely impossible. Who happier than I! My opportunity, which increased every moment, compelled her at last to come out with her scheme, and inform me that if I too could resolve on becoming as little as I had once seen her, I might still remain with her, be admitted to her house, her kingdom her family. The proposal was not altogether to my mind: yet at this moment, I positively could not tear myself away; so, having already for a good while been accustomed to the marvellous, and being at all times prone to bold enterprises, I closed with her offer, and said she might do with me as she pleased. I was thereupon directed to hold out the little finger of my right hand; she placed her own against it; then with her left hand she quite softly pulled the ring from her finger, and let it run along mine. That instant, I felt a violent twinge on my finger: the ring shrunk together, and tortured me horribly. I gave a loud cry and caught round me for my fair one, but she had disappeared. What state of mind I was in during this moment, I find no words to express; so I have nothing more to say, but that I very soon, in my miniature size, found myself beside my fair one in a wood of grass-stalks. The joy of meeting after this short yet most strange separation, or if you will, of this re-union without separation, exceeds all conception. I fell on her neck; she replied to my caresses, and the little pair was as happy as the large one. With some difficulty we now mounted a hill; I say difficulty, because the sward had become for us an almost impenetrable forest. Yet at length we reached a bare space; and how surprised was I at perceiving there a large bolted mass; which, ere long I could not but recognise for the box, in the same state as when I set it down. "Go up to it, my friend," said she, "and do but knock with the ring: thou shalt see wonders." I went up, accordingly, and no sooner had I rapped, than I did, in fact, witness the greatest wonder. Two wings came jutting out; and at the same time there fell, like scales and chips, various pieces this way and that; while doors, windows, and colonnades, and all that belongs to a complete palace, at once came into view. If ever you have seen one of Rontchen's desks: how, at one pull, a multitude of springs and latches get in motion, and writing board and writing materials, letter and money compartments, all at once, or in quick succession, start forward, you will partly conceive how this palace unfolded itself, into which my sweet attendant now

introduced me. In the large saloon, I directly recognised the fire-place which I had formerly seen from above, and the chair in which she had then been sitting. And on looking up, I actually fancied I could still see something of the chink in the dome, through which I had peeped in. I spare you the description of the rest: in a word, all was spacious, splendid and tasteful. Scarcely had I recovered from my astonishment, when I heard afar off a sound of military music. My better half sprung up; and with rapture announced to me the approach of his majesty her father. We stepped out to the threshold, and here beheld a magnificent procession moving towards us, from a considerable cleft in the rock. Soldiers, servants, officers of state, and glittering courtiers, followed in order. At last you observe a golden throng, and in the midst of it the king himself. So soon as the whole procession had drawn up before the palace, the king, with his nearest retinue, stepped forward. His loving daughter hastened out to him, pulling me along with her. We threw ourselves at his feet; he raised me very graciously: and on coming to stand before him, I perceived, that in this little world I was still the most considerable figure. We proceeded together to the palace; where his majesty, in presence of his whole court, was pleased to welcome me with a well-studied oration, in which he expressed his surprise at finding us here; acknowledged me as his son-in-law, and appointed the nuptial ceremony to take place on the morrow. A cold sweat went over me as I heard him speak of marriage; for I dreaded this even more than music, which otherwise appeared to me the most hateful thing on earth. Your music-makers, I used to say, enjoy at least the conceit of being in unison with each other, and working in concord; for when they have tweaked and tuned long enough, grating our ears with all manner of screeches, they believe in their hearts that the matter is now adjusted, and one instrument accurately suited to the other. The band master himself is in this happy delusion; and so they set forth joyfully, though still tearing our nerves to pieces. In the marriage state, even this is not the case: for altho' it is but a duet, and you might think two voices, or even two instruments, might in some degree be attuned to each other, yet this happens very seldom; for while the man gives out one tone, the wife directly takes a higher one, and the man again a higher; and so it rises from the chamber to the choral pitch, and farther and farther, till at last wind instruments themselves cannot reach it. And now, as harmonical music itself is an offence to me, it will not be surprising that disharmonical should be a thing which I cannot endure. Of the festivities in which the day was spent, I shall and can say nothing; for I paid small heed to any of them. The sumptuous victuals, the generous wine, the royal amusements I could not relish. I kept thinking and considering what I was to do. Here, however, there was but little to be considered. I determined, once for all, to take myself away and hide somewhere. Accordingly, I succeeded in reaching the chink of a stone, where I entrenched and concealed myself as well as might be. My first care after this was to get the unhappy ring off my finger; an enterprise, however which would by no means prosper, for on the contrary, I felt that every pull I gave, the metal grew straiter, and cramped me with violent pains, which again abated so soon as I desisted from my purpose. Early in the morning I awoke (for my little person had slept, and very soundly); and was just stepping out to look farther about me, when I felt a kind of rain coming on. Through the grass, flowers and leaves, there fell, as it were, something like sand and grit in large quantities; but what was my horror when the whole of it became alive, and an innumerable host of ants rushed down on me! No sooner did they observe me, than they made an attack on all sides; and though I defended myself stoutly and gallantly enough, they at last so hemmed me in, so nipped and pinched me, that I was glad to hear them calling to surrender. I surrendered instantly and wholly; whereupon an ant of respectable stature approached me with courtesy, nay, with reverence, and even recommended itself to my good graces. I learned that the ants had now become allies of my father-in-law, and by him been called out in the present emergency, and commissioned to fetch me back. Here then was little I in the hands

of creatures still less. I had nothing for it but looking forward to the marriage; nay, I must now thank Heaven, if my father-in-law were not wroth, if my fair one had not taken the sullen. Let me skip over the whole train of ceremonies; in a word, we were wedded. Gaily and joyously as matters went, there were, nevertheless, solitary hours, in which you were led astray into reflection; and now there happened to me something which had never happened before: what, and how, you shall learn. Everything about me was completely adapted to my present form and wants; the bottles and glasses were in a fit ratio, to a little toper, nay, if you will, better measure, in proportion than with us. In my tiny palate, the dainty tid-bits tasted excellently; a kiss from the little mouth of my spouse was still the most charming thing in nature; and I will not deny that novelty made all these circumstances highly agreeable. Unhappily, however, I had not forgotten my former situation. I felt within me a scale of by-gone greatness; and it rendered me restless and cheerless. Now, for the first time did I understand what the philosophers might mean by their ideal, which they say so plagues the mind of man. I had an ideal of myself; and often in dreams I appeared as a giant. In short, my wife, my ring, my dwarf figure, and so many other bonds and restrictions, made me utterly unhappy, so that I began to think seriously about obtaining my deliverance. Being persuaded that the whole magic lay in the ring, I resolved on filing this asunder. From the court jeweller, accordingly, I borrowed some files. By good luck, I was left-handed, as, indeed, throughout my whole life, I had never done aught in the right-handed way. I stood tightly to the work: it was not small; for the golden hoop, so thin as it appeared, had grown proportionably thicker in contracting from its former length. All vacant hours I privately applied to this task: and at last, the metal being nearly through, I was provident enough to step out of doors. This was a wise measure; for all at once the golden hoop started sharply from my finger, and my frame shot aloft with such violence, that I actually fancied I should dash against the sky; and at all events, I must have bolted through the dome of our palace; nay, perhaps, in my new awkwardness, have destroyed this summer residence altogether. Here then was I standing again; in truth, so much the larger, but also, as it seemed to me, so much the more foolish and helpless. On recovering, from my stupefaction, I observed the royal strong-box lying near me, which I found to be moderately heavy, as I lifted it, and carried it down the foot-path to the next stage; where I directly ordered horses and set forth. By the road, I soon made trial of the two side pouches. Instead of money, which appeared to be run out, I found a little key; it belonged to the strong-box, in which I got some moderate compensation. So long as this held out, I made use of the carriage: by and by I sold it, and proceeded by the diligence. The strong-box, too, I at length cast from me, having no hope of its filling again. And thus in the end, though after a considerable circuit, I again returned to the kitchen-hearth, to the landlady, and the cook, where you were first introduced to me.

MISCELLANY.

SWIFT.

The first promotion in the church which Dean Swift obtained was "the prebend of Kilroot, in the diocese of Connor, worth about one hundred pounds a year. To this he retired, and assumed the character of a country clergyman." Previous to his obtaining this living he had resided with Sir William Temple, his munificent patron, and tasted the seductive influence of the society of the great and learned. Hence it is not to be wondered at, that Swift did not relish the seclusive mode of life which falls to the lot of country parsons. He, therefore, soon wished to resume his old station at Sir William Temple's, and the latter, "who had learned by the loss of Swift, his real value, became solicitous that he should return to Moorpark. While Swift hesitated between relinquishing the mode of life which he had chosen, and returning to that which he had relinquished, his resolution appears to have been determined by a circumstance highly

characteristic of his exalted benevolence. In an excursion from his habitation, he met a clergyman, with whom he formed an acquaintance, which proved him to be learned, modest, well-principled, the father of eight children, and a curate at the rate of forty pounds a year. Without explaining his purpose, Swift borrowed this clergyman's black mare, having no horse of his own,—rode to Dublin, resigned the prebendary of Kilroot, and obtained a grant of it for his new friend. When he gave the presentation to the poor clergyman, he kept his eyes steadily fixed on the old man's face, which, at first, only expressed pleasure at finding himself preferred to a living; but when he found that it was that of his benefactor, who had resigned in his favour, his joy assumed so touching an expression of surprise and gratitude, that Swift, himself deeply affected, declared he had never experienced so much pleasure as at that moment. The poor clergyman, at Swift's departure, pressed upon him the black mare, which he did not choose to hurt him by refusing; and thus mounted, for the first time, on a horse of his own, with four score pounds in his purse, Swift again embarked for England, and resumed his situation at Moorpark, as Sir William Temple's confidential secretary.

While we are speaking of the Dean of St. Patrick's, we may as well insert another trait of his character, from the same source. After the death of Sir William, Swift resided for some time in the family of Lord Berkeley, as resident chaplain. In the year 1700, he obtained the living of Laracor, and resumed the habits of a country clergyman. He is said to have walked down, *incognito*, to the place of his future residence; and tradition has recorded various anecdotes of his journey. He walked straight to the curate's house, demanded his name, and announced himself bluntly as his master. All was bustle to receive a person of such consequence, and who, apparently, was determined to make his importance felt. The curate's wife was ordered to lay aside the doctor's only clean shirt and stockings, which he carried in his pocket; nor did Swift relax his airs of domination until he had excited much alarm, which his subsequent kind and friendly conduct to the worthy couple, turned into respectful attachment. This was the ruling trait of Swift's conduct to others; his praise assumed the appearance and language of complaint; his benefits were often prefaced by a prologue of a threatening nature; his most grave themes were blended with ironical pleasantry, and, in those of a lighter nature, deep and bitter satire is often couched under the most trifling levity.

[Sir Walter Scott's Life of Swift.]

INTEMPERANCE.

To show the dangers of inebriety, the catholic legends tell us of some of their hermits to whom the devil gave the choice of three crimes; two of them of the most atrocious kind, and the other, to be drunk. The poor saint chose the last, as the least of the three; but when drunk, committed the other two.

The baneful effects of this pernicious vice upon the body, are described by Dr. Darwin, in his *Zoonomia*, under an allegory which would not have disgraced the splendid imagination of Lord Bacon himself.

"Prometheus," says the Doctor, "was painted as stealing fire from heaven, that might well represent the inflammable spirit produced by fermentation, which may be said to animate or enliven the man of clay; whence the conquests of Bacchus, as well as the temporary mirth and noise of his devotees. But the after punishment of those who steal this accursed fire, is a vulture gnawing the liver, and well allegorizes the poor inebriate lingering for years under painful diseases."

And that the graces and energies of poetry may come in aid of the figure so strongly depicted in prose, the same great physiologist, in his 'Botanical Garden,' has composed a picture which should be painted and hung up in every chamber dedicated to Bacchanalian festivity.

Dr. Darwin personifies the goddess of wine under the name of Vitis, who thus addresses her votaries:

"Drink deep, sweet youth," seductive Vitis cries,
The maudlin tear-drop glistening in her eyes;
Green leaves and purple clusters crown her head,
And the tall thyrsus stays her tottering tread.
"Drink deep," she carols as she waves in air
The mantling goblet, "and forget your care."
O'er the dread least malignant Chymia sallows,
And mingles poison in the nectared bowls.
Fell gout peeps grinning through the flimsy scene,
And bloated dropsy keeps behind unseen—
Wrapped in her robe, while Lepra hides her stains,
And silent Frenzy, writhing bites his chains.

SUPERSTITIOUS NOTIONS.

NO. II.

Ye would be dupes and victims, and ye are! [Moore.]

There are few, even among the most bigotted lovers of the marvellous, who will confess their faith in the doctrine of Witchcraft. How many there are who believe it in their hearts, is not for me to say; but there are many who place this absurd system of diabolical agency, on a par with the divine power of working miracles, and suppose it to have passed away with the age of miracles itself. Now, what more dangerous doctrine, both to religion and morality, than this! Does it look becoming the Author of all good, whatever spiritual power he may suffer the infernal beings to exercise;—does it look probable, that he allows their depredations on human happiness, or creates sub-agents to counteract all His gracious purposes, and to encounter His ministers of revelation, miracle to miracle? One would think, if such a belief could be fully substantiated, that the unlettered Indian, who makes no difference of power between the Good and Evil Spirits, has more cogent reasons for his belief than otherwise. Had this been true; how would the age of miracles have rendered earth a field of spiritual warfare, between the ministers of Satan, and the inspired prophets of God? If so, then, indeed, might the devil be changed into an angel of light; and not even the ministers of the Most High could prove their mission by their works.

The advocates of the theory of ancient witchcraft, are now called upon to support their faith, by Scripture or reason. Right glad of an opportunity, they fly forthwith to their strong hold of necromancy—the story of the witch of Endor. Well, what are your questions; let us hear. When the hag commenced her sybiline incantation, how did she discover that it was Saul to whom she spoke? for it is recorded that she addressed him thus, "Thou hast deceived me: thou art Saul." Again, how could she show Samuel to Saul, and cause him to repeat the curse of God on him for his disobedience, stating that the kingdom was passed from him to David, the son of Jesse? And lastly, what but a supernatural agency could prophesy so exactly the result, in this case, as also in the fulfilment of the sentence, that "to-morrow thou shalt be with us?" There are many sensible and well meaning people who cannot see through the foolery of such questions. They carry their own answer nearer to them than many are aware of. What old woman is there in the United States, so stupid as not to recognise any man at first sight, after having repeatedly heard it asserted that he was taller, "by the head and shoulders," than any other man in the nation? Again, Saul had so displeased Samuel while living, and Samuel had warned him of his alienation from God;—and had he not also annointed David? Who then would not know the reason of his being cast out from the participation of the favour of God, when without doubt it was made as public among the Israelites, for years before, as it would be, by preaching from the pulpits of all our modern churches? If Samuel had witnessed the truth in his life, what credit to any one to repeat his prophecy after his death? Concerning this augury, "to-morrow thou shalt be with us,"—the old imposter committed a most grievous error. If we look through the succeeding chapters of the book, we will find that the armies of David and Saul were wonderfully active, or that it must have been several days before Saul's death that he sought this interview. If you carry your argument further, and say the word *to-morrow* is figuratively used, and does not strictly signify the next day, as well might the maniac, who strolls about the

streets, lay claim to the gifts of prophecy, by saying, "to-morrow thou shalt die!" for if we ever die, his augury, by this rule, must come to pass.

In the midst of this transition, I have passed over one remark which is of importance here; I mean the general belief of the superficial reader, that Samuel did actually and visibly appear to the ocular powers of Saul. Nothing can be farther from the truth than this. We read that he asked the witch, "What dost thou see?" and hearing her answer, he said, "it is Samuel," and fell on his face for fear. Then a dialogue passed between the supposed Samuel and the king, and its import and veracity I have noticed above. Considering the antiquity of the art of ventriloquism, and the profound credulity of Saul, and all the Jewish nation, I do not think it is speaking any thing derogatory to the authenticity of the Scriptures, to say that with a smattering of this art, and some fumes of sulphur,—some groaning, and distortions of countenance, it was possible—nay, probable, that the king of Israel was completely gulled. If so, what becomes of the antiquity of witchcraft? If not, I shall be happy to learn of such as have clearer views of the mysteries of revelation.

The beam pounce in; for time and skill will couch the blind.

G.

THE REPOSITORY.

JOINING A REGIMENT. The next day I may consider to have been my first appearance in public as a properly authenticated officer in the army. I stood upon the parade fully equipped, with my regiment. During all the time, I might as well have been in the pillory; nothing relieved me but pulling off my gloves, fixing my cravat and playing with my sword knot. I formed one of those whom the admiring crowd gazed at. I was saluted every where by passing soldiers, and I gratified my vanity in this point, by repeatedly walking past the sentries on duty at the palace, to hear them slap the butt ends of their muskets, as they carried arms to compliment me. I was gazed at on the Steyne by the most captivating eyes; I was smiled at in the library by the most fascinating faces; lovely lights gleamed on from balconies, barouches, and donkeys' backs; pelisses flounced, and feathers waved for me; I was somebody, I was everybody; there was nobody in the world but me—myself! at least I saw no one else worth a moment's consideration, except as far as their admiration of me was concerned. I never ate so many ices and jellies in my life; not for the love my appetite bore to such confections, but the lounge—the halo which the discussion of an ice throws round the military figure in a pastry cook's shop is everything:—it was delightful! [Military Sketch Book.]

PHYSIOGNOMY. I have been a great physiognomist in my life. I have learnt more from the "human face divine" than ever I did from books. The face is the index to the book of human nature. It bodies out by imperceptible lines and evanescent hues the strong points of character, and the most secret emotions of the soul. Of all countenances I love the melancholy one the most, because when it does become gay, its gayety is so bewitching. I cannot bear the constant smile. It is too much like the gilded sign, which is but rotten wood at heart. The deepest fancy, the most fascinating gayety, and the most interesting cast of thought are most generally associated with your melancholy Madona face. I have nine times out of ten found such to be the case. Why it is so I never inquired. But the same character may be discovered in the silent portions of nature. How beautiful the afternoon sun appears when he breaks out from a cloudy or a rainy morning! The fragrance of the fields is agitated—the songsters of the wood begin to chaunt—the rivulets roll over the pebbly bottoms with joy—the big ocean heaves itself against its shores with exultation—and the whole face of heaven sparkles with a new brightness that serves but as an anticipation of a glorious hereafter.

WHY A MAN IS NOT MADE OF DUST. A black servant, not an hundred miles from St. Andrew's Holborn, being examined in the church catechism was asked, "what are you made of Jack?" he said,

"of mud, massa;" on being told he should say, of dust, he replied, "no massa, it no do, no stick to-gedder."

ALBANY:

SATURDAY, JUNE 16, 1827.

Mr. ELISHA WILCOX, proprietor of the Canal bookstore, on board the boat *Encyclopedia*, is our authorised agent on the line of the Erie canal, between Albany and Buffalo.

H. MARSH, esq. of St. John's Hall, in the city of New-York, will receive subscriptions and payments for the American Masonic Record, and Albany Saturday Magazine, in that city and its vicinity.

INDEPENDENCE.

Teems not each ditty with the glorious tale?
Ah! such alas! the hero's amplest fate!
When granite moulders and when records fail,
A peasant's plaint prolongs his dubious date.
Pride! bend thine eye from heaven to thine estate;
See how the mighty shrink into a song! [*Childe Harold*.]

The season is fast approaching, when it will be, not only the duty, but the privilege, of the true lover of liberty, to pay some tribute to the noblest monuments of ancient worth—our civil liberty and our enlightened constitution, by a decent and cordial observance of the FOURTH OF JULY. It is a theme,

So often and so coldly sung,

that it seems almost impossible to speak of it with the reverence due to the sublime images it crowds upon the memory. The rise, the progress, and the prosperity of our country, are certainly interesting; but there are ideas connected with it, which take to themselves wings and fly away from the monotonous pages of history. They carry the glance of our mind, first, into the hearts of the liberty-inspired founders of this first of western realms. We imagine we can see that magnanimous prudence which bound their hearts into one, mixed with the disinterested pride of a father over the first spark of genius in his son, which he knows shall eclipse his own. Grand as was their station, and potent as were the virtues of the talisman they wielded, and by which they led a whole nation like a child, fond prophetic reason told them that nation was indeed a child; strong, indeed, to enforce its rational purposes, yet in strength a mere infant, which not an age, but ages, must raise to the full stature, strength, and wisdom of manhood. Theirs was a task of mind as well as arms, and well did the result prove the fitness of mind to its task. How different, indeed from the boasted worshippers of reason, who aspired to the liberation of France!

And vile ambition that built up between
Man and his hopes an adamant wall,
Has grown the pretext for the eternal thrall
Which nips life's tree, and dooms man's worst his second fall.

It was not selfish ambition that led the soldier of the American revolution to encounter cold and nakedness, poverty and want. It was for children yet unborn. Fetters were forging for their tender hands. The unballowed tread of the taskmaster was to press the soil they had husbanded. Their souls shuddered at the thought, and in generous indignation, they rose at once, and resolved to crush the reptile of oppression in the egg. Then did the blood, the free-born blood of youth, rush through heart and brain, with a heat that nought but the

air of liberty could cool. Then, too, did woman forget her native timidity,

And she, whom once the semblance of a scar
Appalled, an owl's larum filled with dread,
Now views the column-scattering bayonet jar,
The falchion flash,—and o'er the yet warm dead
Stalks with Minerva's step where Mars might quake to tread.

Shall we, who are beginning to reap the first fruits of their labours, forget them? Filial affection forbid! If we had no motive to celebrate this day, but the bare exercise of this duty,—to comfort the tottering steps of the remnant of that band who dared and achieved this brightest of boons, our relation as sons of such sires, would be an incontrovertible argument. To meet with them around the festive board, and listen to their unoffending boasting; to bid the fire of patriotic youth shine once more in their waning orbs; to quicken the sluggish pace of superannuated blood, into the throbbing of youth; and to flatter their excusable vanity, if not by the applause of words, at least by the attention of the ear and the eye,—who can describe the pleasure such scenes may impart to them? They forget their toils and cares, their debility and their mortality, in the gust of joy; and he who will not administer to that joy, is unworthy of the birthright.

In the glory of that festive moment, where will not the mind run? The ocean on the one hand, and the wilderness on the other, shall be no limits to its flight. The sentiments of sympathetic grief for those who are doomed to "grind in the prison houses" of legitimate tyrants, shorn of their strength by sinecures, and deprived of their eyes by the bigotted creatures of priestcraft, can not fail to be upon our souls,

With a power and with a sign:—

Nor shall our hearts refuse to throb in unison with the young Samson, who is waking from his ignominious enthrallment, with a strength that shall shake the pillars of their temple of legitimacy, though he perish in the ruins of its fall.

Where are those bloody banners which of yore
Waved o'er thy sons victorious to the gale,
And drove at last the spoilers from thy shore?

* * * * *
Cold is the heart, fair Greece! that looks on thee,
Nor feels like lovers o'er the dust they loved—

Italy, too, once emphatically the "commonwealth of kings," groaning beneath the triple yoke of civil despotism, bigotry, and abject poverty, can not but come over our thoughts; and we must mingle a tear with our wine for her, who was once the arbitress of nations,—now a degraded dependant on the strangers sword for the nominal peace she enjoys. The eloquence of all her orators never told so much, nor so ominously, the transmuting strength of Time, as the dumb relics of her ancient glory;—the wisdom of all her sages is nothing to the example she holds up to the nations, of the slavery which luxury is sure to bring. In vain we look forward into the labyrinths of fate. Not even hope sheds a ray of light on her dark lot. And why? Is there no more virtue in the blood that is fanned by her salutiferous gales? Is there no more inspiration shed from her sunny skies, and her celestial bowers?

Or must such minds be nourished in the wild,
Deep in the unpruned forest, midst the roar
Of cataracts, where nursing nature smiled
On infant Washington?

She is not the only land whose subjects hug their chains, and bow the head, and bend the knee, to the idol of their own degradation. The fatal frenzy of the French revolutionists seems to have wrought a

charm on the destinies of Europe, which reason and intellectual light shall be long in breaking.

Still, Liberty! thy banner, torn, but flying,
Streams like a thunder-storm against the wind!

Still, Liberty! the seed which we have sown shall spring up and bring forth its fruit; not one particle shall die in the ground, though for ages it seem to be rotten and forgot. Still, Liberty! while at thy pure shrine we pour the libation of Joy, unrestrained by the edicts of legitimate apes, and unawed by the flames of persecution, thou hast thy votaries who do not look on our feast with apathy, in every realm of Europe. The generous son of Erin would gladly join in the song and bowl, but his birthright is yet to be wrested from the clutches of an overfed hierarchy. The Gaul, could we read his heart, would sigh for the unrestrained exercise of his noble thoughts; but a power, imposed by foreign bayonets, is upon him; and as yesterday, he bowed to the nod of Napoleon, so to day he cringes to the sceptre of the Bourbon. The genius of the Iberian, too, is quelled; and no longer does the Guerilla leap "like a stream from the rock," to avenge the injuries of his country, on the emissaries of France, and the more wanton, bigotted creatures of the Spanish church. Still, beneath the dark glance of the Andalusian eye, there is a spark which floods of foreigners can never quench; and when the monster of oppression is least on the alert, that spark is ready to burst into a flame.

The phlegmatic Russ, like the fettered bear after a desperate spring to the length of its chain, falls back calmly to silence, but not to repose; let another season of such promise offer, and his fetters are broken.

—Still the seed we find

Sown deep, even in the bosom of the north;
So shall a better spring less bitter fruit bring forth.

The day is not less worth observing, for the extraordinary festivity of the last anniversary; on the contrary, an additional motive for veneration was attached to it by the exit of two whose hands had contributed to its primal institution; as if Heaven had resolved, by special providence to approve and consecrate what man had done. Americans must from this year forward, not only look on this day as the natal day of their political existence, but, as the ancient Roman esteemed an object doubly consecrated, that had been touched by the lightning, so shall our children's children be taught the lessons of liberty by the association of the patriot's dying hour, with the already glorious memorials of the FOURTH OF JULY.

The Grand Lodge of the state of New-York commenced its annual communication in the city of New-York, on Wednesday, the 6th inst. and adjourned on Tuesday, the 12th. During this meeting, the differences which heretofore existed between the city and country lodges, and which, for three or four years previous, had caused the existence of two bodies, each claiming to be the Grand Lodge, were settled in the most amicable manner. The officers [for which see first page] were elected unanimously, not a vote being given against either of the brethren chosen. Much business was transacted, and thirteen charters for new lodges granted; among which were grants for two additional lodges in the city of New-York. The proceedings of the two bodies, in separate capacities, previous to the consolidation, are, by this arrangement, made valid.

We congratulate the fraternity on this reunion,

which, if it caused no bitterness of feeling between the brethren of the country and city, was a too fruitful source of embarrassment to both. It is a bad principle among any class of men, to set up a kind of independent reserve, and look upon each other as not worth notice. Contention, if not carried too far, is much better than contempt, and is more likely to reconcile all rivalships, than a sullen silence and selfish reserve. We are happy to reflect, that during the whole separation, each party has conducted toward the other with a becoming complaisance, and have rather studied to carry their contested point by good will, than by harsh words. On the whole, they have acted as if resolved to unite, from the separation, to the last. We trust that the particularly awkward situation in which they have been placed by this mutual revolt, will bear on the memory of the leading brethren, with a monition that shall prevent its recurrence for the future.

LEISURE HOURS. There is a peculiar luxury in the enjoyment of silent reflection. When the body is wearied by labour, or the mind confused with noise and hurry, to recruit the exhausted functions by a cup or two of good tea, and then to throw yourself into an easy chair, where no officious meddler can intrude, and interrupt the chain of your cogitations. What can equal it? Head ache and heart ache,—hunger and thirst,—church and state,—freshet and drought,—constables and duns,—broken heads and blue devils,—are all swept away in one overwhelming current of thoughts. What need a man to care for wind or rain, fevers or chills, markets or famine, peace or war, if he can drive them all from his mind without any extraordinary effort, and tumble head and heels into an ocean of waking dreams, which he will neither realize nor remember over ten minutes? At that season of the day too, when "*Hesperus*, who bringeth all good things," throws over his gifts, a silence that may be felt. O, it is worth all the toil, and sweat, and noise, and dust, and every hard thing that the day offers, to sit for one short half-hour in such a mood; and you who wish to enjoy it can form no idea of its sweet influences, until fatigue, and confusion, and finally the oblivious beverage, have fitted your mind and body for its fruition.

If our readers are particularly anxious to peruse a capital specimen of Mr. Solomon Southwick esq.'s most eloquent style of "*ganging back agen*," we beg leave to refer them to an article in yesterday's National Observer, entitled "*Explanation*." The article to which the reader is referred, contains all the pith, and some of the excrescence, of the intellectual portion of its immaculate author's constituent whole; and very forcibly illustrates the decency, good nature, and classic attainments of the reservoir from whence it proceeds. The original vein of bathotic acuteness, too, whose flowing commences with the head and winds off with the tail, combined with the sarcastic introduction of sundry masonic titles and various manly & witty nicknames, beget in it a spirit which renders the Observer astonishingly interesting. We really hope the modest and patriotic editor has obtained another opportunity to sell "two hundred and fifty papers at a shilling a-piece." How excessively agreeable and disinterested such an occurrence would be!

Seriously, however, as far as we are connected with the tirade of abuse here alluded to, it does not exceed our expectations. If a man speak truth in the teeth of a fanatic, he must prepare himself for the

receipt of fourfold its bulk in billingsgate. We spoke truth of Mr. Southwick, we have received the billingsgate, and are content. We said that if Mr. Southwick's word was true, he was, either in his youth or in his age, an *impostor*. To free himself from this charge, he has acknowledged that he spoke falsely; and as this was the confession we aimed at extorting from him, we have accomplished our object. The worth of his word, *under any circumstances*, may now easily be guessed at. He has repeatedly alleged as an excuse for his errors, that he writes in a "*hurry*;" but we humbly conceive, that if he is in too much of a "*hurry*" to speak the truth, a close mouth would do him more honour than a slippery tongue. Private character is not a fit bauble for the sport of fools and bedlamites; nor should the tongue of a disappointed politician be considered as licensed to defame it. Solomon Southwick is not wholly unacquainted with bounties and bonuses; and so long as his history presents positive proof that he is as open to corruption as other men are, we shall not encourage his apparent iniquity in the hope of basking in his adulation. We look upon him as a quack in morality—an experimenter upon the bad passions of the day; and one who, if snugly taken upon the hip, will lie in one instance to preserve his credit in another.

The *Philadelphia Album* has been enlarged, and much improved in appearance, and placed under the editorial direction of Dr. M'Henry and Mrs. Muzzy.

CHIT CHAT.

S. Phillips, of Geneva, advertises his appointment as an *Auctioneer*, and adds "having been appointed 2d *Corporal*, no auctioneering can be done on parade days."—The Sag Harbour *Corrector* mentions that there is a white-wood tree at Lloyd's Harbour, of such dimensions that the passengers of a vessel, *eleven* in number, who had gone on shore to amuse themselves, were comfortably and commodiously sheltered in the trunk, which is hollow, during a heavy shower.—A car loaded with coal got loose lately on the Mauch Chunk railway, and went *nine miles in ten minutes*. Fortunately it encountered nothing in its course, and did no injury.—The *Tontine*, the ship which sailed from Philadelphia with provisions for the Greeks, arrived at Gibraltar in twenty four days—all well.—A. D. 1299, Liverpool was a village belonging to the parish of Walton, to which it was attached till the year 1699, when the burgesses paid the king ten marks for a charter, which declared their town a free burgh forever. A merchant guild was then granted them, together with some other liberties. Antwerp was first enclosed by a wall in 1261.—The London papers state that a gentleman in Devonshire has invented a snuff pistol. It has two barrels, and being applied to the nose, and touching a spring underneath with the fore finger, both nostrils are filled instantly, and a sufficient quantity is driven into the head to last the whole day. The after dinner call at a tavern will hereafter be—*pistols* for two.—A satirical poem has been published in Boston, entitled "*Our Chronicle*, or '26."—A new novel, by the author of *Redwood*, is in the press, and will be published in a few days. It is entitled *Hope Leslie*.—A Rev. gentleman, who has stately preached in Providence, R. I. to a large congregation, for the last thirty-six years, has during that period, united sixteen hundred persons.—The Boston Greek Committee have obtained a vessel to transport a cargo of provisions to Greece. The loading is to commence next week.—One dollar notes of the Hartford Bank, Conn. altered to tens, are in circulation, dated 1st Nov. 1826, payable to H. Hendricks, or bearer, the No. 1483, and signed by H. Burr, cashier and N. Terry, president. The deception is very complete, and we understand that even some of the brokers have been deceived.—A party of gentlemen, belonging to Bristol Vermont, recently went on a squirrel hunt, and on counting the game the evening of the second day, they numbered 4,000 squirrels, and a congregation of crows and other ravenous birds.—The whole tax, state, county, and town, paid by the town of Barrington, N. H. last year, was \$17 16, being the cost of supporting one pauper, at 33 cents per week. Some rich people, proud of their riches, but grumblers about taxes, think of moving to Barrington.—The Rochester Daily Advertiser says that upwards of \$26,000 was

received at the collector's office in Rochester from the opening of canal navigation the present season to the 31st of May, and 636 boats have taken original clearances from the same office.—The Lockport Observatory gives an account of a Mineral Spring recently discovered near Niagara Falls. It contains lime, magnesia, and sulphurous acid, and is said to have afforded relief in some cases of disease.—Mr. Poinsett our minister to Mexico, has sent to the Literary and Philosophical Society of Charleston three cases of minerals, comprising a collection of beautiful specimens, particularly from the mountains and mines of Tlalpujahua.—The U. S. ship *Hornet*, capt. Claxton, sailed from Pensacola on the 14th ult. on a cruise.—The U. S. frigate *Constitution* was at Milo, April 16, bound to Smyrna, to relieve the *Ontario*, capt. Nicholson.—The *lead mine* in Eaton, N. H. turns out to be uncommonly rich, and, as is believed, inexhaustible. It is equal to the best Missouri ore. This, with the iron ore in Gunstock Mountain, will no doubt facilitate the completion of the intended canal.—The Hon. Daniel Webster has been elected, by the legislature of Massachusetts, to the senate of the United States.—A New-Orleans paper mentions a radish which measures in its upper part, *two feet four and a quarter inches* in circumference; the length not ascertained, but, if correspondent to its rotundity, very probably sufficient to reach capt. Symmes' concavity.

EMIGRATING INDIANS. The public will look, with a good deal of solicitude, to see what is the result of the removal of the emigrating Creeks. Colonel Brearley, who acts as their agent, has reached Arkansas, in company with four or five chiefs, and is going on with them to the country west of that territory, which has been offered them by the U. States government, in exchange for the land they have relinquished to Georgia. Colonel Brearley expects to establish an agency about one hundred miles above Cantonment Gibson, and there to await the first emigrating party, which, if the chiefs should be pleased with the country, will probably amount to several thousands this year. The second party, who might be expected to follow within a few months after, will probably be as numerous as 8,000 or 10,000. This nation includes 21,000 persons; and it is supposed that nearly the whole will emigrate in a few years. [N. Y. Daily Adc.]

FOREIGN NEWS.

By the ship Hudson, capt. Champlin, arrived at New-York on Thursday, London papers to the evening of the 6th of May, have been received.

The new members of the administration received from the King the seals of their respective offices on the 30th April.

Parliament re-assembled on Tuesday, the 1st of May, and the public curiosity was at the highest pitch on the occasion. The avenues to the house were crowded to such a degree, that it was only with great difficulty that Mr. Canning and Mr. Peel could enter.

The debate was opened by the late Mr. Secretary Peel, on a motion to issue a writ for the election of a member to supply the place of Mr. Sturges Bourne, who has taken Mr. Peel's place in the ministry. Mr. P. took this opportunity to explain the reasons which had prompted him to leave the administration. He quoted often from a speech of Mr. Canning's when he resigned his seat in the cabinet, in 1807, to show that he (Mr. Peel) had been governed by similar considerations in the step he had now taken. Mr. Peel's speech was distinguished by a display of much talent.

Sir Francis Burdett and Mr. Brougham made eloquent speeches, explanatory of their views, and avowing their determination to support the new administration—if they can.

Sir Thomas Lethbridge and Mr. Dawson, who have gone to the opposition benches, assailed the new ministry. They expressed much chagrin, and stigmatised the union of the Whigs with Mr. Canning, as one of the basest coalitions which the country had ever witnessed; and attacked the Press as being "corrupted to the very heart's core."

Mr. Canning made a most triumphant speech. It is not only a piece of eloquence, but contains the true views of all the sincere friends of catholic emancipation. He has not made it a cabinet question, but, as he informed the house, the very fact of his being in office must promote its ultimate success. Nothing says the editor of the Sun, can now injure it but treachery on the part of its professed friends. The Right Hon. gentleman entered into a history of his political life as connected with the Catholic Question, and proved the consistency of his conduct in the most unanswerable manner.

The sitting of the House of Commons on the evening of the 3d of May, was one of the most stormy that has been witnessed for a number of years. Party spirit seems again to have reached no inconsiderable height, and in the words of Mr. Canning, "the standard of opposition has been now fairly unfurled."

In the House of Lords, on the evening of the 2d of May, the ex-ministers entered on their defence, and proved such a total want of concert on their parts, that the editor of the Sun doubts whether Mr. Canning was authorised in calling their simultaneous secession a "strange coincidence." The principal speakers were, the Earl of Eldon, the Duke of Wellington, the Earl of Mansfield, Viscount Goderich, Earl Bathurst, Lord Melville, the Marquis of Lansdown, and Lord Ellenborough.

It is rumoured that Parliament will be dissolved at the close of the present session, in order to give the new ministry the advantage of a new election.

POETRY.

FOR THE MASONIC RECORD, AND SATURDAY MAGAZINE.

TO THE HUDSON.

When morning leads the infant day
To look upon thy glassy face,
True, thou art fair,—and every ray
Bestows its wonted grace.
Then art thou, in thy thoughtless glee,
All smiles and volatility;
Spurning the warm embrace
And gaze of day,—like the coy fair
Who finds unwelcome gazers there.

Or when the tempest throws its might
Among the dimples of thy cheek,
And crowns thy little waves with white,
And bids thy margins speak
Their loud complaints against the wind.
How like the persecuted mind,
Tost by the waves of bleak
Adversity. A spell is there,
That is not rapture—nor despair

But evening has a charm, that none
Of every changing season brings;
When all that day can do is done,
And sable silence flings
A curtain o'er the purple sky,
And fancy turns her azure eye
Away from earthly things,
Or brings some spirit from above,
To meet the eager look of Love.

Around, beyond thy looming shore,
The hum of labour dies away;
And lights of evening, twinkling o'er
Thy mirror, drop away,
And yield to darkness, one by one,
As time and glory aye have run
Their sparkling sands away;
And left destruction stalking where
Life, light, and beauty, shone so fair.

Hence, ye self-loving ones, and leave
Night and its silence all to me.
Here I can smile, or muse, or grieve,
Or rest my head—and be,
In fancy's favour, all ye deem
Your dearest selves, or fain would seem,
By blank hypocrisy—
One whose whole soul is nightly given
To love, to thoughtfulness, and heaven.

June 11, 1827.

G.

MY GENTLE HARP.

BY THOMAS MOORE.

My gentle harp! once more I waken
The sweetness of thy slumbering strain;
In tears thy last farewell was taken,
And now in tears we meet again.
No light of joy hath o'er thee broken,
But, like those harps, whose heavenly skill
Of slavery, dark as thine, hath spoken—
Thou hangest upon the willow still.

And yet, since last thy chord resounded,
An hour of peace and triumph came,
When many an ardent bosom bounded
With hopes that now are turned to shame.
Yet even then, while peace was singing
Her balcyon song o'er earth and sea,
Though joy and hope to others bringing,
She only brought new tears to thee.

Then, who can ask for notes of pleasure,
My drooping harp, from chords like thine?
Alas! the lark's gay morning measure
As ill would suit the swan's decline!
Or how shall I, who love, who bless thee,
Invoke thy breath for freedom's strains.
When e'en the wreaths in which I dress thee,
Are sadly mixed—half flowers half chains!

But come, if yet thy fame can borrow
One breath of joy—O, breathe for me,
And show the world, in chains and sorrow,
How sweet thy music still can be;
How lightly, e'en mid gloom surrounding,
Thou yet canst wake at pleasure's thrill;
Like Memnon's broken image sounding,
Mid desolation—tuneful still!

[The following beautiful lines are extracted from an embryo volume, entitled *Peter Cornelips, a Tale, with Songs, and other Poems*, by a Scottish peasant, named Rodger. It is said,

the author has a wife and nine children, whom he has supported for the last ten years, upon wages which have not, on an average, exceeded twelve shillings sterling a week.]

"DINNA FORGET."

AIR—"When Adam at first was created."

Here put on thy finger this ring, love;
And, when thou art far o'er the sea,
Perhaps to thy mind it will bring, love,
Some thought—some remembrance—of me:
Our moments of rapture and bliss, love,
The haunts where so oft we have met,
These tears, and this last parting kiss, love,
It tells thee—O, "dinna forget!"

We might look on yonder fair moon, love,
Oft gazed on by us with delight,
And think of each other alone, love,
At one sacred hour every night:
But ah! ere she'd rise to thy view, love,
To me she long, long would be set;
Then look to this token more true, love,
On thy finger—and "dinna forget!"

Thou mayest meet faces more fair, love,
And charms more attractive than mine;
Be moved by a more winning air, love,
Or struck by a figure more fine:
But, should'st thou a brighter eye see, love,
Or ringlets of more glossy jet,
Let this still thy talisman be, love,
Look on it, and "dinna forget!"

And, oh! when thou writest to me, love,
The seal impress with this ring;
And that a sweet earnest will be, love,
To which, with fond hope I will cling:
That thou to thy vows wilt be true, love—
That happiness waiteth us yet:
One parting embrace—now adieu, love—
This moment I'll never forget!

TO A RECRUIT.

By the present writer of *Letters from Cockney Lands*.

Gaily you march to the rolling drum—
But heavier peals, hereafter,
And shriller notes, to thine ear shall come,
Than the fife's, or thy reckless laughter.

And is this enough to drown the kiss,
And the prayer, and the tear at parting—
To call out the spirit of waking bliss,
In the light of thine eye-beam darting?

But on! let each pulse of the heart beat high,
The banner of hope dance o'er thee!
A soldier's joys are always high—
Nor flee when the foe's before thee.

Then march away merrily, reckless part!
No care on a soldier's morrow;
To his foe his arm, to his friend his heart—
Then what has he left for sorrow?

EPITHALAMIUM.

I saw two clouds at morning,
Tinged with the rising sun;
And in the dawn they floated on,
And mingled into one;
I thought that morning cloud was blest,
It moved so sweetly to the west.

I saw two summer currents
Flow smoothly to their meeting,
And join their course with silent force,
In peace each other greeting.
Calm was their course through banks of green,
While dimpling eddies played between.

Such be your gentle motion,
Till life's last pulse shall beat;
Like summer's beam, and summer's stream,
Float on, in joy, to meet
A calmer sky, where storms shall cease—
A purer sky, where all is peace.

VARIETY.

THE PHYSICIAN AND THE PAVIOR. Dr. Radcliff "told Mr. Mead one day, 'Mead, I love you; and now I will tell you a sure secret to make your fortune—use all mankind ill.' He was avaricious, and would never pay his bills without much importunity. A pavior, after long and fruitless attempts, caught him just getting out of his chariot, at his own door, in Bloomsbury square, and set upon him—'Why, you rascal,' said the doctor, 'do you pretend to be paid for such a piece of work? Why you have spoiled my pavement, and then covered it over with earth to hide your bad work.' 'Doctor,' said the pavior, 'mine is not the only bad work the earth hides.' 'You dog, you,' said the doctor, 'are you a wit? you must be poor: come in and be paid.'

ANECDOTE—founded on fact. In a small village in the state of Georgia, a quarrel recently occurred between two Frenchmen; one a meagre little phy-

sician, who looked as if he lived on his own drugs—the other, a sturdy grocer, who, as a cannibal, could have taken the little M. D. at a meal. In the progress of the dispute, the doctor, wrought up to the sticking point, and as warm as a cataplasm, exclaimed, "I will be dam if I no kill you"—to which the grocer replied, with non-chalance of the most ludicrous contrast, "No Doctaire, I be dam if you do, for I shall not employ you."

At a late race in the North, among other horses, one called *Bother'em* started for the plate. An Hibernian taking a fancy to the name, betted large odds in his favour. Towards the conclusion of the race, his favourite was unluckily in the rear, on which he exclaimed, 'Ah! by Jasus, there he is: *Bother'em* for ever! see how he drives all before him!'

Get as much force of mind as you can. Live within your income. Always have something saved at the end of the year. Let your imports be more than your exports, and you'll never go far wrong. [Boswell's *Life of Johnson*.]

Life is but short; no time can be afforded but for the indulgence of real sorrow, or contests upon questions seriously momentous. Let us neither throw away any of our days upon useless resentment, or contend who shall hold out longest in stubborn malignity. It is best not to be angry; and best, in the next place, to be quickly reconciled, [Ibid.]

Every faculty in one man is the measure by which he judges of the like faculty in another. I judge of your sight by my sight, of your ear by my ear, of your reason by my reason, of your resentment by my resentment, of your love by my love. I neither have, nor can have, any other way of judging about them. [Adam Smith.]

MASONIC RECORD.

Semita certe,
Tranquilla per virtutem patet unica vitæ. [Juv. Sat.]

Selected for the American Masonic Record.

AN ORATION,

Delivered at the Dedication of Free Mason's Hall,
Lincoln's-Inn-Fields, London, on the 23d of May,
1776.

BY WILLIAM DODD, LL. D. G. C.
(Concluded.)

But, remote as is *this period*, we date not from thence the commencement of our art. For though it might owe to the wise and glorious king of Israel some of its many mystic forms and hieroglyphic ceremonies, yet certainly the art itself is coeval with man, the great subject of it. Nay, it may be well stiled coeval with *creation*; when the sovereign ARCHITECT raised on masonic principles this beautiful globe;—and commanded that *master-science*, *geometry* to lay the rule to the planetary world, and to regulate by its laws the whole stupendous System, in just unerring proportions rolling round the central sun!

II. And as *masonry* is of this remote antiquity, so is it, as might reasonably be imagined, of boundless extent. We trace its footsteps in the most distant, the most remote ages and nations of the world. We find it amongst the first and most celebrated *civilizers of the east*: We deduce it regularly, from the first astronomers on the plains of *Chaldea*, to the wise and mystic kings and priests of *Egypt*; the sages of *Greece*, the philosophers of *Rome*:—Nay, and even to the rude and *Gothic builders* of a dark and degenerate age: whose vast temples still remain amongst us, as monuments of their attachment to the *masonic arts*, and as high proofs of taste, which, however irregular, must always be esteemed awful and venerable.

In truth, in no *civilized* age or country hath *masonry* been neglected: The most illustrious characters,—kings and nobles,—sages and legislators,—authors and artists, have thought it their glory to protect and honour it. And at the present hour, while we find the *brotherhood* successfully established in every kingdom of the earth, we are happy to rank in that list many names, which do honour to their own,—would have done honour to any age. To *enumerate* them would be a task abundantly pleasing; but the time allows me not. It would, however, be inexcusable to omit particularising that *hero-king*, that bright and northern star, whom the admiring world allows to be one of the greatest princes, and of whom we may justly boast as one of the first and most distinguished friends and lovers of our art!—that ancient, honourable art, for whose promotion and dignity LODGES are opened in every quarter of the globe. For I cannot but remark with peculiar pleasure, that in whatsoever else men may dispute and disagree, yet they are all unanimous to respect and to support a singularly amiable institu-

tion; which annihilates all parties; conciliates all private opinions; and renders those who by their Almighty Father were *made of one blood*, to be also of one heart and one mind; brethren, firmly bound together by that indissoluble tie—"the love of their God, and the love of their kind."

This alone might well be judged a sufficient reason for the *extent*, and, if we may so say, *universality* of the craft. But, when to this we further add, the COMPREHENSIVENESS of the institution, and the vast circle of arts and sciences which it takes in, we shall no longer wonder at the *extent*; but be satisfied, "That masonry must and will always keep pace, and run parallel with the culture and civilization of mankind. Nay, we may pronounce, with strict truth, that where *masonry* is not, *civilization* will never be found. And so in fact it appears: for, in *savage* countries, and barbarous climes, where operative *masonry* never lays the line, nor stretches the compass; where skillful *architecture* never plans the dome, nor rears the well ordered column; on these benighted realms, liberal science never smiles, nor does ingenuous art exalt, refine, embellish, and soften the mind!"

But, give masonry once to exert her heaven-descended talents, even in realms like these;—let her rear the dwelling, and teach the lofty temple to emulate the clouds,—see what a train of arts immediately enter and join in ample suite, to give their patron *architecture* completion and glory! Lo! at their head, *sculpture* with his animating chisel bids the forming marble breathe!—See *painting* with his vivid pencil steal nature's fairest tints, while the glowing canvass starts beneath his touch into beauty and life! See the long labours of the loom; the storied tapestry, and the rich wrought silk, employed to decorate the habitation which every art and every exertion of the manufacturer and mechanic are busied to complete.

But not the *manual arts* alone attend: Hark!—through the finished dome divine *music* pours her soul-commanding sounds; with her artful hand and finely-varied tones, sweetly enforcing the lofty and instructive lessons of heaven-born *poesy*!—which, while it wraps the delighted mind in deep contemplation, gives birth and being to those sage, those civil, those legislative and moral plans;—or, in one word, to all that round of *speculative masonry* which secures, adorns, and dignifies society; and represents in strong contrast the *savage*, and the *civilized* man!

Thus *comprehensive* is the noble art we boast; and such are the triumphs of *architecture* alone, in whose ample grasp are contained such numberless benefits to human nature, and which may justly be deemed the peculiar and favourite child of civilization, as well as the unerring mark and criterion of that civilization, and of the progress of the fine arts in every state. Were I to proceed—or had I assumed for my proof that wonderful, all-informing science on which *masonry* is built; nay, and which,—*proud mistress of the arts*!—issues forth her commanding laws not only to those arts, but even to *nature*—even to nature's amplest round—the *solar system* itself. Had geometry been my theme—the time would have failed me to have recounted even a part of that comprehensive extent and reach of instruction; that inexhausted fund of information and knowledge, of improvement and advantage, which it imparts to its studious votaries. Happy votaries,—adepts in true *masonry*, ever the zealous and most ardent admirers of natural and moral beauty! for they are especially sensible of the *beauties* of that world, which amongst the intelligent Greeks, knew no other name. And well indeed might it be stiled *beauty*, for it excels, at once, in all the regularity of order, the exactness of proportion, the glow of colouring, the force of expression, and the strength of design.

IV. But future and more extensive discussions of this high and entertaining theme may one day, perhaps, through your honourable sanction; happily engage my pen. For the *present*,—after what hath

already been advanced, can any man doubt a moment of "the EXCELLENCE and UTILITY of *MAJ* SONY," thus deep in antiquity, boundless in extent, and universal in its comprehension of science, operative and speculative: Thus in its wide bosom, embracing at once the whole circle of arts and morals?

To attempt its encomium would be "wasteful and superfluous excess;" would be in the fine language of our first and sublimest of bards,

"To gild refined gold, to paint the lily,
To throw a perfume on the violet;
To smooth the ice; to add another hue
Unto the rainbow; or, with taper-light
To seek the beauteous eye of heaven to garnish."

For who, in this polished, this improving age, is insensible of the attraction, the excellence, the utility of the fine arts, the liberal sciences? Who in this peculiarly humane and philanthropic era is cold to the call of benevolence,—that never failing attendant on the ingenuous arts;—that all-pervading, all-performing virtue, which in one short and easy word, *Thou shalt love thy neighbour as thyself*, comprises all duty, and consummates the round of moral perfection.

Indeed, the celebrated eulogy which Cicero passeth on philosophy, may with equal propriety be applied to *masonry*, duly practised and rightly understood. For in that view, it will be found eminently "the improvement of youth and the delight of old age. The ornament of prosperity, the refuge and solace of adverse hours: it pleases at home; is no incumbrance abroad; it lodges with us; travels with us; and adds amusement and pleasure to our rural retirement."

With heart-felt zeal and sincerity, allow me then, right noble and worthy brethren, to congratulate you on the advancement, the progress and present state of our useful, excellent, antique, and mystic lore! more particularly, allow me to congratulate you on this great and festive day; on this solemn *dedication* with high pomp and song, of an *edifice*, which does equal credit to its architect, and to the craft; and which promises a long line of stability and glory to *masonry*, in this its favourite land!

And while by our sincere *good will* and *friendly regard* each for the other;—while by our liberal and merciful *relief* of the brethren in distress,—while by the establishment of an universal language and communication, for the attainment of those two important purposes throughout the earth, under the seal of the most sacred and inviolable *secrecy*;—while thus, we seem to have amply provided for the interests of *benevolence*; so let us, by every method, and by every encouragement in our power, court the LIBERAL ARTS to come and dwell amongst us: Let the means of their cultivation and improvement be the frequent subject of our best and most serious disquisitions: Let us endeavour to hold forth every engaging allurements, that they may approach and apply their elegant and wonder-working fingers, to finish the beauties of this well-ordered dome; and to make it, what we wish, the distinguished residence of immortal MASONRY!

An era, which cannot be far distant: for the magnificence of our building, in so short a period, thus wonderfully grown up before us, speaks in emphatic language, at once the zeal and the ability of its friends; and stimulates,—with a force far beyond the eloquence of the most persuasive orator;—stimulates every noble heart to a gallant emulation, and must inspire a wish to contribute towards the perfection of so beautiful and elegant a design.

Nor can the brilliant and generous example of that illustrious NOBLEMAN, who so honourably presides over us, want its due effect;—a nobleman,—you, my brethren, all agree with me—not more distinguished as a *mason* than as a *man*! whose love of liberal arts, and whose regard for moral virtue, are not confined to the lodge, but accompany and adorn

* I cannot withhold from my reader the following eulogium on the king of Prussia, by the historian so often quoted, and whose work alone would confer immortality. "The king of Prussia alone hath invented a new method of disciplining armies, of heading battles, and of gaining victories. This prince who would have been better served by another nation, and certainly better commended than he could possibly be by his own; who hath not had, since Alexander, his equal in history, for extent and variety of talents, who, without having been formed by Greeks, hath been able to form Lacedæmonians; he, in a word, who hath deserved, beyond all others, that his name should be recorded in his age, as a distinction vying in greatness with those of the finest ages of the world; this same king of Prussia hath totally changed the principles of war, by giving, in some measure to the legs an advantage over the arms; that is to say, that by the rapidity of his evolutions, and the celerity of his marches, he hath always excelled his enemies, even when he hath not conquered them. All the nations of Europe have been obliged to imitate his example, in order not to be obliged to submit to him. He will enjoy the glory, since it is one, of having raised the art of war to a degree of perfection, from which, fortunately, it cannot but degenerate."

him in all the walks of life! Under such auspices may the craft rest happy and secure, and flourish for ever as the palm! and may this HALL, awfully dedicated to masonry, to virtue, to benevolence, still and for ever behold each ennobling science, each ingenious art; smile and triumph, soften and civilize beneath its roof! May private friendship and public virtue dignify and distinguish the heart and character of every mason, who here shall form and fill the mystic lodge!

And when the sacred solemn rites are done, when festive hilarity assumes his social seat, may decent politeness, and sweetly smiling innocence, for ever wreath the chaplet for his brow, crown his bowl, and command his song!

And while, amidst the scientific labours of the lodge, elevated schemes of improving art engage and enrapture our minds; while holy and ancient mysteries warm the imagination with improvement's kindred glow: while in the mournful investigation of a brother's wants pleading pity melts our eye, and generous compassion swells the feeling breast: while amidst the cheerful exertions of inoffensive mirth, of heart enlarging, friendly communication,—reflection should be enabled to look back with pleasure, and impartial conscience shall find nothing to disapprove: then, my brethren, may we, with comfort and with confidence, lift up our adoring hearts:—

AND WE DO LIFT THEM UP TO Thee, great nature's adorable and wondrous Geometrician! Almighty Parent of the world! wise Former of man! imploring on this, and all our other laudable undertakings, thy favour, thy blessing, thy aid, without which, vain and fruitless are all the efforts of feeble men!—'Tis from thee, beneficent Founder of our frame, that we have received the heart to feel; the hand to labour; the eye to behold; the ear to hear; the tongue to proclaim; and all the faculties which make us susceptible of moral, partakers of natural good! Teach us, then, to delight in them, to improve them as thy blessing; and through the beauty, order, and excellence of created things, to view, contemplate, and adore, thy uncreated excellence and beauty!

Formed as thy temple, and enriched with the ornaments of thy creative wisdom,—consummate architect of thy master building, man!—we look up to thee, to inspire us with understanding, with science, with virtue, with all which can dignify, refine, and exalt our nature, and render the temple at least not wholly unworthy of its sacred inhabitant!—To this end, direct us, make the blessed volume of thy instructive wisdom, the never erring square to regulate our conduct; the compass within whose circle we shall ever walk with safety and with peace; the infallible plumb-line and criterion of rectitude and truth! Enable us to fill up every sphere of duty with exactness and honour; and by our amiable attention to all the sweet and blessed offices, the endearing charities of social life in particular, teach us to win the love of those who unite in those tender offices with us; and as fathers, husbands, friends,—as worthy men and worthy masons,—to distinguish and exalt the profession which we boast!

And, while through thy bounty—rich dispenser of every blessing!—our cups overflow with plenteousness, and wine, and corn, and oil, delight and cheer our boards; Oh! may our full hearts never be wanting in gratitude, and in the voice of thanksgiving to thee; in liberal sentiments and succour towards every laudable undertaking; in the quickest sensibility, and readiest relief we can give to the woes and distresses of our fellow creatures—of all mankind;—of every being, universal lord! who bears thy image, and looks up to thy providence; who is fed by thy hand, hopes for thy future and all comprehending mercy, and can and will triumphantly unite with us, with the general voice of masons and of men,—earnestly and emphatically saying,

"Father of All! in every age,
In every clime ador'd;
By saint, by savage, and by sage,
Jehovah, Jove, our Lord;

To Thee, whose temple is all space,
Whose altar, earth, sea, skies;
One chorus let all being raise,
All nature's incense rise!"

SCIENCE AND THE ARTS.

On annealing Cast Steel so as to make it as soft as Iron.—By JACOB PERKINS, Esq.

We were lately shown by an American friend, some slips of thin cast-steel, which were as soft and pliant, and as easily bent into any required shape, as though they had been tinned sheet iron. They were of a light grey colour, perfectly free from oxidation or scales, and were still capable of hardening, on being heated and quenched in water.

On mentioning this fact to Mr. Perkins, he stated that it was known to him, he having practised it in America with great advantage; and he had even communicated the process to one intelligent engineer in this country, who had since constantly employed it.

The secret consists in inclosing the cast-steel in close cast iron vessels, which completely exclude the external air; and in keeping them at a moderate red heat, in a proper annealing furnace, a sufficient length of time, according to the thickness of the steel; and, lastly, letting them cool very slowly.

This process is superior to the usual practice of decarbonating cast-steel, and reducing it to a state of iron; which renders it necessary to restore its steely nature again, by case-hardening it, before it can be hardened as usual.

On the proper Method of casting the Rims or Fellies and the Naves of Wheels in cast-iron; and affixing wrought-iron spokes in them.—By JACOB PERKINS, Esq.

In the ordinary method of doing this, the wrought iron spokes are laid in their places in the sand moulds, and the melted cast iron is poured in at the same time, both to form the rim and the nave. The consequence of this evil practice is, that the rim in cooling, shrinks; and as the spokes are fixed immovably in the nave, they cannot move with it as they ought to do, and the rim, of course, breaks.

Now, in order to avoid this misfortune, we have only to cast the rim first, and allow it to become quite cold, whilst the spokes are at liberty to move in the mould, during the time the rim is casting; the nave may then be cast, and the wheel will remain perfectly sound.

*On an improved Mode of forming cast-iron Wheels. By Mr. I. LUKENS, of Philadelphia, United States Engineer.**

It is found, that either the rims or spokes of cast-iron wheels are frequently breaking, when the spokes are made straight, or in radii lines around the nave as usual; owing to the irregular shrinking of the rim and spokes in cooling, after the casting, as mentioned in the last article.

If, however, the spokes are bent or curved in the form of arcs of circles for instance, then they will bend or yield in cooling sufficiently to prevent the above evil; and the appearance of the wheels is rather improved than otherwise, by the change made in the form of the spokes.

We have seen a cast-iron band wheel for a foot-lathe with its spokes so formed, and the rim of which ran with great truth and accuracy. This wheel and lathe was made by Mr. L. in the United States, and brought over to this country by him.

On improvements in the Construction of Lathes.—By Mr. I. LUKENS, Engineer.

Mr. Lukens has formed his carriage for the mandrel of his foot-lathe, and the two bars, in one solid mass of cast-iron, thus greatly lessening the jarring, or tremor which cast-iron lathes are subject to, as well as effectually preventing all derangement of position to the mandrel, in respect to the bars, which might take place, were the carriage or support of the mandrel to be made in a separate piece, as is commonly the case.

The two bars of his lathe are each made of a triangular shape, their tops being dressed truly flat, their insides made vertical, and parallel to each other, to serve as a guide to the sliding puppet; and their outsides are left rough from the casting, and

*And an English patentee for improved lithotomy instruments.

slope away underneath towards the centre, their lower edges being also dressed parallel to their tops. By this judicious form, the greatest strength is produced from the least quantity of materials, so that the lathe is sufficiently portable. The outer ends of the bars are united across into one solid mass.

The mode of acting upon the crank of his band-wheel is also peculiar. Instead of the usual hook, which connects it with the treadle, the treadle, which is formed of wood turning upon two pivots or centres at the back of the lathe, has affixed upon the middle of it an upright iron standard, about two feet high, near to the centres of the treadle, and strengthened by a diagonal stay at its foot. This standard is thus fixed at right angles to the treadle, and it has a slit in its upper end, with holes through it, in which a pin is affixed, which is passed through another slit, made near the end of an iron bar, which is passed through the slit on the top of the standard, and has a round cleft hole at its other end, which is fitted upon the cylindrical neck of the crank, and secured from opening by a slide ring. By this arrangement, the pin in the slit of the standard thrusts against the bottom of the slit in the bar, and when the foot of the operator is pressed upon the front rail of the treadle, the bar is urged against the neck of the crank, and drives it before it, so as to put the wheel into motion; the action upon the crank being continued during nearly three-fourths of each revolution of the wheel. The slit in the bar allows the treadle to remain at rest, in case the front rail should happen to catch or press upon a tool, &c. which may have fallen down underneath it, and thus avoid breaking the tool.

POWER OF STEAM ENGINES.

All the world is more or less acquainted with those immense masses, the pyramids of Egypt, which were considered among the wonders of antiquity. The materials of which the largest of them is constructed, were dug out of the earth at a considerable distance from their present situation. They cover more than eleven English acres; and are piled up to the height of about 600 feet. According to M. Dupin's calculation, their volume is equal to about 4,000,000 of cubic metres, their weight is 10,400,000 tons; which raised to the height of eleven metres from the bottom of the quarries to the surface of the earth, and of forty nine more as their mean elevation above the basis; in all sixty metres above their original level; give 624,000,000 tons raised to the height of one metre. Now the steam-engines employed in England are equal to the force of 320,000 horses, (1820) and can raise 826,800,000 to the height of one metre in twenty-four hours. But 624,000,000 being less than three-fourths of this quantity, it follows that the steam engines of England could have raised the materials of which the greatest pyramid is constructed out of the quarries, could have conveyed them to their present place, and heaped them up in their present form in less than three-fourths of one day, that is to say, in less than eighteen hours. According to Diodorus Siculus, this building employed 860,000 workmen—according to Herodotus, 100,000 workmen, during twenty years. Whichever of these estimates be nearest the truth, it is certain that one of the most powerful monarchies of remote antiquity applied its whole disposable resources in the construction. Therefore, the mechanical power of British steam-engines was, in 1820—and it has much increased since that time—to that of the Egyptian monarch, Cheops, inversely as the times necessary to each to perform the same task; that is to say, as twenty years to eighteen hours, or about 10,000 times as great. Neither would it be unfair to deduce from this single fact, that the general power of the two monarchies, including that which is the source of power, knowledge, was, if not exactly in this ratio, at least in a proportion which could not widely differ from it—let us, with great moderation say, one-fourth as great; that is, more than probable that the power of England is, at this moment, 2500 times as great as was that of Egypt, at the period when this pyramid was constructed. when we consider the reach of intellect which is necessary, to devise the steam-engine, in its present state; together with its general influence upon civilization, and the part it acts in national prosperity, it would be impossible for a nation which it has made many times as powerful as another by its direct ef-

fect, to be less than one fourth of that in every branch where its action is only indirect.

By the power of steam every machine to which it is applied receives, not an addition, but a multiplication of force. The power thus produced, in 1820, was computed to be equal to 320,000 horses, or about 2,240,000 men. At this moment, steam, on account of its many new applications, and the improvements made in the manner of employing it, may perform the work of near three millions of men in the United Kingdom.

[London Quarterly Review.]

THE REPOSITORY.

BURNING OF A SHIP AT SEA.

The following description of a fire at sea, as related by one of the passengers in the lost ship, is extracted from the last Scottish novel of William Galt, author of *Sir Andrew Wylie*, who has recently received an appointment by the British king, in Upper Canada. The title of this book is the *Last of the Lairds*, but though last, it is not the least of this author's productions—

"It happened said he, on a Saturday night, we had been all merry, according to the custom at sea, and had retired to our respective cabins and births, in the hope of making the Cape in a day or two. I had just fallen asleep, when a sudden and strange noise roused me from my pillow. I listened, and a wild cry of fire was instantly echoed by many voices. I started up, and ran on deck; I could see nothing, but only a steamy white smoke issuing from the fore-hatchway. In a moment every soul on board was around me.

The captain with undismayed coolness ordered all to prepare for the worst, and the other officers with their trumpets were immediately at their posts, directing the crew in the attempt to extinguish the flames. The night was calm, the heavens above were all serene; and the sea lay so still around, that the ship appeared to hang in the centre of the starry sphere, so beautiful and bright was the reflection of the skies in the unbounded ocean.

I may not describe the dreadful contrast which the scene on board presented to that holy tranquility. There were distraction, and horror, and cries, and fearful screams, and hideous bursts of delirious laughter. Then there was a crash below and silence for a moment, and then the busy troubled sound of the consuming destruction, felt as well as heard, gnawing and devouring the inward frame and beams of the ship, still growing louder and fiercer.

In the meantime the boats were lowering; the first that floated was instantly overloaded, and sunk with a horrible startling cry; every soul who had so wildly leaped on board, perished.

The rage of the burning still increased, it was no longer possible to go below, without the risk of suffocation.

Another boat was launched; one of the officers leaped on board, and sword in hand, shoving her from the ship's side, suffered none to follow until water and provisions were handed in; but notwithstanding his prudent endeavours, she was soon filled both with the sailors and the passengers. The mother of this orphan was standing on the gang-way with her three children, she looked as if she too would have leapt into the boat, but the babies clung to her, and so hung upon her arms, that she could not disentangle herself from their fond and frantic embraces.

I tore this poor boy from off her; she cried, O save him if you can!—the third boat was by this time in the water. I flung him to a sailor on board; she snatched up the other two beneath her arms, and with a shrill dismal shuddering shriek, which made every one that hung clustering about the shrouds and gang-way look round, she rushed into the smouldering cabin, and shut the door.

Her madness infected all who witnessed it; the boat was pushing off, there was no other chance for me; I leapt into the water and was taken on board; many followed me, but the officer with a terrible compassion for those who might be saved, hewed off their hands with his cutlass, as they laid hold of the gunwale. Row, he cried to the sailors who had seized the oars, the fire is making towards the magazine; Row off, or we shall be blown to pieces.

The sailors rowed with their utmost vigour. As we left the ship, a cry arose from all the unfortunate wretches who were abandoned to their doom, so frantic, so full of woe and despair, that it made even the firm minded officer exclaim, Good God, what is that?

I covered my ears with my hands, and bent my forehead to my knees, that I might neither hear nor see.

When we had rowed to some distance, the men at the oars paused; I uncovered my ears and looked up; a deep, low, hoarse murmuring and crackling noise, came from the ship, and now and then a human cry. As yet the flames had not appeared, but all around us, save where those dread and dismal sounds arose, was stillness and solemnity, and the smoke from the devoted vessel appeared like the shrouded form of some incomprehensible and tremendous phantasma, ascending from the sepulchres of the ocean to the dominions of omens and powers.

We looked at the spectral sight with terror and in silence. The orphan was clinging to my knees; at last the fire began to break out. The flames just showed themselves at the cabin windows; in a moment they whirled up the rigging; the sails blazed, and the ship was for a minute like some unblest apparitional creation of sorcery. It is all over said the officer, and his voice sounded hollowly over the mute and echoless ocean. The fire is in the gun room!

At that instant, a vast sheet of flame filled the whole air, and like an angry demon unfurling his wings, scattered meteors and malignant fires against the stars. The black forms of many things hovered like motes in the sunbeam for a moment in the blaze. I distinctly saw an anchor, and many like men with outspread arms.

That momentary and indescribable vision of fires and fragments, was succeeded by a booming roar, as if an earthquake had raised his voice from the abysses of the silent waters, and then there was a numerous splashing noise of many things falling around us into the sea, but that too soon passed, and then there was darkness and silence.

At that moment a cold wet hand caught hold of mine, which was hanging over the boat's side, and a man from the sea cried in a homely Aberdonian voice, "for Christianity, will ye take me up?" The officer heard him, and relenting from his firm and merciful purpose, ordered him to be taken on board, "Na, na," cried the Scotchman, "take my bag first," and he held up to me a small haversack which I grasped and lifted in; but in the same instant, an undulation from the sea came rolling from the whirlpool where the ship had sunk; the boat rose on the swell, the fated wretch lost his hold and sank beneath forever!"

THE HUMOURIST.

From "More Mornings in Bow-street," just published in London.

MICHAEL IN SEARCH OF HIS WIFE.

Messrs. Michael Brien and Callaghan M'Carty presented themselves before the magistrate, begging that he would be pleased to settle matters between them; they having battered and bruised each other until they were tired, without coming to any satisfactory conclusion.

"An plaze your honour, said Mr. Callaghan M'Carty, "this one alongside o' me is Mykle Brien, the father-in-law of me, becaze I married the daughter of him, Norah Brien that was, but Mrs. M'Carty that is—now she's me own lawful wife, long life to her! for she isn't the likes of him at all, nor like to be, plaze God, but paccable an quiet—barrin a shmall dthrop onst in the twelve months, in regard to St. Pathrick, or a thrifte that away, and the very pathern of her ould mother, plaze your honour. An last night, plaze your honour, Mykle Brien wallop'd the ould woman, and she run'd out of his place and cum'd into mine, and we tuck her into't, and giv'd her a dthrink o' beer to wet her sorrow, for she's ould and hardly dealt by, the cratur! an a bet after comes Mykle Brien hisself, wi' th' dthrink in his head and the vingeance in his heart agin her; an 'Where is the ould devil?' says he to me through the keyhole, for meself had the door fast as he shouldn't come into't. An 'Get

along wid ye paccably, Mykle Brien,' says I; 'sorrow a bit I'll let ye into it this night at all!' says I. 'Divel burn ye to keep me out of it, and me own lawful wife in it this blessed time!' says he. 'Be aisy, Mykle,' says I; but plaze your honour he wouldn't, for he cum'd in at the windy the wrong ind foremost—savin' your honour's prisince; for sure he cum'd in wid his behind before, mighty ondasint, in regard of the throwers wantin mendin; and I tuck the blow-bellis out o' th' corner and fitch'd him a clane slap wi' the broad of 'em upon his wrong ind; to knock him out of the windy agin, into th' sthreet; but he rould innert instid—right across the table; an the beer, an the backy, an the little bits o' tay-tackle, was all upset—an 'Where is the ould devil?' says Mykle. But he couldn't see her at all, in regard to the big taty-kittle she clapp'd over his head to shut up his eyes, for fear he'd be after wallopin' her agin. 'Be aisy, Mykle,' says I, but he wouldn't, for he blasphem'd desperit bad inside the taty-kittle, though Corny Keogh, his wife's sister's second cousin, larrup'd the top of it wid a sawall he had to make him aisy, an meself wattling him wid the blow-bellis at the t'other ind; but he wouldn't be aisy at all for, plaze your honour, like a world's rogue as he is! Thinn the neighbours cum'd in to keep the pace, an divil a bit of pace there was in it, but a great skrimage; and at last Mykle twisted his faytures out o' the taty-kittle, an tuck the blow-bellis clane away from myself; an, by the Powers! he gives me a mighty swate clout on me head wid 'em. Och! but me own placespinn'd round me like a windy-mill wid stunnin of the clout I got from him!"

"Then the fact is, he broke your head?" said the impatient magistrate.

"Nat altogether, your honour," replied Mr. Callaghan M'Carty, "or meself wouldn't be here spakin' may be; but he left his mark upon me." This "mark," a lump about the size of half a cricket ball, on the very top of his head, he pointed out to his worship's notice; and then he concluded his case by stating, that before he had time to "return the complement," the watchmen came in and "broke up the skrimmage," by driving Mykle and the neighbours home to bed; and therefore he and Mykle met, next morning, "cool and comfortable," and agreed to "take the law upon each other;"—in furtherance of which agreement they had now waited upon his worship.

It was now Mykle's turn to spake. Poor Mykle seemed to have come off second best in the skrimmage; for, over and above the wattling inflicted upon his wrong end, his whole countenance was so bruised and swollen that it looked more like a ripe melon than any thing else. "And bad luck to yur blow-bellis, and yur taty-kittle!" he began, at the same time looking any thing but cool and comfortable towards Mr. Callaghan M'Carty; "bad luck to yur blow-bellis, and yur taty-kittle, for it's meself that won't be able to sit in pace this fortnight by reason of the wattling I got from ye on my sate; but I never seen betther of ye than just a great big blaggard! Your wurchip, the ould woman's a bad ould woman, and dthinks more than she harns; though she takes a bushel o' fruit into the sthreet every day, and brings none of it back to spake of; and it's becase I loves the ould cratur above all the world that I larrups her now and then, and can't bear to see the mother of thirteen childer taking dthrops in a gin shop when she's got a good husband at home in her own place; so if I didn't love her, I wouldn't be after larruping her at all, but let her roul about in the kennel like a dthrunken baste instead; and what for is it that 'Carty locks her up from me? Sure I'd all the right in the world to go in after her, and I did; and I was smashed all to pieces among 'em, with bellises and taty-kittles, plaze yur wurchip, as yur wurchip may persave; for Corny Keogh clouted the taty-kittle not half so much as he clouted my shoulders; and when—"

"I will hear no more of this stupid nonsense!" said the magistrate; "go along about your business, and if you dare to break the peace again I will hold the hold gang of you to bail."

"That's jest what we want!" cried Mr Callighan M'Carty. "Indeed an it is, yur wurchip!" cried Mr. Mykle Brien; but the officers showed them the door, and "the devil a bit of law" they got to bless themselves with!

POPULAR TALES.

THE PRIEST AND THE BRIGAND.

At a small barber's shop in the *Strada dei Fiori* at Velletri, lived a light-hearted and honest young fellow as any in the world. He was not rich, nor ever likely to be so; for, although shaving and trimming beards and mustachios was an occupation which ensured him plenty of practice, the gains were small, and he laboured under the disadvantage, in this respect, which is common to all ingenious persons, whose means of subsistence depend upon the exertions of their own hands. But there is no word which has a more peculiarly relative meaning than "rich." If the man who has enough for his wants and a trifle of superfluous may be called rich, then Masetto was not poor. There was only one thing he wanted—a wife—and that he was not like to be long without; for Lissa, the daughter of a vine-dresser, who lived half a league out of the town, had promised to marry him at the festival of Santa Veronica, which was now within three weeks. Masetto had set his house in order, and made all becoming preparations for receiving his bride; and waited with the impatience natural to a man who is going to be married, for the happy day!

Lissa was about sixteen, the marriageable age for girls in this part of Italy. She was a good-tempered, innocent country girl. Elsewhere she would have been considered a prodigy of beauty; and, even in a place where the beauty of the peasantry is its most striking feature, she was considered above the ordinary run of pretty *contadine*. She loved the barber, and was looking forward to the fete of Santa Veronica with no less impatience than her Masetto.

It was a holiday; and thanks to the comfortable religion of Rome, there are many of them in the year;—Masetto had dressed himself in his best clothes; and was just setting off to pay a visit to Lissa, when he was stopped by the Father Brignoli, a canon of the church of San Giovanni, who came in all haste to be shaved. The canon was unluckily in the habit of putting off every thing he had to do until it was too late to do it; and he had now been loitering in his garden so long that he was obliged to take the barber's shop in his way, in order to reach the church in time for the offices. He was a stout, tall man, of between fifty and sixty, who, having passed the earlier part of his life in the army had sought a refuge in the bosom of the church from the cares of a world which he thought had treated him ungratefully. Perhaps he was right; but the story is too long to tell in this place. It will be enough for the intelligent reader to know that there was a woman at the bottom of it; and that the Cavalier Brignoli became the Canon Brigolini, because he was jilted—an example which, if universally followed, would fill the world with religious men. Masetto liked him, because he condescended to talk to him, and to let him talk in return. He was, besides, of great use to the barber, because he would tell him the tales of his exploits, and the wonders he had seen, which Masetto translated to his gaping customers, with such additions and explanations as he thought suited to their several tastes and understandings, and by this means made himself the favourite barber of the town. Perhaps the innamorato would not have stayed to shave any one else, but he could not refuse to wait upon the canon; so, taking off his best coat, and adjusting his apron, he began to operate on the canon's round chin.

"The course of true love never did run smooth." Masetto had just finished one half of the superficies of the lower part of the priest's broad face, when the mother of Lissa rushed into the shop, crying and sobbing, invoking all the saints whose names she could recollect, to save her child. The razor dropped from Masetto's hand, and he left the canon holding the basin under his chin, half shaved, and half lathered, and withal so infolded in the shaving-cloth that he could not readily rise from his seat. Masetto besought his intended mother-in-law to tell him what dreadful calamity had befallen his mistress, and had thrown her into the ecstasy of grief and passion in which he saw her. At first it was impossible to make her give any intelligible relation of the affair; but at length Masetto learned that Lissa had gone, before daybreak that morning, with some other girls of the neighbourhood, to draw wa-

ter from a spring, half a mile from the road, which was reputed to have great efficacy in preserving maidens' complexions. It was a sort of frolic which they had undertaken, without the knowledge of their friends, and had intended to be back before the sun was up. They had reached the spring, had filled their pitchers, and were about to return, when a man, of gigantic stature and most forbidding aspect, appeared among them. The girls shrieked with terror at the sight of him, and some of them made off; when, upon a whistle which the stranger blew, eight or ten fellows, as ill-looking, and armed with carbines and sabres, appeared from behind the rocks. The frightened girls knew at once that these were the Brigand Garbone and his comrades, whose atrocious deeds filled the neighbourhood with terror. Garbone, without speaking, seized Lissa, who clung to some of her companions; but her feeble resistance was of course in vain. The chief took her in his arms, and, motioning to some of his followers to assist him, bore her off. She shrieked, and implored the help of the other girls, who offered to follow her, but the remainder of the brigands presented their pieces at them, and threatened to shoot them on the spot. The poor girls fell on their knees, and with tears and supplications implored the monsters not to take away the wretched Lissa, but they might as well have implored the rocks. Garbone and the others, who carried away the devoted maiden, bore her swiftly towards the forest, and were soon lost sight of; while the others, staying till their comrades had got clearly off, slowly followed them, still looking back, and threatening the horror-stricken girls who remained at the fountain.

This was the substance of the account which they had given when they came home; and, although their terror had exaggerated the horror of the appearance, and perhaps the numbers of the brigands, there could remain no doubt that they consisted of Garbone and his troop. The mother of Lissa now recollected that a tall singular looking man had been seen at various times, and always in different garbs, hovering about their house, and was apparently struck with admiration of Lissa; a circumstance which had flattered her mother, but had never alarmed her.

Poor Masetto was beside himself at this intelligence; he tore his hair, wept, threw himself upon the ground, and played all the extravagant tricks which violent passion urges a man to. The canon in the mean time having extricated himself, wiped his face, and made himself decent, with the calm gravity of a man who has lived long enough in the world to see the nullity of every thing like violent emotion. Not that he was indifferent to Masetto's grief, and the cause of it. He had seen and admired the beautiful and innocent Lissa; and, while he was rubbing his face, he resolved to save her, or at least to make an attempt. He had, besides, as great a hatred as a churchman could have against this Garbone; and he felt some of his old military feeling rise, accompanied with an inclination to try if his arm yet possessed its strength and skill. These were of course improper notions for a priest, but they came unbidden across him. He consoled Masetto as well as he could; then, when he had made him listen, he represented that he had better be attempting something for his mistress's deliverance than weep over her loss. The poor barber thought this would be sheer madness; "for how," he said, could he hope that his Lissa was not already murdered, or worse."

"You show neither so much fortitude nor reason as I expected from you, my son," said the canon; "and you know nothing of the character of this Garbone. Murder is not his object; and I have a strong belief that he will not attempt any outrage against Lissa. But we waste time; tell me only this—dare you risk your life to save your mistress?"

"Ay, willingly!" replied Masetto, in whose heart the priest's words had revived something like hope, though he was afraid to trust it; "for what is existence to me without Lissa?"

"Why, then, let this be the last tear you shed; but give me a pen and ink, and, while I write, do you run and fetch Felippo, the lay-brother, who attends my mule; and, as for the offices, unless the Padre Geronimo has performed them, they must go undone, for the hour is now past."

Masetto had obeyed the canon. The letter was written, and dispatched by Felippo to the Cavalier Novi, who commanded a detachment of the pope's troops, a few leagues distant. First, however, Felippo was ordered to prepare his master's mule and his own, and to lend the better of his two frocks to Masetto, who, having put it on, followed the canon to his own house. A short preparation sufficed to make them ready for the journey which the canon meditated; and giving it out that he was going to the monastery of Santa Maria della Salute upon business with the abbot, he mounted his mule, and, followed by Masetto, in the dress of the lay-brother, rode gently towards the mountains.

As they journeyed on, the father explained to Masetto his plan, which was to throw themselves in the way of the brigands, and thus discover in the first place where Lissa was kept. They would think Padre a rich prize; and he knew them too well to apprehend any violence from them, because they would expect to get a large sum from him in the way of a ransom, and would willingly release his follower, that he might fetch them the money. This being done, the rest of the enterprise must depend greatly on Masetto's intelligence and skill in bringing up the troops of the Cavalier Novi, whom the Padre's letter had apprised of his design, to the robber's retreat.

It was noon, and the travellers dismounted under a spreading tree to repose themselves and their mules. The canon, who never travelled without a due portion of creature comforts, which he had a strong liking for, directed Masetto to display a cold capon, and to put a flask of very drinkable wine into a cold mountain brook which ran bubbling by the forest path. The meal was not ended, when it fell out, according to the good father's expectations, that some of Garbone's gang discovered them. The first intimation they received of the presence of their visitors, was the muzzle of a gun being poked through the boughs of a thicket on the rock opposite them, and a hoarse voice crying out with a thousand imprecations for their money. Masetto thought it was all over with them; but the priest called out without the least emotion, "We are poor travellers, a priest and his servant; what we have is at your service; but spare our lives for the sake of the blessed Mother of Heaven, and all the Saints."

The muzzle of the gun was withdrawn; and the gentleman to whom it belonged, accompanied by four others of his fraternity, made their appearance. They were fine-looking, able-bodied ragamuffins; but their long hair and mustachios, and the expression of their countenances, gave them a disagreeable and fierce look. They were dressed in a coarse but fantastic manner, every man having in his garb some attempt at finery, which ill accorded with the dirtiness and poverty of the rest of his clothing. They wore long daggers, and pistols stuck in their belts; some of them had, besides, swords; all were armed with carbines, and not a man, but a rosary, or a relic, or some other outward and visible token of his religion stuck about him. They surrounded the canon and his man, and, having searched for their weapons, and found none but the knives with which they were eating, they bound their arms behind them, and bade them prepare to go before their chief, who they said was within a short distance. While this ceremony was being performed by some of the rogues, the others finished the flask and the capon which the canon and Masetto had been employed upon when they were interrupted.

The canon offered nothing like resistance; but gave the thieves now and then a ghostly exhortation, or a slight recommendation to pursue the paths of virtue and piety, and not to bind his arms too tightly; managing to apply his texts so as to make a favourable impression on the banditti, whose superstition he was perfectly well acquainted with.

All being ready, the prisoners were marched off, followed by three of the brigands, the others staying behind to pursue their lawful vocation of robbing passengers. After half an hour's walk through circuitous paths, they arrived at a rock, which they began to ascend. From the top of this rock the robber's retreat was discernible. A small dell, shut in by high rocks, and which, from its position, was inaccessible to all but those who knew the country, had been pitched upon by Garbone for his headquarters. A range of low buildings at the further

end appeared to be the dwellings of the troop, and a great portion of the green was planted with olive trees and vines. A shrill whistle from one of the robbers was answered by some one from the dell, and the party began to descend with the caution which the steep path rendered necessary. The captives were conducted to the building, and entered a long room which appeared to be a sort of common hall. At the fire-place, some men of a similar appearance to those by whom the travellers had been taken, were employed in cooking; others were playing with cards and dice in different parts of the chamber; and at the upper end, with a moody look, and apart from the rest, sat one, who, from his stature and appearance, the canon had no doubt was the chief—the redoubted Garbone. To him they were soon led; when the canon, in answer to his enquiries, told him that he and his follower were upon a journey to the abbot of the monastery of Santa Maria della Salute, to receive some money due to his own church, when he had been stopped by the good gentlemen who had now done him the honour of introducing him. Garbone, although he looked extremely ill-tempered, happened to be in one of his most gracious moods. He welcomed the canon with great politeness for a robber, and said he was glad to see him for several especial reasons; the first, because his troop was mainly in want of a priest, for, although they were thieves, yet they had consciences, and it was so long since they confessed (having killed their last confessor in a brawl), that half of them were ready to desert, that they might unburden their bosoms, and obtain absolution; secondly, because he himself was going to be married (Masetto was ready to fly at the brigand's throat, but the canon trod upon his toe, and restrained him); and thirdly, because he should have a good round ransom for his captive.
